HIPOWER *The Final Touch of Security*

SAFEGUARD your track with HIPOWER. The premium is negligible compared to cost of purchase, construction and maintenance.

HIPOWER Nut Locks permanently and adequately maintain the stress imparted to a track bolt by initial wrenching in anticipation of and in preparation for the super stresses induced by traffic.

The illustrated HIPOWER cannot be completely compressed by ordinary wrenching. The high reactive pressure therefore becomes *immediately* and *adequately* active to absorb the impact of the rolling load.

Canada's Authoritative Text Book and Guide for Railway and Marine Executives and Assistants

Buyers of advertising have come to appreciate the importance of the editorial standing of a business publication, as a factor in the value of its advertising pages.

The fact that CANADIAN RAILWAY AND MARINE WORLD has, for 25 years, been recognized as a dependable authority, editorially, in the railway and marine fields, lends to its advertising pages an influence that has a real and tangible value to the advertiser.

Our readers know, too, that we will not admit to our advertising pages announcements of doubtful merit, nor firms of questionable responsibility.

You are in "good company" when you become a member of Canadian

Railway and Marine World's advertising "family."

Your very presence in our advertising pages carries with it, by inference, the publisher's approval; and our reader's feeling of confidence in our paper is quite naturally extended to your firm, for that reason.

When men meet in a public place they converse guardedly and with reserve. But let these same men meet as members of an exclusive club; or as fellow wearers of the emblem of some society and the natural barriers of distrust immediately disappear.

So it is with advertisers in Canadian Railway and Marine World—their representatives and their business letters receive a welcome of fellowship which can be secured in no other way.

*A Good Opportunity to Purchase
Dependable, Rebuilt*

FLAT CARS

THESE cars measure 41 feet long, and have a carrying capacity of 80,000 lbs. The woodwork is entirely new and the trucks have been thoroughly rebuilt. They represent an excellent opportunity for railroads and other users of flat cars to purchase this equipment at an attractive figure.

Built to comply with all M.C.B. and I.C.C. rules and regulations and fitted with U.S. safety appliances.

If you are in the market for:

Locomotives
Cranes
Steam Shovels
Dump Cars
Passenger or
Baggage Cars
Flats,
Coal or
Box Cars,
Etc.

—give us an opportunity to quote you.

**100

Canadian National Railways

An accurate maintenance record tells the unvarnished truth about a machine. It can always be consulted with confidence

Are being used with great success on small industrial locomotives

In one southern clay pit, sets are mounted on steam shovel roofs, furnishing current for G-E floodlights which light the workings.

Over Three Years in Operation Upkeep Only 37 Cents a Month

On one American railroad more than 250 G-E Headlight Turbine Generator Sets have been in operation for over three years. A carefully kept maintenance record shows but 37 cents a month per machine for spare parts. This exceedingly low upkeep, coupled with the dependability of this sturdy lighting set, accounts for its increasing popularity with engineers and executives.

The severe tests of four years' service and the manufacturing experience the General Electric Company has had with turbines great and small, combine to make G-E Headlight sets reliable. They are strong, highly efficient and can be closely regulated.

A Document that insures protection

"PRICE PER GALLON" comparison of lubricating oils arbitrarily places all oils—good, bad and indifferent—on the same quality level. It does not consider "Service"—the true determining factor of value.

Railroad tickets are not sold on the basis of "so much per ride," irrespective of distance or class of accommodation afforded. They are priced in accordance with the extent of service represented.

Service must gauge the value of railway lubricants as well as railway tickets. And lubricating service may be ascertained and recorded as accurately as sales of railway tickets can be checked.

The Galena Guarantee Contract stipulates that your lubrication will not exceed a certain sum per thousand miles of service. It offers an absolute protection to the customer as it is literally an insurance of service.

The guarantee in itself is evidence of our confidence in Galena lubricants to deliver uniform service, day after day, through the ever-changing conditions of weather and operation. It represents the difference between "oil buying" and lubrication buying.

"The Galena Contract Is A Bond of Service!"

COLD WEATHER ENORMOUSLY INCREASES TRAIN RESISTANCE!

Actual tests made and reported in the Proceedings of the American Railway Engineering Association show that when a train stood still long enough to "freeze up," starting resistance ran up to

30 lb. per ton

—over five times the starting resistance of the same train after it had stopped only a few minutes.

This enormous resistance is directly chargeable to the journal bearing, oil and packing congealing into one solid mass.

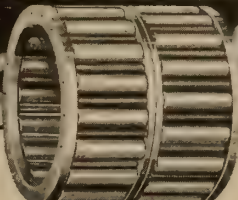

With STAFFORD ROLLER BEARINGS the journal is not held in the vise-like grip of a friction bearing, nor is it immersed in the oil-soaked packing; thus "frozen up" conditions cannot possibly occur.

Stafford Roller Bearings are guaranteed three years.

Savings that are Constant

The more extensive the record of comparison is between Dearborn Scientific Feed Water Treatment and other methods, the more favorable is the showing of Dearborn.

In the test stages this saving is brought forcibly to the attention and is welcomed. We ask you to remember, however, this point:

Dearborn Treatment will continue its record of saving, but in a greater proportion, after the boilers are cleaned, than shown in its original tests.

For Dearborn Treatment based upon water analysis and laboratory control of water variation is practical perfection in remedying scale formation, foaming, pitting and corrosion.

If you are not using Dearborn Treatment, we know we can save money for you. For the past 35 years, over one thousand new customers—stationary power plants and railroads—on an average per year, have adopted Dearborn Treatment and service and ARE STILL USING IT. Write—give us the opportunity to prove Dearborn to you under your own service conditions.

**"SHIP THIRTEEN FOUR TENTHS MILES
ELECTRIFICATION TODAY SURE"**

There are plenty of examples of successfully electrified tunnels, main trunk lines, mountain divisions, suburban sections and yard tracks.

But it is not possible—never will be possible—to wire for "thirteen and four-tenths miles of Type K Electrifications complete."

The contact system (overhead or third rail), the transmission line, the method of rail bonding—all these are of first importance. Each presents broad opportunity for inventive ability in the solution of the special problems of the particular road which is being electrified.

The O-B organization welcomes demands on the knowledge and experience gained through contact with most of the projects already developed.

The **Ohio**  **Brass Co.**
Mansfield Ohio, U.S.A.

Products: Trolley Material, Rail Bonds, Electric Railway Car Equipment, High Tension Porcelain Insulators, Third Rail Insulators

DIAMETERS-8 to 84 INCHES

PEDLAR'S "PERFECT" TONCAN METAL CULVERTS

NO matter what the size needed, there is a Pedlar Culvert that will solve the problem.

Our standard range of sizes run from 8 to 84 inches in diameter. When occasion demands, we can provide larger diameters than 84 inches.

The above illustration shows a 12-foot Culvert made especially for one of our customers.

Lengths Up to 40 Feet

with specially designed coupling bands for assembling individual culverts into longer lengths than 40 feet. We also manufacture Steelcrete, Metal Lath, Metal Roofing and Siding, Rib Fabric, Floor Tyle, etc.

Write for Culvert Booklet "R.M."

PORT HOPE - ONTARIO

Immune to Winter's Blasts

IN the G. R. S. Electric Interlocking System electrical power is used exclusively to operate the functions.

Only in winter does the operation of an interlocking plant receive its severest test.

Hail, sleet, snow, wind and zero temperature have no effect on a well insulated and protected wire carrying electrical current to its function. Because an electric current is immune to these severe winter elements, so also is the system of G. R. S. Electric Interlocking, for it is electric throughout.

*An electric current does
not freeze*

When you think "interlocking"—think G. R. S. Electric Interlocking, the *Modern System* immune to the frigid blasts of winter.

Are You Playing Fair with Your Store Records?

Are you checking in every quart of oil as accurately as you measure it out? You know, when you use Bowser Oil Batteries, that you use all the oil you buy. Play fair with your store records.

Bowser storage tanks, oil tight, of all metal construction, prevent spillage and waste, thereby eliminating the fire hazard. Bowser piston-type pumps accurately measure the oil in the exact quantities required.

Write today for Booklet C-14, and let our engineers make a survey—at our expense—of your storage and distribution problems. Savings in time and labor from 15% to 35% can be pointed out.

Sanders for Electric Railways

Both pneumatic and mechanically-operated sanders are made by the Nichols-Lintern Co.

The mechanically-operated N-L sander has been accepted and installed as standard equipment by some of the largest railroads in Canada and the United States. When the air is lost the N-L mechanical sander used with a hand brake is an emergency device that will prevent many accidents. N-L mechanical sanders are admirably adapted for use on safety cars and are economical on sand. They apply all the sand you need, but no more.

The air sander is usually used on interurban cars for sanding round curves and may be equipped with either independent or auxiliary valve. It is also used on city cars when it is desirable to locate sand hoppers at other points than close to or directly above the rail.

Let us send you full particulars of these improved sanders.

This is the way we recommend these Sanders be used on Safety cars—giving a properly-balanced Sander Equipment.

FLANNERY

F.B.C. WELDED FLEXIBLE STAYBOLTS

Building for the Future

Today, locomotive performance is influenced and measured more definitely by boiler efficiency than by any other one factor.

This is proved by the records, which show that 40% of the locomotives held out of service require boiler repairs, a large proportion of which is due to leaky and broken staybolts.

Installations of Flannery "F.B.C." Welded Flexible Staybolts are building for the future in a twofold sense—they increase revenue hours and cut down the cost.

P. & W. Die Stock Dies

For Clean, Accurate Threads

THE die consists of a single piece collar and guide containing four chasers held in radial slots by set screws placed at an angle of 45°.

A ring surrounds the collet and in this ring are four tapered slots which match the bevel backs of the chasers. Pushing and pulling screws in the flange of the collet move the ring to permit adjusting the chasers 1/32 in. over or under standard size.

The chasers are hobbled one at a time in a separate holder in such a manner as to provide proper relief or clearance when set up in the collet. Chasers are readily removed for re-grinding. Their proper location is always determined as the collet slots and chases are correspondingly numbered. Collet is bored to correct diameter to act as a guide and thus insures true alignment.

The Holding Ring

Note the taper adjusting slots for the chasers. Threaded for pulling screws.

The Chasers

Set in the holding ring to provide the correct relief or clearance. Easily sharpened on the cutting face.

The Collet

Marked slots for chasers. Clearance holes for chips. Center hole bored to correct diameter for true alignment. Slot for locking in the die-stock. Counter-bored for pulling screws and tapped on an angle for chaser locking screws.

Sets are made up in United States Standard, S. A. E. Standard, and Whitworth Standard threads. They are unequalled for fast, accurate threading of all metals.

Canadian Railway and Marine World

January, 1923

Some Fundamental Needs in the Canadian Railway Industry.

By Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

The Canadian railways may be regarded as constituting a large transportation machine, the function of which is to furnish transportation to the Canadian people. The usual economic considerations applying to human activities demand that to best serve the people's interests, the machine should turn out a good product, and at the lowest possible net cost; that is, it should furnish efficient and cheap transportation. It has done so in the past; what of the future? In the following paragraphs, a few enquiries, necessarily very brief and very general, into some of the things influencing the quality and cost of the railway transportation which the Canadian people will buy and pay for in the future, will be made, and corresponding conclusions drawn.

Railway Mileage and Facilities.—The statement that Canada has grossly overbuilt in the railway field has been so frequently repeated that it has become a commonplace. There is no doubt that, chiefly through error in the matter of distribution, railway mileage has been provided in the country in excess of the economic necessity for it. The Canadian transportation machine is uneconomical, like any other machine that cannot be kept working full time, because all of its capital cost was not justified. While paralleling, and bad mileage distribution in relation to traffic requirements, made the machine too big, and therefore uneconomical in the first place, the course of events in the past few years, which has had the effect of limiting immigration and growth in population, has prevented our transportation machine from becoming more economical, by limiting the demand for its product.

The curve in fig. 1, showing the number of people to support each mile of railway (line, not track), was constructed on the supposition that the increase in population as between 1901 and 1911, and between 1911 and 1921, was fairly uniform. On this basis, Canada's population in 1907 was 6,472,513, and the railway built being 22,452 miles, there were 288 people for each mile of line. After the orgy of railway construction between 1910 and 1916 had run its course, there were but 211 people per mile of line. In 1921 this number had been increased to 221. The U.S. has in the neighborhood of 400 people per mile of line, the United Kingdom about 2,000, and Australia about 275. It is evident, therefore, that Canada has a large transportation machine in relation to the number of people to provide a market for its product.

As to railway rolling stock and other facilities, experience has demonstrated that passenger equipment has been provided in the past in sufficient quantity to meet the country's needs. Freight equipment has also been provided in sufficient quantity to meet the country's needs, except in periods of very heavy traffic, such as experienced in the autumn of 1922, at which time of year a natural flow of cars into U.S. territory generally serves to

intensify any car shortage that occurs. Shops for adequately maintaining and repairing equipment have been provided, as has all other physical plant necessary for efficient railway operation.

Passenger and Freight Traffic.—While it is axiomatic that increased population would mean an increase in traffic offering to the railways, it would be interesting to know if increased population would result in the railways being afforded more traffic per individual of the population than when the population was smaller. Considering the decrease in the number of people to support one mile of railway which has taken place in Canada as between 1907 and 1921, passenger traffic density for the railways as a whole has kept up well. In 1907 there were 90,921 passengers carried one mile per mile of line. In 1912 this figure was 108,888, and in 1913 it was 111,353. In 1915, 1916 and 1917 the figure ran below 80,000, but in 1918 it got up to 81,306, and in 1919 to 93,668. Taking the good years with the bad, the number of passengers carried one mile per mile of line was not quite so much smaller between 1914 and 1921 than between 1907 and 1914, as the change in the number of people supporting each mile of railway would lead one to believe it would be. Fig. 2, showing the number of miles travelled by rail annually by each person, indicates that passenger traffic fluctuates violently, the amount of travelling people do being influenced in great degree by prevailing economic conditions. The average of 375.3 miles per person, between 1914 and 1921, compared with the average of 358.6 miles per person between 1907 and 1914, has been responsible for keeping passenger traffic density up somewhat more than it would be expected to be, based on the number of people per mile of railway, between 1914 and 1921. However, it would be doubtful if this increase in the average amount of travelling done per individual per year could be taken as any indication that passenger travel per individual tends to increase as population increases. It is probable that as population increases, and as human needs and desires increase, and as the luxuries of one generation become the necessities of the next, railway travel tends to increase. On the other hand though, the increasing use of automobiles is tending, and will further tend, with more good roads, to restrict railway passenger travel. On the whole, it may be concluded that the increase in passenger traffic on Canadian railways will vary about directly with the increase in population.

Applying our enquiry to the freight end of the railway business, however, it may be seen that freight traffic increases at a much faster rate than population. Notwithstanding the great decrease in the number of people to support each mile of railway, as between 1907 and 1921, the number of ton miles of revenue freight per mile of line has shown a large increase. In 1907 the

freight traffic density for the Canadian railways—the number of tons of freight carried one mile per mile of line—was 518,486. In 1918, despite the great decrease in the number of people per mile of line, as shown in fig. 1, there were 798,093 tons carried one mile per mile of line. In 1920 this figure was 809,832. Fig. 3 shows the number of ton-miles of freight carried per individual of the population from 1907 to 1921. While freight traffic also fluctuates violently in accordance with prevailing economic conditions, it is evident that as population has increased, the number of ton-miles of revenue freight furnished the railways by each individual has also increased. Taking the average for 1907, 1908 and 1909, each person in Canada furnished the railways with 1,892 ton-miles of freight annually. Taking the average for 1919, 1920 and 1921, each person furnished 3,332 ton-miles annually. While population increased by approximately 29%, the amount of freight traffic furnished the railways by each person increased by 75%. The U.S. has had this same experience; while the U.S. population doubled, U.S. railway freight traffic quadrupled. If the past is any indication of what may be expected in the future, it may therefore be taken for granted that, as Canadian population increases, railway freight traffic per unit of population will continue to increase at a much faster rate. This proportionately greater increase in freight traffic than in population, is a logical result of the greater diversity of human needs, more efficient methods of production, resulting in larger ton-nages being originated by comparatively few people, and the establishment of new producing areas and markets and the extension of old ones.

Transportation costs to the public.—Railway transportation can be bought in Canada today at a cost much lower than the average for all other commodities. This statement is proved by the figures supporting the trend curves in figs. 4 and 5. In fig. 4, the percentage increases in the cost of living, as furnished by the Labor Department, are compared with the percentage increases in freight and passenger rates, using the levels in the year 1911 as a basis. The cost of living, which includes such items as food, fuel, light, rent, etc., has at all times been relatively higher than either freight or passenger rates. These cost of living figures are for the month of July for each year; the average receipt per revenue ton-mile of freight and per revenue passenger-mile are averages for each whole year, and for 1922 to July 1. In July, 1920, the cost of living was 106% higher than in July, 1911, while the average freight rate for 1920 was but 38% higher than in 1911, and the average passenger rate but 50% higher. In July, 1922, the cost of living was still 58% higher than in July, 1911, while the average freight rate for the first 6 months of 1922 was but 47% higher than in 1911, and the average

passenger rate 50% higher. In addition to this, freight rates have been again cut, effective in Aug. 1922. In addition to the restoration of the 1898 Crowsnest Pass rates on grain from Western Canada, large decreases in commodity rates were ordered.

In fig. 5, freight and passenger rates are compared with average wholesale prices, also furnished by the Labor Department. These prices cover almost every kind of commodity. In this chart, 1913 has been taken as the basis. In July, 1920, when the average wholesale price was 157% higher than in July, 1913, the average freight rate was but 41% higher than in 1913, and the average passenger rate but 48% higher. In July, 1922, wholesale prices were still 67% higher than in 1913, but freight rates for the first half of 1922 had aver-

experienced by the Canadian National Rys., but will, on the contrary, wonder how our privately-owned railways have continued to operate.

Railway Operating Efficiency.—One of the reasons why the privately-owned railways have been able to operate at a small profit and the Canadian National Rys. have been able to get along with no greater operating losses than they have incurred, is because operation has been very efficient. Any enquiry into railway operating efficiency here must be very limited. While operating efficiency involves many numerous and complex considerations, it has been felt that car loading, utilization of cars, condition of locomotives, locomotive hauling capacity, train make-up, etc., are all reflected more or less in the average train load hauled, and for that reason fig. 6, show-

As a matter of fact, the railways have handed on to the public, through lower rates, and to their employees, through increased wages and more favorable hours and working conditions, amounts which total considerably more than they have been able to save by increased operating efficiency. Figs. 4, 5, 7 and 8, and the calculations supporting them, prove this. In fig. 7 it can be seen at once that as gross earnings per freight, passenger and mixed train mile increased, due to higher rates, railway operating expenses increased faster, so that railway net earnings per train mile decreased. In 1911, while the railways derived average gross earnings of \$2.10 a train mile, with expenses of \$1.46 a train mile and net earnings of 64c. a train mile, in 1920 they had gross revenues per train mile of \$4.19, but train mile operating expenses, amounting to \$4.07, left net earnings of only 12c. There was some improvement in 1921, when net earnings per train mile for the roads as a whole were 34c., but in the first half of 1922 the net earnings per train mile were but 21c. While better traffic conditions in the autumn of 1922 will likely increase this figure for the complete year, despite the further decreased rates, it is all too evident that the railways' net earnings are still seriously restricted in comparison with what they were a few years ago.

For the purpose of showing that these unfavorable operating results for the railways as a whole have not been unduly influenced by the results on the Government-owned roads, the operating ratios for all the roads and for the C.P.R. by itself are shown in fig. 8. The C.P.R. has been affected by exactly the same conditions as the other roads. The simple truth of the matter is that since 1917 railway rates have not been high enough to allow the railways to pay the wages they are paying, and the material prices they are paying, and derive as favorable net earnings as they were able to prior to 1917.

Having presented these few facts in connection with the Canadian railway industry, it might be well to refer back to the statement that the Canadian transportation machine is uneconomical, because there is not enough work for it, i.e., that the railways could handle traffic at less cost if they had more of it. It may readily be demonstrated, on an analysis of railway operating expenses based on statistics and experience, that a railway can handle additional traffic at a less cost per unit than its original traffic is costing it to move, up to a point where the capacity of its facilities is reached, but as this principle is true of practically all productive industry in more or less degree, no demonstration of the fact is necessary here. It will be accepted as axiomatic, therefore, that increased traffic density will mean a tendency to reduced operating costs.

Taking into consideration the fact that it is the freight traffic which is the real money earner for the railways, and combining this with the relationship as between population and freight traffic density, as demonstrated above, it is at once evident that the greatest influence for reduced railway operating cost, and therefore reduced transportation costs for the public, will be exerted by increased population. Even if freight traffic density increased but directly in proportion to the increase in population, an increased population would be of assistance in reducing transportation

Fig 1. Number of People per mile of Line.

Fig 3 No. of ton miles of freight per individual, annually.

aged but 50% higher than in 1913, and passenger rates 48% higher, while freight rates have since been largely reduced, as stated above, and wholesale prices have changed but little one way or the other.

The mistake in railway regulation (which, on account of the interconnection between Canadian and U.S. rail transportation, and the enforced similarity between Canadian and U.S. rate levels, can be traced back to its origin in the policies of the United States Railroad Administration during the period of Federal control), occasioned by the undue slowness in adjusting rail rates to meet fluctuating price conditions, is made evident on examining the trend curves shown in fig. 4 and 5. Because railway rates were not finally adjusted upward, until commodity prices had reached and passed their maximum, the public got the idea that railway rates had been made unduly high, but an examination into the matter demonstrates conclusively that railway rates never were inflated like commodity prices, and are at present comparatively low. When one considers the manner in which commodity prices soared, and then considers that railways are among the greatest purchasers of commodities, he will express no wonder at the deficits

ing the average number of ton-miles of revenue freight handled per freight train mile, is given. It is evident that the more tonnage one locomotive and crew can handle in one train, the cheaper will each ton be handled. The average number of tons of revenue freight per freight train mile had increased from 305 in 1907 to 460 in the first half of 1922. Larger cars, larger and more efficient locomotives, better grades—all of the things that make for increased operating efficiency, and cheaper handling of traffic, have combined to bring about this result. While the cost of handling traffic by no means decreases directly in proportion to the increase in the average train load hauled, consideration of the increase in the average train load will at least afford some indication of the amount by which the railways have succeeded in reducing relative operating costs. The word "relative" is important; higher wages and material costs have, of course, acted to increase actual unit operating costs considerably, as will be indicated further on.

Railway Earnings.—Figs. 4 and 5 at once make evident that any savings the railways have been able to make by increased operating efficiency have been in large part handed on to the public in the form of relatively lower rates.

costs, but with freight traffic density increasing much faster, proportionately, than population, increased population will be even more beneficial to the railways and the country. It may at once be stated, therefore, that the prime requisite for the solution of our railway problem is increased population.

With railway wages at a fair and reasonable level, and with prices for railway materials determined by the usual economic influences, about the only things of consequence, outside of increased population, which will aid in solving the Canadian railway problem are, first, increased operating efficiency, and second, keeping down of the annual cost of additional capital required for railways to the lowest possible point. These two things are very important and, if overlooked, it is possible that a great part of the advantages to be

from time to time, will have to be acquired and paid for. All these things will require expenditures which will aggregate large amounts.

Maintaining and increasing operating efficiency and economy also requires an initial expenditure of money. Money must be spent to keep track in good condition, and to keep cars and locomotives in good shape, and to maintain the entire physical railway property in such condition that transportation can be produced efficiently and economically. Money must be expended for grade revisions, for improving terminals, so that lower terminal handling costs shall prevail, and for acquiring and adopting the numerous devices and methods which mean ultimate economy. If this money is not spent, operating efficiency will not be increased and transportation costs will not be lowered. In the writer's

alike suffer through the lack of it. When earnings are low, there is a tendency to postpone the investment of new capital for things which would make operation more efficient, and the net result of all these natural tendencies is that increase in operating efficiency ceases.

So far as the annual charge for capital is concerned, it would be well if the public would realize that, in connection with railways, it is faced with the problem of determining what proportion of its transportation service it will pay for as it gets it, and what proportion it will get on credit. The amounts which have had to be paid on Canadian National Rys. account, for fixed charges and for operating losses, indicate that the public has been getting too much transportation on credit. This cannot go on forever. The nearer the Government roads can come to earning their operating ex-

secured by increased population will be lost.

If Canada is to enjoy the industrial growth which the character of her people and her natural resources indicate that she should enjoy, and if the number of people are brought into Canada in the next decade which it is proposed to bring in, it is evident that Canadian railways will be called upon to handle a great deal more traffic than they ever have in the past. Although the number of people per mile of railway is small, compared with other countries, the fact remains that there is already great need for properly located branch line mileage, and it is likely that railway construction will proceed at a fair rate. Additional passenger cars, freight cars, locomotives and auxiliary equipment of all descriptions will have to be furnished, while other facilities, as found necessary

opinion, a let-up in the increase in operating efficiency, and payment of an unduly large sum annually for additional capital, which would combine to offset advantages gained by the railways and the country by increased population in the future, can be prevented by one thing only, and that is adequate railway net earnings in the present.

In support of this statement, and in so far as operating efficiency is concerned, it may be stated that if railway net earnings are deficient, a tendency is at once produced to cut down on maintenance, and there is a tendency toward getting along with old and inefficient machines, instead of securing a new machine which would do the work at half the cost and pay for itself in a short time. A tendency is produced toward postponing the acquisition of new rolling stock, while producers and consumers

penses, the smaller will be the annual charge for capital (or for that part of the national debt which would have been cancelled if the taxes collected could have been used for the purpose, which is the same thing), which will have to be paid in the future, and the better the financial standing of a business or a Government, the lower will the interest rate be. A fundamental principle in an individual's affairs, or in the affairs of a business, or a nation, is that summed up in the statement, "The more we can pay as we go, the better off will we be in the end," and that applies very appropriately to the present Canadian railway situation.

Leaving aside all discussion as to the advisability of rate reductions already made, particularly with reference to the application of those reductions to various branches of industry, it would seem

that any further reduction in railway rates in the near future would be bad policy. The few figures presented show clearly that the railways are now in receipt of net earnings which are inadequate, while they are at the same time charging rates which are relatively much lower than in pre-war years. It would be well if, during the next few years, the railways be allowed to keep the benefit of any saving they may make possible by increased operating efficiency or otherwise, so that they may still further increase operating efficiency, in preparation for the big traffic of the future. It would be well that the privately-owned roads be enabled to provide for increasing operating efficiency out of earnings, instead of through additional capital issues. It would be well that the Government roads be given a chance to earn their operating expenses, and a portion of their fixed charges, so that the country will not be swamped with debt arising out of loans for railway expenditures. If the railways are not allowed adequate earnings, it can be taken as certain that operating efficiency will suffer, and increased traffic brought by increased population could not be handled economically. If the Government lines are not given an opportunity to pay their way, the pyramiding additions to the national debt will have the public taxed to death. Why not pay our obligations for transportation received, by adequate rates, and have done with it, instead of paying them over and over by paying compound interest forever?

If the policy of false economy which threatens be avoided, and if the railways be allowed adequate net earnings for the next few years, so that operating efficiency may continue to increase, and so that the public will not be called upon to pay for transportation at a rate which will be necessary to provide for interest on unduly large new capital expenditures, it may be expected that our railway problem will proceed to its final solution. If our transportation machine is to produce efficient transportation, it must be kept in condition to do so; mileage, equipment, necessary facilities must be properly co-ordinated, and rounded off into a correctly proportioned and smooth-working mechanism. If we get the population, our transportation machine will automatically become more economical through increased demand for its product, but if we do not keep the machine in good condition, and improve it here and there as opportunity offers, it will be found that its loss of efficiency will wipe out the economy introduced by increased population. But with railway net earnings adequate while the population is coming, it may reasonably be expected that the additional demand for transportation caused by the increased population, combining with the increased operating efficiency secured by reason of adequate net earnings, will place Canadian railways in a position to handle a volume of traffic hitherto undreamed of, more efficiently, and consequently at less cost to the public, than ever before.

Locomotive Stokers for G.T.R.—In reference to the announcement in Canadian Railway and Marine World for Dec., 1922, pg. 600, that the G.T.R. had ordered 12 Elvin mechanical stokers, to be applied to mikado locomotives, we are advised that they will be built by Montreal Locomotive Works.

Railway Rolling Stock Orders and Deliveries.

Abitibi Ry. & Navigation Co., Iroquois Falls, Ont., has bought a small Shay locomotive from Lima Locomotive Works, Lima, Ohio.

St. Marys Cement Co., St. Marys, Ont., has ordered one 4-wheel switching locomotive, type 0-4-0-T, from Montreal Locomotive Works. Following are chief details:—

Gauge	36 in.
Weight, total	28,800 lb.
Wheel base	4½ ft.
Cylinders, diar. and stroke	9 x 14 in.
Driving wheel, diar.	27 in.
Driving journals	4¼ x 6 in.
Boiler, type	Straight top
Boiler, diar. first ring outside	29½ in.
Boiler, pressure	175 lb.
Firebox, length and width	30½ x 26 in.
Tubes, no. and diar.	48—2 in.
Heating surface tubes	191 sq. ft.
Heating surface, firebox	26.5 sq. ft.
Heating surface, total	217.5 sq. ft.
Grate area	5.5 sq. ft.
Tractive power	6,250 lb.
Factor of adhesion	4.6
Tank type	Saddle
Capacity, water	600 gals.
Capacity, fuel	475 lb.

Canadian Car & Foundry Co.'s report for the year ended Sept. 30, 1922, issued recently, contains the following paragraph:—"Traffic on Canadian railways is now showing signs of substantial improvement. The movement of the large crop seriously taxed their resources, and this, together with the general improvement in business, has emphasized the need for additional rolling stock of all kinds. The uncertain position of the Canadian National Rys. has now been clarified by the conclusion of litigation between the Government and the G.T.R., and by the definite constitution of a board of directors controlling the combined national systems, under the authority of a distinguished railway administrator as chairman. It is hoped that early action will now be taken to provide the large renewals of rolling stock and motive power which the Canadian railways will undoubtedly require."

Abitibi Ry. & Navigation Co. has bought 100 flat cars from Canadian Equipment Co. They were built up from second-hand trucks, etc., with entirely new woodwork throughout, and will be used by the company for logging operations. They are built to M.C.B. and Interstate Commerce Commission standards, and are equipped with U.S. safety appliances, latest improved drop brake staff, etc. Side sills are bored for automatic trip stake pockets, which will be applied by the owner. Following are the chief dimensions:

Length over end sills	41 ft.
Length over striking plates	42 ft.
Width over decking	9 ft. 4 in.
Side sills	5 x 12 in.
Intermediate and center sills	5 x 9 in.
End sills	8 x 10 in.
Draft rigging	Miner
Coupler	M.C.B. automatic
Body and truck bolsters	Steel
Coil springs	8 per truck
Journal boxes	McCord
Journals	5 x 9 in.
Wheels, type and diar.	M.C.B. 33 in.
Brake beams	Metal inside hung
Weight	28,500 lb.
Capacity	80,000 lb.
Air brakes	Westinghouse or New York

Canadian National Railways Rolling Stock, Etc.

The Grand Trunk Railway management, some two or three months ago, invited tenders for rolling stock, but they were not acted on, and were allowed to lapse, probably because no appropriation had been provided. Following the appointment of the Canadian National Rys.' new directorate, headed by Sir

Henry Thornton, it was decided to consolidate the Canadian National Rys. and the G.T.R. requirements, and, late in November, R. C. Vaughan, Vice President, Purchasing, Supplies and Stores Department, Canadian National Rys., invited tenders for the following rolling stock and work equipment, to be sent in by Dec. 14:—

Locomotives: 40 Santa Fe, about 69,600 lb. tractive power; 8 mikado, about 54,600 lb. tractive power; 16 mountain, about 49,600 lb. tractive power; 5 eight-wheel transfer; 3 six-wheel switching.

Passenger cars: 20 standard steel sleeping; 35 standard steel first class; 8 steel underframe first class; 10 steel mail; 30 steel baggage; 50 steel underframe express.

Freight cars: 100 freight refrigerator; 2,000 box, 40-ton; 1,250 stock; 100 hopper; 800 automobile; 100 general service, 50-ton; 50 caboose; 276 coal car bodies.

Work equipment: 100 ballast cars; 2 snow ploughs; 3 locomotive cranes, 15 to 20-ton, with pile drivers and leads; 2 locomotive cranes, 20-ton, without pile drivers and leads; 1 railway ditcher; 6 air dump cars, 10 to 12 yards capacity; 2 pile drivers; 2 wrecking cranes, 160 tons; 1 wrecking crane, 120 tons; 4 spreaders, with ditching attachment.

The specifications for the foregoing were prepared jointly by the Canadian National and the G.T.R. Mechanical Departments' officials.

An Ottawa press dispatch of December 21, stated that orders had been given for the locomotives, and that the cars would be ordered the following week. At the time of writing (Dec. 22), we are officially advised that no orders have been placed for any of the rolling stock for which tenders were invited, but that the matter will probably be dealt with between Christmas and the New Year, after Sir Henry Thornton returns to Ottawa from the United States.

Railway Lands Patented.—Letters patent were issued during Nov., 1922, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:

	Acres
Canadian Northern Ry.	34.53
Canadian Pacific Ry. grants	1,115.03
Canadian Pacific Ry. roadbed and station grounds	22.81
Grand Trunk Pacific Ry.	12.20
Grand Trunk Pacific Branch Lines Co.	68.09

Total 1,252.16

Industrial and Logging Railways in British Columbia.—The British Columbia Minister of Railways' annual report for the year ended Dec. 31, 1921, shows that there were being operated within the province 83 logging and industrial railways, with a total length of 558.45 miles. The rolling stock used consisted of 161 steam, 27 electric, and 13 air locomotives; 9 gas driven cars, and 2,997 cars of all kinds.

Buffalo & Fort Erie Bridge Co.—The Dominion Parliament will be asked to incorporate a company with this title to build a bridge across the Niagara River for pedestrians, vehicles, carriages, electric cars, and for any other like purposes, with approaches from near Walnut St., Fort Erie, Ont., to near Hampshire St., Buffalo, N.Y. German & Brooks, Welland, Ont., are solicitors for applicants.

Sir Henry Thornton's Assumption of Office, and his Activities.

As stated in Canadian Railway and Marine World for Dec., 1922, Sir Henry W. Thornton, K.B.E., President, Canadian National Rys., arrived in New York from England on Nov. 28, being met by Hon. G. P. Graham, acting Minister of Railways and Canals, and Major Graham A. Bell, C.M.G., Deputy Minister of Railways and Canals, and Vice President Canadian National Rys. From New York he went direct to Ottawa, via Valleyfield and Coteau Jct., on G.T.R. business car Bonaventure, accompanied by Major Bell, arriving on Dec. 1, and being received by one of the Governor General's A.D.C.'s and some Railway and Canals Department's officials. He proceeded at once to the temporary offices secured for him at 122 Bank St., on the sixth floor of the Jackson Building, where a small clerical staff had been provided for him, and where R. A. C. Henry and V. I. Smart, of the Department's technical staff, had been transferred to for special service.

One of his first official acts, on Dec. 2, was to have a conference with S. J. Hungerford, Vice President and General Manager, Canadian National Rys., who went from Toronto for that purpose. On Dec. 4 he had a conference with the Prime Minister, and in the evening spoke at a dinner given by the Government to the U.S. Postmaster General and other delegates attending the postal conference between Canadian and U.S. officials.

He arrived at Montreal early on the morning of Dec. 5, accompanied by Major Bell, and made an inspection of the G.T.R. terminals, including Bonaventure station, Turcot and Southwark yards and Point St. Charles shops, on which he was accompanied by the following G.T.R. officials: W. D. Robb, Vice President and General Manager; J. E. Dalrymple, Vice President of Traffic; Major F. L. C. Bond, Chief Engineer; J. C. Garden, General Superintendent, Motive Power and Car Department; W. R. Davidson, General Superintendent, Eastern Lines; and R. Gilmour, Superintendent, Montreal Terminals. Sir Henry and a number of G.T.R. and Canadian National Rys. officials were entertained by Mr. Robb at luncheon at the St. James Club, after which Sir Henry had a number of conferences with officials and others and in the evening he attended the Montreal Board of Trade's dinner, an extended report of his speech at which is given on pgs. 17 to 20 of this issue. He returned to Ottawa that night.

Sir Henry left Ottawa by the Canadian National afternoon train on Dec. 8, accompanied by the following C.N.R. officials: S. J. Hungerford, Vice President and General Manager; W. A. Kingsland, General Manager, Eastern Lines; H. T. Hazen, Chief Engineer, Canadian Northern Eastern Lines; W. R. Devenish, General Superintendent, Ontario District; G. P. MacLaren, Engineer of Maintenance, Ontario District; W. R. Kelly, Superintendent, Ottawa Division; S. McIlwain, Ottawa Division Engineer, and R. A. C. Henry of the Railways and Canals Department. On Dec. 9 he met a number of C.N.R. officials in the morning, at the head office, 1 Toronto St., and was the principal guest at one of the frequent luncheons given by Lieut.-Governor Cockshutt, at Government House, to business men from various parts of the province, at which he spoke. In the afternoon he visited the C.N.R. shops at

Leaside, and afterwards conferred further with C.N.R. officials. In the evening he dined with Mr. Hungerford and other C.N.R. officials at the Toronto Club.

On Dec. 10 he went to Stratford, to see Hon. W. C. Kennedy, Minister of Railways and Canals, who was convalescing there after his severe illness, and he then returned to Toronto. On Dec. 11 he received a deputation in the morning from the Toronto Board of Trade, which urged the selection of Toronto for headquarters for the final co-ordinated Canadian National System, and then inspected the new union station and adjoining terminals. He was entertained at luncheon by the Empire Club, the attendance being the largest in its history. In the course of his speech, he stated that he intended to have a study made of Ontario's water powers, with a view to their use for railway electrification, etc. In the afternoon he left for Belleville, Ont., where he attended a dinner given by the city to W. D. Robb, Vice President and General Manager, G.T.R., and was one of the speakers.

Sir Henry started his inspection of some of the Quebec, and of the Maritime Provinces lines on Dec. 12, when he left Montreal at 9 a.m., accompanied by Major Bell and Gerard Ruel, director and General Counsel, Canadian National Rys. Of the other directors, E. R. Decary joined him at Quebec and accompanied him east, and on the return trip as far as Moncton, and J. H. Sinclair, of New Glasgow, accompanied him from Halifax to Campbellton, N.B. The following C.N.R. officials were in the party: S. J. Hungerford, Vice President and General Manager; C. A. Hayes, Vice President, Traffic Department; M. H. MacLeod, Vice President, Construction Department; R. C. Vaughan, Vice President, Purchasing, Supplies and Stores Department; C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance Departments; G. E. Smart, Mechanical Assistant, Car Department, to Vice President, Operation and Maintenance Departments; W. A. Kingsland, General Manager, Eastern Lines; L. S. Brown, Assistant General Manager, Eastern Lines; A. F. Stewart, Chief Engineer, Canadian Government Rys. east of Armstrong, Ont.; W. U. Appleton, General Superintendent of Rolling Stock, Eastern Lines, and F. B. Tapley, Engineer of Maintenance of Way, Canadian Government Rys. east of Armstrong, Ont. The following G.T.R. officials were in the party: W. D. Robb, Vice President and General Manager; J. A. Yates, Treasurer, and J. C. Garden, General Superintendent, Motive Power and Car Departments. Major F. L. C. Bond, Chief Engineer, joined the party at St. John, N.B. The party travelled by special train, comprising C.N.R. business car 73, for the President; G.T.R. business car Ontario, for Major Graham Bell; C.N.R. business cars 51 and Kaien; G.T.R. business cars Ottawa and Quinte, and a compartment observation car. The party was accompanied by the general superintendents, district engineers and master mechanics over their respective districts, and by the superintendents, assistant superintendents, assistant master mechanics, bridge and building masters and roadmasters over their respective jurisdictions.

Short stops were made, on the way

east, at West Jct. and Riviere du Loup, Que., and Moncton, N.B. A stop of a little over an hour was made on Dec. 13 at Amherst, N.S., where the Maritime winter fair was in progress, and where Sir Henry addressed an audience of over 1,000 in the armories. After a short stop at Truro, N.S., Halifax was reached on the same afternoon, and Sir Henry spoke in the evening at a dinner given by the city council and board of trade, and next morning the terminal facilities, etc., were inspected and deputations were received from the city council and board of trade, and also from Dartmouth. Sydney, N.S., was reached on Dec. 15, at 2.30 a.m., and after the deputations from the Sydney and North Sydney boards of trade, and a delegation from Sydney Mines, had been received, was left again at 9.55 a.m. New Glasgow was reached at 6.15 p.m., where a dinner given by the business men was attended, and the party started again at 11.05 p.m., proceeding to Prince Edward Island. Charlottetown was reached on Dec. 16, at 9.30 a.m., and was left again at 2.10 p.m., after a board of trade luncheon had been attended. Moncton was reached on Dec. 16, at 9.30 p.m., where a dinner given by the board of trade, in connection with the 50th anniversary of the opening of the Intercolonial Ry., was attended, at which Lieut.-Governor Pugsley urged that the portions of the G.T.R. outside of Canada should be got rid of. Next morning, the general offices, shops, and other terminal facilities were inspected, and St. John was reached that evening. The St. John terminals, etc., were inspected on the morning of Dec. 18, and delegates were received from the city council and board of trade, to whom Sir Henry, in replying to Lieut.-Governor Pugsley's suggestion at Moncton, said he did not think it necessary or advisable to get rid of the G.T.R. lines in the U.S. He then spoke at the Canadian Club's luncheon, left St. John at 2 p.m., reached Fredericton at 5 p.m., and after addressing the civic club there, left at 10.40 p.m. An hour's stop was made at Bathurst, N.B., on Dec. 19, when a deputation from the board of trade was received. A similar stop was made at Mont Joli, Que., and a short one at Rimouski, Que., where the mayor and the president of the board of trade were received, Quebec being reached at 10.50 p.m. On the morning of Dec. 20, Sir Henry conferred with the harbor commissioners, inspected the terminals, and then spoke at a board of trade luncheon, leaving at 2.59 p.m., and reaching Montreal at 7.35 p.m., where the party dispersed, Sir Henry leaving for Ottawa at midnight. He left there again on Dec. 21 for the United States, owing to his mother-in-law's serious illness, expecting to return Dec. 26.

It is probable that Sir Henry, Major Bell and other officials will leave Ottawa, about Jan. 8, for an inspection trip of the Pacific coast.

Radiophone Operation of Railways.—Daily press reports stated recently that the Michigan Central Rd. was about to experiment on its Canadian lines with a system of operating trains by radiophone; that the first train to be so equipped would be run in January, and that if successful the system would be adopted generally on the company's lines. We are officially advised that there is nothing in the report.

Report on Possible Timiskaming & Northern Ontario Railway Electricification.

S. B. Clement, Chief Engineer, T. & N.O.R., North Bay, and J. G. G. Kerry, M.Sc., Consulting Engineer, T. & N.O.R., Toronto, were instructed by the Ontario Government, in Dec., 1921, to investigate and report on the advisability of electrifying the T. & N. O. Ry., with particular reference to sources of hydro-electric power available for the undertaking. A. L. Mudge was appointed as special electrical engineer, and A. T. McMaster as special hydraulic engineer. Messrs. Clement and Kerry presented their report recently, recommending a 3,000 volt d.c. system, as follows:—

"We recommend electrification as a reliable and economical system of operation for the main line, for the Iroquois Falls and Porcupine Branches, and for other branch lines where the traffic has been sufficiently developed to justify the additional capital investment involved. We recommend electrification of the main line from North Bay to Cochrane (252.3 miles), and of the Iroquois Falls Subdivision (7 miles), and Porcupine Subdivision (33.1 miles), as providing a sound and self-supporting investment for the capital funds of the province in a further development and upbuilding of northern Ontario. We recommend that the commission take immediate steps to secure title, and control, of the water powers on the Amable du Fond, Blanche and Frederickhouse Rivers, referred to in the accompanying estimates. We recommend that after title to these water powers has been secured, opportunity should be given to the companies operating power plants in the district, such as Riordan Co., Northern Ontario Light & Power Co., Abitibi Power & Paper Co., Northern Canada Power Co. and others, to tender on supply of electric power for the commission. Comparison of such tenders with our final estimates of the cost of producing power from plants to be built by the commission, will determine how maximum economy in power cost can best be obtained. In any case, it would be desirable to establish connections with the power plants already in the district, for mutual assistance in cases of failure of any of the sources of power supply. Our estimates, however, do not include any specific amounts to cover the cost of making such connections. We recommend that the study of detail engineering questions be continued, and plans and specifications for electrification and for power development be completed, so that actual tenders for all the work involved may be obtained.

"From the standpoint of maintenance and transportation, the operation of the commission's railway, by the use of transmitted electric power, will prove to be entirely reliable and satisfactory, and will result in certain distinct advantages over steam operation, particularly in winter. This opinion is based on information received from officials of railways now operated by electricity, and has been verified by our examination of these railway electrifications."

In support of the foregoing recommendations, the report stated that while traffic on the T. & N.O.R. is relatively light, the opportunity to secure a power supply at low cost is exceptional, and tends to offset the effect of light traffic. The estimate of water power development capital cost was as follows: Frederickhouse River development, 50 ft.

head, 9,000 installed turbine h.p., \$1,000,157; Blanche River development, 115 ft. head, 7,000 installed turbine h.p., \$863,440; Amable du Fond River development, 130 ft. head, 9,000 installed turbine h.p., \$935,481; 100 miles of 66,000 volt feeder transmission line at \$4,300 a mile, \$430,000; total cost generating stations and high tension feeder transmission line, \$3,229,078.

The estimated cost of electrifying the line to give it a capacity to handle the expected 1925 traffic, calculated at 25% greater than that handled in 1921, was reported as follows: Railway transmission system, 312 miles of 66,000 volt line, \$1,279,200; railway substations, 7-1,500 k.w. automatic, \$735,000; 2-1,500 k.w. hand, \$190,000; 1-3,000 k.w. hand, \$165,000; 1-1,500 k.w. portable, on 2 cars, \$90,000; power indicating and lim-

Location of Water Power Sites, Substation Sites and Transmission Lines, for T. & N. O. Ry. Electrification.

iting device, \$62,500; 3,000 volt d.c. power distributing system, overhead feeders and bonding, 410 miles, \$2,740,000; twelve 150-ton freight locomotives, \$1,800,000; five 150-ton passenger locomotives, \$750,000; nine 80-ton switching locomotives, \$774,000; 10 heater cabs, 43 tons, light, \$275,000; gasoline motor repair car for overhead work, \$25,000; cost of power development as estimated above, \$3,229,078; less salvage value of released steam equipment, \$900,000; total cost, \$11,214,778.

The report compared the actual cost of operation in 1921, with steam locomotives, with the estimated cost of operation with electric locomotives, those items affected by the type of power used comparing as follows:—A., with steam power: Water station maintenance, \$11,375; fuel station maintenance, \$2,495;

water, \$31,947; locomotive repairs, \$307,103; locomotive house expense, \$141,985; locomotive depreciation, \$21,288; fuel for locomotives, \$817,845; hire of freight cars for transporting locomotive fuel, \$13,133; transportation of locomotive fuel on T. & N. O. R., \$466,567; total, \$1,413,378. B., with electric power: Water, \$250; transmission line maintenance, \$24,960; substation operation, \$37,000; substation maintenance, \$12,500; power distribution system maintenance, \$63,000; locomotive repairs, \$167,130; locomotive house expense, \$37,140; locomotive depreciation, \$60,480; electric power supply, operation and maintenance, \$96,872; coal for heating passenger cars, \$13,000; heating tenders, repairs and maintenance, \$18,500; wages, heater tender firemen, \$16,650; heater tender depreciation, \$5,500; total, \$552,982. Balance in favor of electrical operation, \$860,936; capital cost of electrification, \$10,914,778, this being \$300,000 less than above estimate for 1925 traffic, on account of two less freight locomotives being required; rate of interest earned on investment, 7.89%.

The report then compared the costs of operation on the basis of the supposed 1925 traffic, and found a saving of \$1,049,596 in favor of electrical operation, or at the rate of 9.35% on the estimated capital cost of \$11,214,778. It then compared the costs on the basis of a traffic 50% greater than that handled in 1921, and found a saving of \$1,249,738 in favor of electric operation. On a capital cost of \$12,105,778 (the increase in capital cost being due to the acquisition of 3 more freight locomotives, 2 more passenger locomotives, 1 more switching locomotive, and 2 more heater tenders, on account of the increased traffic), that saving would represent a return of 10.31%.

The report showed the cost of coal to be a most important factor in making comparisons. Analysis showed that cost on T. & N. O. R. locomotives was \$5.12 in 1914 and \$9.49 in 1921. In the comparisons given above, coal at the 1921 cost was taken. While it is natural to assume that a decrease in its cost would be accompanied by a decrease in the costs of electrifying and electrical operation, this was not figured on by the investigators, and a comparison of steam and electric operating economy on this basis for the 1921, 1925, and 1921 plus 50%, traffic, with coal at \$7.50 a ton, showed that on the 1921 traffic the saving in favor of electrical operation would be \$631,481, or 5.79% on the investment, while on the 1925 traffic it would be \$851,798, or 7.59% on the investment, and on the 1921 plus 50% traffic it would be \$1,022,528, or 8.45% on the investment. The report stated that A. A. Cole, Mining Engineer for the commission, had been consulted concerning the possibility of using peat from the various bogs near the railway as locomotive fuel, and had advised that there is no reason to think that it could be done.

It was further pointed out that while the T. & N. O. R. locomotives now in use are modern and efficient, recent developments in locomotive design and practice indicate that a reduction of possibly 20% in fuel consumption might be made. If the improvements possible were made on the steam locomotives, at an estimated capital cost of \$300,000, the net annual saving on the basis of the estimated

1925 traffic would be \$138,068. On the other hand, however, on the testimony of officers of railways where electrification had been carried out, and on that of electrical manufacturing companies' experts, the report stated that an annual saving of \$229,837, on the basis of the 1925 traffic, could be expected from indirect economies due to electrification, and it was further stated that the two considerations, viz., the saving due to improving the steam locomotives, and the indirect economies from electrification, may be conservatively considered as offsetting each other.

Additional reasons advanced in the report for the adoption of electrical operation were as follows: Electrification will enable increased traffic to be handled with less increase in track facilities than if steam operation is continued, and will obviate the necessity of enlarging the motive power shops and ultimately removing them to a new site. Electrification, in eliminating smoke and cinders, and giving a smoother acceleration to trains, will prove attractive to tourists, and will have a very definite advertising value. It will decrease the danger from forest fires. It will release the commission from dependence upon locomotive fuel imported from the U.S., and will result in the utilization and further development of a great natural resource, the water powers of the Nipissing and Timiskaming districts, making the whole of the commission's undertaking self-contained.

The study on which the report was based included: 1, Consideration of traffic conditions and tendencies; 2, analysis of operating expenses under present steam operation; 3, examination of the more important steam railway electrifications in the U.S. and Canada, and conferences with operating and engineering officials in charge; 4, conferences with representatives of manufacturers of heavy electric railway equipment; 5, estimates of cost of installing electrical equipment of suitable type and of sufficient capacity to handle the present and estimated future traffic. These estimates were based on the 3,000 volt d.c. system for locomotive operation, but no attempt was made to come to a final decision regarding the details of electric equipment; 6, investigation of sources of hydro electric power supply; 7, estimates of construction cost and operating expenses of hydro electric power developments; 8, estimates of operating expenses under electrical operation, for comparison with operating expenses under steam operation.

It was stated that the water powers mentioned above are such that, from the standpoint of cost, they would not be considered highly desirable for general commercial use, but that they are well suited, both as to capacity and location, to serve as primary sources of electric power for T. & N. O. R. use, and the Ontario Government has been requested to make no disposition of them pending further communication from the commission.

The report made it clear that while the investigation was of a preliminary nature, the subject had been gone into thoroughly within the limits imposed by that fact, and it was recommended that further studies, embracing the numerous engineering details involved, should be undertaken.

The T. & N. O. R. Commission, in presenting the report to the Ontario Government, recommended that electrifica-

tion be postponed for the present, and was given authority by the Government to continue its investigations in the matter.

The accompanying map shows the location of proposed water power sites, substation sites, and transmission lines.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian National Rys.—A. C. CAMPBELL, heretofore of the Freight Soliciting Department, Winnipeg, has been appointed Freight Agent, Moose Jaw, Sask.

H. A. DIXON, Chief Engineer, Western Lines, Canadian National Rys., Winnipeg, has been given jurisdiction as Chief Engineer over Canadian Northern Pacific Ry. lines, T. H. WHITE, heretofore Chief Engineer, Canadian Northern Pacific Ry., at Vancouver, having relinquished those duties and been appointed Consulting Engineer.

Canadian Pacific Ry.—G. C. COCHLAN, heretofore District Freight Agent, Detroit, Mich., has been appointed District Freight Agent, Toronto, vice C. S. Morse, transferred to Ottawa.

R. J. FOORD has been appointed City Ticket Agent, Toronto, vice W. E. Underwood, appointed City Passenger Agent there.

C. S. MORSE, heretofore District Freight Agent, Toronto, has been appointed District Freight Agent, Ottawa, vice F. P. Tinker, transferred to Detroit, Mich.

F. P. TINKER, heretofore District Freight Agent, Ottawa, Ont., has been appointed District Freight Agent, Detroit, Mich., vice G. C. Cochlan, transferred to Ottawa.

W. E. UNDERWOOD, heretofore City Ticket Agent, Toronto, has been appointed City Passenger Agent, there, vice G. S. Beer, whose appointment as Assistant District Passenger Agent, Toronto, was announced in a recent issue.

Edmonton, Dunvegan & British Columbia Ry.—M. W. BOUCHER, heretofore General Locomotive Foreman, has been appointed Assistant Superintendent. Office, McLennan, Alta.

S. R. LAMB, Resident Engineer, has had his jurisdiction extended over the maintenance of way.

J. G. REID, Chief Engineer and Superintendent, E. D. & B. C. R., has resigned and taken service with the Sydney E. Junkins Co., contractors for the C.P.R. pier B.C. at Vancouver, B.C.

Grand Trunk Ry.—H. HULATT, Manager of Telegraphs, after 16 years service, has resigned to enter other business, and that position has been abolished.

J. A. CLANCY, Superintendent, Transportation, Western Lines, has been transferred from Chicago, Ill., to Detroit, Mich., with office at 400 Jefferson Ave. East.

O. F. CLARK, Car Accountant, Western Lines, has been transferred from Chicago, Ill., to Detroit, Mich., with office at Brush St. station.

T. RODGER, heretofore Superintendent of Telegraphs, Eastern Lines, has been appointed Superintendent of Telegraphs and Telephones, with jurisdiction over the entire system, and will perform the duties performed hitherto by the Manager of Telegraphs, reporting to the

Operating Manager, Montreal, and the General Manager, Western Lines, Detroit, Mich. Office, Montreal.

Michigan Central Rd.—E. L. JENNINGS has been appointed General Agent, Detroit, Mich., vice S. W. Carder, whose appointment as Assistant General Freight Agent, Buffalo, N.Y., was announced in our last issue.

W. D. McVEY, heretofore Assistant General Freight Agent, Buffalo, N.Y., has been appointed one of the three Assistant General Freight Agents at Detroit, Mich., vice E. W. Brunck, promoted.

Grain in Store at Elevators.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that for the week ended Dec. 8, 1922, the quantity of grain in store increased by: Wheat 17,965,860 bush., and oats 1,012,030; the decreases being: Barley 177,021, flax 19,541 bush., and rye 124,598.

In western country elevators decreases were shown of wheat 2,762,986 bush., and flax 42,896. The increases were: Oats 580,630 bush., barley 164,430, and rye 21,190. During the previous week, 16,787,634 bush. of all grains were received at western country elevators and 18,843,826 were shipped.

At interior terminal elevators, wheat decreased by 236,120 bush., barley 4,409, and flax 772, while oats increased 15,443 bush. The receipts during the week were 791,333 bush., and shipments, by rail, 473,057, and by ship (from Vancouver), 544,133.

The public and private terminal elevators at Fort William and Port Arthur showed increases, wheat 2,216,993 bush., oats 17,506, flax 36,129, and decreases, barley 404,440 bush., and rye 211,765. The total receipts of all grains at Fort William and Port Arthur during Nov., 1922, were 66,533,210 bush., and 8,934,165 lb. of mixed grains, and the shipments were, by rail, 1,525,506 bush.; all grains, 1,857,254 lb. of mixed grain, and by ship, 119,394,807 bush., all grains.

Winnipeg private terminal elevators showed decreases, wheat 238 bush., oats 1,705, and increase of barley, 291 bush.

Eastern public elevators showed increases, wheat 1,533,293 bush., oats 174,379, barley 14,152, and decreases, flax 12,002 bush., and rye 2,904. Receipts of all grains were, by rail, 846,750 bush., and the shipments were, by rail, 2,036,586, and by ship 795,437.

U. S. grain in store at eastern public elevators was 4,151,468 bush., compared with 3,926,302 for same period, 1921.

At Buffalo, N.Y., and Duluth, Minn., there were increases, wheat 16,675,261 bush., oats 186,078, barley 72,487, and rye 1,541.

United States Atlantic seaboard ports showed increases, wheat 539,652 bush., oats 39,699, rye 67,340, and barley a decrease of 19,532 bush.

The total amount of wheat exported during Nov., 1922, was 55,315,972 bush., compared with 29,254,036 for Nov., 1921.

Board of Railway Commissioners Examiners.—The Winnipeg Board of Trade is reported to have under consideration a proposition to ask for the appointment of four examiners, under the Board of Railway Commissioners, to investigate minor cases and report their findings to the commissioners for action. Abitibi Railway & Navigation Co. has bought 4,000 tons of relaying rails, 2,500 tons of 85 lb. and 1,500 tons of 56 lb., from Canadian Equipment Co.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Railway & Navigation Co.—We were advised recently that the grading, trestle-building, track laying and ballasting on the 16 miles standard gauge logging railway from Iroquois Falls, the terminus of a branch of the Timiskaming & Northern Ontario Ry., to Hughes, Ont., where a junction is effected with the National Transcontinental Ry., had been practically completed, and that a 5-mile spur line had been built from mile 8, into the bush. (Nov., pg. 568.)

Burrard Inlet Tunnel & Bridge Co.—A press report states that the Northern Construction Co., which has a tentative contract to build a bridge over the second narrows of Burrard Inlet at North Vancouver, reported to the directors, Dec. 7, that after having completed investigations on the site, it was prepared to go on with the work under the terms of the agreement of Sept. 26, 1922, which provides for the construction of the bridge for \$1,250,000, payable in municipally guaranteed bonds, plus \$55,261 to cover any deficiency in the price realized on the bonds being put on the market, which latter provision it proposed to abandon.

The councils of the North Vancouver City, and of North Vancouver District, were reported recently to have passed bylaws asking the ratepayers to give them authority to issue debentures to cover their respective portions of the proposed bridge, the voting to take place Dec. 20, 1922.

At the North Vancouver City Council meeting, Dec. 4, the Mayor is reported to have stated that a committee of the council had waited on the Vancouver Harbor Commission respecting elevator sites on the north shore, and received an intimation that the commission had bought about a mile of water frontage on the north shore for elevator purposes. The construction of such elevators would be of great advantage to North Vancouver, and he thought that the Harbor Commission would look favorably upon a proposition to take over the company's undertaking. (Nov., 1922, pg. 568.)

Calgary & Fernie Ry.—The Dominion Parliament is being asked to extend the time within which the company, which was incorporated some years ago, may commence and complete its authorized line of railway from Calgary, Alta., to Fernie, B.C. The company was granted an extension of time for construction in 1921, but while surveys have been made, no construction has been started.

Connors Creek Logging Railway.—A press report states that work has been started on a 7-mile logging railway from Greencourt, on the Canadian National Ry. Onoway-Whitcourt branch, into the Connors Creek district, Alberta.

Cowichan Bay Ry.—The question of a proposed grant of 600 or 700 acres of the foreshore of Cowichan Bay to the Cowichan Bay Ry. Co., was discussed recently by representatives of the company and the landowners with the British Columbia Government. H. C. Hall, K.C., for the company, contended that the projected railway would be complementary to the Canadian National Ry., that it was being promoted with the concurrence of the former directors of that railway; that it was necessary for the development of the timber resources of the district, and that its construction would

increase the value of the farm lands in the area. H. G. Lawson, on behalf of other lumbering interests, claimed that the Esquimalt & Nanaimo Ry. had to provide its own booming ground, and contended that there was nothing in the company's claims to show that the foreshore area asked for was necessary for railway purposes. Property owners argued that the construction of the railway would cut off their access to the water; that it would destroy the value of property round the bay and the lake, and that the construction of a short spur line by the Canadian National Ry. would give all the accommodation desired. The Premier stated that the matter would be given consideration, and that no hasty decision would be arrived at.

We are advised that among those interested in this railway project are H. W. Bevan, E. F. Miller, J. T. Malter, Duncan, B.C., and H. C. Hall, Victoria. A preliminary report on the projected line has been made by D. O. Lewis, Director of the Engineering Corporation, Ltd., Vancouver, and formerly Division Engineer in charge of construction on the Canadian Northern Pacific Ry. on Vancouver Island, but no surveys have been made. (Nov., 1922, pg. 568.)

Duluth to Fort William and Port Arthur.—A Duluth, Minn., press dispatch of Nov. 9, gives some further information about the projected Duluth & Ontario Ry., to which reference was made in Canadian Railway and Marine World for Nov., 1922, pg. 568. The report states that Robert Waldron is negotiating for the taking over of the old Duluth & Northern Rd., from the Weyerhaeuser interests, who bought it recently from the Alger-Smith Co., and that if the purchase is made, the Duluth & Ontario Rd. Co. will be incorporated to take over the line and extend it. The new railway would run from Duluth to Knife River, the southern terminus of the Duluth and Northern Rd., continuing along that line to its most northerly point, at mile 99, and then on to Port Arthur. (Nov., 1922, pg. 568.)

Esquimalt & Nanaimo Ry.—Work was reported as having been started recently on the construction of the northern or railway side of the Johnson St. bridge, Victoria, B.C., by the city council's workmen, under the charge of F. M. Preston, City Engineer. The old railway bridge was removed to permit the work to go on, and the railway traffic is being carried over the highway portion of the bridge. (Nov., 1922, pg. 568.)

Hudson Bay Ry.—A recent press report stated that Canadian National Ry. officials had given orders for the picking up of all unused railway material along the Hudson Bay Ry. from Pas, Man., to the Kettle River Rapids, where the track ends at present. The material was said to include a large number of ties, 80 lb. steel rails, rail fastenings, switches, telegraph wire, and other construction material. It was stated that the work was to be started at once, and that it was the Government's intention not to do any further work in the way of completing the line, between the Kettle River rapids and Port Nelson, the projected terminus on Hudson Bay. We are officially advised that the work being done consists of picking up, principally, ties and lumber, to enable it to be used before its natural life is exhausted.

Another press report quoted J. A. Campbell, Manitoba Government Commissioner for Northern Manitoba, as saying that the material collected would be used for the betterment of the line, particularly north of Pikwitonei, at about mile 214, to which point a fortnightly train is being operated. Still another report stated that the ties and other material would be used in bettering the line from Pas to mile 214, and that the 80 lb. steel rails would be used in replacing 60 lb. rails on the Canadian Northern Ry line from Hudson Bay Jct. to Pas. (Aug., pg. 409.)

Lacombe & Northwestern Ry.—A party representing the Alberta Government returned to Edmonton recently, after having made an inspection of the extension of this line from the former end of track, about 4 miles beyond Rimbey, to Headley, 12 miles. The extension just completed gives the line a total length of 49 miles from Lacombe, and opens up a good lumber and farming country. It is said to be the intention to extend the line through to Edmonton, as soon as the Government can obtain the necessary appropriations from the Legislature. (Sept., 1922, pg. 458.)

Michigan Central Rd.—A press report states that the United States Secretary of War has granted a permit to the Niagara River Bridge Co., and the Michigan Central Rd., to build a bridge across the Niagara River to replace the present cantilever bridge over the river between Niagara Falls, Ont., and Niagara Falls, N.Y. A contract is reported to have been let to the American Bridge Co., Philadelphia, Pa., for the construction of this bridge.

Michigan Central Rd.—Plans for the extension of the yards at St. Thomas, Ont., are reported to have been under discussion for some time. The work, which it is stated is estimated to cost \$500,000, involves the closing of Park Ave., in which matter Yarmouth Tp. is primarily interested. The township council refused to accede to this request, and negotiations have been going on, during which the council is stated to have suggested the erection of an overhead bridge to carry Park Ave. over the tracks, as well as other modifications of the company's plans. A deputation of Yarmouth Tp. residents protested at a recent council meeting against the proposal to erect an overhead footbridge, and asked for the erection of a bridge to carry all traffic. It was pointed out that the council passed a bylaw in 1885 authorizing the Canada Southern Ry. to build an overhead bridge at this crossing. The matter was referred to the council's solicitor. (Oct., 1922, pg. 518.)

Montreal to National Transcontinental Ry.—The Montreal Chamber of Commerce passed a resolution recently asking the Quebec Government to investigate the possibility of building a direct railway from Montreal to the National Transcontinental Ry. as a provincial enterprise. Two projects have been discussed at different times to provide this connection, but both failed. The first was through the Lake Manuan district to Parent, and the second was the North Ry., which in 1912 was authorized to build from Montreal to the National Transcontinental Ry. at the crossing of the Bell River, Que., and thence to James Bay. The right to build the Montreal-Bell River portion of the line

was bought from the promoters, together with surveys, etc., for \$250,000 in 1914.

Newfoundland Ry.—A recent press report stated that work had been started on a branch railway from near Grand Lake, mile 363.25 from St. John's, on the transinsular line, to Junction Brook, in connection with the proposed Humber River power development plant. It is stated that the branch will leave the main line about 3.5 miles east of Grand Lake station, and continue across Junction Brook. This Junction Brook, or River, carries the waters of Grand Lake and Sandy Lake into the Humber River. The report also stated that 4 pile drivers had been delivered at Grand Lake for use on the work. Other work in connection with the project is also reported to have been started at Deer Lake, about 10 miles west of Grand Lake. (Aug., 1922, pg. 440.)

North Shore Ry.—A press report states that negotiations are nearing completion for the resumption of coal mining in the Beersville district, New Brunswick, and that as a result the North Shore Ry., built in 1903 by the Beersville Coal & Ry. Co., will be re-opened. The railway passed to the North Shore Ry. Co. in 1907, and after some years of unsuccessful operation, went into the hands of a receiver. During the war period it was proposed to take up the rails and sell them at the high prices then prevailing, but this was not done, and in 1918 the railway property was sold at auction for the benefit of the creditors, and was bid in by F. S. Gage, Haverhill, Mass. G. B. Burchell, Little Bras d'Or, N.S., is reported to be interested in the present project, according to a statement credited to the New Brunswick Minister of Lands and Mines, and is negotiating for the purchase of the property. The railway extends from Adamsville Jct., on the Intercolonial Ry., 31 miles easterly from Moncton, and extends to the Beersville collieries, 8.63 miles.

The Quebec Development Co. is reported to have started work on the construction of a railway from Hebertville, mile 198 from Quebec, on the old Quebec & Lake St. John Ry., for use in the building of a dam at the Grande Descharge of Lake St. John. Contracts are reported to have been let for grading and trestle-work on the line from Hebertville to St. Joseph D'Alma, for a bridge across the Little Descharge, and for another one over a small branch of the Saguenay River, as well as for piers, foundations and other works. Arrangements are also reported as being made for contracts for the construction of the dam at the Grande Descharge. Hebertville is three miles south of Hebertville station, so that the railway will run northerly from Hebertville station to St. Joseph D'Alma, which is on the shore of the Little Descharge. Alma Island separates the outflow of Lake St. John into two branches, the Little Descharge and the Grande Descharge, which farther on becomes the Saguenay River.

The Premier of Quebec is reported to have announced, Dec. 9, that an order-in-Council had been signed ratifying a contract between the Government and the Quebec Development Co. for the building of two dams at the Grande Descharge. The first part of the project would, it was stated, be started immediately, and was expected to be completed in about three years, at a cost of about \$12,000,000. The first development is expected to produce 200,000 h.p., and

the fully completed plan is expected to produce 1,000,000 h.p. Sir William Price, Quebec, and J. B. Duke, New York, are reported as being associated with the enterprise.

Salmon River Valley.—A Prince Rupert, B.C., press report states that C. F. Caldwell, President New Alaska Mining Co. and the Portland Canal Ry. & Terminal Co., has arranged with C. A. Carlson, of the Siems-Carlson Construction Co., Spokane, Wash., to build a railway from Hyder up the Salmon River Valley. We are unable to trace a place named "Hyder," but Hydah is a stopping place on the Grand Trunk Pacific Coast Steamship route between Vancouver and Prince Rupert, at the mouth of the creek or canal, into which the Dean or Salmon River flows.

St. Francis Valley Ry. Co.—The Quebec Legislature has extended the time for the construction of the company's proposed line from Richmond or Melbourne to St. Francis du Lac, to Dec. 21, 1924, for a section of 5 miles, and to Dec. 21, 1928, for the remainder of the line. (April, 1919, pg. 191.)

Sydney & Louisburg Ry.—A press report states that re-ballasting of the Sydney & Louisburg Ry., between Sydney and Louisburg, N.S., with crushed slag has been completed.

Timiskaming & Northern Ontario Ry.—The question of the construction of a branch line from Swastika through the Kirkland Lake mining district to the Quebec border, has been discussed, and a delegation of mining men is reported to have interviewed G. W. Lee, Chairman T. & N. O. R. Commission, recently in regard to it. We are officially advised that the Commission is not doing anything in the matter at present. (Oct., 1922, pg. 518.)

Timiskaming & Northern Ontario Ry.—We are officially advised that track has been laid on 44.4 miles, from Cochrane, Ont., to the second crossing of the Abitibi River, on the 70-mile extension of the line to near Newpost on the Abitibi River, and that a considerable amount of work has been done on the remaining 26 miles. The contractors are Grant, Smith & Co. and McDonnell, Ltd. Newpost is about 115 miles from tide water near Moose Factory on James Bay, Hudson Bay, which is the final objective of the line. The T. & N. O. Ry. Commission has legislative authority to extend the line to this point, and engineering parties are reported to have been on the field locating a route. No further construction, however, can be undertaken beyond Newpost, until an order-in-Council has been passed and funds provided. We are officially advised that, while it is intended to continue with the construction of the line to James Bay, the question of calling for tenders has not been definitely decided upon. (Oct., pg. 578.)

Victoria Lumber & Manufacturing Co.—A press report states that about 40 miles of logging railway line are being built by the Victoria Logging & Manufacturing Co., in connection with its mills at Chemainus, Vancouver Island, B.C. The line under construction is to open up the Haslam Creek district, and will be tributary to Oyster Harbor, 2 miles north of Ladysmith. Grading on about 10 miles of the line is reported to have been completed, and work is in progress on bridges and the track laying. This piece of line is expected to be ready for operation in March. It is reported that another line to be built will serve a district farther south on the

Chemainus River, and that it will run by way of Copper Canyon to about 3 miles from Sahtlan station, on the Esquimalt & Nanaimo Ry.

Wigwam Pulp & Paper Co.—We are officially advised that the Canadian Pacific Ry. and the Great Northern Ry. (U.S.A.) have decided to take no action at present in connection with the proposal to build a spur line to serve a mill proposed to be erected near Elko, B.C., by the Wigwam Pulp & Paper Co. (Nov., 1922, pg. 568.)

Freight and Passenger Traffic Notes.

The building in which the C.P.R. downtown freight office is located, at the corner of Dundas and Richmond Streets, London, Ont., is reported to have been re-rented from April 1, and the C.P.R. officials expect to have to move to another building before that date.

The C.P.R. is reported to have hauled 82,262 cars of grain from western points to Fort William, Ont., between Sept. 1 and Nov. 21. The total shipment in bushels was 100,750,894, of which 96,701,456 was carried on east by water, and 4,049,237 by rail.

A London, Eng. cable, referring to the arrangement made for the removal of the embargo on the importation of Canadian cattle to Great Britain, states that it will mean the exportation from Canada of about 200,000 annually, the carrying of which will add \$2,000,000 to Canadian railways freight revenue.

Canadian railways withdrew, on Dec. 10, the requirement that freight charges to the U.S.-Canada boundary on shipments of coal and coke, be prepaid, and on Dec. 6, the Coal and Coke Association were reported in New York to have announced that arrangements had been completed to accept all shipments of coal and coke to Canadian destinations with charges collect.

Guy Tombs, transportation agent, etc., and formerly with the Canadian National Rys., is reported, in speaking at the Canadian Association of British Manufacturers' luncheon at Montreal recently, to have said, when it is considered that there are 14 passenger trains operated daily between Montreal and Ottawa, it is realized that too much money is being spent on passenger service. The equipment of transcontinental passenger trains cost in the neighborhood of \$6,000,000, which would have provided 2,000 box cars, of which he considered the railways badly in need.

The Canadian National Rys., as a result of suggestions received relative to the self-propelled car service put in operation on its Vancouver Island line between Victoria and Sooke River road, have decided to reverse the schedule, and to start the car from the latter point instead of from Victoria. The new service was put in operation Dec. 11, a double daily service being given. Cars leave Sooke River Road at 8 a.m. and 3 p.m., reaching Victoria at 9.15 a.m. and 4.15 p.m.; returning from Victoria at 10.30 a.m. and 5.30 p.m., reaching Sooke River Road at 11.48 a.m. and 6.53 p.m.

With the opening of service by the Canadian Government Merchant Marine from Halifax to the West Indies on account of close of navigation at Montreal, the general cargo rates will be reduced to the basis of 40c. per c.f., and 75c. per 100 lb. It is presumed that other lines will give similar rates.

Mainly About Railway People Throughout Canada.

H. H. Collins, cashier, G.T.R., Montreal, died there, Dec. 2, from pneumonia. He was born at Brighton, Eng., in 1865, and entered G.T.R. service in 1886, as clerk in Audit Department, Montreal. He was transferred to the Treasurer's office in 1892, and was appointed cashier, Aug. 8, 1908. His father was in G.T.R. service for several years, and is now on the superannuation list, and a son, Leslie Collins, is in the Vice President and General Manager's office. W. Collins, of the Motive Power and Car Department, is a brother.

Mrs. M. Carvell Fisher, widow of the late Capt. A. M. Fisher, R.A.M.C., who died at Ottawa, Ont., Dec. 12, from pneumonia, was the only child of Hon. F. B. Carvell, Chief Railway Commissioner for Canada.

Wm. Fulton, District Passenger Agent, C.P.R., Toronto, in addressing the Toronto Rotary Club recently, pleaded for consideration for ticket clerks, who work under great tension, and have to take the greatest care to supply correct transportation. He dealt with the C.P.R.'s extensive operations, and contended that passenger rates, which are now only slightly above pre-war levels, are very reasonable.

Capt. Thos. E. A. Hall, Division Engineer, Nipissing Division, Ontario District, Canadian National Rys., Capreol, Ont., died there, suddenly, Dec. 1. He was born at Liverpool, Eng., in 1878, and was educated there, going to South Africa to complete his course in railway engineering. He served through the South African war, came to Canada shortly after, and entered C.P.R. service as instrument man, and Resident Engineer, on the construction of the Bolton-Sudbury line, and later served in the Maintenance Department. He transferred to Canadian Northern Ry. service in 1909, and, to 1913, was Resident Engineer on the construction of the Toronto-Ottawa line, at Brighton, Ont., and from 1913 to 1915 was Division Engineer, Division F, Ottawa-Capreol Line, Canadian Northern Ry., opening up and completing construction on that division. In 1915 he went overseas as Captain in the Canadian Army Service Corps, and served throughout the war, and for some time after the signing of the armistice. As a result of his services, he suffered from heart displacement due to concussion, and was in receipt of a pension. He returned to Canada in 1919, since when he had been, to March, 1921, Division Engineer, Ottawa Division, Canadian National Rys., Ottawa, Ont.; March, 1921, to April, 1922, Division Engineer, Montreal Division, C.N.R., Montreal; and from April, 1922, until his death, Division Engineer, Nipissing Division, Ontario District, C.N.R., Capreol, Ont. He had been feeling unwell for about three months, due to war injury, and had made arrangements for three months leave to go to California for a rest, and was getting ready to take the train, when his death occurred.

D. B. Hanna, ex-President, Canadian National Rys., who left Toronto, Nov. 25, returned Dec. 14, after visiting Seattle, Wash., Victoria and Vancouver, B.C., and Winnipeg.

John Irving, formerly General Sales Agent, Nova Scotia Steel Co., died at his house in Westmount, Montreal, Dec. 8, aged 55, after an illness of about a year, during the last two months of

which he was confined to bed, first at Montreal General Hospital and then at his house. He was a son of the late Wm. Irving, an architect, who came to Canada from Edinburgh in 1885, and was born in Toronto. For several years he played in the Toronto lacrosse team. He entered the Nova Scotia Steel Co.'s service in 1898, and for some 13 years past had his headquarters in Montreal. He was a member of Ashlar Masonic Lodge, Toronto; of the St. James, Mount Royal Hunt, and Beaconsfield Golf Clubs, Montreal, and of Isleway and Red Rock Fishing Clubs. In 1904 he married Miss I. A. Kidner, of Toronto, who, with a son, aged 16, and a daughter, aged 10, survive him. His funeral at Montreal, Dec. 11, was attended by a large number of prominent railway officials and business men, the pallbearers being Brig.-Gen. Sir Alexander Bertram, of the John Bertram & Sons Co., machine tool manufacturers, etc.; W. W. Butler, President, Canadian Car & Foundry Co.; P. R. Diamond, Canadian Bronze, Ltd.; F. Gutelius; Robt. Hobson, President Steel Co. of Canada; Wm. Inglis; J. A. Kilpatrick, President, Dominion Wheel & Foundries, Ltd.; G. E. Smart, Mechanical Assistant, Car Department, to Vice President, Operating and Maintenance, Canadian National Rys.; V. G. R. Vickers, Vice President, The Holden Co.; and Thos. Watson, President, Canada Machinery Corporation.

Howard G. Kelley, formerly President, G.T.R., Montreal, has been retained as Consulting Railroad Advisor to the Joint New England Railroad Committee, which has been appointed to study and consider the railway situation in New England, in connection with amendments to the Interstate Commerce Act, and is making his headquarters in Boston, Mass. The study will include the physical condition, the operating problems, and the financial situation, and will occupy several months. Mrs. Kelley suffered severe cuts and bruises about her face, when a taxicab, in which she was riding on Sherbrooke St., Montreal, on Dec. 11, collided with an automobile truck.

W. B. Lanigan, Freight Traffic Manager, C.P.R., left Montreal, early in December, for Victoria, B.C., expecting to return about the middle of January.

R. W. Leonard, C.E., formerly Commissioner, National Transcontinental Ry., has been elected a director of Canadian Locomotive Co., Kingston, Ont., succeeding the late J. L. Whiting.

R. W. Long, Division Freight Agent, G.T.R., Toronto, addressed the Toronto Purchasing Agents' Association at its luncheon on Dec. 15, on "How freight rates are made."

Walter B. Mallon, whose appointment as Canadian Traffic Agent, Buffalo, Rochester & Pittsburgh Ry., Toronto, was announced in our last issue, was born at Rochester, N.Y., Oct. 9, 1894, and entered the company's service Jan. 15, 1917, since when he has been, to April 23, 1917, clerk, Lincoln Park, New York; and from April 23, 1917, to Oct. 1, 1922, rate clerk, Rochester, N.Y.

D. W. McDonald, Assistant Superintendent, Sydney & Louisburg Ry., Glace Bay, N.S., who had one of his legs badly mangled by a moving train at Victoria Jct., towards the end of November, is reported to be progressing satisfactorily.

C. W. Milestone, who died at Truro,

N.S., Dec. 3, aged 65, was born in the United States, of Yorkshire, Eng., parents, and came to Canada in 1882. He entered C.P.R. service in Aug., 1882, as train dispatcher at Winnipeg, and was appointed Chief Dispatcher, there in 1885, and Superintendent at Moose Jaw, Sask., in 1890, which position he held until he resigned from the service, Aug. 31, 1902. On leaving C.P.R. service, he entered the coal business in Saskatchewan, retired in 1921, and removed to Truro, N.S.

R. C. Morgan, Superintendent, Winnipeg Terminals, C.P.R., who has been on leave of absence for some months, to enable him to act as General Manager, Reid Newfoundland Co., at St. John's, Nfld., was, we were advised from there on Dec. 12, expecting to leave on Dec. 17 for either Port Arthur, Ont., or Winnipeg, to spend Christmas, and it had not been decided then whether he would return to St. John's or resume his former position at Winnipeg.

G. A. Mountain, Chief Engineer, Board of Railway Commissioners, Ottawa, has been elected President of the Civil Service Professional Institute there.

W. D. Robb, Vice President and General Manager, G.T.R., was entertained, on Dec. 10, by the City Council and Chamber of Commerce of Belleville, Ont., where he spent 13 years as Locomotive Foreman. The Mayor gave him a golden key to signify the freedom of the city, and at a dinner in the evening, the speakers, in addition to the Chamber of Commerce President, and Mr. Robb, included Sir Henry Thornton, President, and Major G. A. Bell, Vice President, Canadian National Rys., who stopped off en route from Toronto to the Maritime Provinces; Sir Joseph Flavelle, formerly Chairman of the Board of Directors, G.T.R.; W. C. Chisholm, K.C., General Solicitor, G.T.R.; and J. D. McMillan, Superintendent, Belleville Division, G.T.R.

Mrs. Stephen, widow of the late George Stephen, and mother of George Stephen, Assistant Freight Traffic Manager, C.P.R., Winnipeg, died at Outremont, Montreal, on Dec. 3.

Jas. Stewart, grain merchant, etc., Winnipeg, and also a Canadian National Rys. director, and President, Maple Leaf Milling Co., has been elected a Bank of Montreal director, succeeding the late R. B. Angus of the C.P.R. directorate.

Lady Thornton, wife of the President, Canadian National Rys., arrived at New York, Dec. 12, from England, by the s.s. Majestic, with her daughter, to join Sir Henry Thornton at Ottawa, and they left a few days later for the U.S., where Lady Thornton's mother is seriously ill.

C. S. Wainwright, whose appointment as General Agent, Freight Department, Canadian National Rys., Grand Trunk Pacific Ry., Grand Trunk Pacific Coast Steamship Co., and Grand Trunk Ry., Los Angeles, Cal., was announced in our last issue, was born at Montreal, and entered railway service in 1890, with the Montreal & Ottawa Ry., and served subsequently with the Assistant District Freight Agent, G.T.R., Toronto, National Despatch Fast Freight Line, Chicago, Ill.; and as rate clerk and chief clerk, G.T.R., Detroit, Mich., and Toledo, Ohio; Travelling Freight Agent, and Commercial Agent, Canadian National - Grand Trunk Rys., Los Angeles, Cal.

Canadian National Railways Construction, Betterments, Etc.

Dominion Atlantic Ry. Connection.—In connection with the Board of Railway Commissioners' recent order authorizing the Halifax & South Western Ry. to divert its line near mile 52.9, Middleton Subdivision, N.B., to connect with the Dominion Atlantic Ry., we were officially advised recently that the H. & S. W. Ry. connected with the D. A. Ry. at Middleton Jct., about 0.6 mile west of Middleton, with a Y connection; and that the H. & S. W. R. Port Wade Branch crossed the D. A. Ry. with a diamond crossing about 200 ft. east of Middleton Jct. switch, and connected to the west leg of the Y. The proposition approved by the Board of Railway Commissioners is to join the Port Wade Branch to the D. A. Ry. just west of the junction switch, and to eliminate the diamond crossing.

Chester Trestle Bridge.—Work on the new bridge spanning the brook leading from Mill Lake to the ocean near Chester station, mile 51, on the Halifax & South Western Ry., is reported to be proceeding. Concrete foundations have been put in. The work includes an arch over the public road leading to the lake property.

Moncton Diversion.—The cutoff between the Intercolonial main line and the St. John line at Moncton, N.B., has been completed, and has been put in operation for both passenger and freight traffic. The diversion starts from the main line about 3.5 miles west of Moncton, and connects with the line to St. John, about 2.5 miles out of Moncton.

Island Pond Yard Office.—A press report states that the new office building in the Island Pond yard, St. John, N.B., is completed. It is of frame, one story high, and is on the site of the one destroyed by fire in Jan., 1922.

Limoulo Locomotive House.—We are officially advised that work was started in Aug., 1922, on a 6-stall addition to the 15-stall locomotive house at Limoulo, Que. The addition is 100 ft. long, and is of brick construction. There is also under construction a 200-ton coaling plant, a 2-track ash track, the installing of a 150-ton Fairbanks-Morse track scale, and a new standpipe at Limoulo. The tracks in the yards are being extended and the shop and switching leads are being rearranged.

Cadorna-Chaudiere Signals.—We are officially advised that on account of the volume of traffic being moved over the Cadorna-Chaudiere section of the line in Quebec, it has been arranged to install automatic signal protection on the 11 miles of track. The installation will consist of 25 T2 D.C. signals, 74 model 12 and 13 D.C. relays, 12 tower indicators, electric locks, switch boxes and other accessories. The signal protection will be carried through existing mechanical interlockings, to which electric locking will be added. The signals will be controlled by the absolute permission scheme, in accordance with the railways' standard circuit arrangement. The installation will be made by the railways' signal and electrical department staff and will do away with the necessity of stopping trains, as at present, to take up and give back staffs under the present system of staff operation between Cadorna and Cap Rouge.

Montreal Station Staircase.—The C.N. Rys. are building a staircase from Dorchester St., Montreal, where the street

is carried across the tracks on a bridge, down to the platform level of the tunnel terminal station. Heretofore, passengers going to the station from Dorchester St., or north of that street, have had to get down to the Lagauchetiere St. level by a circuitous route, but the stairs will enable them to get to the station directly from the Dorchester St. level. The stairway is being built of steel throughout; rests of steel towers built on concrete piers, and will have a canopy roof of corrugated iron. There will be three landings, the top one being on the level of the Dorchester St. sidewalk.

Longlac-Nakina Cutoff.—The cutoff proposed to be built between the Canadian Northern Ry., at Longlac, Ont., and the National Transcontinental Ry. at Nakina, 29.4 miles, was described very fully in Canadian Railway and Marine World for December on pg. 623. Opposition to its construction developed in Quebec, and the Quebec Harbor Commissioners sent a protest to the Dominion Government, which is said to have been endorsed by some M.P.'s for that province. When returning from his Maritime Province trip recently, Sir Henry Thornton had a conference with the Harbor Commissioners in Quebec on Dec. 20, which resulted in their deciding to withdraw the protest and endorsing the proposal to build the connection. At the time of writing (Dec. 22), Canadian Railway and Marine World believes that it has been decided to proceed with construction, and that an order in council authorizing this is in process of going through at Ottawa. At the time of writing (Dec. 22), Canadian Railway and Marine World understands that the whole matter is before the Dominion Government, and the probability is that it will be decided to proceed with construction, in which case the tenders which were received up to Dec. 4, 1922, will doubtless be dealt with at an early date.

Regina Terminals.—The Board of Railway Commissioners gave a judgment recently providing for opening up Retalack St., across the Grand Trunk Pacific Ry. at Regina, Sask., the cost of construction and maintenance to be borne by the city. The Chief Commissioner pointed out that the G. T. P. Ry. had planned for the erection of terminal facilities, including a station and a hotel at the point, and a highway crossing so close thereto would have been an element of danger. The G. T. P. Ry. had become a part of the Canadian National Rys. system, and the whole terminal project had fallen through, changing the situation entirely. In all probability the particular track to be crossed would be nothing more than a siding. Under these circumstances, there was no reason why the highway should not be extended across the railway track at the city's expense.

Drumheller C.P.R. Connection.—The Board of Railway Commissioners approved recently of the C.N.R. completed plan, showing proposed C.P.R. connection and transfer track at Drumheller, Alta., and has ordered that, pending its building, the C.P.R. may use the North American Collieries' spur as a connection with the Canadian National Rys. up to and including Jan. 1, 1923. The whole of the work to be completed at the C.P.R.'s expense by Jan. 1, 1923.

Red Deer Extension.—The Board of Railway Commissioners has authorized

the opening for traffic of the line from the junction with the Brazeau subdivision, mile 60, to Red Deer, between miles 0 and 6.1, and also the west leg of the Y. at the junction with the Brazeau subdivision. The Brazeau line extends from Warden to Brazeau, 173.6 miles, and the line into Red Deer branches off just west of Burbank, mile 58.9.

Brazeau Subdivision Bridge.—Tenders were received to Dec. 13, for the excavation of a rock cut of approximately 19,000 cubic yards adjoining the bridge at mile 157.3, Brazeau Subdivision, Alberta District, and the placing of the material excavated to form a rock dyke across the adjacent ravine.

Jasper and Lucerne Division Points.—We were officially advised recently that no decision had been reached as to the consolidation of the divisional terminals at Jasper and Lucerne, at one of these places. Jasper and Lucerne are divisional points on the Grand Trunk Pacific Ry. and the Canadian Northern Ry., respectively, and are both located on the joint section between Lobstick Jct. and Red Pass Jct., between which a joint line was established during the war period, the rails released being shipped to France. The reason for the proposed consolidation of these two terminals into one is to reduce operating expenses and to facilitate operation. The facilities at both of these points consist of locomotive house, the usual locomotive facilities and tracks, station buildings and four or five yard tracks.

Kyax Bridge.—We are officially advised that tenders received recently for a bridge foundation and rock filling at the crossing of the Kyax River, mile 1,713.2, Skeena Subdivision, Grand Trunk Pacific Ry., near Prince Rupert, B.C., have not been acted upon. Additional information is being gathered, which will probably affect the present plans, and it is likely that tenders will be asked again next spring.

British Columbia Terminal Expenditures.—A recent Victoria, B.C., press report stated that the British Columbia Government had passed orders in council for the payment out of the terminals guaranteed bonds, of \$18,912.46, for work on the Canadian National Rys. terminals in Vancouver. The sums paid for work done on the several terminals out of the proceeds of the guaranteed bond issue to date are, therefore, now as follows: Vancouver, \$4,015,666; New Westminster, \$1,842,106; Port Mann, \$1,187,715; Steveston, \$290,183; Patricia Bay, \$206,687; Victoria, \$412,848; total, \$7,955,205. The report of the Minister of Railways for the year ended Dec. 31, 1921, recently laid before the Legislature, showed that the expenditures on the terminals at that date amounted to \$7,850,511, and that the total amount realized for the bonds amounted to \$9,043,843.12.

Michigan Central Rd. Absorption.—A St. Thomas, Ont., press dispatch of Nov. 20, said it had been announced at the C.M.R. offices there that the M.C.R., which is a subsidiary of the New York Central Lines, would be absorbed by the latter on Jan. 1, and that its name would disappear. Canadian Railway and Marine World is officially advised that the statement quoted was not made by any M.C.R. official, and that nothing is known of the matter at the M.C.R. general offices.

American Railway Association Mechanical Division Meeting and Committees.

The American Railway Association's Mechanical Division General Committee has decided not to hold the usual convention in 1923, but instead to have merely a business meeting lasting only two or three days. If this decision is adhered to, it will mean that the large meeting at Atlantic City, as held in preceding years, with the accompanying display of equipment and devices, will not take place. It is probable that the business meeting proposed will be held in Chicago or some place other than Atlantic City. The reason assigned for this action is that owing to the shopmen's strike, and the large amount of business the railways have been handling, the committee members have not had time to devote to the preparation of reports, and it is considered that the time remaining is too short to hold meetings and prepare reports in time for the usual regular convention.

The Division's officers are: Chairman, J. Coleman, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal; Vice Chairman, J. Purcell, Assistant to Vice President, Atchison, Topeka & Santa Fe Ry., Chicago, Ill.; Secretary, V. R. Hawthorne, Chicago, Ill.

In addition to the general and nominating committees, the following standing committees were appointed, and were given alphabetical designation as well as names: A, Arbitration; A-1, Prices for labor and materials; B, Autogenous and electric welding; C, Car construction; C-1, Brakes and brake equipment; C-2, Couplers and draft gears; D, Design of shops and locomotive terminals; E, Electric rolling stock; F, Loading rules; G, Locomotive and car lighting; H, Locomotive design and construction; I, Safety appliances; J, Specifications and tests for materials; K, Tank cars; L, Wheels. Those committees having a number after the designating letter are to be considered as part of the committee whose letter they bear, and the chairmen of such committees will be expected to attend meetings of the main committee.

The Division's general committee has appointed the general, nominating and

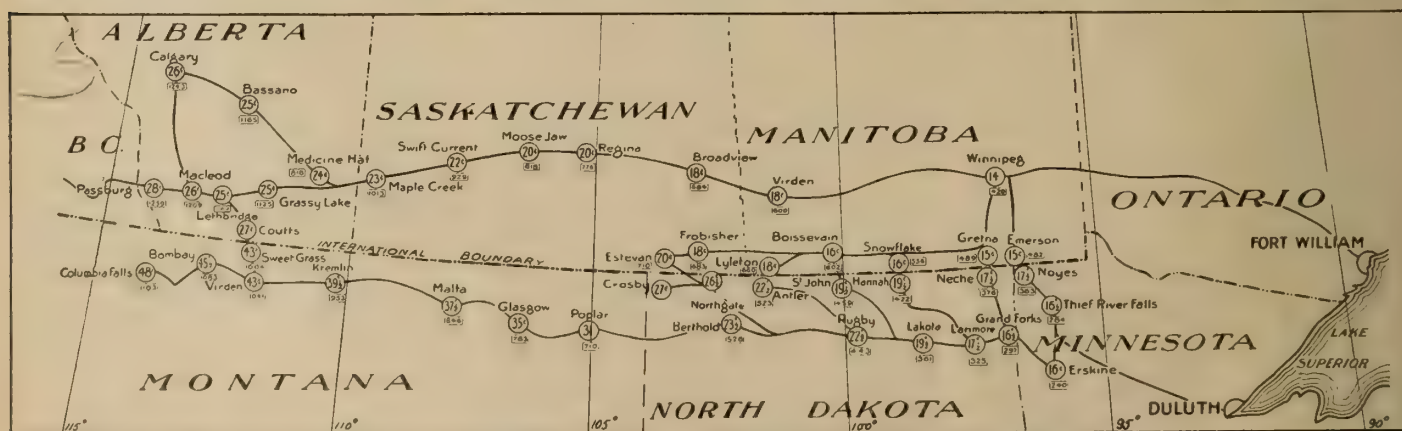

standing committees to serve until June, 1923. It reviewed the list of committees and their personnel, and in line with a suggestion by the Association's executive committee, that a careful survey be made so as to adjust the committees along the most efficient and economical lines, several committees were consolidated, others eliminated, and the personnel of others reduced. The committees on brake shoe and brake beam equipment, and trainbrake and signal equipment, were consolidated as the committee on brakes and brake equipment. The committees on car repair shop layouts, locomotive terminals design and operation, modernization of stationary boiler plants, and scheduling of equipment through repair shops, were consolidated as the committee on design of shops and locomotive terminals. The committees on locomotive headlights and classification lamps, and train lighting and equipment were consolidated as the committee on locomotive and car lighting. The committees on locomotive construction, mechanical stokers, feed water heaters for locomotives, lateral motion on locomotives, and design and maintenance of locomotive boilers, were consolidated as the committee on locomotive design and construction.

Canadian railways officials, or officials of U.S. railways having Canadian affiliations, who have been placed on the various committees, are as follows: C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, on locomotive design and construction committee; H. G. Burnham, Engineer of Tests, Northern Pacific Ry., St. Paul, Minn., on specifications and tests for materials committee; J. Coleman, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., Montreal, on general and arbitration committees; H. M. Curry, General Mechanical Superintendent, Northern Pacific Ry., St. Paul, Minn., on locomotive design and construction committee; G. Fisher, Master Car Builder, G.T.R., London, Ont., on prices for labor and materials commit-

tee; W. H. Flynn, Superintendent Motive Power, Michigan Central Rd., Detroit, Mich., on locomotive and car lighting committee; W. J. Hatch, General Air Brake Inspector, C.P.R., Montreal, on brakes and brake equipment committee; E. J. Robertson, Superintendent Car Department, Minneapolis, St. Paul & Sault Ste. Marie Ry., Minneapolis, Minn., on loading rules committee; W. H. Wilson, Assistant to Vice President, Northern Pacific Ry., St. Paul, Minn., on car construction committee; W. H. Winterrowd, Chief Mechanical Engineer, C.P.R., Montreal, on general and car construction committees; L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Ry., Chicago, Ill., formerly of Canadian Northern Ry., Mechanical Department, Toronto, on general, electric rolling stock, and wheels committees.

Railway Taxation in Manitoba.—The C.P.R. Co. and the Canadian National Rys. pay taxes on their lines and other property in Manitoba to the Manitoba Government, under agreements entered into in 1917, the C.P.R. paying \$225,000 and the Canadian National \$85,000 a year. These agreements have expired, and it is reported that negotiations are in progress between the railways and the Provincial Treasurer to settle terms for new agreements. Under the act fixing taxation on railways the government is entitled to levy a tax of 3% on the gross earnings of each railway in the province, a subsection providing that on the Canadian Northern Ry. the tax is to be 2% during the life of the bonds of the line guaranteed by the province. The amount of the tax paid prior to 1917 was \$125,000 by the C.P.R. and \$65,000 by the Canadian National Rys. The railways are reported to be asking for a reduction from the amounts now paid.

The C.P.R. is stated in a Winnipeg press dispatch to have marketed 84,959,194 bush. of grain on its Western Lines from Sept. 1 to Oct. 14. During the same period, 44,817 cars were shipped equivalent to 65,219,498 bush.

A Comparison of Wheat Rates in Canada and in United States Adjoining Territories.

The map given above shows the railway charge, in cents per 100 lb., for hauling wheat from various Canadian and United States points to the head of Lake Superior, viz., Port Arthur and Fort William in Canada, and Duluth in the United States. In most cases the

mileage is shown beside the rate. In every instance the Canadian rate is much more favorable than the U.S. one. The points chosen are thoroughly representative. Any other selection would yield just as favorable a comparison for Canada. More of the U.S. wheat area lies

east than of the Canadian wheat area, and the Canadian farmer has often a much longer haul. The Canadian railways have done their share towards offsetting this natural disadvantage, as is shown clearly by the figures at different points on the map.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culation, Canadian National Newspapers and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, JANUARY, 1923.

Can Political Interference with the Canadian National Rail- ways' Management Be Prevented?

On every possible occasion since Sir Henry Thornton was appointed President of the Canadian National Rys., he has emphasized the fact that, before he accepted the position, Prime Minister King assured him that there would be no political interference with the management. He announced this in an interview he gave the press on the day of his appointment in Ottawa; in New York when en route to England; at various farewell functions at which he spoke in England; at the Montreal Board of Trade's dinner to him on Dec. 5, a full report of his speech at which is given farther on in this issue; and practically at every other place at which he has spoken, including that political hotbed, the Maritime Provinces, during his recent trip. And he has given politicians clearly to understand that while, like anyone else, they will be listened to courteously, he does not intend to be influenced by them. Canadian Railway and Marine World thinks he has acted wisely in doing so, and that he cannot reiterate too often the promise given him by the Prime Minister, and his evident intention of insisting on its fulfilment. Ordinarily, such an undertaking by a prime minister would be considered conclusive, but Sir Henry will do well to be on his guard, and to see that Mr. Mackenzie King does not deviate from his assurance. Unfortunately, the Prime Minister's record in this respect is very unsatisfactory, and it is important that Sir Henry should know of something that occurred no longer ago than in July last, when a member of the Manitoba Legislature telegraphed the Prime Minister in reference to President D. B. Hanna's decision that C.N.R. officials or employees, who became candidates for the Dominion Parliament, or a provincial legislature, should not remain in the railways' service. Mr. King replied, in part, as follows: "The control of the Canadian National Rys. is vested in a board of directors which is held responsible by the Government, as representing the people, for the management and operation of the roads. It is a fundamental principle of Government policy not to interfere, or to permit interference, with the board of directors in the discharge of its duties. The Government is therefore not in a position to say to the board of directors what, in this or in any matter, should or should not be done."

Had Mr. King stopped at that, he would have taken a perfectly proper position, but the rest of his telegram was as follows: "On the other hand, the Government does not hesitate to make known the attitude which, in its opinion, should be adopted by the board of directors of the Government railways with respect to the right of railroad workers to offer themselves for political office. As regards workers on the Government railroads, the Government would hope and expect that the same attitude would be taken in the matter of their political rights as is taken towards their employees by the privately owned railroads and in particular by the C.P.R. Co. which operates the other important railway system in the Dominion, and is the only real competitor of the Canadian National Rys. I regret that the Minister of Railways is absent from Ottawa today, which deprives me of an opportunity of immediate conference with him. I am sending

copies of your communication and this reply to the Deputy Minister of Railways with the request that its contents be communicated immediately to the Chairman of the Board of Directors of the Canadian National Rys."

Outside of the fact that Mr. King's method of dealing with the matter was most discourteous, as he at once, undoubtedly for political effect, made his telegram public, so that Mr. Hanna and other officials saw it first in the press, and before it was communicated to them officially, the position he took was a most hypocritical and unjustifiable one. First he declared that it was "a fundamental principle of Government policy not to interfere, or to permit interference, with the board of directors in the discharge of its duties," and then, in the very next sentence, he said that the Government did "not hesitate to make known the attitude which, in its opinion, should be adopted by the board of directors." That was a most glaring case of political interference, and the fact that Mr. Hanna paid no attention to the suggestion was probably one of the reasons why his services were not retained. We hope, for Sir Henry Thornton's sake, and for the Canadian National Rys.' sake, that Mr. King will not repeat the performance.

Canadian Railway and Marine World, in referring, in its Nov., 1922, issue, to attempted political interference with the C.N.R. management, absolved the respective Ministers of Railways and Canals who were in office since a government appointed board was created, viz., Dr. Reid, the late Mr. J. A. Stewart, and the present Minister, Mr. Kennedy, and said that it believed they had played the game fairly, but that some other members of the House of Commons, both Conservative and Liberal, did not. We mentioned a few of the things that we knew had occurred, including a Conservative minister's attempted interference with appointments on the Intercolonial Ry., and with Canadian Government Merchant Marine operations; a Liberal member's petty action in attempting to secure the dismissal of section laborers in Pictou County, N.S., who had voted against him; and another Liberal member's attempt to have some of his supporters appointed as gatekeepers in Cape Breton. We repeat these cases to show to what contemptible depths some politicians are prepared to go. The leopard cannot change his spots. What has been attempted in the past will no doubt be attempted again in the future, unless members of Parliament realize, as they should, that when Sir Henry Thornton put up his "No political interference" sign, he meant it to be observed, as we have no doubt whatever that he does. As a matter of fact, attempts to interfere with the management through the Government have already been made. As stated elsewhere in this issue, the Quebec Harbor Commissioners tried to influence the Government to prevent the building of the much needed connection between the Canadian Northern Ry. at Longlac, Ont., and the National Transcontinental Ry. at Nakina, which would greatly improve the system's efficiency, and this was backed up by a number of Quebec M.P.'s; and there are evident signs that attempts are being made to influence appointments, particularly in regard to the chief position at Moncton, N.B.,

should it be decided to establish a regional headquarters there, as appears likely will be the case.

Sir Henry Thornton accepted his position on a solemn assurance that he would not be politically interfered with. He has a three years contract, and Canadian Railway and Marine World believes that he has the courage and determination to keep the politicians in their proper places. In doing so, he should be

heartily supported by the people as a whole, and by the press, which should expose and condemn every attempt at political interference which may come to its notice. Canadian Railway and Marine World invites any of its readers, who learn of such attempts, to send it the facts, and assures them that their communications will, so far as their names, etc., are concerned, be treated as absolutely confidential.

Railway Freight Traffic and Equipment.

The usual seasonal increase in railway freight traffic which takes place every autumn was emphasized more than usual in both Canada and the U.S. in 1922, due to the extraordinarily large agricultural production in both countries, and to the greatly improved tone in general business and trade conditions. An examination into the traffic handled by the railways, and the adequacy or inadequacy of the equipment with which they handled it, will be of interest and value as indicating the future traffic trend and the extent of the requirement for enlarged facilities.

Unfortunately, the Railway Association of Canada does not publish a statement of the number of cars loaded with revenue freight, and immediate information concerning traffic conditions, necessarily of a general nature, must be derived from an acquaintance with conditions in the railway industry, while more specific information cannot be obtained till about two months after the termination of any period under review, from statistics published by the Dominion Government. The Railway Association, however, issues a statement of car surpluses and shortages which is of value in showing how railways are meeting the traffic demands. The Association reported that on Sept. 1, 1922, there was a surplus of 15,871 freight cars on Canadian lines. On Sept. 15, this had been reduced to 3,868. On Oct. 1, the surplus had been replaced by a shortage of 7,667 cars; on Oct. 15, the shortage was 7,914; on Nov. 1 it was 7,967; by Nov. 15 it was 10,193, and on Dec. 1 it had been reduced to 6,923. Latest reports on the situation show that while there has been in the immediate past a good deal of shortage in various localities, in the main the demand for cars is now being met, and it is probable that with the termination of the most intensive portion of the crop movement, the railways are now able to adequately cope with the demand for freight transportation.

In the U.S. there was no car shortage on Sept. 2. On Sept. 9 there was a shortage of 15,000 cars. At the end of the following week, there were demands for 62,937 more freight cars than the railways could meet. The shortage increased rapidly, until on Oct. 14 there were 156,309 requisitions for cars that could not be filled. The figure remained about constant till Nov. 4, when the shortage was reported as 175,500, and at Nov. 11 it was 174,498. Some decrease took place during the following week, and at Nov. 18 the shortage was 158,236. Further improvement in the following week brought the figure down to 152,565, and since then conditions have further improved. The shortage is accounted for by the large car loading which the U.S. lines experienced. From the beginning of the week ended Sept. 2 to the end of the week ended Nov. 25, 1922, there were 12,515,136 cars loaded

with revenue freight on U.S. lines, compared with 10,995,450 in the same period of 1921, and 12,392,911 in the same period in 1920. These large car shortages have always characterized periods of good business in the U.S., since the railway business became really established in that country, and although the shopmen's strike prevented U.S. lines from getting their equipment into as good condition to meet the autumn "rush" as they otherwise would have done, there is no doubt that a large car shortage would have been experienced even if there had been no strike.

Examination into the causes of the car shortage in Canada show that it was not due at all to an unduly large proportion of the freight equipment being in bad order. It has been ruled by the American Railway Association that if a railway can keep 93% of its freight cars in good operating condition, it is doing about all that can be expected in this direction, but the Canadian railways have done better than this standard requires, as is evidenced by the fact that on Oct. 1 the percentage of bad order cars on Canadian lines was 7.03, on Nov. 1 but 6.1, and on Dec. 1 but 5.2. A contributing reason for the shortage of cars on Canadian lines has been the much larger number of Canadian cars on U.S. lines than of U.S. cars on Canadian lines, but, as was pointed out in an analysis of this matter in Canadian Railway and Marine World for Dec., 1922, pg. 620, this is a natural condition, due to traffic currents and the nature of commodities shipped, and therefore a difficult condition to change. It would seem, therefore, that the greatest contributing cause of the car shortage which has been experienced in Canada has been insufficient equipment to meet the country's transportation needs. No shipper of freight has to be told about the loss and inconvenience which car shortage causes. When cars become scarce, freight rates immediately become a second consideration, and the ability to get the cars needed becomes of prime importance. A lack of transportation quickly clogs the industrial machine, and places a great barrier in the way of carrying on efficient and profitable commercial operations.

U.S. railways, during the past year, have placed orders for freight equipment which are larger than have been placed for years. Presumably, their officers recognize that the great industrial activity which has been looked for since the war's termination is about to begin in real earnest, and they, as a matter of good business, are preparing to handle the heavy traffic which will inevitably accompany it. If our hopes and expectations concerning Canada's commercial and industrial future are to be realized in appreciable degree, and if Canada's population increases in anything like the way in which the ambitious plans for immigration now being discussed would

lead one to believe it is going to increase, there is no doubt that a vastly increased freight traffic will have to be handled by the Canadian railways, for the reason that freight traffic increases proportionately much faster than population. It is reasonable to believe that Canadian railways, like U.S. railways, should prepare to handle the heavy traffic which they can logically expect in the near future, and the enquiries for equipment put out by the Canadian National Rys., as stated elsewhere in this issue, show that the C.N.R. management recognizes the correctness of that proposition.

"A Serious Charge Against a Canadian National Railways Director."

Canadian Railway and Marine World for Dec., 1922, referred to a charge made by Sir Henry Drayton, M.P., at Carleton Place, Ont., during the Lanark County election, to the effect that F. G. Dawson, of Prince Rupert, B.C., who was appointed a member of the Canadian National Rys.' directorate, by the Dominion Government, was a bootlegger on a large scale, and was spoken of by members of his own party as "the king of the bootleggers," and we quoted and endorsed the demand made by the Renfrew, Ont., Mercury, a leading Liberal paper, that, if the charge was true, Mr. Dawson's resignation should be demanded. Mr. Dawson is reported, in a press dispatch, to have made the following statement at Vancouver on Dec. 11:—

"Charges reported as being made by Sir Henry Drayton that I am a bootlegger are absolutely unfounded and unwarranted, and if definite statements were made they would in my opinion be libellous. My business is wholesale grocery, and when the British Columbia Moderation Act came into force my firm were appointed distributing agents in Northern British Columbia for a Victoria brewery, to distribute beer in that territory to the Government liquor stores. Hon. H. H. Stevens, M.P. for Vancouver, made a charge in a public speech some time ago that upon an inspection made we were several hundred barrels of beer short, which evidently had been disposed of illegally. I demanded, on behalf of my firm, an investigation. The B. C. Legislature had the matter thoroughly investigated by the Chief Inspector and by the public accounts committee, who absolutely exonerated me and my firm, there being absolutely no evidence against us. This report was tabled in the Legislature. This charge was evidently made for purely political purposes in an endeavor to discredit me in the eyes of the public, in the hope that my appointment to the C.N.R. board would reflect upon the Mackenzie King Government."

Canadian Railway and Marine World, in all fairness, gives as much prominence to Mr. Dawson's denial as it did to Sir Henry Drayton's charge, and pauses to remark that Sir Henry would now appear to have the floor.

Unreliable Press Reports.—St. Thomas, Ont., is establishing an undeniable reputation for unreliable press reports, that it would be better to be without. A number of press dispatches from there recently, dealing with Canadian Pacific, Michigan Central and Pere Marquette Ry. matters, have, on enquiry from official sources, proved to be either incorrect or greatly exaggerated.

Political Attacks on the Canadian National Railways' Managements.

Very soon after D. B. Hanna and his colleagues were appointed C.N.R. directors, by the Borden Government, the then opposition members and the opposition press commenced to attack them, the attacks increasing in intensity as the last general elections approached. Mr. Mackenzie King was one of the most bitter, and was joined by others members, and would-be members, in absolutely unfounded and contemptible attacks on the directors. One of those who joined in the attacks was the present Minister of Railways, Mr. Kennedy, but it is to his credit that after he became a minister, and saw the work that was being done, and how it was being handled, he changed his views materially. Now that Mr. Hanna and his colleagues have been got rid of, and a new board, headed by Sir Henry Thornton, has been appointed, Mr. Meighen, Sir Henry Drayton and other leading Conservatives are in the firing line, and are criticising such things as the President's salary, the date from which it started, the fact that on his brief return to England to close up his affairs there he spoke at several farewell functions which were tendered him, and similarly petty things. The Prime Minister and his party press are holding up their stained hands in hypocritical horror, but it does not lie with them to complain, as the Conservatives today are simply adopting the tactics pursued by the Liberals when in opposition, though so far in a much milder manner. It is lamentable that public men, and the daily press, with very few notable exceptions, cannot deal with the Canadian National Rys. question from a non-partisan standpoint.

Canadian Railway and Marine World was in favor of Mr. Hanna's services being retained, and did not hesitate to say so, but the Government decided otherwise. Sir Henry Thornton is in no way responsible for the circumstances which led up to his appointment, it should be recognized that he is on the job to stay, and he should be heartily supported in what is undoubtedly the most difficult task he has ever undertaken. Notwithstanding the unjustifiable way in which the Liberal politicians and press treated Mr. Hanna and his colleagues, we should like to see the Conservative politicians and press take a higher stand, and not sink to the level that Mr. Mackenzie King and his followers did.

Economy from Locomotive Superheating.

The Railway Gazette, London, Eng., in discussing the matter of economy in fuel consumption derived from locomotive superheating, draws attention to a case on a leading British railway, in which a shunting tank locomotive, which was superheated, showed a saving of only 3.7% of the fuel consumed over that consumed by a non-superheated locomotive of the same class, and to other cases in which locomotives doing 15 or 20 mile continuous runs showed a fuel consumption economy of 15.8, and even 18.7%, due to superheating. It is pointed out that the value of superheat is highest where locomotives are engaged in continuous runs, because if they have to stand idle a great deal, there is naturally bound to be a great loss in superheat, and a corresponding de-

crease in fuel economy. This is a feature of the superheating question which, to our knowledge, has not received much attention or discussion, but from the results of tests as quoted above, and from consideration of the conditions in practice, it appears evident that, while superheating will make any locomotive a more efficient and economical machine, the best results may be expected when the locomotives are operated on long runs with few stops. A further argument for reducing to a minimum the number of stops by trains is thus introduced, as in addition to fuel losses caused by accelerating, a further loss of economy is caused through the drop in superheat during the period of the locomotive's inactivity.

Sir Henry Thornton at Work.

Sir Henry Thornton has displayed unbending energy in the month that has elapsed since he arrived in Ottawa to take up his work as President of the Canadian National Rys. In addition to numerous conferences with other officers and officials, at Ottawa, and at the Canadian National and Grand Trunk headquarters, he has inspected a very large portion of the eastern lines, has met a great number of the public, and has addressed a much larger number. His first speech, at the Montreal Board of Trade's dinner, was a notable one, made before a record audience, the attendance at the Empire Club's luncheon in Toronto being but little behind it, and he was heard by a still larger number at Amherst, N.S., and by smaller gatherings at many Maritime Provinces' points and in Quebec City.

It has been suggested that it might have been better for Sir Henry to have delayed speaking until he had some definite announcements to make, but he has, and Canadian Railway and Marine World thinks, wisely, taken every opportunity of meeting the public, and telling them of the general principles on which he will proceed, and particularly of his determination that there shall be no political interference. He should certainly be pleased with the enthusiasm with which he has been received, and with the impression he has made.

Canadian National Railways' Headquarters.

The question of where the headquarters of the finally co-ordinated Canadian National Rys. System should be, is being treated in altogether too flippant a manner by a number of places which have no qualifications for it, and are simply making themselves ridiculous in putting forward their claims, and in taking up time in dealing with them. Halifax, Quebec, Belleville, Hamilton, and even New Westminster, have advanced claims. It is almost unnecessary to say that there are only three places that should, from a business standpoint, be considered, and so as to be absolutely impartial, we will state them in alphabetical order, which is also their geographical order from east to west, viz., Montreal, Ottawa and Toronto.

Said the President to the President.

The task allotted E. W. Beatty, K.C., President, Canadian Pacific Ry., of proposing Sir Henry Thornton's health, at the Montreal Board of Trade's dinner, was in several ways a difficult one, but he performed it with consummate skill,

and made a distinct impression at the start, when he spoke as representing the largest taxpayer in Canada, which has to contribute more than any other concern to any deficits which the Canadian National may have. His closing expression of hope that Sir Henry may be permitted to run the National System just as if he owned it himself, is undoubtedly shared by the people generally.

Make the Facts Public.

Mr. Meighen, the Opposition leader in the House of Commons, is reported to have said, in speaking at Hamilton, Ont., on Nov. 14:—"I have evidence on me that there has been political interference already in the management of the Canadian National Rys." Canadian Railway and Marine World suggests that Mr. Meighen take the public into his confidence fully, and tell them exactly what the interference he refers to consists of. Everything in the way of political interference should be exposed thoroughly, as quickly as possible, so as to deter repetitions.

Index to Canadian Railway and Marine World for 1922.

For a number of years, Canadian Railway and Marine World has published, early in each year, a very complete index to the contents of the previous year's issues, which we know has been very much appreciated by the large number of subscribers who bind the paper for reference. Owing to what we consider an arbitrary ruling of the Post Office Department, we have not been allowed to simply enclose the index as a supplement with the regular issue of the paper got out at the same time, but have had to bind it in as part of the issue, making it somewhat difficult to detach for binding with the previous year's volume.

We have therefore decided that the index for 1922, which will be published at an early date, will not be bound in as heretofore, but will be issued and mailed separately, and will only be sent to those who apply for it. Subscribers who wish to receive copies are therefore requested to advise us as early as possible, so that we may know the number that it will be necessary to print.

Rail Sawing on the C.P.R.

The C.P.R. has three rail sawing machines in operation, each having a capacity of about one track mile of rail per day of 10 hours, i.e., the machine will saw off both ends of each rail, and drill new bolt holes. The first machine to be put in operation was a semi-portable one, bought in 1902, and which has been stationed at Winnipeg ever since. The majority of rails treated by this machine have been used for branch line construction in the west. The second machine bought was installed at Angus shops, Montreal, in 1906. It is stationary, and is used principally in connection with frog shop work, to saw rails required for the manufacture of switches, frogs, and diamond crossings. In addition to this, it has sawn and redrilled a considerable mileage of relay rail for Eastern Lines branches. The third machine is portable and was built at Angus shops, Montreal, in 1907. It is mounted on a flat car and is moved from point to point as required.

Transcontinental Freight Rates Decision by Interstate Commerce Commission.

The Interstate Commerce Commission rendered a decision recently on an application filed in Aug., 1921, in which the important and far-reaching principles of the long and short haul, and water competition in its effect on rail rates, were involved. The case arose out of the application by U.S. railways having their western termini on the Pacific coast, for permission to establish lower rates to and from their Pacific coast terminals, than are in effect to and from intermediate points, on traffic having origin or destination in territory east of the Rocky Mountains, so that they would have "equality of opportunity" in competing with ships carrying similar traffic from Atlantic or Gulf of Mexico ports to Pacific coast ports via the Panama Canal. The application was, in the main, denied.

The railways concerned, including the Southern Pacific and all lines operating between Chicago, or the Missouri River, and the Pacific coast, stated in support of their application that the proposed lower rates were compelled by water competition. They contended that in no case were the proposed rates as low as water rates, but were designed to be only so much higher as to afford the railways equality of opportunity in competition with water lines, considering the additional cost of shipping by water, by reason of marine insurance, port charges, etc., and the longer time required when shipping by water. They also contended that, the proposed lower rates being compelled by water competition, the higher rates to intermediate territory would not be discriminatory or unreasonable in themselves. They further contended that their application merited relief from the long and short haul principle, as defined by statute, by reason of the water competition being actual and compelling. In connection with their application, they proposed to blanket the all-rail rates from the Atlantic seaboard to the Missouri River, on westbound movement to Pacific coast terminals.

The intermediate territory, in which the railways wished to charge higher rates than for the longer haul to and from the Pacific coast, includes such points as Spokane, Wash., Reno, Nevada, Salt Lake City, Utah, and Phoenix, Arizona, and at the hearings representatives of the cities in this territory vigorously protested against the railways' application. They were unable to see the justice of a rate system wherein they would be required to pay higher rates than charged cities on the Pacific coast, particularly when traffic westbound for the coast cities passed through the intermediate territory. They contended that if the rates as proposed by the railways for the Pacific coast cities were to be considered by the Commission as fair and just, the higher rates which they would have to pay on the shorter haul would be exorbitant. The Pacific coast interests supported the application, contending that the coast cities' advantageous geographical location would be only properly reflected in the establishment of terminal rates which would be on a competitive basis with the rates charged for water carriage via the Panama Canal.

Steamship interests having ships in the trade between the Atlantic and Gulf of Mexico ports and the Pacific ports

opposed the application, urging that shipowners must depend for their economic existence on the comparatively small amount of business originating at, and destined to, points on or near the coasts, while the rail lines have a monopoly of the business on the rest of the continent. They contended that if the reduced rates to and from the Pacific coast were granted the rail lines, the result would be a loss of a large portion of their traffic to the rail lines, and that the ultimate result would be a further reduction in water rates, made so as to hold the traffic to the ships, thus leaving both the rail and water lines in a worse position than ever. A good deal of the traffic going west by ship originates a considerable distance inland from the Atlantic and Gulf coasts, and eastern rail lines represented pointed out that if the reduced rates on traffic to the Pacific coast were granted, and if this resulted in a lot of traffic now going west by ship being diverted to the all-rail route, they would lose their revenue on local hauls from point of origin to the Atlantic coast and would obtain in place thereof only a division of the low rate to the Pacific coast terminal. Generally, however, the eastern rail carriers were ready to join with the western lines in making the proposed rate reductions effective.

Examination into the history of the case discloses that, until March 15, 1918, lower rates to the Pacific coast than to intermediate territory were allowed. On that date, due to the prevalence of high water rates, occasioned by the scarcity of shipping, and the removal of ships formerly engaged in the trade between Atlantic and Pacific ports to the trans-Atlantic service, water competition thereby ceasing to be a compelling force, the Commission decided that lower rates to Pacific coast cities than to points in intermediate territory unduly preferred the coast cities, and denied further relief from the operation of the long and short haul clause. Following this, intermediate territory points applied to the Commission to have their rates made lower than the Pacific coast rates, but the Commission, pointing out that water competition was likely to be resumed in a short time, dismissed the application. A few months later, in Aug., 1921, the railways' application to reinstate lower rates to the coast terminals was filed.

The Commission, in its decision, calls attention to the effect of the sections of the Transportation Act influencing the long and short haul principle, and particularly to sec. 500, which sets forth the policy of Congress as being to "foster and preserve in full vigor both rail and water transportation." The law demanding that the rate charged on a longer, as opposed to a shorter, haul should be reasonably compensatory, the Commission has evidently interpreted this as preventing it from following its former liberal policy in granting relief from the long and short haul rule, for the reason that it considered that the applicant railways had not demonstrated to its satisfaction that large revenue losses would not result from the proposed lower rates. The Commission was further of the opinion that the region west of Pittsburgh would be accorded a preferential rate structure by the railways' proposals to blanket the rates from Pittsburgh to the Pacific, from all

points of origin between the Atlantic and the Missouri River, while keeping in effect rates from eastern origins in the same territory to intermountain destinations graded somewhat in accordance with the length of hauls. As a result of the Commission's findings, the general application for lower rates to and from Pacific coast points was denied, although some concessions were made to the railways, one being the allowance of the proposed rate on crude sulphur, and another being the approval of rates proposed for the Southern Pacific's combined rail and water line from California terminal points to the Atlantic seaboard via Galveston.

Container Tank Car for Milk Traffic.

Canadian Railway and Marine World for Jan. 1922, gave on p. 18, details of the container car system of handling l.c.l. freight, as introduced on the New York Central Lines. The N.Y.C. has now carried the container car idea a step further, by applying the principle to milk transportation. At the recent New York State fair, the railway showed a container car fitted with 9 compartments, into each of which fits a large glass-lined tank, effectually insulated by cork. The tanks have double walls, and in principle resemble large thermos bottles. The capacity of each tank is 645 gall. The N.Y.C. management hopes to perfect this plan of transporting milk, so that any milk station shipping 645 or more gallons daily can avail itself of container car service and thereby save large sums in freight charges, and in depreciation of the ordinary milk cans now used. The expectation is that the container system will save much time in loading and unloading, and it is felt that the milk can be handled in a much more sanitary way than at present. The saving in ice is also expected to be material.

Toronto Transportation Club. — The following officers have been elected: President, G. W. Vaux, General Agent, Union Pacific Ry.; Vice President, W. S. Campbell, Manager, Transportation Department, Canadian General Electric Co.; Secretary, W. J. Hotrum, Chief Clerk, Local Freight Office, G.T.R.; Treasurer, M. MacDonald, Assistant Superintendent of Weighing, G.T.R.; chairman, membership committee, W. Fulton, District Passenger Agent, C.P.R.; chairman, entertainment committee, F. R. Caldwell, Manager, Cluett, Peabody Co.; chairman, publicity committee, Chas. Vail, General Manager, Vail & Sheppard; chairman reception committee, T. Symington, Superintendent, Canadian Cartage & Storage Co.; chairman, sick committee, G. S. Donaldson, General Agent, Chicago & North Western Ry. It is the intention to have monthly luncheons and semi-monthly dinners.

Vancouver Pier, C.P.R. — Canadian Railway and Marine World was officially advised, recently, that a contract for building the C.P.R.'s additional ocean pier at Vancouver, to be called Pier B.C., had been given the Sydney E. Junkins Co., of Winnipeg and Vancouver, and that work would be started as soon as possible.

Montreal Board of Trade's Dinner to Sir Henry Thornton.

Speeches by the Canadian Pacific and the Canadian National Railways' Presidents.

The dinner given by the Montreal Board of Trade, in Montreal, on Dec. 5, to Sir Henry Thornton, President, Canadian National Rys., was a most successful and enthusiastic function, over 650 being present, great interest being shown to hear his first public utterance in Canada, and those present represented the leading railway, banking, commercial, industrial and political interests. The speakers were President W. M. Birks, of the Montreal Board of Trade, who occupied the chair; Sir Joseph Flavell, ex-Chairman, Board of Directors, G.T.R., who proposed the toast of Our Country, in a very practical and interesting speech dealing with the railway situation generally, and the country's material development; Dean Gordon Laing, of McGill University Arts Faculty, who responded; E. W. Beatty, K.C., President, C.P.R., who proposed the health of Sir Henry Thornton, and the latter, who responded.

The C.P.R. President's Speech.

E. W. Beatty, K.C., President, C.P.R., said:—When your president was good enough to suggest for me the honor of proposing the health of Sir Henry Thornton, I not unnecessarily concluded that this pleasure was being afforded me because, as representing probably the largest taxpayers in Canada, I represented the largest stockholders in the system over which Sir Henry will preside. Large stockholders have a special interest in the successful administration of their property and in the personality of its executive head. I presume it is not only customary, but necessary, to propose the health of the guest of honor, but it does seem to savor of irony to suggest health to Sir Henry after one fleeting glance at his robust physique. It is equally customary, when addressing a toast to the guest of the evening, to inform you of his outstanding characteristics and indulge in flattering references, usually untrue, or at least inaccurate. It would be presumptuous for me to tell you of Sir Henry and his achievements. I felt, and still feel, that with what the chairman does not know of him and the free and full information he would give you in consequence of his ignorance, and what Sir Henry himself would not tell you, though well equipped to do so, you would probably receive all the misinformation you were entitled to obtain in one evening.

In confining what I have to say to general observations pertaining to Sir Henry's work, without confusing it with opinions or theories in respect of policies, I feel that I will not be in danger of detracting from the sociability and complete amity of this occasion, an occasion which is intended to express on behalf of the Board of Trade its utmost goodwill towards Sir Henry himself, its belief in the principles of private ownership of railways and its profound, if latent, conviction that the City of Montreal offers advantages for head or other offices not enjoyed by any other city in Canada. I must admit that the stubbornness of the members of the Board of Trade on the question of public ownership, and their confidence in the future of their own city as a railway center, might lend an atmosphere of discourtesy

and self-interest to this dinner, were it not for the fact that both their convictions and their ambitions are overshadowed by their desire to induce Sir Henry to appreciate that he is a very welcome citizen of Canada, whose work, if successfully accomplished, will be of lasting advantage to the country and whose success the citizens of Montreal and the members of the Montreal Board of Trade, no matter what their political, transportation or other religions may be, cannot but desire in every meaning of that word. The reason why we may suppress all other considerations is that the prosperity of the National Railways must inevitably mean that Canada itself is prosperous.

Some years ago, when I was younger and therefore more prone to make mistakes, or rather prone to make more mistakes, I rashly stated that anything that was good for Canada was good for the C.P.R. Co., inasmuch as their fortunes were inextricably linked together. It did not take long for enterprising gentlemen who had not the same appreciation of either the bona fides or the value of the C.P.R. to distort this phrase into: "What is good for the C.P.R. is good for Canada." Both expressions are equally true, however, if you eliminate the subtle suggestion of selfish interest first, contained in the latter. But it is undeniably true that if Canada is not prosperous, the National Railways cannot prosper, and if Canada is prosperous the National Railways' position must, of necessity, be substantially improved.

The guest of the evening has had a unique and varied railway experience. Having only met Sir Henry today, you will not expect me to introduce him in that personal and familiar way I would have been able to do if this dinner had taken place a week hence. I have learned on reliable authority, however, that he is 6 ft. 4 in. tall, that in his college days he was a famous football player, and is a married man. Some years ago I pointed out a prominent banker in Montreal to a gentleman who formerly earned his living by the scientific and forceful application of his hands to vulnerable parts of the anatomy of other gentlemen striving to do the same to him; I informed my pugilistic friend that the eminent banker had been a boxer in his youth, and his reply was that if he had been a good boxer, he would bet his shirt that he was a damn good banker. I do not know that Sir Henry is a good railway executive because he was a fine football player, but I do say that he is none the less competent and efficient because of his earlier athletic prowess. He enjoys in a marked degree the friendship and admiration of a large circle of friends, both in the United States and Great Britain. Some few days ago, when in New York, I had occasion to meet many of Sir Henry's former associates. They spoke of him in terms not only of respect and admiration, but, indeed, of affection. Each president expressed his conviction that the Government Railways were fortunate to secure his services and that the whole railway situation in Canada would be improved by his advent to this country. President Rea, of the Pennsylvania System, cheerfully informed me

that all he needed to say was that Sir Henry was trained in the service of the Pennsylvania Rd. Co. Once Mr. Rea admits that a man has been trained by the Pennsylvania, he concedes him every known virtue that can be possessed by a railway executive. But it is interesting to observe the fascination with which Sir Henry's task and Canada's peculiar and almost unique railway situation is viewed by railway presidents in the United States and the transportation men of Great Britain. To them it is, if anything, a greater problem than it is to us. They have never experienced a condition in which the railways of the country were divided, not equally, but not disproportionately, between a private and a government-owned system. They are correct in its uniqueness, but they are, I think, unduly apprehensive of the complications which such a condition is anticipated to create. In no essential way should such a condition mean lack of harmony, unfairness in competition or other conditions which have tended on some occasions to bedevil the transportation interests of a country.

There is one danger, of course, which is inherent in such a situation, but not a danger insuperable to successful co-administration, and that danger is that the government system might not be permitted to be administered entirely by those in charge of its administration. Given a strong, fearless and efficient organization and with a free hand to effect which all officers of successful enterprises enjoy, there is no reason why the general transportation problems of the two systems should not be handled as effectively and as fairly as if they were privately owned and operated. In fact, I feel so strongly that this is true that I would hazard the suggestion that the principal factors in harmonizing, improving and ultimately solving, the present situation will be the executives and the officers of the existing systems. You will, no doubt, appreciate that in this country of ours many railway problems are common to the two companies. Many questions of general policy depend for their execution upon the mutuality of opinion of the officers of those corporations, and in those larger questions not local to the individual lines, but concerned with the relationship of all companies to the public they serve, the co-operation, the frank exchange of views between those officers either determines or prejudices the determination of a solution. I do not think that I am speaking with too much assurance from the experience of the past when I say that in these problems I am confident that the officers of the C.P.R. and the National Railways can work in substantial accord to the mutual advantage of their respective companies and the public.

Sir Henry will be inundated with suggestions. It is a peculiar, but not unreasonable, circumstance that when the public money is involved, every one considers it his right to make suggestions, and to, in a measure, interfere, suddenly becomes a condition attached to his ballot. It will not be Sir Henry's fault if, at times, he is irritated, but having talked with him today I am confident that his irritation will not be serious or his equanimity permanently disturbed.

I would like to assure Sir Henry and to make the assurance now before he proceeds farther to portions of the country where the people are just as estimable, but probably less free from prejudice than those of Montreal, and therefore more likely to endeavor to poison his mind with suspicion, that in the solution of these common problems of which I speak he may be assured of frankness and candor, and an honest expression of opinion and desire to co-operate on the part of the officers of the C.P.R. Co.

Gentlemen, the toast of the evening is to Sir Henry Thornton, coupled with the expression of the hope that he may be permitted to run the National System just as if he owned it himself.

Sir Henry Thornton's Speech.

It is with a deep feeling of gratitude that I rise to express my thanks to those distinguished gentlemen who have preceded me for the kindness and cordial words they have said about me, and the generous manner in which you have received those words. Dr. Gordon Laing especially has left me speechless in his description of Montreal and the modest way in which he set forth the aspirations of the Province of Quebec. He has left little to the imagination, and I am proud to heartily endorse all he has said, after having had the pleasure of being with you thus far this evening. He has referred to the fact that the Province of Quebec is the only remaining reservoir of intelligence, and, may I say, common sense, because that is significant. If the Province of Quebec continues its course it will speedily accumulate all the cents in the rest of the Dominion.

Of late I have come to the conclusion that all the world is divided into three classes. First, those who are willing to enlist in the services of the Canadian National Rys., and are not slow about saying so. The second class represents the ordinary shareholders of the Grand Trunk Ry., who have contributed materially to my correspondence. And last, but by no means least, there are those who hold the secret, and are very willing to impart it, as to where the headquarters of the system should be located. The fact that the President of the C.P.R. has done me the honor of proposing my health is in itself a compliment which any railway man would appreciate, for we in the transportation industry regard the C.P.R. as one of the best managed and one of the most efficient of railways. Its original conception was courageous and statesmanlike, and its subsequent administration has reflected credit upon all who have been connected with it. If those of us, who are charged with the responsibility of organizing into one entity and working as one unit the Canadian National Rys., succeed in approaching the enviable record of the C.P.R., we shall have more than met our responsibilities. The C.P.R. should be, and I am sure is, the pride of the people of Canada, and much of the prosperity of the Dominion is due to the efforts of its officers and staff. We shall undoubtedly be rivals, and it is good that it should be so, but I feel certain that our rivalry will only reflect itself in an effort to furnish to the people of Canada adequate and efficient transportation at reasonable cost.

I have always envied the Prophet Daniel when he appeared upon one occasion at a dinner, the result of which promised to be unpleasant to the principal guest; and, with whatever delight

the lions may have looked forward to the dish which was about to be set before them, Daniel at least, as the honored guest, had the satisfaction of knowing that he would not be called upon to speak after the conclusion of the feast. Apart from the pleasure of meeting those whom I hope will become my Canadian friends, I should have preferred to make no public speeches until I had been in Canada for at least a year. At the expiration of that time my deeds, whatever they may be, would have spoken with more accuracy than any statements I can make tonight; for words are easy of pronouncement, but actions speak with a greater eloquence. Let me frankly say that I have not the intimate acquaintance with Canada and its transportation needs which many of you possess, and it would be folly, in the absence of a detailed study of the position, to speak in other than somewhat general terms.

The amalgamation of constituent railways now known as the Canadian National Rys. has for the last two years shown an improving financial position, although the position is not today what any one of us would wish. The fact, however, that the position is improving, shows that it will yield to treatment, and reflects much credit upon those who, until the appointment of the present administration, were charged with the administration of the constituent properties. I should be wanting in observation and appreciation if I did not take advantage of this opportunity to thank Sir Joseph Flavelle, Mr. Hanna, Mr. Kelley, Mr. Robb and Mr. Hungerford, their officers and their associates on the former boards of directors for the excellent spade work they have already done, and the zeal and efficiency with which they executed their responsibilities. I hope that those of us who will follow the trail they have so ably blazed may still count upon their valued advice and support.

I am not concerned with the events and circumstances which brought the Government to take over the national railway system. We are confronted by a condition, not a theory, and I must accept things as I find them. Whatever the reasons may have been, the people of Canada have embarked upon an adventure which has not been conspicuously successful elsewhere; but I emphatically deny that this forms any reason for failure here, providing certain basic principles are unalterably maintained. There is a distinction, if not a difference, between the government railways of Canada and government-owned and operated railways elsewhere. In Canada, as I understand the position, the Government is the only shareholder in these various properties, or at least sufficiently controls the voting power to appear as the single shareholder; and the Government has elected to administer the national railways in substantially the same way as though they were privately owned. The only difference between our railways and private railways is that, so far as we are concerned, there is substantially but one shareholder to deal with, namely, the Government, and on private railways there are perhaps several thousands of shareholders. Experiments in government-owned railways elsewhere have taken the form of directly operating the railways by officers and men who were actually the servants of the government, rather than the servants of the railway. Now this distinction is obviously important, as well as vital, and it certainly

tends to make the elimination of undesirable influences from the administration of our railways easier than might otherwise be the case.

No Political Interference.—Much has been said about the dangers of political interference with our railways, and this is at least one subject upon which I can speak with emphasis and authority. The existence of politicians seems to be the price which is paid for a democratic form of government; and, generally speaking, there are two things in every country which, in the minds of at least 50% of the population, afford reasonable grounds for complaint: one is the weather, and the other is the government. But in a democracy the people get the kind of government they elect to office; and if the weather is disagreeable the Dominion of Canada provides a great variety of climates, any one of which can easily be reached by those who avail themselves of the services of the Canadian National Rys. Perhaps I should be generous and inform you that the C.P.R. has also a passenger service. Politicians are much maligned. In earlier days they were designated as statesmen, just as 15 or 20 years ago anyone who acquired a fortune was considered a captain of industry, while today opulence is generally looked down upon as an indication of profiteering. However all this may be, we all recognize that politicians do exist, and presumably because they exist they are essential in our scheme of government. But let it be emphatically understood, now and once and for all, that there is to be no political interference, direct or indirect, in the administration and working of the Canadian National Rys. I cannot put it any more forcefully without transgressing the rules of polite speech, but if I knew of any words which would make this point more clear, I should unhesitatingly employ them. The Prime Minister has solemnly assured me that there is to be no political interference, and it was with this distinct understanding that I accepted the post which the Government has done me the honor to offer. This assurance is the only assurance that any government, irrespective of political complexion, would be compelled to make under similar circumstances. It is vital to the success of our railways, and any other procedure spells inevitable disaster. From time to time the din of battle and the clash of political arms lead one at least to suspect that there are political disturbances going on in the land, and I have reason to believe that something of the kind is going on at the moment, or has taken place during the last few days. With these periodical political upheavals, neither I nor any officer of the Canadian National Rys. have, nor should have, any concern, other than the interest which every patriotic citizen should take in what is going on about him. Our job is to devote ourselves entirely and with tranquility to rendering to the people of Canada an honest and efficient railway service. I think I can speak with authority for my co-directors, and I shall certainly speak with authority for myself, when I say that, without fear and without favor, the Canadian National Rys. are to be operated of the people, by the people and for the people, and, moreover, for all of the people of the Dominion. I know that political interference presents itself in many seductive disguises, and sometimes it tends to make itself felt in many unknown ways. Of all of this I am fully

aware, but let me again repeat that there is to be no political interference or influence in the administration of the Canadian National Rys. And while I am on the subject let me go one step further. Constructive criticism, born of a desire to improve conditions, is helpful and will be welcome. Other varieties, which are intended to be destructive, may be ignored. Any individual who can tell me how I can do my job better will be regarded as my friend. Every opportunity will be given for a full discussion before decisions are made, but made they must be, with firmness, cour-

meet favorably any appeal. If I may paraphrase the words of Lincoln, I would say that you can please all of the people some of the time and some of the people all of the time, but it is quite impossible to please all of the people all of the time. Decisions will undoubtedly have to be made which will be distasteful to certain sections of the Dominion. I only hope that it will be possible to reduce decisions of this character to a negligible minimum. It must be obvious to anyone that, while recognizing in full sympathy the requirements of all sections of the Dominion, the national railways as a

will almost surely result. The preparation of the property to meet the development of the country involves wisdom and forethought. Any railway which finds itself unable adequately to meet its traffic responsibilities, is hindering the progress of the community which it serves. The relations between the company and its men involve chiefly the handling of labor, and in this respect, government-owned railways have always been particularly vulnerable. I believe that every employee of every industry, irrespective of its character, should receive that minimum wage which will enable him to live in decency, in comfort and under proper sanitary conditions, and to educate and bring up his children as self-respecting members of society. Any other policy makes for social unrest, and if carried on long enough, is likely to create political upheavals. The wage I have indicated represents the minimum to be received. How much greater the wage may be depends upon the condition of the industry, the value of the service rendered, and other similar factors. Labor troubles usually disappear if they are caught when they are young; that is to say, when they are in a plastic condition. The prompt and just settlement of complaints is an effective guarantee of tranquillity. If, on the other hand, attention is not given to such matters until they become festering sores, and both sides have delivered ultimatums, the solution becomes correspondingly difficult. It is my desire that all officers of the Canadian National Rys., in their respective capacities, should be easily accessible to their men, and should promptly deal with complaints. I am sure that there already exists a kindly feeling between our officers and their men, and I wish this spirit to be carried through our railway from Halifax to Vancouver, and that contentment and comfort amongst the men may manifest itself in smiles and goodwill, and that the Canadian National shall be known as the Smiling Railway.

Public Relations.—With respect to the public, the same policy will be pursued as with respect to the men. Everything that is asked, of course, cannot be granted, but our most pressing problem is one of development, and every effort will be made to meet the demands of the public in the promotion of increased traffic. It must, of course, be abundantly evident to all that your railways will become an increasing burden upon your pockets if freight rates are continuously lowered and wages continuously raised; and I take it that it is the desire of the people of Canada that the Canadian National Rys. should be put upon a self-supporting basis and the burden on the purse of the taxpayers stopped as quickly as possible. There should be no fundamental reason why this should not be done in a reasonable time, without doing the slightest injustice to either the men on the railway or the travelling public. But this object cannot be achieved if the railways are to be regarded as a Christmas tree, and the Chairman as a sort of glorified Santa Claus, however much I might personally like to play that role.

Headquarters and Organization.—We shall soon have to make some announcement with respect to the location of the general headquarters of the national system, and the kind of organization under which the railways are to be administered. In so far as the first is concerned, I have nothing to say tonight, excepting what I have already said, namely, that the headquarters will be

Notice to Trespassers.—From Toronto Globe.

age and no undue waste of time. When once made, they must be maintained. Any other policy would reduce your railways to a spineless nuisance with no body to kick nor soul to damn. Therefore, the railway administration must be master in its own house and in the interest of efficient management no interference of any sort can be tolerated.

Sectional Differences.—Perhaps no less dangerous than political interference is what may be called pernicious sectional pride. The Dominion covers a wide territory, and the aspirations and desires of different sections are not always identical; indeed, from time to time, they may even conflict. It will be my conscientious effort to meet the reasonable demands of all sections of the Dominion and contribute to the utmost to their development. Every request will be received with sympathy, and my first thought shall be not how to justify a refusal, but, on the other hand, how to

whole cannot be sacrificed to meet the wishes of any part of the Dominion. Whatever disagreement we may have, I hope it will be understood that an attempt will be made to solve all of our problems with malice toward none and charity towards all.

Factors of Successful Administration.—There are four factors which constitute the sum of successful railway administration: 1, adequate net receipts; 2, the development of the property to meet the burdens of future traffic; 3, the relations between the railway and its men; 4, the relations between the railway and its clientele. The activities of any railway may be classified under one or the other of these heads. The first two are largely technical. Satisfactory net receipts involve a proper organization, capable and loyal officers, together with intelligent and enlightened administration. Given these things, and barring accidents, satisfactory net earnings

placed at the point from which the Canadian National Rys. can be most efficiently, and consequently most economically, worked, having regard to all of the circumstances. I am sure that whatever may be the demands of local pride, no patriotic citizen of the Dominion would wish me to proceed upon any other basis. Whatever decision is reached is bound to involve a certain degree of disappointment to some, and I hope when a decision is announced it will be accepted by all with goodwill and in a friendly spirit.

In so far as organization is concerned, the Canadian National Rys., from the point of view of mileage, is excelled by no other railway system. It serves seaports, prairies and mountains; it embraces a variety of climates; and all are separated by vast distances. Whatever organization is adopted, it is essential that in each one of the grand divisions into which the property may be divided, there should be an executive officer, with a full staff capable of appreciating and dealing promptly with the reasonable demands of the public; that is to say, the organization must be such as will preserve a close and quick contact between the railway on the one hand and the public on the other. There must be centralization with respect to policies, but there must be complete decentralization with respect to details. It should not be beyond the wit of man to devise an organization which will adequately meet these cardinal principles, and at the same time preserve that cohesion which is essential to economical management. We are now engaged in a study of the position, and there is, of course, pressing need to announce at as early a date as possible the headquarters of the system, the character of the organization, and its principal officers, and this will all come in due time.

Appreciation of Welcome.—I should be lacking in appreciation if I did not take advantage of this opportunity to thank very many of my Canadian friends for the kind and hospitable hands which they have extended to me. It is refreshing to know and feel how many there are who wish the adventure upon which the people of Canada have embarked to prove a success; and let me also, tonight, particularly thank the Canadian press for their kind words of welcome, and in many cases their sympathetic editorials. It is right that the people of Canada should be as closely informed as possible with respect to all essential facts relating to their railways, and the medium of communication must, of course, be the press. I, therefore, wish it to be understood that I shall always be glad to meet the representatives of the press and to take them as fully into my confidence as the welfare of the railways will permit.

Financial Prospects.—I have said that our first and most pressing objective is to stop the drain on the purse of the taxpayer, resulting from the national railways. We shall do materially better this year than in previous years, and will more than meet operating expenses. Roughly speaking, and without taking into consideration the amounts which the Government have had to furnish in the past to meet deficits in operating expenses, and the guaranteed requirements of capital, our national railways must earn, roughly, \$40,000,000 net annually to stop any further advances from the Government; that is to say, to stop the drain on the taxpayers; and it will be a satisfactory day for you, and a matter of pride to me, when the people of Canada will know that their railways have

ceased to be a drain on the public purse. How soon this can be brought about I hesitate to say, but I will go so far as to indicate that it may not be so far distant as most people might imagine. The accomplishment means an increase in gross receipts, and reduction in expenses. I am inclined to think that the latter will be more easy of accomplishment than the former, because the former is involved with the whole question of Dominion development, and this brings me to the question of immigration, a subject on which I should like to say a few words.

Immigration.—Most thoughtful people in Canada, judging from the public expressions I have heard, feel that we have but one problem in Canada, namely, that of increasing the population, and I think this is largely correct. If the Dominion is to develop as it should, and if we are to enjoy all of the advantages which follow in the train of development, we in Canada must address ourselves vigorously to the question of immigration. By immigration I do not mean throwing down the barriers and making the mistake which was made in past decades in the United States, which resulted in admitting every immigrant that chose to come, but I think we should adopt a policy which is intensive, but at the same time selective. Other of the British Dominions overseas are up and doing, and we must not fall behind lest some of our sister dominions secure the cream. I have read what Lord Shaughnessy has recently said upon this subject, and I am heartily in accord with it. Just how the details should be developed, I am certainly not in a position to say tonight, but at any rate the immigration question is sufficiently important to justify the undivided attention and energy of some one capable individual, reinforced with an adequate staff. How soon the Canadian National Rys. will become self-supporting turns largely on what is done in the matter of immigration.

In conclusion, I want to thank the Board of Trade of Montreal for their kindness and hospitality in giving me an opportunity to meet so many representative citizens of the Dominion, and to thank each of you who have patiently listened to what I am afraid must of necessity have been a somewhat rambling discourse, full of generalities and characterized by nothing particularly definite. But as I have said, had I spoken a year hence, I might have gone much more to the point than is possible now. I am not so foolish as to imagine that single-handed I can solve the difficult railway problems which confront not only the board and myself, but every citizen of Canada; nor am I so silly as to imagine that if these problems could be solved single-handed, I am the only one who could do it. It happens, however, that I have been asked to tackle the job. I have gone into it with a full knowledge of the conditions and I propose to see it through. But success will only be achieved if I succeed in convincing you and the employees of the Canadian National Rys. that you and they are justified in placing your confidence in the officers who administer the property, and myself. It will require a high degree of team work on the part of those employed by the railway, coupled with the support of the public. I ask no favors, but simply a clear field and a sporting chance. The success of the Canadian National Rys. is sufficiently important to every citizen of the Dominion to justify an appeal for at least fair

play. So far as I am concerned, I have undertaken the job convinced that it can be done, and I ask you to give me that degree of confidence and support which you think my efforts justify.

The Bad Order Car Situation.

The Railway Association of Canada reports the total number of freight cars on Canadian lines on Dec. 1, 1922, as 196,148. The allowance for bad order cars on the A.R.A. basis, which assumes 7% of the cars in bad order, was 13,730, and the actual number in bad order was 10,135, or 3,595 less than the American Railway Association standard would require. The figure 10,135 represents 5.2% of the cars in bad order, compared with 6.1% on Nov. 1, 1922. The car shortage at Dec. 1 was given as 6,923, compared with 7,967 at Nov. 1.

The American Railway Association's Car Service Division reports that the total number of freight cars on line on U.S. class 1 roads on Nov. 15, 1922, was 2,258,949, of which 235,660, or 10.4%, were in bad order, compared with 11% on Nov. 1, 1922. On Nov. 15, out of 1,034,603 box cars on line, 102,867, or 9.9%, were in bad order. Out of 57,519 refrigerator cars, 5,881, or 10.2%, were in bad order. Out of 947,059 gondolas, 105,174, or 11.1%, were in bad order. Out of 82,207 stock cars, 8,326, or 10.1%, were in bad order. Out of 95,327 flat cars, 10,220, or 10.7%, were in bad order.

Analysis of the figures given above covering the Canadian situation, shows that the Canadian lines have succeeded in reducing the proportion of their cars in bad order to a very low level, when it is taken into consideration that the figure for bad order cars has been set at 7% by the American Railway Association, as representing about the best the railways can be expected to do under prevailing conditions. Some progress has also been made by U.S. roads in getting their freight equipment into good repair, the figure of 10.4% comparing very favorably with a percentage running at about 14 a few months ago.

Michigan Central Rd. Absorption.—A recent St. Thomas, Ont., press dispatch said it has been announced at the M.C.R. offices there that the M.C.R., which is a subsidiary of the New York Central Lines, would be absorbed by the latter on Jan. 1, and that its name would disappear. Canadian Railway and Marine World is officially advised that the statement quoted was not made by any M.C.R. official, and could not have been made by anyone having knowledge of the facts. The New York Central controls the Michigan Central, through ownership of approximately 90% of the capital stock, but no steps have been taken looking to a lease or further absorption of the line.

Railway Accidents Throughout Canada.—The number of railway accidents reported to the Board of Railway Commissioners during Oct., 1922, was 302, in which 1 passenger, 7 employees and 24 others were killed, and 23 passengers, 264 employees and 50 others were injured. Included in "others" are 13 killed and 27 injured, in 26 highway crossing accidents, in which 2 of the crossings were protected by bells, 2 by watchmen, and 22 were unprotected. In the crossing accidents, automobiles were concerned with 13, resulting in 10 persons being killed and 15 injured. Pedestrians were involved in 5, wagons in 7, and a bicycle in 1.

Steam Railway Operating Revenues, Expenses and other Statistics for September.

The following comparative table for September, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Trans-

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimaux and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

The Railways' Operating Results for September.

Sept., 1922, brought to Canadian railways the beginning of the heavy traffic movement which rapidly became greater in October, and which has since continued to be of large dimensions. Due to lower rates than in Sept., 1921, however, the increase in traffic in Sept., 1922, was not sufficient to yield larger gross earnings to the railways as a whole than in Sept., 1921. As shown in the table published on the preceding page, freight, passenger and total gross earnings were smaller than in Sept., 1921, despite the fact that freight tonnage handled was increased materially, while passenger traffic decreased only nominally. As compared with Aug., 1922, gross earnings for the railways as a whole in September were \$4,151,577 larger.

Analysis of operating expenses indicates that maintenance of way and structures, and maintenance of equipment, were as well kept up by the railways as in Sept., 1921. While smaller amounts were spent on these two accounts than in Sept., 1921, it will be remembered that wages in both departments were reduced between the respective months. The transportation account shows some reduction from Sept., 1921, despite the increase in freight traffic handled. In view of the fact that locomotive men's and trainmen's wages were not reduced in the period between Sept., 1921, and Sept., 1922, the reduction in transportation expense must be taken as an indication that no let-up in operating efficiency has been allowed. The reduction can, of course, be explained in part by the wage decreases applying to clerical forces, freight handlers, and other employes, and to some decrease in average fuel and material prices, but when a reduction in transportation expenses of \$331,961 was accomplished while revenue freight handled increased by more than 374,000,000 ton miles, it can safely be assumed that transportation efficiency has not been suffering. Total railway operating expenses for the roads as a whole were \$2,426,889 smaller than in Sept., 1921. As operating revenues decreased by only \$1,440,789, the operating ratio was bettered to the extent of 2.86 points, with corresponding improvement in net earnings and net operating income, as noted in the table. The improvement secured in September, compared with Aug., 1922, may be judged when it is pointed out that the operating ratio for all roads in August was 88.54, while net earnings were but \$4,315,555, and net operating income but \$3,996,417.

Attention has already been called to the increase in revenue freight ton mileage compared with that in Sept., 1921, while the increase over that in Aug., 1922, was 1,115,643,758 ton miles. Passenger traffic, however, was lighter than in Sept., 1921, the decrease in passenger miles being 818,315. A large seasonal falling off from the passenger traffic of Aug., 1922, was also recorded. The freight train miles and passenger train miles operated during the month showed an increase and a decrease, respectively, compared with those for Sept., 1921, as was to be expected from the traffic changes which took place. It is worthy of note, however, that while the number of tons of revenue freight handled increased by 14.2% over that handled in Sept., 1921, the number of freight train miles operated increased by but 9.7%. This comparison is significant, as it

shows that our remarks in connection with transportation expense were well founded. The effort in any scheme of railroading which aspires to be efficient should be to transport the maximum number of ton miles in the minimum number of train miles, for the reason that the ton miles are the units that bring in the revenue, while the operation of train miles occasions the expense. It would seem that the smaller percentage increase in train miles recorded than in revenue ton miles is a good indication of the progress Canadian railways made during the year between Sept., 1921, and Sept., 1922, in making railroading more efficient. This improvement is directly reflected in the figures covering freight train loading, on reference to which it will be seen that the average revenue train load in Sept., 1922, was 20.0 tons heavier than in Sept., 1921, while for all freight the 1922 trainload was 18.5 tons heavier.

In connection with passenger traffic, it is interesting to observe that a reduction in passenger train miles roughly proportional to the small reduction experienced in passenger traffic, compared with Sept., 1921, was obtained in Sept., 1922, but that at the same time there was a small increase in the number of passenger train car miles operated. This is accounted for, of course, by the slightly greater average number of passenger cars per passenger train, the figure being 7.5 cars for Sept., 1922, compared with 7.3 in Sept., 1921.

Further analysis into the matter of efficiency in connection with the loading and handling of freight cars discloses the fact that the better trainloading secured in Sept., 1922, than in Sept., 1921, was not on account of better car loading, but rather in spite of lower average car loading. The average carload in Sept., 1922, was but 25.3 tons, compared with 26.2 tons in Sept., 1921. The better train loading was secured through there being an average of 22.5 loaded cars per freight train, in place of but 21.1 in Sept., 1921, while at the same time the average number of empties per freight train fell from 11.2, in Sept., 1921, to 10.3 in Sept., 1922. Better utilization of freight cars, primarily made possible by more favorable traffic conditions, is thus indicated. Another favorable factor in the month's operations is found in the increased average freight haul and average passenger journey.

The situation disclosed by the payroll ratios for the roads as a whole is worthy of attention. The fact of the ratio of payroll to operating revenues being 48.1 in Sept., 1922, compared with 47.1 in Sept., 1921, indicates that railway wages have not been reduced to as great an extent as railway unit revenues, that is, rates, during the year elapsed between the respective months. The fact of the ratio of payroll to operating expenses being 58.2 in Sept., 1922, compared with 55.1 in Sept., 1921, indicates that, railway wages, being a larger part of operating expenses in the former month than in the latter, were not reduced during the elapsed year to the same extent as were other items of operating expense.

While space does not permit any thorough examination into the results secured during the month by individual properties, attention may be drawn to the fact that the Canadian National Rys.

reduced the operating ratio from 108.67 in Aug., 1922, and 95.88 in Sept., 1921, to 94.86 in Sept., 1922, and earned a net operating revenue in Sept., 1922, of \$602,709, compared with \$467,684 in Sept., 1921. Expenses increased 2% over those of Sept., 1921, but the 34.6% increase in freight traffic offset the losses experienced in passenger, express and other revenue, and in addition brought about a 6.8% increase in total revenue. Freight train loading increased from 521 to 604 net tons, and the average freight car load increased by 1.1 tons.

The C.P.R. operating ratio was reduced from 81.96 in Aug., 1922, and 77.17 in Sept., 1921, to 75 in Sept., 1922. Notwithstanding the 9% increase in freight traffic, compared with Sept., 1921, total revenues for the month declined 7.8% from those of Sept., 1921, but the 10.4% decrease in operating expenses brought about the more favorable operating ratio shown.

On the G.T.R., the effect of the recent reductions in rates was not so marked as on the transcontinental roads, the average freight receipt being 1.328c., compared with 1.338c. in Sept., 1921. Passenger traffic on the G.T.R., while lighter than in August, increased 5.8% over that of Sept., 1921, but freight traffic decreased not only 4.6% from that of Sept., 1921, but also 4% from that of Aug., 1922. This resulted in a total revenue decrease of \$209,838, compared with Sept., 1921, but as operating expenses decreased by \$937,828, the more favorable operating ratio noted was the result.

On the whole, the September results show that the Canadian railways, on the basis of the expense reductions experienced, considered in relation to the rate reductions made, were able, with a moderate increase in freight traffic, to derive results considerably better than in Sept., 1921. The article published elsewhere in this issue, dealing with C.P.R. and C.N.R. results for October, in which preliminary statements for November are also given consideration, indicates that results for Oct. and Nov., 1922, will be still better, for the roads as a whole, than those in September. As applied to the year's peak traffic, the present rates seem to be working out satisfactorily, and on this basis we can be optimistic of the future if traffic conditions remain favorable—but not otherwise, for, with light traffic, favorable earnings on the present rates would not be possible. But, although the usual seasonal decline from the peak will be experienced, there is no reason to feel that traffic conditions will become relatively unfavorable in the near future, for the reason that the country's industry is now on a sounder basis than at any time in the immediate past. For these reasons, therefore, we can feel justified in expressing the expectation that if rates are not further reduced during a reasonable future period, the railways will be favored with an opportunity to make some progress toward once more obtaining those desirable financial results which they were experiencing a few years ago.

George Cobb, Superintendent, Reid Newfoundland Co., Bishops Falls, Nfld., in remitting his renewal subscription, writes:—"Canadian Railway and Marine World is certainly a valuable fund of information. I would not be without it."

Canadian Pacific and Canadian National Railways' Earnings and Expenses.

C.P.R. gross earnings for Oct., 1922, were \$23,061,547, compared with \$22,089,624 in Oct., 1921; operating expenses were \$15,258,802, compared with \$15,378,137 in Oct., 1921; and net earnings were \$7,802,745, compared with \$6,711,487 in Oct., 1921. While gross revenue increased \$971,923, operating expenses decreased \$119,335, leaving an increase in net earnings of \$1,091,258. For the 10 months period ended Oct. 31, 1922, gross earnings were \$147,888,319, a decrease of \$10,588,933 from those for the first 10 months of 1921, while operating expenses, \$120,777,225, were but \$9,087,869 smaller than those for the first 10 months of 1921, leaving net earnings of \$27,111,094, or \$1,051,064 smaller than those for the first 10 months of 1921.

So far as net earnings are concerned, Oct., 1922, was the best month the C.P.R. has had since the company was organized. The nearest approach to October's result secured before was in Oct., 1920, when the net earnings were \$7,700,822. The gross earnings for Oct., 1920, however, when traffic was moving at peak rates, surpassed those secured in Oct., 1922, by \$1,739,086.

The Canadian National Rys., including the Canadian Northern Ry., steam lines only, the Canadian Government Rys., and the Grand Trunk Pacific Ry., gross earnings in Oct., 1922, were \$14,074,025, compared with \$12,789,473 in Oct., 1921; operating expenses were \$11,917,281, compared with \$11,756,152 in Oct., 1921, and net earnings were \$2,156,744, compared with \$1,033,321 in Oct., 1921. That is, gross earnings increased \$1,284,552, while operating expenses increased but \$161,129, resulting in an increase in net earnings of \$1,123,423.

Analysis of C.P.R. operating results shows that Oct., 1922, was the third consecutive month in which it had an increase in its net earnings. In August, 1922, the increase was \$370,297, compared with Aug., 1921; in September, 1922, it was \$265,883, compared with Sept., 1921, while in Oct., 1922, as stated above, it was \$1,091,258, compared with Oct., 1921. October, 1922, was also the third month in which a substantial decline in operating expense was recorded. In Aug. and Sept., 1922, gross revenues decreased as compared with those for Aug. and Sept., 1921, and the increased net revenues were secured only by operating expenses being reduced in greater proportion than were the gross revenues. In Oct., 1922, however, the remarkable increase in net was secured by an increase in gross earnings, in combination with a decrease in operating expenses. As the increased gross revenues, considered in relation to the important rate reductions which have gone into effect, indicate that a very much larger amount of traffic was handled in Oct., 1922, than in Oct., 1921, the fact of the company's ability to decrease operating expenses indicates that it has now got control of them in a thorough manner.

As it was pointed out in Canadian Railway and Marine World for Dec., 1922, pg. 615, C.P.R. net earnings to the end of Sept., 1922, were \$2,592,322 less than for the first 9 months of 1921, and attention was called to the conjecture in railway and financial circles as to whether the company would be able, in the final three months of 1922, to earn sufficient net to enable it to have a total net for 1922 equal to that secured in

1921. As stated above, the results in Oct., 1922, were such as to make the net earnings at the end of the 10 months period in 1922 but \$1,501,064 less than at the end of the first 10 months in 1921. In our December number, the opinion was expressed that the company had an excellent prospect of being able to wipe out this decrease, and if preliminary earnings statements for November may be taken as an indication, it will succeed in doing so. For the first week in November, the gross earnings were \$503,000 more than in the first week of Nov., 1921, while in the second, third and final periods, the increases in gross compared with the corresponding period of Nov., 1921, were \$506,000, \$705,000 and \$911,000, respectively, making 14.3% increase in gross earnings for Nov., 1922, over those for Nov., 1921. These facts, taken into consideration with smaller operating expenses in Oct., 1922, than in Oct., 1921, despite the greater traffic handled in the former month, indicate that the company will have had net earnings in November almost sufficient to bring the net for the first 11 months of 1922 to the level of those of the first 11 months of 1921.

But, even if the 1922 net earnings are equal to those of 1921, it must not be lost sight of that such net earnings will fall far below the level of those being secured annually but a few years ago. The 1921 net earnings, while sufficient to satisfy all dividend requirements, and meet other fixed charges, were only such as to yield a very small return on the value of the property devoted to the public service, and any contribution to surplus arising therefrom was of merely a nominal character. The mere fact of the C.P.R. securing as good net earnings in 1922 as in 1921, if, indeed, it does so, will in itself be of no special significance. A far more important consideration will be found in the fact that the company was able to derive net earnings from a heavy traffic in the concluding months of the year sufficiently large to enable it to make up the deficiency experienced in the preceding months. The significant fact is that the good returns were derived from the present rates only when they were applied to a heavy traffic movement. It must be evident that the success attending C.P.R. operations in the latter part of 1922 was due to the large volume of traffic, and from this it is clear that the chief thing necessary to ensure to the public a continuation of good service at the present reasonable rates, and to the railway a return which will enable it to meet all fixed charges, and put something aside to meet the public demand for increased facilities, will be a continuation of that heavy traffic.

Analysis of the Canadian National Rys. earnings statement shows a situation in Oct., 1922, which is a gratifying improvement over that of Oct., 1921. The fact of the net earnings having increased by over 100% is sufficient indication that all the national lines require to place them in position to earn their operating expenses steadily and consistently, is a continuation of the traffic conditions which made the October results possible. Preliminary earnings statements for Nov., 1922, indicate that the results in that month will be more favorable than those of Nov., 1921, and when the results secured by the G.T.R.

throughout 1922, compared with 1921, are taken into consideration, it can be predicted with some degree of confidence that the Government railways, as a whole, will about earn their operating expenses for the complete year.

While the favorable earnings secured by the railways in the autumn of 1922 are no doubt due in great measure to the movement of the large tonnage of agricultural products resulting from the bumper crops obtained throughout the country, there is also no doubt that larger tonnages of all merchandise and manufactured products, and products of the mine and forest, have been moved. The heavy traffic furnished the railways is at once an indication and a result of improved business and economic conditions, and it is to be hoped that this improved status will obtain throughout 1923, for the benefit of both the railways and the public.

Freight Car Locations on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Dec. 1, 1922, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Central Vermont, in Canada; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Michigan Central, in Canada; Napierville Jct.; Pere Marquette, in Canada; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo, and Wabash, in Canada, as follows: Cars owned by reporting railways, 220,731; home cars on Canadian foreign lines, 20,463; home cars on U.S. lines, 56,441; home cars on home roads, 143,827; Canadian-owned foreign cars on home lines, 19,249; U.S.-owned foreign cars on home lines, 33,072; total cars on lines, 196,148; per cent. on lines to total owned, 88.8; deficiency on lines to total owned, 24,583; home cars in bad order, 9,718; foreign cars in bad order, 417; total cars in bad order, 10,135; per cent. in bad order, 5.2; privately-owned U.S. cars on lines, 1,996; privately-owned Canadian cars on lines, 1,033.

Flour Arbitrariness Over Wheat for Export.—Some months ago the Dominion Millers' Association, and the Canadian National Millers' Association, petitioned the Dominion Government for a review of the Board of Railway Commissioners' judgment re arbitrariness over wheat for export, and the matter was heard by a sub-committee of the Privy Council on April 19, 1922. The Minister of Justice reported on Oct. 26, 1922, that it was not a case in which the Government should interfere with the Board's order, and an order in council was passed Oct. 27, 1922, dismissing the petition. Subsequently the Dominion Millers' Association sent a delegation to Ottawa and requested the Prime Minister that the judgment be reviewed, our latest advice being that the matter was receiving consideration.

H. C. Holloway, Locomotive Foreman, Canadian National Rys., Norquay, Sask., in remitting his subscription, says: "I enjoy reading Canadian Railway and Marine World very much."

Track Section Prize Competition on Canadian Pacific Railway Eastern Lines.

For the past 10 years an annual track section prize competition has been carried out on the C.P.R. Eastern Lines, which has aroused a healthy spirit of rivalry and keen competition among the section forces of the different divisions and districts. Sixty-three prizes are awarded in the competition, as follows: A General Manager's prize to the foreman having done the best season's work on Eastern Lines; 4 general superintendent's prizes, to the foreman on each district who has done the best season's work, exclusive of the winner of the General Manager's prize; 11 division superintendent's prizes, to the foreman on each division who has done the best season's work, exclusive of winners of higher prizes; 45 roadmaster's prizes, to the foreman on each roadmaster's territory who has done the best season's work, exclusive of winners of higher prizes.

Under this system no man can win more than one prize, and all foremen have an equal chance, as the quality of the work done throughout the season is the deciding factor, and not the actual physical condition of the section at the end of the season. The basis on which the sections are judged is entirely efficiency, and careful consideration is given throughout the season to the condition of, and work done on, ditches, gauge, spiking, line, surface, bolts, rail wear, so far as it can be controlled by the section forces, switches, sidings, right of way and station grounds, track signs, cattle guards and fences. The amount of work done and the hours of labor put in, both by regular force and extra gang, are also carefully considered, and the foreman accomplishing the best work with the least amount of labor—the physical condition of the section, as to grade, alignment, drainage, and character of roadbed being considered—wins the first prize.

The number of hours of regular labor, and the number of hours of extra labor on the section are figured against the number of ties renewed, tie plates installed or changed, rails changed over on curves, and ditching done, etc. The amount of track handled, right of way, spikes and bolts, is fairly uniform on all sections, so that the condition with respect to these items at the end of the season is usually a criterion of the amount and quality of the work done thereon throughout the season. Where special conditions affect such work, they are taken into consideration. Some idea of the care exercised in judging a foreman's work can be formed by following the work in connection with the selection of a prize section. Towards the end of the season, on each of the 45 roadmasters' territories, a section is picked out as the most deserving in point of work done during the season with the material and labor available. These are carefully inspected by the superintendent and division engineer, who select the best one on each division for inspection by the general superintendent and district engineer. All divisions of a district are covered by these two officers, and the section selected which they consider eligible for the General Manager's prize. The judging for the General Manager's prize is done personally by the General Manager, the Engineer of Maintenance of Way, the Assistant Engineer of Maintenance of Way, and district officials.

Following is a list of the successful section foremen for 1922: General Manager's prize, \$100—W. Hunter, Harvey, N.B., Brownville Division, New Brunswick District.

New Brunswick District.—General Superintendent's prize, \$50—N. Mason, Woodstock Division, Canterbury.

Brownville Division: Superintendent's prize, \$25—W. E. Nason, Seboois. Roadmasters' prizes, \$10 each—B. Bedeau, Morekill; W. P. Harris, Rooth; T. Giddens, Giddens; G. Plante, Keough.

Woodstock Division: Superintendent's prize, \$25—T. Abbott, Newburgh. Roadmasters' prizes, \$10 each—B. Saunders, Canterbury; W. H. Morrill, Aroostook; B. Clark, Cardigan.

Quebec District.—General Superintendent's prize, \$50—J. Bureau, Laurentian Division, Belair.

Farnham Division: Superintendent's prize, \$25—J. Boyer, Sherbrooke. Roadmasters' prizes, \$10 each—C. Bessett, Brookport; J. Cavanaugh, Waterloo; A. Messier, West Shefford; A. Marian, Milan.

Montreal Terminals Division: Superintendent's prize, \$25—J. Poirier, Ballantyne. Roadmaster's prize, \$10—E. Manzo, Outremont.

Laurentian Division: Superintendent's prize, \$25—N. Labonte, Plaisance. Roadmasters' prizes, \$10 each—V. Carpentier, Belair; J. Constantineau, Lachute; A. Morin, Mont Rolland; A. Peland, Joliette.

Ottawa Division: Superintendent's prize, \$25—M. Gauthier, Rigaud. Roadmasters' prizes, \$10 each—A. Kanatowka, Hudson; T. A. Kelly, Waltham; A. Robillard, Maniwaki.

Smiths Falls Division: Superintendent's prize, \$25—O. Heintz, Pakenham. Roadmasters' prizes, \$10 each—A. Dawson, Brockville; E. Poirier, Vaudreuil; A. Weisenburg, Pembroke.

Ontario District.—General Superintendent's prize, \$50—W. Gratton, Trenton Division, Norwood.

Trenton Division: Superintendent's prize, \$25—W. Davis, Sharbot Lake. Roadmasters' prizes, \$10 each—J. Dawdell, Kingsford; A. Honeywell, Newtonville; L. Linton, Claremont; J. W. Bone, Brechin; R. Crawford, Titchborne; J. Wickens, Ivanhoe.

Toronto Terminals: Superintendent's prize, \$25—F. Tuckley, Islington. Roadmaster's prize, \$10—W. Spoffard, Parkdale.

Bruce Division: Superintendent's prize, \$25—J. Lee, Dundalk. Roadmasters' prizes, \$10 each—J. McMinn, Essa; R. Bates, Proton; N. Bolton, Orton.

London Division: Superintendent's prize, \$25—S. Mathies, Galt. Roadmasters' prizes, \$10 each—J. Rutledge, Watdown South; A. Fairbanks, Caradoc; T. Rath, Ayr; N. Allen, Straffordville.

Algoma District.—General Superintendent's prize, \$50—A. Milant, Schreiber Division, Rosspoint.

Sudbury Division: Superintendent's prize, \$25—J. Sayers, Garden River. Roadmasters' prizes, \$10 each—E. Starkey, Shawanaga; J. McNamara, Markstay; A. Archambault, Algoma; J. Whyatt, Klock; W. Boucher, Timiskaming.

Chapleau Division: Superintendent's prize, \$25—R. Beaupre, Chapleau. Roadmasters' prizes, \$10 each—A. Goegan, Tophet; H. Willoughan, White River.

Schreiber Division: Superintendent's prize, \$25—O. Laine, Schreiber. Roadmasters' prizes, \$10 each—B. Michaud, Loon; G. Milani, Caldwell.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System, Grand Trunk Pacific Ry., and Canadian Government Ry., the last including the Intercolonial Ry., Prince Edward Island Ry. and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net deficits	
			1922	1921
Jan.	\$3,210,401	\$10,433,564	\$2,223,163	\$2,863,058
Feb.	7,650,743	10,026,572	2,375,829	2,986,998
March	9,418,100	10,397,547	979,447	2,582,959
April	7,804,222	9,153,738	1,349,516	2,686,639
May	9,678,965	9,726,020	47,055	2,554,540
June	8,235,603	10,199,992	1,963,989	2,595,257
July	8,877,776	10,510,778	1,633,002	1,334,569
Aug.	9,569,780	10,399,617	829,837	17,105
Sept.	11,726,459	11,123,750	*602,709	*677,685
Oct.	14,074,025	11,917,281	*2,156,744	*1,033,321

\$95,246,074 \$103,888,459 \$8,642,385 \$16,020,119
Decrease

\$ 5,784,708 \$ 13,162,442 \$7,377,734

*Net operating revenue.

Approximate gross earnings for Nov., \$13,042,333, and for two weeks ended Dec. 14, 1922, \$5,246,273, against \$12,839,107 and \$5,268,646, for same periods, 1921.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,975	\$10,854,498	\$483,477	\$157,948
Feb.	11,303,693	10,649,205	654,488	158,904
March	13,847,627	11,427,120	2,420,507	30,402
April	12,331,371	10,782,698	1,548,773	1,097,359
May	13,664,246	11,819,732	2,344,514	949,038
June	13,810,448	11,448,134	2,362,313	742,445
July	14,463,835	12,501,927	1,961,908	92,408
Aug.	15,918,050	12,971,613	2,946,437	*370,297
Sept.	18,149,523	13,563,595	4,585,928	*265,888
Oct.	23,061,548	15,258,803	7,802,745	*1,091,258

\$147,888,319 \$120,777,225 \$27,111,094 \$1,501,064

Decrease \$ 10,588,933 \$ 9,087,869 \$ 1,501,064

*Increase.

Approximate gross earnings for Nov., \$21,132,000, and for two weeks ended Dec. 14, 1922, \$8,268,000, against \$18,507,000 and \$7,214,000 for same periods, 1921. Mileage under operation increased to 13,502.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses and net operating revenues, or deficits for 1922 and 1921:—

	Revenue	Expenses	Net revenue	
			1922	1921
Jan.	\$5,354,317	\$4,984,953	\$369,364	*\$701,166
Feb.	5,687,487	4,700,985	986,502	31,874
March	6,118,314	5,153,023	965,286	577,680
April	4,901,367	4,596,666	304,701	382,272
May	5,800,329	5,189,756	610,572	824,185
June	6,503,646	5,519,124	984,522	712,028
July	7,164,085	5,709,652	1,454,433	916,225
Aug.	7,383,340	6,130,841	1,252,499	1,361,924
Sept.	7,046,496	6,191,109	855,387	127,897

\$55,939,381 \$48,176,116 \$7,763,267 \$3,732,780

Increase \$ 7,763,267 \$ 3,732,780

*Deficit.

Approximate gross earnings for Oct., \$10,156,563; for Nov., \$10,084,707, and for two weeks ended Dec. 14, 1922, \$4,237,149, against \$9,743,332 for Oct., \$8,854,370 for Nov., and \$3,533,568 for two weeks ended Dec. 14, 1921.

Birthdays of Transportation Men in January.

Many happy returns of the day to:—

W. U. Appleton, General Superintendent of Rolling Stock, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 29, 1878.

R. Armstrong, Superintendent, Brandon Division, Manitoba District, C.P.R., Brandon, born at Kingston, Ont., Jan. 27, 1865.

L. E. Ayer, General Agent, Canadian National-Grand Trunk Rys., Kansas City, Mo., born at Henderson, Ia., Jan. 11, 1877.

F. X. Belanger, ex-General Freight and Passenger Agent, Temiscouata Ry., Riviere du Loup, Que., now Traffic Manager, Fraser Companies, Ltd., Edmundston, N.B., born at Chloxydormes, Que., Jan. 20, 1876.

Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., born at Hamilton, Ont., Jan. 29, 1866.

W. H. Coverdale, President, Canada Steamship Lines, Ltd., Montreal, and New York, born at Kingston, Ont., Jan. 27, 1871.

J. E. Dalrymple, Vice President, Traffic, G.T.R., and Central Vermont Ry., Montreal, born there Jan. 1, 1869.

G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, Ottawa, Ont., born at Quebec, Que., Jan. 27, 1861.

J. E. Everell, Superintendent, Montmorency Division, Quebec Ry., Light & Power Co., Quebec, Que., born at Cap Rouge, Que., Jan. 1, 1863.

Gordon Grant, Chief Engineer, Dominion Highways Commission, Ottawa, Ont., born at Dufftown, Scotland, Jan. 2, 1861.

C. Hood, Grain Agent, C.P.R., Winnipeg, born at Edinburgh, Scotland, Jan. 20, 1864.

D. W. Houston, Superintendent, Regina Municipal Ry., Regina, Sask., born at Bathurst, N.B., Jan. 3, 1879.

H. J. Humphrey, Assistant General Superintendent, Ontario District, C.P.R., Toronto, born at Berrys Mills, N.B., Jan. 26, 1879.

P. A. Keeler, Treasurer, Dominion Express Co., Toronto, born near Prescott, Ont., Jan. 18, 1867.

H. G. Kelley, ex-President, G.T.R., Montreal, born at Philadelphia, Pa., Jan. 12, 1858.

W. A. Kingsland, General Manager, Eastern Lines, Canadian National Rys., Montreal, born at New York, N.Y., Jan. 5, 1869.

Calvin Lawrence, member Board of Railway Commissioners, Ottawa, Ont., born in Windham Tp., Norfolk county, Ont., Jan. 30, 1857.

W. J. Lynch, General Manager, Quebec Ry., Light, Heat & Power Co., Quebec, Que., born there, Jan. 17, 1882.

G. E. McCoy, Master Car Builder, Eastern Lines, Canadian National Rys., Moncton, N.B., born there, Jan. 8, 1886.

John Macrae, Locomotive Foreman, C.P.R., Winnipeg, born at Springburn, Glasgow, Scotland, Jan. 30, 1879.

G. C. Martin, General Traffic Manager, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born at Creemore, Ont., Jan. 2, 1866.

William Phillips, European Manager, Canadian National-Grand Trunk Rys., Canadian Government Merchant Marine, and Canadian National Express Co., London, Eng., born at Toronto, Jan. 31, 1870.

W. Pratt, Manager, Dining and Parlor Cars, Hotels and News Department, Canadian National Rys., Toronto, born

at Sibbertoft, Northamptonshire, Eng., Jan. 18, 1870.

John Pullen, President, Canadian National Express Co., Montreal, born at Shepton Mallet, Eng., Jan. 23, 1863.

R. Mayne Reade, Superintendent, City Division and Quebec County Railway, Quebec Railway, Light & Power Co., Quebec, born at Llanelly, Wales, Jan. 1, 1868.

L. J. Rouleau, Commercial Agent, Canadian National-Grand Trunk Rys., Sherbrooke, Que., born at Montreal, Jan. 6, 1879.

F. L. Seaton, acting Assistant Auditor of Traffic, Canadian Government Rys., Moncton, N.B., born there, Jan. 29, 1878.

A. F. Stewart, Chief Engineer, Canadian Government Rys. and National Transcontinental Ry. east of Armstrong, Ont., Moncton, N.B., born at West Bay, N.S., Jan., 1864.

J. G. Sullivan, ex-Chief Engineer, Western Lines, now Consulting Engineer, C.P.R., Winnipeg, born at Bushnells Basin, N.Y., Jan. 11, 1863.

C. M. Walton, Superintendent of Transportation, Eastern Lines, G.T.R., Montreal, born there, Jan. 24, 1884.

T. H. White, Chief Engineer, Canadian Northern Pacific Ry., Vancouver, B.C., born at St. Thomas, Ont., Jan. 27, 1848.

A. Wilcox, General Superintendent, Central District, Canadian National Rys., Winnipeg, born at Kincardine, Ont., Jan. 2, 1865.

T. A. Wilson, Superintendent, Sudbury Division, Algoma District, C.P.R., Sudbury, Ont., born at Stratford, Ont., Jan. 27, 1872.

Canadian Car Demurrage Bureaus.

For several years the directory of Transportation Associations, Clubs, etc., published in each issue of Canadian Railway and Marine World, has contained the name of Canadian Car Demurrage Bureau. In our Nov. 1922 issue this was changed to Canadian Car Demurrage Bureau, Eastern Lines, as its jurisdiction is confined to points east of Port Arthur and Armstrong, Ont. Its office is at 401 St. Nicholas Building, Montreal, W. J. Collins being Manager, and A. J. Letch Assistant Manager.

For a number of years the Canadian Freight Association, Western Lines, Car Service Department, has attended to demurrage matters, but on Oct. 11, Canadian Car Demurrage Bureau, Western Lines, was organized, with jurisdiction over all territory in Canada, west of and including Port Arthur and Armstrong, the first divisional point on the Canadian National Rys. east of Superior, Ont. The Bureau's committee consists of E. Crawford, E. D. Cotterell, T. P. White and J. G. Sutherland. F. W. Thompson is acting Chairman, with office at 805 Boyd Building, Winnipeg.

G.T.R. Statistics.—D. E. Galloway, Assistant Vice President, G.T.R., in speaking recently at a dinner given in Montreal to R. H. Fish, on the latter's appointment as General Superintendent of Ontario Lines, gave the following figures respecting G.T.R. operations for 1921: Gross earnings, \$101,961,804; tons of freight handled, 27,254,786; passengers carried, 13,526,108; number of employees, 40,000; annual pay roll, approximate, \$55,000,000.

Movement of Michigan Central Railroad Cars by London & Port Stanley Railway.

The Board of Railway Commissioners passed order 33,145, Nov. 24, as follows: Re application of London & Port Stanley Ry. Co. for a revision of rates paid by Michigan Central Rd. Co. for the movement of cars between St. Thomas and London, Ont. Upon hearing the application at Ottawa, Oct. 10 and Dec. 19, 1921, and Oct. 23, 1922, the London & Port Stanley Ry. Co. and the Michigan Central Rd. Co. being represented at the hearing, and reading the agreement between the London Railway Commission and the Michigan Central Rd. Co., dated Dec. 23, 1915, under which the application is made, and the report of V. I. Smart, to whom the matter was referred for investigation, the Board, in pursuance of the terms of the said agreement, fixes the following rates to be paid the London Railway Commission by the Michigan Central Rd. Co., viz.:

Movements	Charge per car
Loads of 12-car trains.....	\$ 7.60
Empties, 12-car trains.....	5.00
Cars in trains of less than 12 cars.....	10.00
Movement of a single car.....	12.50

The operating charge for handling cars interchanged between industries on the London & Southeastern tracks and other railways at London to be \$5 instead of \$2 a car, as provided in sec. 13 of the agreement. The rates and operating charge fixed by this order to apply and be effective for 5 years from Dec. 23, 1920.

The original agreement providing for the handling of M. C. Rd. cars by the L. & P. S. Ry. between London and St. Thomas was entered into Dec. 23, 1915, sec. 7 providing that the M. C. Rd. pay the London Railway Commission, which negotiated the agreement on behalf of the L. & P. S. Ry., \$3 for each loaded car, and \$2 for each empty car, delivered in trainloads of not less than 12 cars from St. Thomas to London, or vice versa; \$4 for each car delivered in trains of less than 12 cars, and \$5 for the movement of a single car. It was provided that the per diem charges on cars so handled would be paid by the M. C. Rd., and that the minimum annual payment to be made by the M. C. Rd. to the L. & P. S. Ry. for the handling of cars in this way would be \$25,000.

It was provided that either party, at the end of 5 years, upon notice in writing at least 6 months before the expiration of the 5-year period, should be entitled to a revision of the charges, and that if such revision could not be agreed upon, the Board of Railway Commissioners should be appealed to. In 1920, as the first 5-year period expired on Dec. 23 of that year, the London Railway Commission advised the M. C. Rd. that it desired an upward revision. The M.C. Rd. management offered to double the rates, but the London Railway Commission felt that it was entitled to a greater increase. Further negotiation resulting in disagreement, the Board of Railway Commissioners, following hearings and consideration of a report prepared by V. I. Smart, of the Railways and Canals Department, fixed the new rates as mentioned in the order, retroactive to Dec. 23, 1920. It is said that the London & Port Stanley Ry. will derive from its application extra revenue amounting to about \$60,000 during the current 5-year period.

Railway Wages and Working Conditions in Canada and the United States.

Canadian Railway Shopmen.—Although the result of the ballot taken among the shopmen on Canadian railways, to determine whether a strike would be called, or further negotiations entered into with the railway executives, was not made public, it was made evident that the majority opinion among the employees affected was in favor of negotiation, by the mere fact of the shopmen's representatives meeting railway representatives in Montreal on Dec. 4, to discuss wage matters. The reduction in shopmen's wages, placed in effect by the Canadian railways, and the arbitration proceedings caused thereby, have been reviewed in preceding issues of Canadian Railway and Marine World, and the shopmen's vote referred to above was to determine whether the rank and file desired to strike in defiance of the conciliation board's award. The railways were represented in the final negotiations, beginning Dec. 4, 1922, by Geo. Hodge, Assistant General Manager, C.P.R. Eastern Lines; R. A. Pyne, Superintendent of Motive Power, C.P.R. Western Lines; E. R. Battley, Superintendent of Motive Power, G.T.R. Eastern Lines; C. F. Needham, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., and C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance, Canadian National Rys. The shopmen were represented by R. J. Tallon, President, American Federation of Labor, Railway Employees Department, Division 4; F. McKenna, Vice President, and Chas. Dickie, Secretary; and also by W. R. Rogers, Moncton, and S. Lyons, Winnipeg, representing the machinists; J. Corbett, London, Ont., representing the carmen; F. Harrison, Montreal, representing blacksmiths; F. Walsh, Montreal, representing pipefitters, and P. Jardine, Montreal, representing the electricians. The outcome of the negotiations, which terminated Dec. 8, 1922, was that the shopmen accepted the rates of pay put into effect by the railways, and upheld as reasonable by the conciliation board which heard the dispute arising out of the reductions. The reduced rates were made effective Aug. 16, 1922, and as a result of the final agreement reached Dec. 8, will be continued. The reductions, based on those ordered by the U.S. Railroad Labor Board for U.S. lines, ranged from 5c. to 9c. an hour, and as the reduced wages are now prevalent on U.S. lines, following the collapse of the shopmen's strike there, their continuation on the Canadian lines was expected.

Maintenance of Way Employees.—Details concerning the U.S. Railroad Labor Board order, by which wages for maintenance of way employees on U.S. roads were increased by 2c. an hour, were given in a preceding issue of Canadian Railway and Marine World. The maintenance of way employees on Canadian roads accepted the proposition advanced by the railways through the Railway Association of Canada, by which their wages were reduced to the extent that maintenance of way employees' wages had been reduced on U.S. lines by a Labor Board order in the spring of 1922, and as a consequence of the subsequent Labor Board order, referred to above, increasing U.S. employees' wages by 2c. an hour, Canadian maintenance employees asked Canadian railways to increase

their wages by a like amount. Negotiations were begun, between a wage sub-committee of the Railway Association of Canada and maintenance of way employees' representatives, on Nov. 21, 1922, and on Dec. 1 were terminated by the railway representatives agreeing to grant the increase sought. The wage sub-committee representing the railways was composed of Geo. Hodge, Assistant General Manager, C.P.R. Eastern Lines; A. E. Crilly, Assistant to General Manager, Eastern Lines, Canadian National Rys.; M. S. Blaiklock, Engineer, Maintenance of Way, G.T.R., and C. P. Riddell, General Secretary, Railway Association of Canada. The maintenance of way employees were represented by A. McAndrew, of the United Brotherhood of Maintenance of Way Employees and Railway Shop Laborers; W. Aspinall, Secretary; W. Dorey, General Secretary for the brotherhood on C.P.R. lines; P. Woods, General Chairman for C.N.R. lines; B. Johnston, representing Canadian National eastern lines employees, and G. Galdi, representing G.T.R. employees. The increased rates are applicable from Nov. 1, 1922.

C.P.R. Clerical Employees.—Details of the wage reduction placed in effect Aug. 19, 1922, by the C.P.R., applicable to clerical and other employees, the majority of whom are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, were given in preceding issues of Canadian Railway and Marine World, as were also details of the arbitration hearings which resulted in a majority decision favorable to the employees. Despite the majority decision, the company stated that the reductions, which had been suspended pending the board's decision, would be placed back in effect, and this was done on Oct. 23, 1922. Following an agreement (hereinafter referred to) reached between the G.T.R. and its clerical employees, by which reductions made in the wages of the latter were reduced considerably, the C.P.R. clerical employees' representatives approached the company to see if part of the reductions placed in effect on the C.P.R. could not be removed, and negotiations were begun in Montreal on Dec. 13 in this connection. Our latest advice (at Dec. 20) is that no agreement has been reached. The negotiations are being carried on by Geo. Hodge, Assistant General Manager, C.P.R. Eastern Lines, and W. A. Mather, General Superintendent, Alberta District, on behalf of the company, and W. E. Turner, Calgary, and F. H. Hall, Montreal, representing the employees.

Canadian National Rys. Clerical Employees.—Further meetings have been held between C.N.R. officials and officers of the Canadian Brotherhood of Railway Employees, with a view to adjustment of the wage reductions placed in effect for clerical and other employees, the majority of whom are members of the Canadian Brotherhood of Railway Employees. The drawing up of a new schedule is also under consideration, and further negotiations are in prospect.

Grand Trunk Ry. Clerical Employees.—The conciliation board, of which E. McG. Quirk, Montreal, was Chairman, and on which the railway was represented by U. E. Gillen, Manager, Toronto Terminal Railway Co., and the employees by H. S. Ross, K.C., Montreal, which was appoint-

ed to enquire into the dispute between the G.T.R. and its clerical employees, the majority of whom are members of the Canadian Brotherhood of Railway Employees, was largely instrumental in bringing together G.T.R. and C.B.R.E. representatives in a conference at Montreal which terminated this long-standing dispute. The G.T.R. reduced the wages of its clerical employees shortly after the U.S. Railroad Labor Board had ordered a reduction for similar employees on U.S. roads, and a conciliation board with the above named members was appointed to enquire into the ensuing dispute. Pending the board's expected award, the wage reductions were held in abeyance for some time, but afterwards made effective. By the agreement reached at Montreal in the early part of Dec., 1922, a compromise was reached on the total amount of the reductions to be made, this total being reduced considerably, and many adjustments were made by grading the salaries in the various clerical positions in the service. In addition, graded rates of pay for freight handlers, warehousemen and kindred employees were established. The reductions at first proposed by the railway were from 3c. to 5c. an hour, but as finally agreed upon are considerably less. They are retroactive to Nov. 1, 1922.

Revision of G.T.R. Seniority Lists.—As stated in Canadian Railway and Marine World for Nov., 1922, pg. 572, G.T.R. employees who lost their seniority and pension rights because of the trainmen's strike of 1910 have had them restored. This has necessitated a great deal of revision of the trainmen's seniority lists, and many of the men who lost their seniority in 1910 now standing for preferred runs. Some of the men to whom seniority was restored were still in the company's service, working on seniority established since they re-entered the service after the strike, while others had been out of the service since the strike.

C.P.R. passenger car shops, which had been closed down at all points on the system for some weeks, were reopened in the latter part of Nov., 1922, and have been operating without interruption since then. About 1,700 men were affected by the shut-down at the Angus shops in Montreal, and 1,300 elsewhere on C.P.R. lines.

Car Cleaners' Wages Increased.—Reductions in passenger car cleaners' wages amounting to 5c. hourly were made by the Canadian railways when the general reductions applying to shopmen of all classes were put in effect Aug. 16, 1922. By an agreement concluded Dec. 10, 1922, between the Canadian railways represented by the Railway Association of Canada, and the American Federation of Labor's Railway Employees' Department, Division 4, car cleaners' wages were increased 1c. an hour as from Dec. 1, 1922, thus decreasing the previous reduction from 5c. to 4c. hourly, and leaving the hourly rate at 37c.

General.—Various press reports state that several locals of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees have left that organization to join the Canadian Brotherhood of Railway Employees. A London, Ont., press report of Dec. 13, 1922, stated that baggagemen and assistant station agents

on the C.P.R. in that district had left the Order of Railroad Telegraphers to join the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and that provision for baggage-men will be made in future schedule contracts entered into by the latter organization.

A Montreal press report of Dec. 14 stated that Sir Henry Thornton, President, Canadian National Rys., would soon meet in conference at Montreal numerous representatives of the Canadian railway shopmen, train service employees and maintenance of way men, with a view to establishing an entente between the C.N.R. and the employees, which would prevent strikes or suggestions of strikes. It was stated that Tom Moore, President of the Canadian Trades and Labor Congress, and a director of the C.N.R., was taking a prominent part in arranging for the conference.

United States Situation.—The past six weeks has seen little of importance in connection with railway labor matters in the U.S., the chief development recorded being a demand made by clerical employees on about 50 roads, to the U.S. Railroad Labor Board, for an increase in wages so as to bring their rates to what they were under the Board's decision no. 2, the highest level at which they ever were. Hearings in connection with the application were held by the Board on three days late in November, 1922, when E. H. Fitzgerald, President, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, argued in support of the application. The railways opposing the application were represented by E. J. McClees, Secretary of the eastern railways' bureau of information. After hearing argument on both sides, the Board reserved decision.

A decision of some importance given by the Labor Board dealt with the practice of contracting out repairs on the Western Maryland Rd. The Board upheld its previous ruling in matters of this nature, and decided that it was unlawful, according to the Transportation Act, for railways to contract their repair work to private individuals or outside firms.

The effects of the shopmen's strike have been completely removed on U.S. lines in the various ways described in preceding issues of Canadian Railway and Marine World, some roads settling with their shop employees on the Willard-Jewell agreement plan, others drawing up independent agreements with their new and old employees, and others continuing to operate with loyal employees and new men hired.

Sir Henry Thornton and the Salvation Army.—Shortly before leaving England for Canada, Sir Henry Thornton visited the Salvation Army farm colony, at Hadleigh, Essex, also the boys' training farm school, and the children's home in Southend, being accompanied by several Great Eastern Ry. officials, and by Commissioner and Mrs. Lamb, and Major James Turner, of the Salvation Army, representing General Booth, the party travelling by special train from Liverpool St., London. Colonel George Joliffe, the Governor of the colony, who met the visitors on arrival at Rayleigh, escorted them over the farms. Sir Henry was much impressed by what he saw of the Army's activities on the colony, and the possibilities of extending the training given to emigrants.

Canadian National Railways' Electrification Plans for Toronto District.

Canadian Railway and Marine World for Dec., 1922, gave on pg. 633, particulars of an interview in which representatives of a number of municipalities along the lake shore east of Toronto urged upon S. J. Hungerford, Vice President and General Manager, and G. Ruel, K.C., director and General Counsel, Canadian National Rys., the desirability of completing the construction of the Toronto Eastern Ry., and the electrification, in connection therewith, of certain portions of the Canadian National Rys. Orono Subdivision, so as to form a continuous electric railway from Toronto to Cobourg.

Following this interview, the C.N.R. decided to make survey, and engineers, under the direction of E. W. Oliver, General Superintendent, Electric Lines, C.N.R., are at work between Toronto and Pickering.

The original Canadian Northern line between Toronto and Trenton, Ont., is now operated as the Orono Subdivision of the Ottawa Division, Ontario District, Canadian National Rys. It is suggested to electrify the Orono Subdivision line from the passenger terminal at the Don River and Queen St., Toronto, to a point not yet determined upon, a short distance east of Toronto, where a new link would be built to connect to the Toronto Eastern Ry. at the west town line of Pickering. From Pickering to the western limit of Whitby, a portion of the Toronto Eastern line, which is graded, and on which structures are built, but on which no rails are laid, would be used. From Whitby to the east end of Wellington St., Bowmanville, another portion of the Toronto Eastern line, on which construction is completed, would be used. From Bowmanville, connection would again be established with the C.N.R. Orono Subdivision line, either via Tyrone, direct north of Bowmanville, and 45.7 miles from the Toronto Queen St. terminal via the Orono Subdivision, or via Orono, northeast of Bowmanville, and 51 miles from the Toronto Queen St. terminal via the Orono Subdivision line. From Tyrone, or Orono, the C.N.R. Orono Subdivision line would be electrified to Cobourg, 76.1 miles from the Toronto Queen St. terminal, while between Cobourg and Brighton, 22.8 miles, the Orono Subdivision line would be taken up. There is now a junction between the C.N.R. and the G.T.R. at Brighton. The Orono Subdivision line would also be taken up between the point east of Toronto where the connection which would be built between it and the Toronto Eastern Ry. at Pickering would leave it, and Tyrone or Orono, as the case might be.

We are advised that if the suggested construction should be gone on with, the service to be given would probably be about as follows: Between the Queen St. terminal in Toronto and the eastern side of the suburban area around Scarboro, every half hour; between Toronto and Bowmanville, hourly; between Whitby and Bowmanville, half hourly; between Bowmanville and Port Hope, every two hours; between Port Hope and Cobourg, hourly.

The Canadian National President's Statement re Electrification.

Not only is the providing of electric service between Toronto and Cobourg being considered, but also for the G.T.R.

line between Toronto, Hamilton and Niagara Falls. Sir Henry Thornton telegraphed W. H. Wardrope, K.C., of Hamilton, on Dec. 20, from Mont Joli, Que., as follows: "With reference to our exchanged telegrams and in response to your request that the board of the Canadian National Rys. should define their position with regard to traffic matters in the territory contiguous to Toronto and Hamilton, I beg to inform you as follows: The board is only concerned with this matter in so far as it relates to the Canadian National Rys., and any expression of opinion must, therefore, be confined to that limit. From this point of view there are two principles involved: First, the board views with apprehension anything which might jeopardize the gross receipts of the Canadian National Rys. In other words, they must pursue the same course which any other institution would pursue under similar circumstances in the protection of its business. Second, the Canadian National Rys. must adequately fulfil their obligations to the public and furnish that character of service which will meet public requirements and enable the said railway not only to retain, but increase, gross receipts. The application of the two principles announced above enables the board to say that they propose to electrify or otherwise improve the service of the Canadian National Rys. in the vicinity of Toronto and Hamilton from time to time, as circumstances and the demands of the traffic justify. As a preliminary step, an examination of the services between Toronto and Hamilton and Niagara Falls, and eastward from Toronto toward Cobourg, will at once be put in hand, with a view at least to partial electrification as soon as possible. Other developments will follow as may be required. There have been similar requests for announcement of policy from various sources, and I am, therefore, giving the information herein contained to the press."

Beer and Wine on Dining Cars in Quebec Province.

A recent Quebec press report said that it was stated that permits were about to be issued for the sale of beer and wine on Canadian National Rys. dining cars while being run on trains within the province, in the same way as permits had been issued to the C.P.R. and other railways operating dining cars within the province. It was added that the Intercolonial Ry. did not sell intoxicating liquor on its dining cars in the pre-prohibition days.

In response to our enquiry, we were officially advised that the Canadian National official under whose jurisdiction the matter would be had no knowledge that it is the intention to serve beer and wines on dining cars in Quebec Province, and the Quebec Liquor Commission advised us that the C.N. Rys. had not made any application for permits.

Canadian Railway Club.—E. R. Viberg, A.S.M.E., Mechanical Engineer, Canadian Car & Foundry Co., read a paper on present day tendencies in car construction, before the club in Montreal, Dec. 12.

Canadian Pacific Railway Construction, Betterments, Etc.

Blacks Harbor and L'Etang, N.B.—A recent press report stated that the C.P.R. was interested in a project for the construction of a railway from near St. John to Blacks Harbor and L'Etang, N.B., where deep water terminal facilities were to be provided for oceangoing ships, and that plans were being prepared for going ahead with the work. We are officially advised that the C.P.R. made some investigations in regard to a railway connection with L'Etang some years ago, but nothing came of it. The proposal to build a railway to Blacks Harbor and L'Etang is one for which the Dominion Parliament some years ago incorporated the Canadian Terminal Ry., in which L. Connors, formerly of Connors Bros., Blacks Harbor, was interested. In 1915 the company applied to the New Brunswick Government for a subsidy of \$20,000 a mile for its proposed railway, but it was refused, and an application for aid in 1916, met with the same fate.

Sherbrooke Viaduct and Bridge.—Sherbrooke, Que., City Council applied recently to the Board of Railway Commissioners for an order directing the C.P.R. to enlarge the Gault St. viaduct and to rebuild the Belvedere bridge there. Arguments were heard by the Board Nov. 26, when it was stated that the C.P.R. would pay two-thirds of the cost of a new bridge on Belvedere St., estimated to cost \$50,000. The Board is reported to have decided that improvements are necessary, and it is said an effort is being made to bring about a settlement between the different parties concerned.

La Salle Loop Line.—As stated in Canadian Railway and Marine World for Sept., 1922, pg. 461, the C.P.R. La Salle loop line in Montreal was opened Aug. 10. The construction of this line has resulted in opening up for industrial development a large area lying close to the heart of Montreal. This area, while in the town of La Salle, which is separated municipally from Montreal, is nearer to the center of the city than many sections of the city itself. The eastern limits of La Salle are less than four miles from the center of Montreal, or less than half the distance of the industrial area in the eastern end of the city. The new line runs through the heart of La Salle, and opens up some 4,675 acres of industrial sites. The entire area served by the line is level; roads and sewerage are assured to new industries locating; adequate water supply is available, as is power at low rates, and labor is plentiful. Since the line was opened, passenger service has been provided by a self-propelled gasoline motor car loaned by the Quebec Central Ry., similar to the car belonging to that railway described in Canadian Railway and Marine World for Sept., 1922, pg. 456.

The Interprovincial & James Bay Ry. starts from near Kipawa, Que., at the terminus of the C.P.R. Kipawa Branch, and the first 10 miles was completed in 1913. The construction of an extension to the Quinze River, with an 8-mile branch to Ville Marie, which will give the railway a total length of 78 miles, is in progress, and we are officially advised that about 40 miles of the grading has been completed, and that 17 miles of track has been laid. Some grading has been done beyond mile 40 from Kipawa, and the right of way to the Quinze River has been cleared.

We are officially advised, in connection with a recent press report that it was proposed to build a spur line from the Kipawa line to Silver Center, that the company has no such intention at present.

St. Thomas Yards.—A recent press report stated that work had been started on an extension of C.P.R. yards at St. Thomas, Ont., at an estimated cost of \$15,000. We are officially advised that the report was somewhat exaggerated. The work consisted of installing a new repair track, about 850 ft. long, on the company's right of way north of Talbot St.

Fort William Freight Shed Burned.—The C.P.R. freight shed, No. 5, Fort William, Ont., was totally destroyed by fire, Dec. 5, together with five cars which were being loaded and a large quantity of freight, the total estimated loss being reported as \$1,000,000. The C.P.R. steamship Assiniboia, which was moored at the passenger landing, caught fire on the bridge, but the fire was extinguished without material damage, and the vessel was towed to another dock. This was the fourth serious fire on the company's Fort William premises in 1922, the previous ones being the destruction of the yard office in January, the oil shed and carpenters' shop some time later, and the No. 2 freight shed during the summer. Plans are reported to be in preparation for the replacement of the burned building.

Russell Northerly Branch.—The first 6 miles of a branch line from Russell, Man., northerly to Cracknell, was completed and put in operation in 1921, and during 1922 the Northern Construction Co. was given a contract for a further section from Cracknell northerly. We are officially advised that track has been laid on this extension to Inglis, 5.58 miles, and that a train service is being operated over it.

Cutknife to Whitford Lake.—The C.P.R. was granted an extension of time by the Dominion Parliament in 1922, for building several branch lines, among them being the extension of the Wilkie-Cutknife branch, through Lloydminster, Sask., to Whitford Lake, Alta., in Tp. 56, Range 15, West of 4th Meridian. In 1919, when the previous extension was granted, Parliament provided that for the purpose of avoiding duplication of construction beyond Lloydminster, the approval of the route map be made subject to joint construction or operation with the Canadian Northern Ry. Co., on terms to be agreed upon between the companies or settled by the Board of Railway Commissioners, and this provision was continued in the act of 1922. The Board of Railway Commissioners, on July 12, 1919, approved of route map covering route from Cutknife, mile 0, to Tp. 56, Range 15, West of 4th Meridian, Alta.; and on June 15, 1920, approved a revised route map from mile 24 to Sec. 11, Tp. 56, Range 15, West of 4th Meridian. The C.P.R. applied to the Board recently for an order approving route map from Cutknife, Sask., mile 0, to Whitford Lake, Alta., mile 100.4. The board, on Dec. 1, refused the application on the ground that the proposed route does not vary from the first 24 miles of the route approved July 12, 1919, or from the revised location from mile 24 approved June 15, 1920.

Weyburn-Lethbridge Line.—We are

officially advised that track has been laid on the last section of this line, the newly completed section extending from Bain westerly to Manyberries, 15.55 miles. The line was inspected by C. Murphy, General Manager, Western Lines, Nov. 28, and was handed over to the operating department Dec. 11, 1922.

Acme-Empress Line.—In connection with this line, upon which track had been laid for about 34 miles at the end of 1921, we are officially advised that track was laid during 1922 on a further 3.34 miles, from Kirkpatrick to Kneehill, Alta., where a connection is made with the Canadian National Rys. This gives the line a present length of 37.03 miles, over which a train service is being operated. This extension gives the C.P.R. access to Drumheller coal fields.

Summerland Station.—A press report states that a contract has been let to Harvey & Elsey, Summerland, B.C., for building a station there, at an estimated cost of \$10,000.

Steam Railway Track Laid in 1922.

Replies to Canadian Railway and Marine World's annual enquiries as to track laid on new main and branch lines, i.e., additions to road, or point to point mileage, report 125.56 miles laid during 1922, in addition to which there was considerable mileage under construction, but on which track has not been laid. Following are the details:

Canadian National Rys.—	Miles	Miles
Magnolia, Alta., connection with Grand Trunk Pacific Ry....	0.79	
Battle-Duhamel, Alta., connection with G.T.P. Ry.....	2.80	3.59
Canadian Pacific Ry.—		
La Salle loop line, Highlands to Cote, St. Paul, Que.....	4.50	
Interprovincial & James Bay Ry., from mile 10 from Kipawa, Que., to track end.....	17.00	
Russell branch, Man., Cracknell to Inglis.....	5.68	
Weyburn-Lethbridge line, Bain to Manyberries, Alta.....	15.55	
Acme-Empress line, Kirkpatrick to Knee Hill.....	3.34	46.07
Kettle Valley Ry.—		
Dog Lake south to Experimental Farm, B.C.....		19.00
Lacombe & North Western Ry.—		
Mile 36.7, near Rimbey, to mile 49.2.....		12.50
Timiskaming & Northern Ontario Ry.—		
From Cochrane to Abitibi River.....		44.40
Total		125.56

The foregoing figures refer to mileage built for regular freight and passenger traffic, in addition to which there was a good deal of construction on industrial lines. Among these, the following were reported completed, or as expected to be completed by Dec. 31, 1922:

Belge Paper Co.—	Miles	Miles
Metabetchouan Lake to Boston-nais River, Que.....		4.50
Abitibi Transportation & Navigation Co.—		
Iroquois Falls to Hughes, Ont.	16.00	
Spur from mile 8.....	5.00	21.00
Keewatin Lumber Co.—		
C.P.R. at Kenora, Ont., to site of new pulp mill.....		1.00
Drum-Lummin Mines Ry.—		
From mines to Hartley Bay, B.C.		1.00
Total		37.50

Premier Oliver, of British Columbia, is reported to have stated, on Dec. 18, that the Legislature having adjourned, the appeal to the Dominion Privy Council on the freight rates question would engage his immediate attention.

Head-on Collision on T. & N. O. Railway.

A head-on collision between two freight trains took place on the Timiskaming & Northern Ontario Ry., Nov. 15, 1922, at 12.25 p.m., when second no. 85, locomotive 138, northbound, met extra 134 south at mile 68.5 north of North Bay. The accident was due to the crew on second 85 overrunning a 31 order held by them. The accident resulted in the death of Gordon Kay, of North Bay, the fireman on extra 134 south, \$27,000 damage to the locomotives, and about \$4,000 damage to box cars. The crew of second 85, consisting of Z. E. Filiatrault, locomotive man; J. Kennedy, conductor; B. Lord, fireman, and T. J. Doherty and A. T. Larome, brakemen, were dismissed from the railway's service. All were charged with criminal negligence, but the charges against the firemen and brakemen were dropped, while those against Filiatrault and Kennedy led to an investigation before a jury at North Bay, early in December. At the investigation, Filiatrault and Kennedy admitted their responsibility for the accident, stating that they had become confused in connection with the orders held by them. The last 31 order received had changed second 85's meet on extra 134 south from Timagami to Doherty siding, south of Timagami, and the collision occurred when second 85, northbound, had passed Doherty siding. The jury found that the accident had been caused by negligence on the part of the accused, who were allowed to go on suspended sentence.

Traffic Orders by Board of Railway Commissioners.

Exchange Surcharge on International Shipments.

General order 372, Nov. 24.—Re general order 326, Jan. 14, 1921, authorizing an exchange surcharge of 60% of the rate of exchange on all international shipments, other than coal and coke, to be added to the total through charges, including advanced charges, payable to United States carriers, when payable and collected in Canada; and re applications of Canadian Manufacturers' Association and Calgary Board of Trade for an order suspending the operation of the order, and the authority granted by it to the railway companies to levy and collect the said surcharge: Upon reading the written submissions filed by the Canadian Manufacturers' Association, the Canadian Freight Association, and other interests affected, and hearing what was alleged on behalf of the Calgary Board of Trade and individual shippers, at Calgary, Sept. 28, 1922, the Board orders that, for the present, and until further or other order, made either upon application, or by the Board of its own motion and without notice, if it shall be deemed desirable or necessary to do so, the companies be, and they are hereby relieved from complying with the requirements of paragraph 3 of the order, obtaining from the Bank of Montreal the rate of exchange for New York funds at the time, and upon the dates specified in the said order, and making monthly returns to the Board showing the amount of surcharges collected.

Supplement to Express Classification.

33,154, Nov. 27.—Re application of Express Traffic Association of Canada

for an order approving Supplement D to Express Classification for Canada no. 5: Upon reading the submissions filed in support of the application, and the report and recommendation of its Assistant Chief Traffic Officer, the Board orders that the said supplement be approved; the said supplement to be published as no. 5 to Express Classification for Canada no. 5.

Express Rates On Cream.

33,142, Nov. 25, 1922.—Re application of National Dairy Council of Canada for an order cancelling the 20% increase in express rates on cream, allowed by general order 327, Feb. 2, 1921, and re-establishing the special commodity rates on cream in existence prior to that order: Upon hearing the matter at Ottawa, April 20, 1922, the National Dairy Council of Canada, the Express Traffic Association of Canada, the Dominion Express Co., the Canadian National Express Co., fruit and vegetable interests, the Canadian Manufacturers' Association, the Canadian Packing Co., the Swift-Canadian Co., Gunn's, Limited, the Harris Abattoir Co., and the William Davies Co., being represented at the hearing, and what was alleged, the Board orders that the application be refused.

United States Railways' Financial Results.

The returns secured by U.S. railways in Oct., 1922, were very much better than for September, and reflected to a greater degree the exceptionally heavy traffic which they were handling during the autumn. As stated in Canadian Railway and Marine World for Dec., 1922, pg. 625, the net operating income earned by the class 1 roads in Sept., 1922, was but \$58,428,000, or 2.88%, on an annual basis, on the tentative valuation determined by the Interstate Commerce Commission. In October, the net operating income was \$85,234,000, representative of an annual return of 4.05% on the tentative valuation. While this was a great deal better than in September, it was not good enough to equal the record for Oct., 1921, when the net operating income was \$105,425,000, or at the rate of 5%. Gross operating revenues for the class 1 roads for Oct., 1922, were \$549,284,000, an increase over those for Oct., 1921, of 2.5%, and operating expenses, \$428,265,000, were 7.8% greater than in Oct., 1921.

For the first 10 months of 1922, net operating income for the class 1 roads was \$614,627,000, compared with \$499,346,000 in the first 10 months of 1921. This was at the rate of 3.97% on tentative valuation, on an annual basis, for 1922, compared with 3.23% in 1921.

Perusal of the above figures demonstrates that U.S. railways must improve their net earnings position considerably before they are securing returns at the rate which the Interstate Commerce Commission has decided on as being fair and just, viz., 5.75%. Many influences in the U.S., led by Senator Capper of Kansas, a leader of the agricultural interests, are working for still lower freight rates, and a repeal of the sections of the Transportation Act which, in the public mind, "guarantee" U.S. railways a stated return on the value of their respective properties. As a matter of fact, the Transportation Act guarantees the U.S. railways nothing—it merely instructs the Interstate Commerce Commission to make such rates that, with honest, efficient and economical manage-

ment, a fair return to the railways should result. The Commission set 5.75% as a fair return, but the results secured by the railways on the rates authorized, as reviewed each month in Canadian Railway and Marine World, have been such that the return specified as just and fair has never been realized by the railways as a whole.

Locomotive Stoker Applications on Canadian National Railways.

Canadian Railway and Marine World for Sept., 1922, stated that the Canadian National Rys. had bought 25 Duplex locomotive stokers for application to Santa Fe, mikado, and consolidation locomotives, and details of the application of 10 of these to Santa Fe's at the Moncton shops were given in subsequent issues. The other 15 stokers were sent to the Transcona, Man., shops, and on Dec. 13, 1922, we were officially advised that 5 mikado locomotives, nos. 3400, 3398, 3395, 3396 and 3397, had been equipped there, that work was proceeding on equipping mikado locomotives 3393 and 3394, and that nos. 3390, 3391 and 3392 would be equipped as soon as they were shopped for general repairs. The remaining 5 stokers are to be applied to heavy consolidation locomotives, it being anticipated that work will be started as soon as the locomotives can be spared, probably when the heavy grain shipment has slackened off.

In 1921, one mikado locomotive, no. 3402, class S-1-e, was received on the C.N.R. Western Lines from the builders equipped with a Duplex stoker, and 12 more locomotives of this class, from nos. 3390-3401, were built with deck castings suitable for stoker application, and with the tender also partially equipped to accommodate the stoker conveyor. As a consequence, the Transcona shops were relieved of a portion of the work which would otherwise have been made necessary by the stoker applications, but, as at Moncton, the alterations required were of considerable magnitude.

The mikado locomotives to which the stokers are being applied have 27 x 30 in. cylinders and 63 in. driving wheels, and a rated tractive effort of 53,100 lb. Total heating surface is 3,361 sq. ft., and grate area 56.5 sq. ft. Weight on drivers is 223,000 lb., and total weight of locomotive and tender 468,800 lb. The heavy consolidation locomotives to which stokers will be applied have 24 x 32 in. cylinders, 63 in. driving wheels, and a rated tractive effort of 49,800 lb. The total heating surface is 2,853 sq. ft., and grate area 49.27 sq. ft. Weight on drivers is 208,000 lb., and total weight of locomotive and tender 382,700 lb.

The intention is to operate the stoker-fired mikado locomotives out of Melville, Sask., between Melville and Rivers, 137.1 miles, on the Miniota Subdivision, Melville Division, Manitoba District; and between Melville and Watrous, 129.1 miles, on the Touchwood Subdivision, Melville Division, Manitoba District. The consolidations to be stoker fired will operate on the heavy grades between Blue River and Lucerne, B.C., 132.7 miles, on the Albreda Subdivision, Kamloops Division, and the Tete Jaune Subdivision, Edson Division, B. C. District.

An illustration showing the arrangement of the Duplex locomotive stoker and the method of its application to tender and boiler back head was given in Canadian Railway and Marine World for Dec., 1922, pg. 600.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 371. Nov. 3.—Disallowing, pending hearing, tariffs of supplements filed by railways qualifying item providing for box shoos, in carloads, by stipulating that same will not apply on material cleated, or glued, together, or otherwise made up, and providing on such material, the box shoos minimum weight and rate plus 4c. per 100 lb.

32,977. Oct. 16.—Authorizing Canadian Northern Ry. to cross Magnan St., Gravelbourg, Sask.

32,978. Oct. 16.—Approving plan and specifications of East Black Creek drain work to be done under G.T.R. in Ellice Tp., Ont.

32,979. Oct. 17.—Approving location of Canadian National Rys. 4th class station at Eldersley, Sask.

32,980. Oct. 17.—Authorizing Canadian Northern Ontario Ry. to operate over bridge across Rideau Canal, at Smiths Falls, Ont., without first stopping.

32,981. Oct. 17.—Authorizing Canadian National Rys. to build bridge over Pipestone Creek, Hartney Subdivision, Man.

32,982. Oct. 17.—Authorizing Quebec, Montreal & Southern Ry. to lay track across St. Ours Road, Sorel, Que.

32,983, 32,984. Oct. 17.—Authorizing Canadian Northern Ry. to use viaduct over East Burrill Creek, St. Boniface, Man., and bridge over Blanche River, Kildare Tp., Que.

32,985. Oct. 16.—Approving C.P.R. plan of layout for wigwag and bell, at crossing of Perth Road at mile 100.9, Kingston Subdivision, Ont.

32,986. Oct. 16.—Ordering Vancouver, Fraser Valley & Southern Ry. (British Columbia Electric Ry.) to reduce fare on its Burnaby Lake Line within City of Vancouver to same rate it charges and collects on its city lines.

32,987. Oct. 11.—Declaring that for the present, the C.P.R. crossing about 2 miles from Wingham station, Ont., is protected to Board's satisfaction.

32,988. Oct. 11.—Relieving Canadian National Rys. from erecting fences, gates and cattleguards on its Hervey Subdivision, Montreal Division, Que., from mile 2.0 to 6.25, both sides; from mile 14 to 14.5, south side only, and from mile 14.7 to 15.25, south side.

32,989. Oct. 16.—Dismissing complaint of Zwicker & Co., Lunenburg, N.S., against freight rate charged by Canadian National Rys. on fish from Lunenburg to Halifax and Yarmouth, N.S.

32,990. Oct. 18.—Authorizing Canadian Northern Ry. to use bridge over Bayonne River, St. Elizabeth Parish, Que.

32,991. Oct. 18.—Declaring that for the present, the G.T.R. crossing one mile north of Clandeboye, Ont., is protected to Board's satisfaction.

32,992. Oct. 17.—Authorizing Canadian Northern Ry. to use bridge over L'Assomption River, St. Charles Borromeo Parish, Que.

32,993. Oct. 16.—Dismissing complaint of National Dairy Council of Canada, on behalf of Manufacturers' Section of Alberta Dairymen's Association, against freight rates on butter east of Calgary and Edmonton, Alta.

32,994. Oct. 13.—Authorizing Canadian National Rys. to build transfer track with C.P.R. in Kamloops, B.C., leave being reserved to city to apply to Board at any time for permission to build subway at the point.

32,995. Oct. 18.—Ordering that future maintenance of C.P.R. crossing at Fourth St. (now 11th St. West), Calgary, Alta., be paid by the city.

32,996. Oct. 14.—Ordering Toronto Ry. Co. to pay C.P.R. \$4,009.57, being 10% of estimated amount of land damages in separation of grades at Avenue Road, Toronto.

32,997. Oct. 17.—Declaring that for the present, the C.P.R. crossing near Montebello station, Que., is protected to Board's satisfaction.

32,998. Oct. 18.—Authorizing Don Valley Brick Co., Toronto, to build crossing over Canadian Northern Ry.

32,999. Oct. 18.—Authorizing Canadian Northern Ry. to use bridge over Shawinigan River, St. Flore Parish, Que.

33,000. Oct. 19.—Authorizing Alberta Public Works Department to make highway across Canadian National Rys. in s.e. ¼, Sec. 10, Tp. 29, Range 20, West 4th Meridian, Alta.

33,001. Oct. 20.—Approving Canadian National Rys. compiled plan showing proposed C.P.R. connection and transfer track at Drumheller, Alta.; and ordering that, pending construction, C.P.R. is authorized to use North American Collieries spur as connection with C.N.R., up to Jan. 1, 1923, after which the connection and transfer tracks at Drumheller shall be used in accordance with approved plan; the whole work to be completed at C.P.R. expense by Jan. 1, 1923.

33,002. Oct. 19.—Dismissing application of Board of Trade of Redland, Alta., for order directing Canadian National Rys. to provide better lighting facilities at Redland station, and ordering C.N.R. to keep station reasonably lighted.

33,003. Oct. 18.—Ordering that cost of supplies for cabin and watchman, including hearing, at

crossing of G.T.R. and Hamilton St. Ry., at King St., Hamilton, Ont., be divided equally between the companies.

33,004. Oct. 19.—Approving plans showing proposed overhead crossing of G.T.R. by C.P.R., near Kingston Junction, in lots 6 and 7, west of Great Catarqui River, Ont.

33,005. Oct. 19.—Amending order 32,937, Sept. 26, re Wellington St. viaduct, Ottawa, by providing that cost of the work of keeping steel work painted and treated, and renewing flooring, and maintaining it with 4-in. B.C. not 1 fir crosstied planking, and maintaining structure from abutment to abutment, be apportioned between the G.T.R. and the C.P.R.

33,006. Oct. 19.—Extending to Nov. 30, time within which Canadian National Rys. may complete 3rd class station at Winter, Sask.

33,007. Oct. 19.—Amending order 31,876, Dec. 6, 1921, re C.P.R. and Peterborough Radial Ry., crossing at George St. Peterborough, Ont., by providing that cost of construction be paid by P.R.R., maintenance of gates by C.P.R. and P.R.R., cost of operation of gates, signals and derrails apportioned 50% by each, during the period of 24 hours, during which P.R.R. is operating gates and interlocker, and for remainder of the time each day, C.P.R. to pay the whole cost.

33,008. Oct. 20.—Authorizing Canadian Northern Ry. to open for traffic, portion of its line from junction with Brazeau Subdivision, mile 60, to Red Deer, Alta., between mile 0 and 6.1, also west leg of Y.

33,009. Oct. 20.—Ordering Canadian National Rys. to lay 24-in. corrugated iron or concrete culvert under its track at Broad Road, leading to North Annex, Regina, Sask.

33,010. Oct. 20.—Dismissing application of B. J. Ostrander, Ltd., Calgary, Alta., for order authorizing joint use of spur built for A. T. & W. J. Stephenson, Red Deer, Alta., under order 15,350, Nov. 13, 1911; and ordering that in event of failure to agree upon compensation to be paid for such use, same to be settled by Board.

33,011. Oct. 20.—Authorizing C.P.R. to build spur for P. Burns & Co., in n.w. ¼ Sec. 29, Tp. 23, Range 1, West 5th Meridian, Alta.

33,012. Oct. 19.—Authorizing Canadian Northern Ry. to open up Higginson Ave., Hawkesbury, Ont., across G.T.R., to cross it with spur, to connect with Canadian National Rys., to build certain sidings across Emerald, Gordon, James and Nelson Sts., to close Nelson St., and to divert it to a crossing farther south.

33,013. Oct. 19.—Extending to Nov. 30, 1922, time within which Canadian National Rys. may erect 3rd class station at Deepdale, Man.

33,014. Oct. 23.—Declaring that for the present, the first public crossing west of Burlington, Ont., over G.T.R., is protected to Board's satisfaction.

33,015. Oct. 20.—Authorizing Canadian Northern Ry. to use bridge over St. Norbert River, Berthier County, Que.

33,016. Oct. 21.—Approving Bell Telephone Co. agreement with Roseville Rural Telephone Co., Lanark County, Ont.

33,017. Oct. 21.—Declaring that for the present, the second crossing west of Manitou station, Man., over C.P.R., is protected to Board's satisfaction.

33,018. Oct. 20.—Authorizing C.P.R. to divert road allowance and close within right of way limits, the diversions to be at grade across its tracks, in Sec. 2, Tp. 21, Range 30, West Principal Meridian, Sask.

33,019. Oct. 21.—Amending order 32,958, Oct. 3, re G.T.R. spur for Carroll Bros., near Sherston, Ont.

33,020. Oct. 21.—Dismissing application of Michigan Central Rd. for order directing Village of Rodney, Ont., to contribute toward cost of installing new type of gates at crossing of Furncoal Road, Rodney.

33,021. Oct. 23.—Dismissing application of Connecticut Oyster Co., Toronto, relative to express classification of oysters in glass jars.

33,022. Oct. 25.—Approving location of Canadian Northern Ry. 3rd class station at Kelvington, Sask.

33,023. Oct. 25.—Authorizing G.T.R. to operate over crossing of its main line by its Port Dover-Stratford line, at Woodstock, Ont., without first stopping.

33,024. Oct. 25.—Authorizing Michigan Central Rd. and Niagara, St. Catharines & Toronto Ry. to operate over crossing at Welland, Ont., without first stopping.

33,025. Oct. 25.—Authorizing City of Hamilton, Ont., to carry Victoria Ave. across G.T.R. sidings to premises of Imperial Oil Ltd., and Charcoal Supply Co.

33,026. Oct. 25.—Authorizing British Columbia Public Works Department to build highway crossing over Great Northern Ry. at mile 185.56, Nelson-Fort Sheppard-Spokane Branch.

33,027. Oct. 25.—Authorizing G.T.R. to build spur and two spurs therefrom for Peninsular Sugar Co., Petrolia, Ont.

33,028. Oct. 26.—Authorizing Brantford Municipal Ry. Commission to lay tracks across G.T.R. on Murray St., Brantford, Ont.

33,029. Oct. 26.—Extending to July 31, 1923, time within which C.P.R. may build spur for J. G. Hargrave Co., Winnipeg, Man., authorized by order 31,663, Oct. 18, 1921.

33,030. Oct. 27.—Ordering that G.T.R. pay 30% of wages of watchman at crossing on South Market St., Brantford, Ont.

33,031. Oct. 28.—Authorizing Canadian Northern Ontario Ry. to build across highway at Footes Bay, mile 125.3, Muskoka Subdivision, Ont.

33,032. Oct. 28.—Authorizing G.T.R. to build extension to siding for C. J. Miller & Sons, Orillia, Ont.

33,033. Oct. 28.—Dispensing with consent of shareholders, and publication of notice in a newspaper in each of counties or electoral districts through which railways run, in the application of the G.T.R. for a recommendation by the Board to the Governor in council for sanction of an agreement dated Jan. 1, 1918, between G.T.R. and C.P.R., granting to C.P.R. for 20 years the right to joint use of passenger station and grounds at Brockville, Ont.

33,034. Oct. 28.—Rescinding order 31,127, June 14, authorizing G.T.R. to build spur for MacConnell & Hicklin, Canboro Tp., Ont.

33,035. Oct. 30.—Amending order 32,825, Sept. 6, authorizing G.T.R. and C.P.R. to close down interlocking plant at crossing north of Essa station, Ont., between Saturday midnight and Sunday midnight, by providing that in case it shall be necessary for the G.T.R. to let a train through the crossing between the hours mentioned, a signalman will be called to operate signals.

33,036. Oct. 30.—Extending to July 31, 1923, time within which G.T.R. may build spur for Christie Products, Lindsay, Ont., authorized by order 32,762, Aug. 12, 1922.

33,037. Oct. 26.—Authorizing C.P.R. to terminate agreement with Rob Roy Cereal Mills Co., Ltd., re siding at Yorkton, Sask.

33,038. Oct. 25.—Authorizing Three Hills Village, Alta., to make highway crossing over Grand Trunk Pacific Ry. in Sec. 36, Tp. 31, Range 24, West 4th Meridian.

33,039. Oct. 25.—Ordering Canadian Northern Ry. to pay Pipestone Rural Municipality, Man., \$665.70, estimated cost of roadway to Woodnorth township.

33,040. Oct. 27.—Authorizing City of Regina, Sask., to open Retallack St. across Canadian National Rys.

33,041. Oct. 25.—Approving location of Canadian Northern Ry. proposed freight and passenger shelter at Okla, Sask.

33,042. Nov. 4.—Ordering Canadian National Rys. to erect fence on north side of its Brule Subdivision, Ont., from mile 121.3 to 126.3, by Nov. 30; portion between mile 126.3 and 142 to be completed by June 1, 1923.

33,043. Nov. 2.—Amending order 16,151, March 20, 1912, authorizing Town of Clarendon, Alta., to extend 4th Ave. across C.P.R., by providing that maintenance be paid by the town.

33,044. Oct. 31.—Approving plan showing proposed changes in signals at crossing of Michigan Central Rd. and G.T.R. at Yarmouth, Ont.

33,045. Nov. 2.—Amending order 32,873, Sept. 20, authorizing Canadian National Rys. to build a bridge over Assiniboine River, near Leon, by changing "Saskatchewan" to "Manitoba."

33,046. Nov. 2.—Authorizing Canadian National Rys. to rebuild bridge over Valley River in east half of Sec. 13, Tp. 26, Range 20, West Principal Meridian, Sask.

33,047, 33,048. Oct. 31.—Authorizing Windsor, Essex & Lake Shore Rapid Ry. to enter Robert Brady's and James Deehan's lands, Maidstone and Sandwich South Tps., Ont., to remove obstructions to view at crossing of Town Line Road, between Maidstone and Sandwich South Tps., Ont.

33,049. Nov. 7.—Approving agreement between Bell Telephone Co. and West Williams Rural Telephone Association, Middlesex County, Ont.

33,050. Nov. 7.—Declaring that for the present G.T.R. crossing near Thornton, Ont., is protected to Board's satisfaction.

33,051. Nov. 7.—Approving location and details of C.P.R. proposed station at Dunlop, Ont.

33,052. Oct. 31.—Approving G.T.R. plan showing proposed layout for protection by two automatic bells, with wigwags, at the crossing of Glenburnie Road (Perth Road) west of Kingston Jct. rock cut, Ont.

33,053, 33,054. Nov. 8, 7.—Authorizing G.T.R. to build spurs for Crane, Ltd., and Constructing & Paving Co. of Ontario, Toronto.

33,055. Nov. 7.—Authorizing Canadian Northern Ry. to cross and divert a number of highways on its line from Twin City Jct. to Kakabeka Falls, Ont.

33,056. Nov. 8.—Approving supplement 3 to Express Classification for Canada 5, providing for weight allowance of 15% from gross weight on shipments of oysters in glass, when packed in ice.

33,057. Nov. 8.—Amending order 32,996, Oct. 14, re separation of grades at Avenue Road, Toronto, by providing that Toronto Ry. pay C.P.R. \$4,425.65, instead of \$4,009.57 as shown in order 32,996, being 10% of estimated land damages.

33,058. Nov. 8.—Authorizing Canadian National Rys. to make highway crossing west of existing crossing at Innisfree, Alta., and authorizing Birch Lake Municipality, 484, Alta., to

- make highway across C.N.R. at point east of existing crossing.
- 33,059. Nov. 7.—Approving agreement between Bell Telephone Co. and Home Telephone Co., York and Ontario Counties, Ont.
- 33,060. Nov. 8.—Approving plan showing permanent structure to be erected on Lot 57, Stamford Tp., Ont., where Hydro-Electric Power Commission's single track line crosses under Michigan Central Rd.
- 33,061. Nov. 7.—Authorizing Canada Southern Ry., for taking care of slope of embankment, to take certain lands in Niagara Falls, Ont.
- 33,062. Nov. 8.—Authorizing Toronto, Hamilton & Buffalo Ry. to take certain lands in Saltfleet Tp., Ont., for improving view at crossing of Given Road.
- 33,063. Nov. 9.—Approving plan showing proposed revision of interlocking plant at junction of Canadian National Rys. and C.P.R. at Current River, Ont.
- 33,064. Nov. 9.—Authorizing Ribstone municipal district 421, Alta., to make highway crossing over Canadian National Rys. at Main St., Ribstone, Alta.
- 33,065. Nov. 10.—Authorizing C.P.R. to build spur for B.C. Spruce Mills, Ltd., Lumberton, B.C.
- 33,066. Nov. 9.—Ordering Niagara, St. Catharines & Toronto Ry. to keep its cars at least 40 ft. from street line at John St., St. Catharines, Ont.
- 33,067. Nov. 10.—Declaring that for the present, the first public crossing over Michigan Central Rd. west of Montague station, Ont., is protected to Board's satisfaction.
- 33,068, 33,069. Nov. 8, 10.—Declaring that for the present C.P.R. crossings near Headingly station, Man., and near Yamachiche station, Que., are protected to Board's satisfaction.
- 33,070. Nov. 9.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to extend Bradshaw Road across its railway $1\frac{1}{2}$ miles east of Otter, B.C.
- 33,071. Nov. 7.—Relieving G.T.R. from maintaining fencing, etc., between miles 8 and 10, St. Valere de Bulstrode Parish, Que.
- 33,072. Nov. 9.—Authorizing G.T.R. to build siding for Canadian Ramapo Iron Works, on lot 77, Stamford Tp., Ont.
- 33,073. Nov. 10.—Authorizing C.P.R. to build its Langdon North Branch across Government surveyed road in n.e. $\frac{1}{4}$ Sec. 7, Tp. 29, Range 20, West 4th Meridian, Alta.
- 33,074, 33,075. Nov. 11.—Ordering that in authority under order 32,205, Mar. 10, 1922, re extension of storm sewer across Toronto, Hamilton & Buffalo Ry. near Simcoe and Wellington Sts., and under order 32,214, Mar. 13, 1922, re storm overflow sewer across G.T.R. at Ferrie and Wellington Sts., Hamilton, Ont., cost of work and details be governed by Standard Regulations Regarding Pipe Crossings under Railways.
- 33,076. Nov. 11.—Authorizing G.T.R. to build spur from Belt Line Ry., east of Nokomis St., York Tp., Ont., for D. Darling.
- 33,077. Nov. 11.—Approving location of Canadian National Rys. proposed freight and passenger shelter at Inland, Alta.
- 33,078. Nov. 10.—Approving supplement C to Express Classification for Canada 5, to be published as supplement 4.
- 33,079. Nov. 8.—Authorizing Canadian Northern Quebec Ry. to use bridge over Rouge River, St. Leger Parish, Que.
- 33,080. Oct. 25.—Declaring that for the present C.P.R. crossing north of St. Gregoire, Que., is protected to Board's satisfaction.
- 33,081. Nov. 13.—Authorizing Canadian Northern Ry. to build spur for Leader Publishing Co., Regina, Sask.
- 33,082. Nov. 14.—Amending order 33,056, Nov. 8, approving supplement 3 to Express Classification for Canada 5, by striking out direction that it be published in Canada Gazette.
- 33,083. Nov. 14.—Ordering Canadian National Rys. to appoint station agent at Peesane, Sask., by Dec. 15.
- 33,084. Nov. 13.—Authorizing C.P.R. to build spur for Imperial Oil, Ltd., Calgary, Alta.
- 33,085. Nov. 13.—Authorizing Interprovincial & James Bay Ry. (C.P.R.) to cross certain road allowances in Laverlochere and Baby Tps., Que.
- 33,086. Nov. 15.—Approving plan showing deviation, or alteration, proposed in Canadian National Rys. in s.w. $\frac{1}{4}$ Sec. 16, Tp. 29, Range 9, West 3rd Meridian, Sask.
- 33,087. Nov. 13.—Amending order 11,809, Sept. 19, 1910, re Alexandra St. crossing of Calgary & Edmonton Ry. (C.P.R.) at Millet, Alta., by providing that cost of maintaining be paid by municipality.
- 33,088, 33,089. Nov. 14.—Approving Maritime Coal, Railway & Power Co.'s standard freight tariff C.R.C. 1, and standard passenger tariff C.R.C. 1.
- 33,090. Nov. 14.—Approving Maritime Coal, Railway & Power Co., bylaw R authorizing N. T. Avar, General Manager, to issue tariffs of tolls.
- 33,091. Nov. 11.—Ordering that authority under order 32,532, June 4, re sewer under Toronto, Hamilton & Buffalo Ry., on King St., Hamilton, Ont., be governed by Standard Regulations Regarding Pipe Crossings under Railways.
- 33,092. Nov. 14.—Authorizing G.T.R. to build spur for National Coöperage Co., Markham Tp., Ont.
- 33,093. Nov. 15.—Declaring that for the present the crossing of Charlesbourg Road by Canadian National Rys. at mile 2.3, St. Lawrence Subdivision, Que., is protected to Board's satisfaction.
- 33,094 to 33,097. Nov. 15.—Authorizing Canadian Northern Ontario Ry. to use bridges over Burnt Creek, Neelon Tp., Ont.; over Black River, Georgina Tp., Ont.; over William St., Parry Sound, Ont.; and over Farm Road, Whitchurch Tp., Ont.
- 33,098. Nov. 15.—Authorizing City of Hamilton, Ont., to build storm sewer under Hamilton Radial Electric Ry. on Kenilworth Ave., in accordance with Standard Regulations Regarding Pipe Crossings under Railways.
- 33,099. Nov. 14.—Ordering G.T.R. to keep its cars back 40 ft. from street line at John St., St. Catharines, Ont.
- 33,100. Nov. 15.—Authorizing City of Hamilton, Ont., to build storm sewer under Toronto, Hamilton & Buffalo Ry. and G.T.R. joint sidings into National Steel Car Co.'s and Firestone Tire & Rubber Co.'s premises, in accordance with Standard Regulations Regarding Pipe Crossings under Railways.
- 33,101. Nov. 15.—Authorizing use of subway carrying Canadian Northern Ry. across Bowes St., Parry Sound, Ont.
- 33,102. Nov. 15.—Authorizing Canadian National Rys. to use bridge over Black River, Rama Tp., Ont.
- 33,103. Nov. 14.—Authorizing G.T.R. to build spur for Regal Poultry Feed Co., Woodhouse Tp., Ont.
- 33,104. Nov. 15.—Authorizing Canadian Northern Ontario Ry. to use bridge over Christie Road, Foley Tp., Ont.
- 33,105. Nov. 15.—Authorizing Canadian Northern Ry. to use viaduct over Don River, York Tp., Ont., mile 15 from Toronto.
- 33,106. Nov. 14.—Ordering Niagara, St. Catharines & Toronto Ry. and G.T.R. to keep their cars back 40 ft. from street line at Page St., St. Catharines, Ont.
- 33,107. Nov. 15.—Authorizing Canadian Northern Ry. to use viaduct over Don River, at mile 13.0, Muskoka Subdivision, Ont.
- 33,108. Nov. 15.—Authorizing Canadian National Rys. to use bridge over side road between Lots 15 and 16, Cons. 3 and 4, and road between Cons. 3 and 4, Whitchurch Tp., Ont.
- 33,109. Nov. 17.—Authorizing Grand Trunk Pacific Ry. to remove planking from crossings on property of R. W. Hyndman, Port Arthur, Ont.
- 33,110. Nov. 17.—Authorizing G.T.R. to use bridge carrying John St., Hamilton, over its tracks.
- 33,111. Nov. 17.—Authorizing C.P.R. to cross and divert road allowance in n.e. $\frac{1}{4}$ Sec. 23, Tp. 16, Range 4, West 2nd Meridian, Sask.
- 33,112, 33,113. Nov. 17.—Authorizing G.T.R. to use bridges carrying Hughson and Catharine Sts., Hamilton, Ont., over its tracks.
- 33,114. Nov. 17.—Authorizing Saskatchewan Highways Department to carry highway across C.P.R. in n.w. $\frac{1}{4}$ Sec. 30, Tp. 16, Range 4, West 2nd Meridian.
- 33,115. Nov. 17.—Authorizing G.T.R. to build spur for Longford Quarry Co., Rama Tp., Ont.
- 33,116. Nov. 17.—Rescinding order 31,770, Nov. 12, 1921, authorizing G.T.R. to build spur for A. E. Jupp Construction Co., Saltfleet Tp., Ont.
- 33,117. Nov. 17.—Authorizing C.P.R. to build spur for Bienfait Commercial Co. in n.e. $\frac{1}{4}$ Sec. 23, Tp. 7, West 2nd Meridian, Sask.
- 33,118. Nov. 17.—Authorizing C.P.R. to make highway crossing on its Langdon North Branch, in n.w. $\frac{1}{4}$ Sec. 12, Tp. 29, Range 22, West 4th Meridian, Sask.
- 33,119. Nov. 17.—Authorizing C.P.R. to rebuild bridge 25.9 over Nose Creek, Red Deer Subdivision, Alta.
- 33,120, 33,121. Nov. 20.—Approving Bell Telephone Co. agreements with Notre Dame de Ham Telephone Co., Wolfe County, Que., and Mount Albert Telephone Co., York and Ontario Counties, Ont.
- 33,122. Nov. 17.—Authorizing G.T.R. to build spur for Canada Grip Nut Co., St. Johns, Que.
- 33,123. Nov. 17.—Authorizing G.T.R. to use bridge carrying McNab St., Hamilton, Ont., over its tracks.
- 33,124. Nov. 17.—Rescinding order 24,759, Feb. 23, 1916, authorizing G.T.R. to build spur for The Wm. Kennedy & Sons, Collingwood, Ont.
- 33,125. Nov. 20.—Authorizing C.P.R. and Peterborough Radial Ry. to operate over George St., Peterborough, Ont., without stopping.
- 33,126. Nov. 17.—Authorizing G.T.R. to enter lands of F. Chisholm, John Sowerby and T. Sowerby, to remove trees and other obstructions to view at crossing of 4th concession road, Goderich Tp., Ont.
- 33,127. Nov. 21.—Authorizing Kingston Suburban Roads Commission to divert Bath Road, Collins Bay, Ont., so as to eliminate two crossings of G.T.R.
- 33,128. Nov. 21.—Authorizing C.P.R. to build two spurs for W. J. McKee, Windsor, Ont.
- 33,129. Nov. 21.—Approving clearances at platform at C.P.R. siding of Rolland Paper Co., Mount Rolland, Que.
- 33,130. Nov. 22.—Authorizing Canadian Northern Ry. to use bridge over Kenogamisis River, Thunder Bay District, Ont.
- 33,131. Nov. 22.—Authorizing Canadian National Rys. to open for traffic, portion of revised line from mile 8.7 to 11.1, Keshabow Subdivision, on north side of Mount Yard, west of Fort William, Ont.
- 33,132. Nov. 21.—Authorizing Interprovincial & James Bay Ry. (C.P.R.) to build pile trestle at bridge 15.97.
- 33,133. Nov. 22.—Authorizing Canadian Northern Ontario Ry. to use bridge over Blackwater River, Thunder Bay District, mile 21.7 from Jellicoe, Ont.
- 33,134. Nov. 22.—Authorizing C.P.R. to build spur for Sherwin-Williams Co. at La Visitation de Champlain Parish, Que.
- 33,135, 33,136. Nov. 22, 21.—Authorizing Canadian Northern Ontario Ry. to use bridges over Blackwater River, at mile 21.4, and at Orient Bay, mile 44.1 from Jellicoe, Ont.
- 33,137. Nov. 22.—Amending order 33,052, Oct. 31, approving G.T.R. plan of layout of automatic bells with wigwags, at crossing of Glenburnie Road, west of Kingston, Ont., by providing that 25% of cost be paid out of railway grade crossing fund.
- 33,138. Nov. 21.—Authorizing Canadian Northern Ry. to use bridge over Stillwater Creek, mile 79.72 from Jellicoe, Ont.
- 33,139. Nov. 22.—Authorizing C.P.R. to open for traffic, portion of its Russell Northerly Branch from mile 6.5 to 12.34, Manitoba.
- 33,140. Nov. 22.—Authorizing Hydro Electric Power Commission of Ontario to build interchange track with Essex Terminal Ry. on Lots 56 and 57, Sandwich West Tp., Ont.
- 33,141. Nov. 23.—Authorizing C.P.R. to rebuild west abutment at bridge 0.74, St. John Subdivision, over Strait Shore Road, N.B.
- 33,142. Nov. 25.—Dismissing application of National Dairy Council of Canada for order cancelling 20% increase in express rates on cream, allowed by general order 327, Feb. 2, 1921, and re-establishing special commodity rates on cream in existence prior to that order.
- 33,143. Nov. 11.—Ordering that authority under order 32,408, May 17, re storm sewer under G.T.R. on Wellington St., Hamilton, Ont., be governed by Standard Regulations Regarding Pipe Crossings under Railways.
- 33,144. Nov. 25.—Authorizing G.T.R. to build spur for Mansons, Ltd., West Hawkesbury Tp., Ont.
- 33,145. Nov. 24.—Fixing rates and charges to be paid London Railway Commission by Michigan Central Rd. for movement of cars between St. Thomas and London, Ont.
- 33,146. Nov. 21.—Relieving Canadian National Rys. from maintaining fences, gates and cattle guards at certain points on its Irondale Subdivision, Ont.
- 33,147. Nov. 25.—Declaring that for the present G.T.R. crossing, Fifth Ave., Weston, Ont., is protected to Board's satisfaction.
- 33,148. Nov. 22.—Authorizing C.P.R. and G.T.R. to close down interlocking plant during certain hours at mile 26.65, Cornwall Subdivision, Ont.
- 33,149. Nov. 24.—Ordering C.P.R. to install double electric bell and wigwag at Craig St. crossing, east of Perth station, Ont.
- 33,150. Nov. 25.—Approving clearances at Michigan Central Rd. siding serving Empire Flour Mills, Ltd., St. Thomas, Ont.
- 33,151. Ordering Grand Trunk Pacific Ry. to build by Sept. 1, 1923, a 2-pen stock yard and loading platform at Deville, Alta.
- 33,152. Nov. 27.—Amending order 33,084, Nov. 13, 1922, authorizing C.P.R. to build spur for Imperial Oil, Ltd., Calgary, Alta., by ordering that cost of crossing of Calgary Municipal Ry. and any protection that may be ordered by the Board, be paid by Imperial Oil, Ltd.
- 33,153. Nov. 27.—Declaring that for the present the fifth public crossing west of St. Catharines, Ont., over G.T.R. is protected to Board's satisfaction.
- 33,154. Nov. 27.—Approving supplement D to Express Classification for Canada 5.
- 33,155. Nov. 27.—Rescinding order 32,974, Oct. 16, removing speed limit of 10 miles an hour at C.P.R. crossing two miles east of St. Thomas, Ont.
- 33,156. Nov. 27.—Ordering Michigan Central Rd. to pay Mrs. E. Prest \$260 for damage to property in removing obstructions to view at highway crossing between Lots 13 and 14, Con. 6, Wainfleet Tp., Ont.
- 33,157. Approving location of C.P.R. standard A3 station at Inglis, Man.
- 33,158. Nov. 22.—Recommending to Governor in council for sanction, lease by C.P.R. of Interprovincial & James Bay Ry. for 99 years from July 1, 1922.
- 33,159. Nov. 27.—Ordering Canadian National Rys. to keep cars clear of street line on each side of Main St., Wadena, Sask., and any movements made on passing track during business hours to be flagged over crossing.
- 33,160. Nov. 28.—Declaring that for the present the G.T.R. crossing at Jarvis, Ont., is protected to Board's satisfaction.
- 33,161. Nov. 25.—Authorizing Canadian Northern Ry. to divert road allowance between Secs. 5 and 6, Tp. 65, Range 22, West 4th Meridian, Alta., to a crossing in s.w. $\frac{1}{4}$ Sec. 5.
- 33,162. Nov. 25.—Authorizing Alberta Public Works Department to build highway crossing over Grand Trunk Pacific Ry. in Sec. 11, Tp. 36, Range 23, West 4th Meridian, Alta.
- 33,163. Nov. 25.—Ordering G.T.R., within 90 days, to install improved type of automatic bell

with wigwag signal at first crossing east of Ren-ton station, Ont.

33,164. Nov. 28.—Declaring that for the pres-ent the G.T.R. crossing at Rosebank station, Ont., is protected to Board's satisfaction.

33,165. Nov. 17.—Declaring that for the pres-ent the Massawippi crossing, near Lennoxville, Que., over G.T.R. is protected to Board's satis-faction.

33,166. Nov. 27.—Authorizing G.T.R. to divert Lake Shore Road, Tay Tp., Ont., from Lot 13 to south of G.T.R. bridge over Hog River.

33,167. Nov. 29.—Authorizing City of Hamil- ton, Ont., to lay storm sewer under G.T.R. on Kenilworth Ave.

33,168 to 33,170. Nov. 28.—Approving Bell Tele- phone Co. agreements with North Algoma Muni- cipal Telephone System, Renfrew County, Ont.; North Ham Telephone Co., Wolfe County, Que., and Queen's Line Telephone Co., Renfrew county, Ont.

33,171. Nov. 28.—Declaring that for the pres- ent C.P.R. crossing near Ogema, Sask., is pro- tected to Board's satisfaction.

33,172. Nov. 27.—Declaring that for the pres- ent, G.T.R. crossing near Walkerville, Ont., is protected to Board's satisfaction.

33,173. Nov. 28.—Authorizing G.T.R. to use bridge 329½, Barrie Division, at mile 100.69 from Toronto.

33,174. Nov. 29.—Authorizing C.P.R. to build 4 spurs for St. Lawrence Paper Mills, Three Rivers, Que.

33,175. Nov. 29.—Extending to Feb. 8, 1924, time within which Canadian Northern Ry. may build Y at Rorekston, Man., authorized by order 32,114, Feb. 8, 1922.

33,176. Nov. 30.—Authorizing Grand Trunk Pacific Ry. to build additional trackage for Balkan Coal Co. in s.w. ¼ Sec. 14, Tp. 49, Range 21, West 5th Meridian, Alta.

33,177 to 33,179. Nov. 29.—Approving Bell Telephone Co. agreements with Weedon Telephone Co., Wolfe county, Que.; Kerr Line Telephone Co., Renfrew county, Ont., and St. Mathieu Rural Telephone Co., Laprairie and Napierville counties, Que.

33,180. Dec. 1.—Dismissing C.P.R. application for approval of route map showing general loca- tion of its Cutknife to Whitford Lake Branch, mile 0 to 180.4.

33,181. Dec. 1.—Declaring that for the pres- ent, G.T.R. crossing near Barrington, Que., is protected to Board's satisfaction.

33,182. Nov. 30.—Extending to June 1, 1923, time within which Canadian National Rys. may build roadway to the station and loading track at Sprague, Man., authorized by order 32,874, Sept. 20.

32,183, 32,184. Dec. 1.—Authorizing G.T.R. to use bridge over Y connecting its Toronto Branch with its main line from Hamilton to London; and bridge over its London Branch and C.P.R. Guelph Branch at Burlington Heights, Ont.

32,185. Dec. 2.—Limiting publication of notice of British Columbia Telephone Co.'s application for sanction of agreement with B.C. Telephone Co., Ltd., for transfer of its undertaking, prop- erty and assets.

33,186. Dec. 1.—Authorizing Canadian North- ern Ry. to divert its line between Frederica St. and Neebing Ave., Fort William, Ont., mile 6.68 to 8.06, and to build new second track and diverted line across a number of streets.

33,187, 33,188. Dec. 4.—Authorizing C.P.R. to build spurs for Lumber & Ties, Ltd., at mile 79.68, Parry Sound Subdivision, and for Provin- cial Reformatory, at Speedwell, Ont.

33,189. Dec. 1.—Authorizing Halifax & South Western Ry. (C.N.R.) to build spur for M. W. Graves & Co., at mile 66.87, Bridgetown, N.S.

33,190. Dec. 1.—Ordering Niagara, St. Cath- arines & Toronto Ry. to commence work relocat- ing its line on Oak and Merritt Sts., Merriton, Ont.

33,191, 33,192. Dec. 4, 5.—Declaring that for the present Canadian National Rys. crossings near Winter, Sask., and near Italy Cross, N.S., are protected to Board's satisfaction.

33,193. Dec. 5.—Authorizing British Columbia Public Works Department to build highway cross- ing over Great Northern Ry. at Gateway, B.C.

33,194. Dec. 4.—Approving revised location of portion of Interprovincial & James Bay Ry. (C.P.R.) from mile 48.01 to 49.05, and from mile 0 to 3.59, Ville Marie Spur, Duhamel Tp., Ont., and authorizing crossing of several highways.

33,195. Dec. 1.—Dismissing application of City of Westmount, Que., for order directing express companies to make deliveries in territory north of The Boulevard.

33,196. Dec. 6.—Authorizing C.P.R. to build two additional tracks across Second St., Yorkton, Sask.

33,197. Dec. 6.—Authorizing C.P.R. to carry traffic over portion of its Weyburn-Lethbridge Line from mile 314.2 to 351.04.

33,198. Dec. 6.—Approving agreement between Bell Telephone Co. and Drummondville Telephone Co., Drummond, Bagot and Yamaska counties, Que.

33,199. Dec. 6.—Declaring that for the present, Canadian National Rys. crossing at Minard, Sask., is protected to Board's satisfaction.

33,200. Dec. 6.—Declaring that for the present, Esquimaux & Nanaimo Ry. crossing of Island Highway, 2.4 miles south of Chemainus, B.C., is protected to Board's satisfaction.

33,201. Dec. 6.—Declaring that for the present, C.P.R. crossing at mile 22, Kisbey Subdivision, in rural municipality 65, Sask., is protected to Board's satisfaction.

33,202. Dec. 6.—Authorizing G.T.R. to build spur for Independent Concrete Pipe Co., near Cheyenne Ave., York Tp., Ont.

33,203. Dec. 6.—Approving agreement between Bell Telephone Co. and Atherley Telephone Asso- ciation, Ontario county, Ont.

33,204. Dec. 5.—Extending to July, 1924, time within which Canadian National Rys. may install swing gates in place of slide or hurdle gates in fences on its Saguenay Subdivision, Que.

33,205. Dec. 9.—Authorizing Michigan Central Rd. to build spur for Canadian Shredded Wheat Co., across Lewis Ave., Niagara Falls, Ont.

33,206. Dec. 11.—Declaring that for the pres- ent, Michigan Central Rd. crossing 3 miles east of Welland Station, Ont., is protected to Board's satisfaction.

General order 372. Nov. 24.—Relieving, until further order, made either upon application, or by Board of its own motion, and without notice, if it shall be deemed necessary or desirable, rail- way companies from complying with requirements of par. 3 of general order 326, Jan. 14, 1921, of obtaining from Bank of Montreal rate of ex- change for New York funds at time and dates specified in said order, and making monthly returns to Board showing amount of surcharges collected.

Telegraph, Telephone and Cable Matters.

Canadian National Telegraphs have opened offices at Desbien, Que., Cavell and Pass Lake, Ont., and Lintlaw, Sask., and have closed offices at Agate and Bankfield, Ont.

H. M. Short, for eight years United States representative of Marconi Inter- national Marine Communication Co., is reported in a Montreal press dispatch to have been appointed Managing Director, Marconi Wireless Telegraph Co. of Can- ada at Montreal, succeeding A. H. Morse, resigned, effective Jan. 10.

A heavy storm in Cape Breton, N.S., at the end of November, did \$160,000 damage, the chief sufferers being the Maritime Telegraph & Telephone Co., \$75,000; Western Union Telegraph Co., \$50,000; C.P.R. Telegraphs, \$10,000, and Cape Breton Electric Co., \$20,000. A practical repetition of the storm occur- red, Dec. 13, when considerable additional damage was done to overhead wires.

The Western Union Telegraph Co. is reported to have announced the building of a telegraph line between New York and Chicago, and for this purpose, will make use of the Michigan Central Rd. right of way through Canada. The sys- tem will consist of 9 wires, and the business will be looked after by M.C.R. telegraph officials. It is stated that con- struction will commence early this year.

An action against the Great North- western Telegraph Co. (now Canadian National Telegraphs), by the Montreal Fruit Exchange, for \$390 damages, sus- tained owing to alleged delay in the delivery of a telegram at Los Angeles, Cal., was dismissed by Mr. Justice Duclos, at Montreal, Dec. 4, on the ground that the sender of a telegram is only ensured of delivery when he has the message repeated and pays the fee therefor. The conditions on the tele- gram form are a part of the contract and binding on the sender, and under these, the company is not liable for any damages arising from failure to trans- mit or deliver, or for error in any unre- peated telegram, beyond the amount received for same, and to guard against errors, the company will repeat back any telegram for the additional payment of half the regular rate, and it is not responsible for the act of any other com- pany. The company received \$1 for the transmission of the message, and had tendered this amount, plus \$5.50, the

costs of the action, after filing the plea, which was sufficient. The action was dismissed with all costs subsequent to the filing of the plea.

Henry Hulatt, who has resigned as Manager of Telegraphs, G.T.R., Mont- real, was born in London, Eng., Feb. 15, 1883, and after being engaged in com- mercial and journalistic work in Eng- land, and for a short time in the House of Commons press gallery at Ottawa, entered railway service, May 3, 1907, since when he has been, to March 1, 1908, clerk, Stores Department, Canadian Northern Ry., Winnipeg; March 1, 1908, to Oct. 1, 1910, secretary to Manager of Telegraphs, Grand Trunk Pacific Ry., Winnipeg; Oct. 1, 1910, to Jan. 15, 1913, chief clerk to Manager of Telegraphs, G.T.P.R., Winnipeg; Jan. 15, 1913, to Oct. 15, 1915, Commercial and Traffic Superintendent, G.T.P. Telegraph Co., and Superintendent of Time Service, G.T.P.R., Winnipeg; Oct. 15, 1915, to Dec. 1, 1922, Manager of Telegraphs, G.T.R. System, and to March 8, 1919, Manager and director, G.T.P. Telegraph Co., and Superintendent of Time Service, G.T.P. R., and from Jan. 1, 1916, to Dec. 1, 1922, also Superintendent of Time Ser- vice, G.T.R., Montreal. He is an asso- ciate member of the Institute of Elec- trical Engineers of England, and of the American Institute of Electrical Engi- neers. He was chairman of the Ameri- can Railway Association, Telegraph and Telephone Section, in 1920-21, and had previously acted on several of the com- mittees. He has joined the Alexander Hamilton Institute, New York, and will leave shortly for London, Eng., to take charge of editorial work in connection with the revision of the Institute's edu- cational course, to make it applicable to English conditions, after which he will take part in the development and super- vision of the Institute's activities in Great Britain.

Among the Express Companies.

The Board of Railway Commissioners passed order 33,154, Nov. 27, approving Supplement D to Express Classification for Canada No. 5.

Canadian National Ex. Co. has opened offices at Flat Lands, N.B., Alonsa, Man., and Peesane, Sask., and has closed its offices at MacDiarmid, Ont.

R. E. M. Cowie, Vice President, Ameri- can Railway Ex. Co., addressed the Canadian Club in Montreal, Dec. 4, on the origin and development of express business.

The Canadian National Ex. Co. has opened offices at Desbien, Que., and Allanwater, Ont., and has changed the name of its office at Bedson, Alta., to Miatte.

The American Ex. Co. is reported to have chartered the s.s. Mauretania, for a Mediterranean cruise, under its man- agement, sailing from New York, Feb. 10.

T. E. McDonnell, Vice President and General Manager, Dominion Express Co., addressed the Knights of Columbus, at their usual weekly luncheon in Tor- onto, Dec. 11, on "Why is an express company?"

The Board of Railway Commissioners has refused an application from the City of Westmount, Que., for an order direct- ing express companies to deliver parcels by wagon service in territory north of the Boulevard, Westmount.

Electric Railway Department

The Toronto Transportation Commission's Work.

Appropriations.—The City Council has granted the Toronto Transportation an appropriation of between \$800,000 and \$900,000 to cover cost of acquiring and renovating the old Board of Trade Building and adjoining properties, at Front and Yonge Streets, where the Commission's headquarters are now located, and an appropriation of \$1,500,000 to add to the \$1,000,000 before appropriated for the purpose, to construct a car repair shop, frog shop, boiler house, a stores department building, to be used jointly by the Transportation Commission and the Toronto Hydro Electric Commission, an office building, and tracks and overhead work at Bathurst St. and Davenport Road. Prior to the date on which these latest appropriations were made, the Commission had been granted appropriations totalling \$21,000,000, none of which was in connection with the price to be paid the Toronto Railway Co. for its undertakings turned over to the city for operation by the Commission.

The Car Repair Shops and auxiliary facilities to be built at Bathurst St. and Davenport Road have been planned by the Commission for some time past. We are officially advised that it is the intention to call for tenders for building them, in the near future, and it is anticipated that construction will be well under way in the spring.

The Eglinton Car House, a detailed description of which was given in Canadian Railway and Marine World for Nov., 1922, pg. 574, was opened on Dec. 16, 1922. An invitation to citizens to attend was issued by the Commission, and speeches were made by the Mayor of Toronto, who officially declared the car-house ready for operation, and by P. W. Ellis, Chairman of the Transportation Commission. After the addresses had been delivered, an inspection of the various facilities was made. The new car house is thoroughly modern in every detail, the operating units having been planned so that cars can be handled with the minimum of lost motion and with maximum economy. It replaces the Yorkville car house in accommodating cars operating on the Yonge St. route, the change to the new house having been effected about Dec. 15.

Agitation for Construction of Cars by Commission.—The Toronto Building Trades Council, in a letter to the Board of Control, in which attention was called to the amounts the Commission has spent outside the city for equipment, has revived the question of the Commission erecting a car building plant and building its own cars, and, possibly, cars for other electric railways. This matter was discussed shortly after the Commission took control of the lines within the city, and it was pointed out at the time that the number of cars required would not justify the capital expenditure which would be necessary to enable the Commission to build its own cars. There is no reason to believe that the situation has undergone any change, and it is unlikely that the proposals to have the Commission go into the car building business will receive any serious consideration.

The Kingston Road Extension, from Queen St. to the eastern city limits, at

Victoria Park Ave., details of which were given in Canadian Railway and Marine World for Dec., 1922, pg. 630, was completed and placed in operation Dec. 2, 1922. A shuttle service is being operated on the extension, with cars operating 5 minutes apart throughout the day, and 3 minutes apart in rush hours. It is probable that this service will be continued till road repairs are completed in the spring, when consideration will be given to operating a service from Victoria Park Ave. to the center of the city.

The Loop at Victoria Park Ave., details of which were given in Canadian Railway and Marine World for Dec.,

extension and rehabilitation programme embarked upon in Sept., 1921, when the Toronto Ry. Co. lines and the Toronto Civic Ry. lines were placed under the Commission's control, is now completed. The large extra force of laborers employed during the construction season just closed has been disbanded, and track work in the future will be almost entirely confined to the usual maintenance.

Hydro Electric Power Distribution, Etc., in St. John, N.B.

Following the result of the municipal elections in St. John, N.B., on Nov. 13, when a council favorable to the execution of a contract with the New Brunswick Government for a supply of current from the Musquash hydro electric power plant, and its distribution by the city, the council has approved of the contract with the New Brunswick Hydro Electric Power Commission. An estimate was submitted to the council for the installation of a power distribution plant in St. John, the approximate cost being \$599,000.

The Mayor advised the council, Nov. 27, that he had written the New Brunswick Power Co., offering to buy out the company's property on the basis of the value put upon it by the New Brunswick Supreme Court, viz., \$2,577,655. The company advised him, Dec. 4, that it could not accept the offer, but expressed its willingness to sell its property on an arbitration basis.

The city council subsequently appointed a civic hydro electric commission, as authorized by the N.B. Electric Power Act, to serve for two years, to supervise the distribution of power in St. John. This commission organized Dec. 7, with Major R. A. McAvity as Chairman; H. Phillips, M.I.C.E., Secretary, and G. Kribs, Electrical Engineer. It was decided to prepare plans for the erection of a substation.

Quebec Railway, Light Heat & Power Co. Legislation.

The Quebec Legislature has had before it, bills for the incorporation of the Quebec Tramways Co., the Quebec Power Co., and the Quebec Gas Co., drawn along the lines mentioned in the official notices summarized in Canadian Railway and Marine World for Nov., 1922, pg. 579, the applicants in each case being: E. A. Robert, C. G. Greenshields, Lt.-Col. J. E. Hutcheson, K. B. Thornton and Hon. D. O. L'Esperance, all directors of the Quebec Ry., Light, Heat & Power Co. The three bills were given a second reading in the Legislative Assembly Nov. 22, and referred to the private bills committee, which did not meet to consider them until Dec. 12, when it was stated that the applicants had decided to withdraw them, and to substitute two bills, one to incorporate the Quebec Tramways & Gas Co., with authorized capital of \$5,000,000, to take over the Quebec County Ry., and various subsidiary railway and other companies owned by the Quebec Ry., Light, Heat & Power Co., and the second, the Quebec Power Co., with 100,000 shares without nominal value.

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council, Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee, The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Royce, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

1922, was built as originally planned by the Commission, despite the protests of various property owners in the neighborhood. After the Commission had been requested to change the location for the loop, and had refused, the Ontario Railway and Municipal Board was appealed to, and approved the location.

New Cars.—As stated in Canadian Railway and Marine World for Sept., 1922, pg. 473, the Commission ordered an additional 50 motor car and 100 trailers from Canadian Car and Foundry Co., Montreal, and 50 motor cars from Ottawa Car Mfg. Co., Ottawa. We are officially advised that the first shipment of this new rolling stock, consisting of 5 motor cars, left the Canadian Car and Foundry Co.'s plant at Montreal for Toronto on Dec. 19, 1922.

Track Work.—The Commission's track

Report on Fort William Municipal Railway.

The Fort William, Ont., City Council's public utilities committee, which manages the municipal railway, has for some time past been giving special consideration to the continuing operating deficits. In Sept., 1922, the committee decided to engage G. L. Guy, consulting electrical engineer, Winnipeg, to report generally on street railway matters, and this decision was approved by the city council, in a resolution stating that he be engaged as "managing expert," for 10 days from Oct. 1. In his report, dated Nov. 10, he says that during the time he was in Fort William, he "examined and studied the construction, operation and financial status" of the railway. The report with tables covers 60 pages, and deals with the history of the railway from 1908, when it was acquired by the city from Port Arthur City Council. From Aug. 1, 1908, to Dec. 1, 1913, it was operated by a joint commission, and since then it has been operated by the City Council's public utilities committee. The line has a total single track length of 20.555 miles, of which 18.360 miles are being operated. There was abandoned in 1914, four short lengths of track, totalling 1.8 miles, and there has been built since that date, 2.16 miles of new track. The city owns 18 motor cars and 5 trailers, and has a modern fireproof construction car house, very well equipped. The present value of the physical property of the railway is stated as \$579,919.11, and the reproduction cost is estimated at \$728,228.50. The value of the intangible property is given at \$120,284.64. There have been issued in connection with the railway property \$1,317,000 of debentures, of which \$225,000 were issued in 1913 to take care of deficits, and \$25,000 in 1911 for paving. Mr. Guy states that the practice of providing for deficits by the issue of debentures is not in accordance with proper financing, and that paving charges are a survival of the old horse car franchises, which should not have been handed on.

He estimates that the utility should provide a depreciation reserve of 4.473% of the total investment, in addition to 4.825%, the average rate of interest payable on debentures. The utility should earn \$78,894.75, above operating charges, to be self-sustaining. An examination of the railway's finances from 1914, shows that the railway has always more than paid its operating expenses, but has never been able to earn fixed charges. With the institution of one-man cars, the revision of the traffic schedules, the elimination of certain employees, and the reorganization of the civic utilities on lines worked out on schedules attached to the report, he estimates that the operating charges will be reduced by \$33,000 a year. The gross earnings, following the general trend of increase, ought to approximate \$200,000; and he estimates the net operating revenue for 1923 at approximately \$35,000. The total debenture issue, in comparison with the value of the physical property and the intangible property, shows overcapitalization, and he recommends, in the interests of the city and of the railway, that the city council provide out of current revenue \$35,000 a year for 15 years.

The section of the report dealing with reorganization of the several public utilities under the charge of the public util-

ities committee, recommends placing the whole of the utilities under one manager, who shall direct the whole, and shall deal with the City Engineer regarding track construction and repairs; the City Solicitor regarding legal matters, and the City Treasurer regarding finances; the electric railway department to be under the charge of a superintendent for operation; the overhead construction and repairs to be looked after by the electric light and power department. The schedules attached show that in several instances the departments are over-staffed in proportion to other railways.

Mr. Guy states that in order to effect savings and put the railway on a more nearly self-sustaining basis, the public must be prepared for a lowering of the standard so far as the frequency of cars is concerned, until such time as business and population increase.

Toronto Suburban Railway Purchase.

As stated in Canadian Railway and Marine World for December, 1922, pg. 634, the Toronto City Council passed a bylaw confirming an agreement with the Hydro Electric Power Commission of Ontario providing for the purchase of the Toronto Suburban Ry. from the Dominion Government. At a meeting of the council Nov. 20, the Board of Control asked permission to introduce bylaws to authorize the issue of debentures for carrying out the agreement. The report states that the agreement calls for the issue of one set of debentures for \$2,778,000, to be deposited with the Hydro Electric Power Commission of Ontario before the acquisition of the railway; and for the issue of the second set for \$202,800, to be delivered to the Commission upon transfer to the city of such portions of the railway purchased as are within the city limits. The Board of Control pointed out that these debentures may be issued by the city without a vote of the electors. The Council passed the Board's report without amendment.

The Governor in council, on Nov. 24, approved of a report of a committee of the Privy Council dealing with this matter. The report detailed correspondence between Sir Adam Beck, Chairman of the Hydro Electric Power Commission of Ontario, and the Minister of Railways, also other letters relative to the matter, and concluded with a statement from the Canadian National Rys. management to the effect that the Toronto Suburban Ry. proposal is practically a three months option to the Hydro Electric Power Commission to acquire the 15,000 fully paid \$100 shares of the T. S. Ry. Co. on the following terms: Assuming the existing bonded indebtedness of \$2,628,000, with interest from the date of transfer of the stock; paying \$36,149 for capital expenditures made since Nov. 1, 1921, to Nov. 1, 1922, and similar expenditures to date of transfer; paying the deficit in operation of lines in Ward 7 and adjacent lines under operating agreement, approximately \$44,000; adjusting current assets and liabilities as of date of transfer; and executing traffic agreement to turn over to the Canadian National Rys. all unrouted traffic which cannot be handled to destination by the T.S. Ry. Payments for

the line, etc., may be deferred for 6 months by the purchaser paying 6% and giving a lien on all rolling stock. Those terms, it was stated, had not then been accepted. The Minister of Railways recommended that the sale of the railway be approved, the exact terms and conditions of sale to be determined by the Canadian National Rys. management. The Privy Council Committee's report was approved and passed as an order in council.

Electric Railway Track Laid in 1922.

During 1922, according to returns made to Canadian Railway and Marine World, and other information at hand, Canadian electric railways laid 12,512 miles of new road, or point to point, track, exclusive of second track and sidings, of which 8.38 miles were extensions completed by Toronto Transportation Commission. The total new road mileage laid in 1921 was 7,757 miles. Following are detailed figures, the mileage for the Kitchener & Waterloo St. Ry. being estimated:—

	Miles	Miles
British Columbia Electric Ry.—		
Broadway West, Vancouver.....		1.00
*Kitchener & Waterloo St. Ry.—		
Albert St. to city limits, Kitchener, Ont.		1.00
Montreal Tramways Co.—		
Church St., Drake to Wellington St.	0.71	
Bordeaux spur	0.16	
Red Star refineries spur.....	0.09	
		0.96
Quebec Ry., Light & Power Co.—		
St. Valier St. and Bells Lane extension	0.46	
Charlebourg Road extension.....	0.42	
Marguerite-Bourgeois extension.....	0.15	
Loops and sidings.....	0.04	
		1.07
Regina Municipal Ry.—		
Edward St. line extension.....		0.10
Toronto Transportation Commission—		
Kingston Road, Queen St. to eastern city limits.....	1.799	
Lake Shore Road, Roncesvalles Ave. to Humber River.....	1.406	
Main St., Gerrard St. to Danforth Ave.	0.270	
Dovercourt Road, Van Horne St. to Davenport Road.....	0.313	
Bay St., Bloor St. to Davenport Road	0.224	
Carlaw and Pape Avenues, Gerrard St. to Danforth Ave.....	0.878	
Yonge St., Woodlawn Ave. to north city limits.....	3.492	
		8.382
Total.....		12.512

In addition to the track laid as mentioned above, the British Columbia Electric Ry. Co. laid about 1,500 ft. of second track in Vancouver; the Kingston, Portsmouth & Catarqui Electric Ry. did reconstruction work on 3,850 ft. of track in Kingston, Ont.; the Montreal Tramways Co. laid 1.09 miles of second track on Begg Ave., and 0.32 mile of second track on Wellington St., and the Ontario Hydro Electric Rys., Essex Division, did reconstruction work on 5 miles of track in Windsor and Walkerville, Ont. The Toronto Transportation Commission's new construction was all double track, and when sidings, tail tracks, etc., are considered, the Commission's total track construction in 1922 was 15,959 single track miles. In addition to that, 33 pieces of special work, containing 2,320 single track miles of steel, were laid, and track laid in connection with car houses and yards, material storage yards, etc., amounted to 6.64 single track miles. In addition, 27,431 single track miles of track were rehabilitated, i.e., the track was completely renewed from subgrade to top of rail, while major repairs were effected on 19,099 single track miles of track.

Ottawa Electric Railway Franchise and Purchase Questions.

Ottawa City Council decided recently to submit two questions to the people at the annual municipal elections, Jan. 1, dealing with the Ottawa Electric Ry.'s future. The first question is: "Are you in favor of the Corporation purchasing all the property and assets of the Ottawa Electric Ry. Co. at \$4,500,000, plus the cost of any capital expenditure incurred on and after July 31, 1922, and any other necessary expenditures, not to exceed in all \$75,000, to be operated by an independent commission?" The second question is: "Are you in favor of the Corporation granting the Ottawa Electric Ry. Co. a service-at-cost franchise agreement for 20 years from May 1, 1923, on the terms and conditions set out in the draft agreement, a synopsis of which was published in the city newspapers of Dec. 11, 18 and 26, 1922?" The first question will be answered by those qualified to vote on money bylaws, and the second one by the voters generally.

The proposed new agreement is very lengthy and provides for the surrender of the present franchise agreement and replacing it by one for 20 years from May 1, 1923; the construction of additional lines every year up to 1928; the operation of a stipulated number of additional cars each year up to 1928; and the purchase of additional snow-fighting appliances; the charging of the following fares: Cash 5c., from 6 a.m. to midnight, and 10c. between midnight and 6 a.m., with 8 for 25c. limited hour tickets, 7 for 25c. Sunday tickets; 40 for \$1 limited hour school children's tickets, and a 3c. fare for children under 52 in. high.; infants in arms free, with free transfers. The value of the company's property and assets is fixed at \$4,500,000, plus the cost of capital incurred after Nov. 1, 1922; additional capital expenditures to be added from time to time. The Corporation is declared to have a capital in the company of \$600,000, representing the value of the paving over and above what it would have cost for ordinary traffic. Out of earnings the company is to set aside, after paying operating expenses, 4% of the capital value of its perishable assets, to a depreciation fund, \$20,000 a year as a general reserve fund, until \$100,000 is accumulated, at which sum it is to be maintained, and 7½% on the capital value of the company's property and the city's interest. Of any balance remaining the company is to retain 60%, to dispose of at its discretion, the remaining 40% to be paid into a special account to be used for the reduction of fares. Provision is made for an annual revision of fares on specified schedules, when necessary for the purpose of securing the returns above specified; for the appointment of a civic commissioner to be paid by the company to see that the agreement is carried out; for the arbitration of differences, and for appeals to the Board of Railway Commissioners. The city may give notice to purchase the property at the end of any five-year period at the capitalized value of \$4,500,000, plus subsequent capital expenditures, and in the event of the Corporation not purchasing at the end of the 20 years, the agreement will continue, subject to the Corporation's right to buy at the expiration of any 10 years thereafter.

We are advised that, while the principles contained in the proposed agreement are satisfactory to the company, there are a number of matters in regard

to which changes will be asked before it is signed.

The city council has received a bill for \$10,000 from the Hydro Electric Power Commission of Ontario, for the services of T. U. Fairlie, of its engineering staff, in connection with the valuation of the company's property for the purpose of the agreement. The Mayor is stated to have advised the Board of Control Dec. 12, that money would have to be found for the payment of the account forthwith.

One-Man, P-a-y-e Cars for London Street Railway.

The London St. Ry. gave an order recently for 5 one-man, pay as you enter, single end, double door, safety cars of the Lancaster type, which is somewhat heavier than the standard Birney type. They will have straight sides, round ends, arch roof, stationary top sash, lower sash to raise, platform floor on same level as body floor, folding doors and steps, 2-motor electrical equipment and air brakes with safety features. The general equipment will include 600 watt single coil truss plank electrical heaters with thermostat control, exhaust ventilators in roof; stationary cross seats on left hand side, and balance of seats arranged longitudinally; incandescent headlights, Ohio Brass Co.'s trolley catchers, illuminated destination signs, sand boxes, H.B. type lifeguards, Westinghouse single end air brake and safety equipment, Westinghouse 35 h.p. 2-motor equipment single end control; Brill 79-E-1 standard safety car trucks with friction bearings, 8 ft. wheel base, chilled cast iron wheels, 26 in. dia. The order was given to Canadian Brill Co., Preston, Ont., but when that company discontinued business and withdrew from Canada, it was transferred to the J. G. Brill Co., Philadelphia, Pa.

The Ontario Railway and Municipal Board, on Dec. 4, authorized the London St. Ry. to operate one-man p.a.y.e. cars on its lines, subject to such regulations as may be prescribed by the Board of Railway Commissioners regarding the operation of the cars over steam railway crossings.

Toronto & York Radial Railway Offices Changed.

In consequence of the Toronto & York Radial Ry. lines having, in connection with the Toronto "clean up deal," passed under the Hydro-Electric Power Commission of Ontario's control, and being now known as the Hydro-Electric Railways, Toronto and York Division, under the jurisdiction of W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission, the general offices, which have been at 84 King Street East, Toronto, for a number of years, have been removed to one of the Hydro-Electric Power Commission's buildings at 110 Elm St., where the following officials are located: Assistant Manager, C. L. Wilson; Resident Engineer, C. P. Van Norman; Traffic Manager, F. S. Livingston; Electrical Engineer, W. B. Boyd; Superintendent, All Lines, C. W. Mott; Superintendent, Metropolitan Division, L. P. McClelland; Superintendent, Scarboro Division, John Break; Superintendent, Mimico Division, J. F. Deadey. The Accounting Depart-

ment has been removed to another H.E.P. Commission building at 59 Murray St. The Master Mechanic, A. M. Smith, and the Purchasing Agent, G. K. Hyde, remain at 1440 Yonge St.

London Street Railway Purchase Proposal Defeated.

The London, Ont., City Council, as a result of the recommendation of its specially appointed transportation commission, submitted to the voters at the municipal election on Dec. 4, the question: "Are you in favor of acquiring the London St. Ry. under bylaw 916?" The votes were: 4,269 against buying the property and 3,843 in favor of it.

The city's commission recommended the purchase of the railway on the expiration of the franchise on Mar. 8, 1925, and that it be operated by a civic commission. The estimated cost of purchasing the railway, modernizing it and building certain extensions, was estimated by A. E. K. Bunnell, electrical engineer, at \$2,600,000.

Following the decision to submit the question, the Mayor and aldermen inaugurated a campaign to secure a favorable answer to the question. Mayor Wilson is reported to have stated in a speech, that there had been a demand made by ratepayers to know how much of the \$2,600,000 it was proposed to pay the company for the railway. The property would be bought by the council, but the price would be fixed by arbitration. However, he could say that the valuation placed on the property by the engineer was \$553,000 as a minimum, and \$905,000 as a maximum. The amount proposed to be expended upon rehabilitation was not to be spent at once, but would be spread over several years after the acquisition of the road. The engineer's report showed that the earnings of the railway would pay interest on the bonds and provide a sinking fund which would pay off the indebtedness in 30 years. This would be possible with a 5c. cash fare, and 6 tickets for 25c.

Sir Adam Beck, who was a member of the special transportation commission, also took part in the campaign, and was reported to have said in one of his speeches, if the city did not buy the railway at once, it would have to wait another seven years for the opportunity to do so. The company was paying a 6% dividend on its common stock, but he thought it would be paying 10% in a few years. Mr. Bunnell's report was the most simple and conclusive he had ever seen. If the city bought the railway, there would be a 4c. fare before very long. The value of the railway would be determined on actual equipment, property, works, including pavements, on a cost having regard to the best kind and system of railway in existence in March, 1925. No profits, or rights, or privileges would be taken into consideration. The minimum cost of the road was estimated by the engineer at \$533,000, and the maximum cost at \$905,000; and \$1,250,000 had been added to the latter amount for rehabilitation. He criticized the suggestion to operate bus lines, and advised the operation of the street railway by electricity.

Press reports state that the directors, on Dec. 8, considered the position of affairs, and that the President stated on Dec. 11, that the company would make some changes in routing as suggested in Mr. Bunnell's report, and would also abandon the Rectory St. line.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—The recently completed agreement between the company and the Vancouver City Council, calls for the completion of work on new tracks to be built within a year at a cost of \$105,000; the contribution of \$10,000 towards the removal of Main St. bridge, and the repaving of the street, and the expenditure of \$250,000 during the next five years on putting the company's wires underground. The track extension referred to includes the laying of permanent tracks on Fraser Ave., from Kingsway to 25th Ave.; re-laying tracks on Hastings Ave. from Granville St. to Homer St., and laying permanent tracks east of the Hastings St. viaduct.

A new automatic substation will, a press report states, be erected on Bodwell Road, between Main and Fraser Sts., Vancouver, at an estimated cost of \$65,000. The substation will be a solid brick structure, and will be equipped with the usual transformer and a rotary converter of 1,000 k.w. capacity, supplying the South Vancouver railway lines with current at 550 volts. It is expected the new structure will be completed within six months. (Dec., 1922, pg. 633.)

Montreal Tramways Co.—We are officially advised that the company has under way about 11.6 miles of reconstruction of tracks, and about 3.1 miles of track extension. It is arranging for the reconstruction of about 8 miles of track, and for the construction of about a mile of track extension. The company will be in the market early in 1923 for 900 tons of 115 lb. No. 508 rails, for use in this work. We are also advised that the company has under construction an additional two stories to its office building.

Lachine, Que., City Council is reported to have decided Dec. 7, to take up with the Montreal Tramways Commission the question of the extension of the Windsor-Montreal West line to Ville St. Pierre and the western suburbs of Lachine. (Nov., 1922, pg. 581.)

In a bill introduced in the Quebec Legislature recently to amend the Montreal city charter in several particulars, sec. 15 provided to authorize the city council to allow the Montreal Tramways Co. to build and operate tramway lines on a part of Mount Royal Park specifically described. Considerable opposition to this section developed, as the bill was considered, resolutions from a number of public bodies in the city protested against it being presented, and the section was dropped when the bill was in committee.

Niagara, St. Catharines & Toronto Ry.—The Board of Railway Commissioners has directed the company to re-locate its lines on Oak and Merritt Streets, Merritt, Ont., and to pay its share of the cost of paving them, the work to start in March.

Nipissing Central Ry.—Application is being made to the Dominion Parliament for an act extending the time for the completion and putting into operation of the lines authorized to be built by the company's act of incorporation, Statutes of 1907, chap. 112. The lines authorized were as follows: From Latchford, Ont., to Blanche Lake, thence northerly to Windigo Lake, and on to a junction with the National Transcontinental Ry. at the Metagami River, Que.; from Latchford along the Montreal River val-

ley to Willison Tp., thence northerly to a junction with the National Transcontinental Ry. in Quebec Province; from Latchford southerly to a junction with the Timiskaming & Northern Ontario Ry. at Timagami, Ont.; from Liskeard westerly to meet line no. 2; from Windigo Lake westerly to the Timiskaming & Northern Ontario Ry.; from Liskeard to Charlton, Ont.; from the first mentioned line in Casey Tp. to North Timiskaming, on the Des Quinze River, Que. The authority to build these lines was extended from time to time, the last extension being in 1918, for five years. The lines built serve Haileybury, Cobalt, and Liskeard, Ont., and include a section of the Timiskaming & Northern Ontario Ry., the total mileage operated being 15.37 miles. The line is operated for the Ontario Government by the Timiskaming & Northern Ontario Ry. Commission. (Jan., 1922, pg. 42.)

Quebec Ry., Light & Power Co.—We are officially advised that the company completed during 1922 three extensions of line in Quebec City, viz.: St. Valois St. and Bell's Lane, 0.46 mile; Charlesbourg Road, 0.42 mile; and Marguerite-Bourgeois, 0.15 mile; and that it also laid 230 ft. of loops and sidings.

Regina Municipal Ry.—A loop to the stadium at Regina, Sask., has been completed, necessitating the laying of 0.1 mile of new track.

Sarnia St. Ry.—A press report states that Sarnia, Ont., Real Estate Board has asked the company to extend its railway.

Electric Railway Passenger Fares.

British Columbia Electric Ry.—The B.C. Attorney-General introduced in the Legislature, Dec. 9, a bill to regulate passenger fare rates chargeable by the B.C. Electric Ry. It provided that upon the application of any municipal council, within the limits of whose jurisdiction the railway operates, or of 100 provincial voters in any unorganized territory traversed by the railway, or of the company, as to rates, the Government may appoint a commissioner, or a commission (hereinafter referred to as the commission), under the Public Inquiries Act, to investigate the matter, the provisions of the act to govern the investigation, subject to the further provisions in the bill. The commission, after enquiry, may make an order fixing the rate or rates to be charged. In fixing the rate, the commission shall have due regard, among other things, to giving the company a reasonable return upon the value of its property; the commission may have an appraisal made of the value of the property, the costs of which are to be borne by the company. Except by an order of a commission, or upon an agreement with a municipality, with the approval of the Government, no change can be made in rates. The company shall not charge rates below those fixed by the commission, except reduced rates of mileage, excursion or commutation tickets; per hour charge for passenger cars, and free or reduced rates for the company's employees, public servants, school children, and others subject to the Minister of Railways' approval. Various sections regulate the proceedings before the commission; appeals against any order of a commission, provide a penalty

of not less than \$10 nor more than \$1,000 in case the company permits anything to be done contrary to the provisions of the bill, or the orders of a commission, and a penalty of not less than \$20 nor more than \$500 in the case of any person soliciting or receiving any rebate, concession or discrimination in respect of any passenger service. Other sections give a commission authority to regulate passenger service and rates, whether fixed by agreement or otherwise; declare that the general powers given to a commission are not limited by any provision of the present bill or by the Public Inquiries Act, and that the provisions of the bill are to prevail over contrary provisions in the Public Inquiries Act, or of any other general or special act.

London St. Ry.—A press report states that the directors decided, Dec. 8, to put on sale at an early date, probably Jan. 1, a strip of 22 tickets for \$1, good up to 8.30 a.m., and from 5 to 6.30 p.m. The present fare is 5c.

Regina Municipal Ry.—A recent Regina, Sask., press report stated that the question of the restoration of 5c. fares on the municipal railway was being made an issue in the election for members of the city council for 1923.

St. Thomas Municipal Ry.—The St. Thomas, Ont., City Council, on Dec. 5, discussed a proposal to restore 5c. fares on the street railway, and decided to retain the 7c. fare for the remainder of the year. It is said that the new council will consider the question.

Waterloo-Wellington Railway Sale Negotiations.

In connection with the company's application to Kitchener, Ont., City Council for the renewal of its franchise, which will expire in February, the council is reported to have given two readings on Dec. 4, 1922, to a bylaw to issue debentures for \$70,000 for the purchase of the line, for modernizing its track and equipment, and for putting it in condition to be operated by the city in connection with the Kitchener & Waterloo St. Ry. The price said to have been offered for the line is \$25,000, which W. H. Breithaupt, the President, said was too low, and suggested \$40,000. At a special meeting of the city council, Dec. 9, he asked that the whole matter be held over for a year, in order that he might have a valuation of the property made. This was agreed to, and it is said that the franchise will be extended for a year to permit negotiations to be completed.

The W.-W. Ry. is only 2.75 miles long and extends from Ahrens St., Kitchener, to half a mile beyond Bridgeport, and owns a right of way for a further half a mile. It has running rights over the Kitchener & Waterloo St. Ry. from the corner of Victoria and Ahrens Sts., to the corner of King and Albert Sts., Kitchener, approximately a mile, and buys its power from the Kitchener Light Commission. (Dec., 1922, pg. 633.)

Employees of Roger Miller and Sons, contractors, and of the Toronto Transportation Commission's Construction Department have endowed a cot in the Toronto Hospital for Sick Children, in memory of the late Fred R. Miller, who was a member of the Toronto Transportation Commission, and of the Hydro Electric Power Commission of Ontario.

One-Man Car Conversion and Operation in Port Arthur.

Port Arthur Civic Ry. has recently converted four 2-man cars, nos. 28, 30, 38 and 56 into 1-man cars, at its shops. The principal dimensions of the cars as converted are as follows:—

Length over bumpers.....	43 ft.
Length over vestibules.....	42 ft.
Length of front vestibule.....	6 ft. 6 in.
Length of rear vestibule.....	6 ft. 6 in.
Width.....	8 ft. 5½ in.
Height from rail to top of roof.....	12 ft.
Height from rail to top of trolley base.....	12 ft. 9 in.
Seating capacity.....	46

These cars are of the double truck type, and equipped with Westinghouse 101 B motors, D.I.E.G. air compressors, and K 6 controllers. In conversion, the control equipment was placed in what was formerly the rear vestibule, i.e., the direction of operation was reversed. This was done to take advantage of the larger rear vestibule space, and provide for both an entrance and an exit on the front platform. The original front end of the car, with its narrow vestibule, now forms the rear end, with a side door as an emergency exit. The cars are equipped with

manually, and so arranged that it interlocks the controller handle when the doors are open, in such a way that the doors must be closed before the car can be started. It is evident that the arrangement is an excellent one for prompt simultaneous loading and unloading of passengers.

Each car is equipped with a longitudinal seat and 7 transverse seats on each side of the central aisle. The cars are equipped with destination lights on the front of roof, 2 white lights indicating a car on the main line run between Port Arthur and Fort William, 2 red lights a car for the north belt line, 2 green lights for the south belt line, one red and one white light for the north belt line and Current River run, and one green and one white light for the south belt line and Current River.

Approval for the operation of these converted cars was received from the Ontario Railway and Municipal Board on Sept. 27. We are officially advised

pointed Superintendent of its Pinawa hydro electric plant, vice Hugh Smith, resigned to enter private business, as mentioned in our last issue.

R. J. Fleming resigned his position as General Manager, Toronto Ry. Co., on Dec. 11, and announced his candidature for the Toronto mayoralty, the election for which will be held on Jan. 1.

George Kidd, General Manager, British Columbia Electric Ry., addressed the Vancouver Kiwanis Club recently, on service.

C. J. Moors has been appointed Manager of Public Utilities, Fort William, Ont., with charge of Fort William Municipal Ry., vice A. L. Farquharson, resigned.

Lorne E. Moreland, who has been appointed Assistant Treasurer, Hull Electric Co., Hull, Que., was born at Ottawa, Ont., Apr. 19, 1895, and entered Hull Electric Co.'s service March 27, 1916, since when he has been, to Apr. 30, 1918, timekeeper; May 1, 1918, to Dec. 6, 1922, chief clerk, Hull, Que. He was also Secretary of the Canadian Electric Railway Association from Feb. 1, 1920, to May 31, 1921.

M. E. Morton, heretofore Traffic Manager, has been appointed Superintendent, Fort William Municipal Ry., Fort William, Ont.

Luke Robinson, who died as the result of injuries received in an automobile accident recently at White Plains, N.Y., was born at Whitby, Ont., July, 1867. He entered Toronto Ry. service in 1885, in the horse car days, and acted as motorman on the first electric car there on the electrification of the lines, and later transferred to the London St. Ry., London, Ont., under C. E. A. Carr, who sent him to Montreal in 1895 as Superintendent, Montreal Park & Island Ry., which position he retained until 1901, when he went to Paris, France, under the late Duncan McDonald, later General Manager, Montreal St. Ry., and worked on street railways in Paris suburbs. He returned to Montreal in 1903, as General Superintendent, Montreal St. Ry., and was later appointed General Manager, Dallas St. Ry., Dallas, Texas. He afterwards received an appointment with the Standard Varnish Co., which was controlled by the owners of the Dallas St. Ry., and left that company's service in 1919, when Manager of the Insulating Department. In 1921 he formed the L. Robinson Corporation, of which he was President and General Manager at the time of his death.

Winnipeg Electric Railway Franchise Extensions.—S. J. Farmer, independent labor candidate, was elected Mayor of Winnipeg on Nov. 24, 1922, by 16,493 votes against 12,591 for J. K. Sparling, who was chairman of the city council's special committee which negotiated the proposed franchise extension agreement with the Winnipeg Electric Ry. Co., a summary of which was given in Canadian Railway and Marine World for Dec., 1922, on pg. 631. The newly elected Mayor made his campaign largely on a proposal to submit the proposed agreement to a referendum before being approved of. The retiring city council, on Dec. 7, decided to leave over the agreement with the company, which had received its second reading, for the new council to deal with.

The Oshawa Ry. is considering the purchase of an electric freight shunting locomotive, and two passenger cars.

Front End Arrangement, Converted Cars, Port Arthur Civic Ry.

Brill 21E trucks, folding doors, and step for entrance, exit and emergency exit, doors and H-B fenders. In addition to seating capacity for 46 passengers, there is also standing room for 44, making a total carrying capacity of 90. Car 38 is equipped with Westinghouse safety equipment, comprising dead man control, door engine and automatic sander, but the remaining cars have not the dead man control feature, and their doors and steps are operated manually. The emergency doorst at the rear of the converted cars open from the inside only, by turning the lock handle and pushing the door. When the door is opened, the folding step is automatically lowered, and a buzzer rings at the front end of the car, and when the passenger leaves the step, the door closes automatically and the step folds up.

In the accompanying sketch showing the converted cars' front end arrangement, A represents the controller's location, B the brake valve, C the farebox, D the coal heater, E the steel cabinet controlling all electrical lighting, air motor and heating circuits, F and G, pipe rail, H the sand boxes and sanders, the latter operated by an air sander valve located in close proximity to the brake valve, K the door operating lever, M the hand brake, N the coal box, and P the folding step for the front entrance and exit door. The door lever at K is operated

that the new system of operation, and the cars used to furnish the 1-man service, are meeting with the entire approval of street car patrons and the citizens generally, and it is estimated that extension of the one-man service to the entire system will result in a saving of \$12,000 annually. A Port Arthur press report states that the first 15 days operation with the 1-man system showed a net saving of \$500, while another report states that fares collected in the seven days beginning Sept. 1, when the new system was instituted, were \$3,852, compared with \$3,582 during the last seven days in August. The latter figures were made public to silence statements to the effect that many of the fares were missed by the conductor-motorman with the 1-man system of operation.

Mainly About Electric Railway People.

C. C. Curtis, General Manager, Cape Breton Electric Co., is President of the Nova Scotia Accident Prevention Association, and W. L. Weston, General Manager, Nova Scotia Tramways & Power Co., represents the public utilities' interests on the general executive committee.

K. C. Ferguson, who has been in the Winnipeg Electric Ry's Electrical Department for some time, has been ap-

Flat Wheels, Their Cause and Prevention.

The Toronto Transportation Commission has issued to motormen a booklet of instructions dealing with the cause and prevention of flat wheels on street railway cars, as follows:—"Flat wheels are one of the greatest sources of annoyance to car riders, and to citizens residing on car routes or in their vicinity. It is apparent to every motorman that flat wheels cause damage to rolling stock and tracks; to remove the flats by grinding is a costly operation, and to renew the wheels, as is necessary in the case of bad flats, is a still larger expense. All motormen have received a training course before being placed in charge of a car. Special instructions have been given on the handling of the air brake equipment installed on the new cars, and also on the p.a.y.e. cars. If a motorman desires further instructions, or wishes to have explained to him the function of any part of the equipment, it will be gladly arranged by the divisional superintendents. The training school and mechanical department are at the service of men who wish to inform themselves on the electrical and mechanical parts of the equipment. To assist in acquainting motormen with the proper handling of the air brakes, A. B. Brown, Brake Expert, Canadian Westinghouse Co.; W. R. McRae, Superintendent of Rolling Stock, T.T.C.; and J. McCullough, Superintendent of Traffic, T.T.C., have prepared the following instructions:—

"As is well known, to reduce the speed or bring a moving railway car to a stop, the first step is to apply the brake shoes against the tread of the revolving wheels. This is accomplished by the aid of a system of brake levers, which equalize the braking forces applied to both trucks as well, as the brake shoe of each wheel. When in contact with the wheels, the brake shoes try to stop the turning of the wheels, but on account of the entire weight of the car resting on the wheels, an opposing, or pulling, force is at once created between the wheels and the rail, which, if sufficiently powerful, will cause the wheels to continue to rotate. The heavier the brake application, the greater is the pull or grip required by the rails in order to keep the wheels turning.

"The system of brake levers on a car is designed with the idea of preventing, as far as possible, the sliding of wheels, for it is well known that a car or train will run one third further when making a stop, if the wheels are sliding, than will be the case if the wheels can be kept rotating. From this it will be plain that what actually stops a moving car is the backward pull of the rail upon the wheels, produced jointly by the weight of the car, and the contact of the brake shoes with the wheels, and not the application of the brake shoes to the wheels alone, as is so generally supposed. As an illustration of this point, if the rails were greased just before the approach of a car, a heavy brake application on such a rail will simply lock the wheels and the car would skid along until brought to rest by some other influence than the brake. This brings us to a realization of the fact that the slippery condition of the rail found at certain seasons of the year is one of the most difficult problems confronting railway operators, particularly as the changes often take place with remarkable suddenness, being subject largely to weather conditions. Fortunately, long experience shows that the

liberal use of a coarse, sharp, grade of sand will improve the condition of a greasy rail, so that it will compare favorably with a clean dry rail. A successful motorman will make a careful study of rail conditions at all points on the route, and, when necessary, drop sand on the rails, the idea being to protect his own car as well as those following upon the same track. Moreover, he will report all conditions that cannot be corrected by this method. The proper method of sanding the rail for ordinary stops is to start the sand before the brake is applied, and allow it to continue running until the car is brought to rest. To apply the sand in any other way is very likely to lead to the flattening of wheels and their subsequent removal from the car.

"The amount of air pressure in the brake cylinder when the car is moving at low speed on a bad rail is an important factor in causing wheel sliding; that is to say, wheels will slide more readily with 40 lb. pressure in the brake cylinder when moving 10 miles an hour than would be the case if the speed was 20 miles an hour. The explanation is that the face of the brake shoe and tread of the wheel are composed of series of little hills and hollows, which engage at slow speed, in much the same manner as the teeth of two gear wheels, with the result that high friction is developed. When the wheel is revolving rapidly, this intimate engagement of the surfaces is not obtained, and therefore the retarding influence of the brake shoe is appreciably less. The well trained motorman knows from experience that the above statement is correct, and, when stopping the car, will invariably admit a high pressure to the brake cylinder (indicated by red hand of the air gauge) when the car is running fast, and gradually reduce the pressure as the speed of the car reduces, and endeavor to have the red hand of the air gauge show no pressure in the brake cylinder when the car stops. As an example, suppose the highest pressure required in the brake cylinder during an ordinary stop is 35 lb.; the correct method is to admit the 35 lb. to the brake cylinder at once, and then step the cylinder pressure down to a few pounds at a time, as the speed of the car, and the motorman's judgment, dictate. This method does not involve the taking of any chances; it simply has for its purpose the avoidance of any tendency of wheel sliding, by the employment of a high brake cylinder pressure when speeds are high, and the insurance of a low cylinder pressure when speeds are low. This method of braking has an additional advantage in that very much smoother stops will be made, which will add to the passengers' comfort and be an inducement to them to leave their seats as the car approaches their street and be ready to get off promptly when the car finally comes to rest.

"Of course, in cases of emergency, the brake must be applied quickly and fully, regardless of possible damage to wheels by sliding. Under such circumstances, however, the reverse key should not be pulled back if the brake is operating properly, as the load imposed by the brake shoes alone is all that the rotating wheels can comfortably bear without sliding. Every case of emergency application of brakes caused by carelessness of pedestrians, drivers of trucks, etc., should be

promptly reported, regardless of whether wheels are flattened or not. Such reports will aid the management in its campaign of urging greater caution upon the public's part in this respect. After all is said and done, the vigorous use of the gong, especially approaching narrow streets, is probably the most effective means of avoiding the necessity for many emergency brake applications, with the unpleasant circumstances usually attending the same.

"Messrs. Brown, McRae and McCullough have clearly outlined in the foregoing paragraphs the proper method of handling a car so as to avoid flat wheels. Motormen are earnestly requested to follow the procedure as outlined, in order to abate the flat wheel nuisance, which results in unnecessary waste of money, causes much inconvenience to the public, and casts a serious reflection on the service in which we are all so much interested."

Electric Railway Notes.

The Cape Breton Electric Co. is considering the purchase of 5 or 6 Birney safety cars.

Hull, Que., City Council is reported to have passed a resolution Dec. 4, requesting the Hull Electric Co. to cease operating one-man cars on the Wrightville line.

Vancouver, B.C., car service was suspended for some time on Dec. 14, owing to a bird having flown between some high tension wires near Barnet, and short-circuited the main power line.

Toronto Transportation Commission's conductors and motormen have been supplied with new number badges for their caps. The badges are of brass, with the employees' number stamped out.

The New Brunswick Power Co. was reported to have completed by Nov. 30, the remodelling of its cars to suit them for operation under the new rule of the road which went into effect in New Brunswick Dec. 1. Complete instructions were given to the motormen as to operation under the changed rule, and precautionary notices were issued to passengers, who enter or leave the cars on the opposite side to that which they were accustomed to use under the old conditions.

The British Columbia Minister of Public Works stated in the Legislature Dec. 1, that the B.C. Electric Ry. had been paid \$195,812.01 by the Government, up to Sept. 11, 1922, on account of the expenses it was put in connection with the change of the rule of the road in the province which came into operation at the beginning of 1922, but the accounts between the company and the Government have not been finally settled. The company estimated the cost of changing tracks, overhead work and rolling stock to suit the new rule, at \$933,397.67, and the Legislature voted a sum not to exceed \$350,000 towards the cost.

J. L. Smith, heretofore Assistant Superintendent, Yorkville Division, has been appointed Divisional Superintendent, Eglinton Division, Toronto Transportation Commission, with office at 2170 Yonge St., and A. Steel, who was Superintendent, Yorkville Division, which has been abolished, has been transferred to the Commission's head office.

Answers to Questions on Electric Railway Topics.

The following answers have been sent, by Canadian electric railway officials, to questions addressed to the American Electric Railway Association's question box:—

Winter Conditions on Tracks.—Have any street railways used electric snow melters in open track switches, or on paved track? With special reference to winter conditions, should switch operating boxes be packed with grease or oil, or salted, or drained? In salting switches, should salt be placed in heel tightening mechanism box?

John Whitsell, Manager, Winnipeg Electric Ry.—We have never used electric snow melters. In this climate, under conditions we have to contend with, we find drainage to sewer below the frost line the only efficient method. Rock salt is sprinkled over the entire switch frame, and thereby have a constant supply of

J. M. Ahearn, Assistant Manager, Ottawa Electric Ry.—We salt only, drains freeze up in our climate. We place salt on top of heel tightening mechanism box, brine within.

Employees' Deposits on Companies' Property.—What method is used to ensure the return of company property to the company when an employee leaves the service, particularly conductors who, when employed, are given punches, badges, etc.; are they required to make a deposit of a certain amount of money and if so, how are the accounting features handled?

E. H. Adams, Comptroller, British Columbia Electric Ry. Co.—This company has no actual safeguard that its property will be returned when an employee such as a conductor leaves its service. The main protection it has is in the careful selection of the class of individual employed. There is no deposit required and the employee is only given equipment, etc., when the traffic department is satisfied with his ability, etc., following a probational period. The employees are not bonded or insured and it is found that the confidence reposed in them is justified, as the losses suffered by the company are very small.

Handling of Accounts.—What is the best safeguard against paying a bill twice; certainly, a large company handling thousands of bills each year cannot look up each bill; should a ledger be used with a page for each firm dealt with or some other kind of an index or loose leaf system be used in the disbursement department?

E. H. Adams, Comptroller, British Columbia Electric Ry.—This company's disbursements are recorded in a subsidiary loose leaf ledger, which is balanced every month with the controlling account in the general ledger. Folios are kept for the individual firms dealt with and we find this book very handy as a reference and as a voucher register. Invoices for merchandise are first passed on the Purchasing Agent's order, and are only vouchered for payment when the goods are reported as received. The voucher is then entered in journal and recorded in the above ledger. The voucher and check numbers used are the same, and we have found this saves a great deal of confusion. A small card index system is also used in connection with monthly or quarterly payments to ensure these items being charged for the right periods and to prevent overlapping or duplication.

Operating Returns.—Where a company operates in several cities and the accounting department has representatives in the different cities to receive and bank the money, and where there is prepared a statement, showing the earnings, mileage, etc., on the different lines in the city, where best could such a statement be prepared; in the local city office or in the general office, it being assumed that the local office reports daily to the general office; how is such a statement prepared on your property?

E. H. Adams, Comptroller, British Columbia Electric Ry.—This company operates over 300 miles of city, suburban and interurban lines on the mainland of British Columbia, and all statements for earnings, mileage, etc., are drawn up in the head office at Vancouver. Statements are made showing passenger earnings, car hours, car miles, etc., separate statements being made up for city and suburban lines by city routes and interurban divisions.

Car Wheel Bores.—In boring cast steel wheels, how much smaller are the wheels bored than the diameter of the axle on which they are to be pressed; what is the most desirable pressure in tons per square inch to press on wheels?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—Our practice in boring iron wheels is to allow from 0.015 to 0.020 in. for 5 in. wheels and 0.012 to 0.016 for 4 in. wheels. Steel wheels only require an allowance slightly more than half of the above figures, the usual resulting pressure being from 35 to 45 tons on 4 in. axles and 45 to 55 on 5 in. axles.

Babbitt Bearings.—Which is more desirable, to bore babbitt bearings after being cast, or to cast them as near exact size as possible?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—Babbitt bearings should be poured, and either rolled or drifted, if preferred, but it is practically impossible to cast the babbitt lining to a fitting size, owing to the variations in wear of shafts.

Flat Spots on Car Wheels.—What results have been obtained from using abrasive brake shoes to take out flat spots on wheel treads?

D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.—We have found the use of abrasive brake shoes quite satisfactory on skid spots smaller than the size of a 50c. piece. I do not believe that there is much to be gained by grinding out larger flats than these.

Courtesy by Platform Men.—Have any member companies conducted "courtesy" contests" among platform employees; if so, please describe plan of contest and rules accomplished?

Tie Rods.—What are the dimensions of your tie rods; please give length over all, length of thread on each end, size of terminal and sizes of flat portion, if flat rods; what tests are tie rods subjected to; where do tie rods fail in service; what chemical and physical characteristics are called for in your specifications; is it necessary to have the threaded terminals greater than 7/8 in. diam.; if so, why; what fit of nuts do you call for?

John Whitsell, Manager, Winnipeg Electric Ry.—We use only a small percentage of tie rods on this system, and those only on bridges.

J. M. Ahearn, Assistant Manager, Ot-

tawa Electric Ry.—Tie rods 4 ft. 10 in. over all; 2 in. thread; 3/4 in. terminal; 2 x 2 1/2 in. flat rods; we do not test, apart from ensuring good workmanship; we use in curves only; tensile strength of approximately 30 tons a sq. in.; for our requirements it is not necessary to have threaded terminals greater than 7/8 in. diam.; clearance between bolt and nut, 0.004 in.

Rail Cutting and Ending.—Have you found any better means for cutting rails in the field than the old reliable hack saw? Can rails be suitably ended so that they will butt close after cutting with the acetylene cutting torch?

John Whitsell, Manager, Winnipeg Electric Ry.—Yes, by the acetylene torch; yes, by a careful welder and by introducing a "dutchman," making a welded joint.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	Oct. 1922	Oct. 1921	4 mos. to Oct. 31, 1922	4 mos. to Oct. 31, 1921
Gross	\$861,812	\$845,973	\$3,375,461	\$3,375,467
Expenses	604,573	631,458	2,427,125	2,531,066
Net	257,239	214,515	948,336	844,401

London & Port Stanley Ry.—In connection with the recent proposal for the City of London to buy the London St. Ry., the London City Council's Finance Commissioner gave out a statement regarding the London & Port Stanley Ry., which said that, including the rent of \$20,000 a year, and interest and sinking fund charges, the L. & P. S. R. had paid into the city treasury \$637,859.79 up to June 30, 1922, in addition to nearly \$40,000 in taxes, and that \$225,000 had been provided out of earnings for betterments.

Quebec Ry., Light, Heat and Power Co.—A press report states that the gross earnings for the 9 months ended Sept. 30, were \$2,123,155, and the operating expenses \$1,468,341 against \$2,051,158 and \$1,529,408 respectively for the corresponding period of 1921. The net earnings for the 9 months were \$654,813, against \$521,749, the increase of \$133,064 being due to an increase of \$71,996 in earnings and to a decrease of \$61,066 in operating expenses. After providing for fixed charges, the net surplus for the 9 months was \$235,798, against \$72,454 for the corresponding period of 1921.

The Canadian Electric Railway Association has appointed a committee on the accounting of maintenance and depreciation of street railway assets, including government classification of accounts, as follows: H. E. Weyman, Manager, Levis County Ry., Chairman; F. S. Livingston, Traffic Manager, Hydro-Electric Rys. of Ontario, Toronto & York Division; H. E. Smith, Comptroller, Montreal Tramways Co.; L. Tait, Secretary and Treasurer, London Street Ry.; G. E. Waller, General Superintendent of Railways, Dominion Power & Transmission Co. Some additions may be made to the committee later on.

The Port Arthur, Ont., Public Utilities Commission, which manages the civic railway and the other publicly-owned utilities, was re-elected by acclamation recently as follows: M. C. Campbell, R. M. Young, B. Tourtellot, E. J. Blaquier. The Mayor is a member ex-officio.

Marine Department

Ship Building and Ship Repairing Throughout Canada.

Canadian Vickers, Ltd., Montreal, did the following repair work recently: Canada Steamship Lines' s.s. Gray County, pump and winch repairs; s.s. Simla, survey and bulwark repairs; s.s. Edmonton, repairing and replacing boat davits; s.s. Thunder Bay, port light repairs; s.s. Mapleheath, pump repairs; Canadian Government Merchant Marine steamships Canadian Navigator, Canadian Ranger and Canadian Squatter, docked for survey, bottom painting and sundry repairs; s.s. Canadian Spinner, new clutch for steering engine; Clarke Steamship Co. s.s. Gaspesia, engine room repairs; Canadian Pacific Steamships' s.s. Mottisfont, boiler repairs; Cunard Steamship Co. s.s. Antonia, winch repairs, Danish s.s. Orkild, dry docked for survey, collision damage repair, and bottom painted; Danish s.s. Knud, engine room repairs; Hindustan Steamship Co. s.s. Baluchistan, grounding damage repair and hull and engine repairs; s.s. Hindustan, new gangways and stern tube repairs; s.s. Afghanistan, feed evaporator and steering repairs; Imperial Oil, Ltd., s.s. Montrolite, engine and deck repairs and new life boats; s.s. Calgarolite, reboring i.p. cylinder and other engine and deck repairs and bottom painting; s.s. Torontolite, rudder and minor deck repairs; barge 41, survey, collision and sundry repairs and bottom painting; Italian s.s. Piave, general repairs; Italian s.s. Aussa, new propeller and engine repairs; Italian s.s. Livenza, new crank shaft for dynamo engine; Italian s.s. Marina, winch pipe repairs; Italian s.s. Montegrappa, circulating pump repairs; Jugo-Slavia s.s. Izgled, starboard bow and bridge repairs; Norwegian s.s. Olaf Kyne, renewing small fairleads; Norwegian-American Line s.s. Trondhjemsfjord, stanchion and guard rail renewals; Ropner & Sons' s.s. Millpool, pump repairs and boat davits; U.S. Shipping Board s.s. Hinckley, repairing electric light set and hatches; s.s. West Kebar, sundry hull, deck and engine repairs.

The following work was done in November:—Canada Steamship Lines' s.s. Lord Dufferin, 4,443 tons, drydocked for survey, cleaning boilers, new winch, opening up cylinders, valves, etc.; s.s. Maplebranch, 1,592 tons, drydocked to remove wire rope foul in port propeller and repairing same; s.s. Maplehill, 1,409 tons, drydocked for survey, and repairing broken stern frame; s.s. Manoa, 5,070 tons, piping repairs; s.s. Maplecourt, 3,388 tons, removing and replacing sampson post band; s.s. Hoerda, alterations to cargo holds; s.s. Vinmount, 1,799 tons, repairing scuppers; Canadian Government Merchant Marine s.s. Canadian Seigneur, 4,096 tons, stern frame and rudder for the ship in Newfoundland Dockyards, St. John's, Nfld.; s.s. Canadian Carrier, 2,499 tons, drydocked for survey and bottom painting; C.P.R. s.s. Monteagle, 6,173 tons, overhauling main feed pump, refrigerating engines and compressor, feed heater and other engine and deck repairs; s.s. Holbrook, 6,655 tons, boiler repairs; U.S. Shipping Board s.s. Deuel, 5,113 tons, bulwark and side plate damage repaired; s.s. West Campgaw, 5,094 tons, engine, valve, pipe and winch repairs; Dominion Coal Co. s.s.

Lord Strathcona, 6,892 tons, drydocked, sea valves opened up, ground and replaced; George Hall Coal Co. steamships John B. Ketchum 2nd, 1,109 tons; Ignifer, 1,137 tons, and John F. Morrow, 1,840 tons, drydocked for survey and laid up for winter; Imperial Oil Ltd. s.s. Trontolite, 6,150 tons, general repairs; barge no. 6, laid up for winter; Canadian Western Steamships s.s. Margaret Coughlan, 5,131 tons, new anchor; Navigazione Libera Triestino, s.s. Isonzo, 5,441 tons, new winch pinions and electric welding, steering gear springs; s.s. Timavo, 7,434 tons, sundry engine repairs; Norwegian-American Line s.s. Tyrifjord, 2,820 tons, boat davits repaired; Intercontinental Transport Services, Ltd., s.s. Grey County, 4,156 tons,

of the saloon, 8 x 18 ft., with 4 rooms, a chart room and bathroom. A steel raised forecastle has also been built, containing the crew's quarters, lighting plant, and gasoline engine for operating the windlass, winch and pumps. Electric lighting has also been installed and a 16 ft. lifeboat and 18 ft. towing launch added. Complete new standing and running rigging and sails, stockless anchors and chains have been supplied, and there have been new decks throughout. She was wrecked in ice in the Miramichi River in Dec., 1921, and after being released and towed to Chatham, N.B., was bought by Mr. Cantley, delivered at New Glasgow. She has been renamed Pictonian, and it is stated will be placed in the West Indies trade in charge of Capt. J. G. Wilkie of La Have, N.S.

Collingwood Shipbuilding Co., Collingwood and Kingston, Ont., advises that the following steamships will be overhauled and repaired during the winter: At Collingwood—Bayersher, Glendochart, Glenlyon, Huronic, Martian and Saskatoon; At Kingston—Bayusona, Edmonton, Keynor, Keyport, Malton, Maplebranch, Simla, T. P. Phelan, Trevisa and Vinmount. In most cases, the nature of the repairs has not been settled, as much will depend on the surveys made, but a steady winter's work for both plants is ensured.

Fraser, Brace Co., Three Rivers, Que. The George Hall Coal Co.'s s.s. Edward L. Strong, the third of 4 steel bulk freight steamships built at this yard for that company, arrived at Montreal, Dec. 6. It was stated that a few finishing touches were to be made at Montreal, and that this prevented her from making a trip to the lakes before the close of navigation.

Gidley Boat Co., Penetanguishene, Ont., has received an order from the city of Toronto for a fireboat for harbor use, complete with fire equipment, for \$29,875. For a number of years, the city has leased a freight-carrying tug for fire service along the harbor front, at \$5,000 for the navigation season. The arrangement was not satisfactory, and it was decided to call for tenders, to the city's specifications, for fire equipment, tenderers to supply their own specification for hull, for a completely equipped fireboat. Only one tender was received, and after several changes in the hull specification suggested by T. B. F. Benson, naval architect, etc., Toronto, the contract was placed. The boat is to be ready for the reopening of navigation.

Halifax Shipyards, Ltd., Halifax, N.S. In addition to the completion of repairs on the C.P.R. s.s. Empress, by Nov. 4, as mentioned in our last issue, the following repairs were done during November: Royal Mail Steam Packet Co.'s s.s. Caraque, docked, scraped, painted and overhauled; s.s. Chaudiere, docked, scraped, painted, general repairs and inspection; Canadian Government steamships Lady Laurier and Stanley, docked, scraped, painted and general repairs in connection with annual inspection; Norwegian s.s. Andalusia, docked, scraped and painted; French cable s.s. Edouard Jeramec, docked for general repairs, including damage caused by fire in coal bunkers, general overhaul, scraping and

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

sundry engine, winch and windlass repairs; Anchor-Donaldson Line s.s. Concordia, 4,986 tons, piping dynamo engine and telegraph repairs; s.s. Gracia, 5,261 tons, sundry repairs; s.s. Lakonia, 4,483 tons, sundry engine repairs.

In addition to the foregoing, the company cut the Canada Steamship Lines' s.s. Maplecourt in two, to pass through the canals to the Great Lakes.

Thomas Cantley, New Glasgow, N.S.—The three-masted steel schooner Alda, which Mr. Cantley bought from German owners some time ago, and which he has had cut in two and lengthened 24 ft., was launched at New Glasgow, N.S., recently. She was built at Hammelwarden, Germany, in 1889, and had dimensions: length 103 ft. 7 in., breadth 22¼ ft., depth 9¼ ft. The portion inserted after cutting the ship in two, consists of 7 frame spaces amidships. A raised steel center deck 13 ft. long has been built, and a raised poop 24 ft. long, the full width of the ship, added, this containing the officers' quarters, aft

painting, and repairs in connection with regular Bureau Veritas survey; H.M.C.S. Patriot, docked for minor repairs to hull and propeller. This last ship was undocked Dec. 1.

Midland Shipbuilding Co., Midland, Ont., has bought the tow barge George E. Hartnell, owned formerly by North Western Transportation Co., Detroit, Mich., and will convert her into a steamship at a cost of between \$150,000 and \$170,000. The George E. Hartnell was built at Chicago, Ill., in 1896, of steel, on the channel system, and has steel tank top where no wood ceiling is fitted, 2 watertight and 2 non-watertight bulkheads, steam pump wells, steam towing machine, electric light, and is provided with steam power for working pumps, etc. The hull is divided into 3 compartments, and the hatches are spaced 24 ft. centers. Her dimensions are: length b.p. 352 ft., breadth moulded 42 ft., depth moulded 27 ft.; tonnage 3,265 gross, 3,154 net.

A. Moscrop, Beach Avenue Shipyard, Vancouver, B.C., launched the steam tug R.S.M. for R. S. Marpole, Vancouver, Nov. 30. Her dimensions are: length 90 ft., breadth 20 ft., depth 11.6 ft.

Northern Boat Building Co., Edmonton, Alta., is building a schooner for Innitok, an Eskimo navigator in the Mackenzie River delta and along the Arctic coast. It is to be ready to go north on the reopening of navigation on the Mackenzie River through to Aklavik. It will be 40 ft. long with 12 ft. beam, schooner rigged, and equipped with an auxiliary engine. This is the fourth schooner built by this company for the same man, all specially designed and built for navigation in Arctic waters. The hull is of white oak framing and southern cypress planking, with two 35 ft. masts, carrying mainsail, foresail and jib. The company is also building a number of smaller schooners and boats for Eskimos in the delta, and all will be completed during the winter to go to Aklavik in the spring. In addition to these, a number of whaling boats are being built for use on the Great Bear Lake, out of Norman, to replace the native kiaks.

Prince Rupert Drydock & Shipyard, Prince Rupert, B.C., did the following repair work recently: Canadian Government Merchant Marine s.s. Canadian Observer, general overhaul; Canadian Fish & Cold Storage Co.'s s.s. Andrew Kelly, docked, cleaned, painted and hull repairs; Dominion Government derrick scow, docked, cleaned and painted; U.S. lighthouse tender Cedar, docked, painted and general overhaul; steam tug Evergreen, extensive hull repairs and alterations. In addition to these, about 25 halibut fishing ships were docked, cleaned, painted and repaired.

The following work was done during November:—Canadian Government Merchant Marine s.s. Canadian Observer, completion of overhaul; Dominion Government s.s. Marfish, docked for inspection; s.s. Newington, docked and painted; West Coast Towing & Salvaging Co., steam tug Masset, docked and painted, new rudder and other repairs. In addition to the foregoing, 28 fishing ships were docked and overhauled.

Smith & Rhuland, Lunenburg, N.S., launched the schooner Pauline C. Winters, Dec. 4, for fishing service. Her dimensions are: length 133 ft., breadth 26½ ft., depth of hold 11 ft.

Turpel Marine Railway Co., Victoria, B.C., has re-established itself on its old

site, which, during the war, was occupied by the Foundation Co. for shipbuilding. The s.s. Redfern was overhauled there recently, and a new stem fitted, and the Ajax dredges 305 and 306 have also been overhauled.

Victoria Machinery Depot Co., Victoria, B.C., did the following repair work during November: C.P.R. s.s. Princess Mary, 2,155 tons, docked, cleaned, painted; s.s. Tees, 679 tons, docked, cleaned and painted, tailshaft drawn for inspection, hull and engine repairs; barge no. 8, 1,135 tons, docked, cleaned and painted, keel repairs due to grounding; s.s. Princess Maquinna, 1,776 tons, docked and propeller blades changed; Dominion Public Works Department dredge Ajax, docked, cleaned and painted, and generally overhauled; Sooke Harbor Fishing & Packing Co., Harriet E, cleaned and painted; Victoria Tug Co. steam tug Sadie, boiler repairs; A. O. Ruscoe, steam tug Nora, engine repairs; schooner Crofton, docked and stern bearing repaired; schooner Leonor, docked, cleaned and painted.

Yarmouth Marine Railway Co., Yarmouth, N.S., has completed extensions to its plant, whereby any ships up to 16 ft. draft at high tide, or 14 ft. draft ordinary tide, can be handled.

Yarrows, Ltd., Victoria, B.C., did the following repair work recently: Canadian Government Merchant Marine s.s. Canadian Highlander, 5,370 tons, dry-docked, cleaned, painted, general survey and overhaul; C.P.R. s.s. Princess Alice, 3,099 tons, docked, cleaned, painted, general repairs and overhaul; s.s. Princess Beatrice, 1,290 tons, docked, bottom damage repair due to stranding, repairs to keel, 4 ft. bilge and heel and sundry repairs; s.s. Princess Louise, 4,032 tons, drydocked, cleaned, painted and minor repairs; Consolidated Whaling Corporation s.s. Gray, 707 tons, new propeller; Commercial Cable Co. s.s. Restorer, 3,180 tons, repairing refrigerator, machinery and sundry small repairs, and preparing ship for sea; Navigazione Libera Tristina s.s. Brenta, 5,400 tons, sundry repairs, deck and engine room, tail shaft and stern gland; Pacific Salvage Co.'s s.s. Salvor, 323 tons, renewing smoke stack and casing, and sundry repairs.

The following work was done in November:—C.P.R. s.s. Princess Alice, 3,099 tons, condenser repairs; s.s. Princess Beatrice, 1,290 tons, engine room repairs; Canadian Government steam tug Point Ellice, 205 tons, docked, cleaned, painted and sundry repairs; Canadian Explosives, steam tug Polar Forcite, docked, cleaned, under water surface sheathed with copper, rudder, skeag and engine room repairs; Canadian Robert Dollar Co. s.s. Grace Dollar, 6,498 tons, drydocked, cleaned and painted, stern frame welded and deck and engine room repairs; Union Oil Co. s.s. Santa Maria, 8,430 tons, drydocked, under water parts overhauled, zinc renewed, cleaned, painted, boilers cleaned, new flood lights on masts for deck, sundry deck, engine room and pipe line repairs; D. G. S. Bergen's s.s. Camilla Gilbert, 5,658 tons, deck and engine room repairs; L. B. Noel steam tug Chehalis, new furnace fronts and sundry repairs; also several scows docked and repaired.

The C.P.R. is reported to have ordered from Yarrows, Limited, a wooden ferry steamboat, for operation between Sidney, B.C., and Bellingham, Wash., for the motor car traffic between the island and the mainland. It is stated that work is to be commenced at once, and that the

boat is to be delivered ready for service during May. The propelling machinery is to consist of engines of the Diesel type. The boat's dimensions are to be: length overall 170 ft., beam 43 ft., depth moulded 11 ft., with capacity for between 40 and 50 cars and 250 passengers, arrangements being made that the cars enter or leave the boat at either end.

Marine Public Works Contracts Awarded.

The Dominion Public Works Department has awarded the following marine contracts: Oct. 14, breakwater improvements, Friars Head, N.S., E. M. Dickson, Louisburg, N.S., reinforced concrete 1-2-4, at \$16.90 a cub. yd.; Oct. 21, pile construction wharf at Canso, N.S., Sydney Construction Co., Sydney, N.S., at \$1.06 a sq. ft. of top area, the width of wharf being 25 ft.; Oct. 28, pile wharf at St. Etienne de Malbaie, Que., Onesime & Poliquin, Portneuf, Que., unit prices; Nov. 3, dredging in Courtenay River, Comox-Alberni, B.C., Grant Smith & Co. and McDonnell, Vancouver, B.C., class B, 85c. a cub. yd., in situ; Nov. 7, repairs and extension to wharf at Bersimis, Que., Methat & Fournier, Montmagny, Que., unit prices; Nov. 8, wharf at Aultsville, Ont., Fallon Bros., Cornwall, Ont., unit prices; repairs and extension to breakwater at Devils Island, N.S., D. G. Kirk & Son, Antigonish, N.S., unit prices; Nov. 9, rebuilding wharf at Vananda, Texada Island, B.C., R. Bumstead, Vancouver, B.C., \$3,673; Nov. 9, building wharf at Davis Bay, Comox-Alberni, B.C., R. Bumstead, Vancouver, B.C., \$5,245; Nov. 9, repairs to wharf and renewal of float at Quatsino, Comox-Alberni, B.C., McDonald, Watson & Wither, Victoria, B.C., unit prices; Nov. 13, repairs to piers at Kincardine, Ont., D. Keys and J. Keys, Kincardine, Ont., unit prices.

Canal Statistics for October, 1922.

The Dominion Bureau of Statistics Transportation Branch has issued the following summary for Oct., 1922:

Sault Ste. Marie.—Traffic through the Canadian and U.S. locks showed a large increase over Oct., 1921, aggregating 11,232,198 tons, compared with 6,650,811 in Oct., 1921. Wheat increased 14,932,210 bush.; iron ore increased 2,696,412 tons, and bituminous coal increased 1,478,053 tons, or over 120%. The total of bituminous coal passed up through the canals during 1922 to Oct. 31 was 5,961,080 tons, compared with 11,979,596 for the same period of 1921, and 12,507,027 tons for the 1921 season of navigation.

Welland.—Total traffic increased over 28%, due almost entirely to increase in wheat shipments, which amounted to 326,349 tons, or 10,878,300 bush., against 3,403,300 bush. for Oct., 1921. Corn shipments decreased 66%; oats also decreased. No anthracite coal passed through the canal and bituminous coal fell off 57,826 tons.

St. Lawrence.—Total traffic aggregated 651,251 tons, against 479,033 in 1921. Corn and oats declined, but wheat shipments increased 223,944 tons, or 7,464,800 bush. Anthracite coal increased 37,796 tons, but bituminous coal was 1,999 tons below 1921 shipments. General merchandise increased from 14,849 tons in 1921 to 26,277.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships, with the ports at which they are berthed for the winter, of which Canadian Railway and Marine World has been officially advised:—

Aube Transportation Co., Montreal.—Aube, at Kingston, Ont.

Brantford Navigation Co., Montreal.—Brantford, at Kingston, Ont.

Canada Atlantic Transit Co., Montreal.—Arthur Orr, Kearsarge, at Chicago, Ill.

Canada Steamship Lines, Ltd., Montreal (partial).—Advance, Arabian, Belleville, Cataract, City of Ottawa, Edmonton, Hamilton, Maplebranch, Mapleheath, Maplehill, Oatland, R. G. A. Weaver, Simla, Stormount, T. P. Phelan and Kinmount, at Kingston, Ont.

Canadian Government Merchant Marine, Montreal.—Canadian Aviator, Canadian Hunter, Canadian Raider, Canadian Rancher, Canadian Trapper, Canadian Trooper, at Montreal.

Canadian Pacific Car & Passenger Transfer Co., Prescott, Ont.—Charles Lyon, at Prescott, Ont.

Canadian Pacific Ry. Great Lakes Steamship Service.—Alberta, Assiniboia, Athabasca, Keewatin, Manitoba, at Port McNicoll, Ont.

Cape Steamship Co., Halifax, N.S.—Turret Cape, at Kingston, Ont.

Chicago, Duluth & Georgian Bay Transit Co., Chicago, Ill.—North American, South American, at Ecorse, Mich., where they are being converted into oil burners.

Donnelly Salvage & Wrecking Co., Kingston, Ont.—Cornwall, Frontenac, Mary, Mary P. Hall, William Johnston, at Kingston, Ont.

Export Steamships, Ltd., Montreal.—Trevisa, at Kingston, Ont.

George Hall Coal Co. of Canada, Montreal.—Frank A. Augsbury, Brignogan, Ignifer, John F. Morrow, Lehigh, John B. Ketchum 2nd., Rock Ferry, F. D. Ewen, Zapotec, Wellington, at Montreal; Royan, at Sorel, Que.; N. H. Botsford, Senator Derbyshire, John Rugee, James W. Follette, at Ogdensburg, N.Y.

Georgian Bay Tourist Co. of Midland, Midland, Ont.—Midland City, at Midland, Ont.

Glen Steamships, Ltd., Midland, Ont.—Glenarm, Glendochart, Glendowan, Glen-ealy, Glenfarn, Glengarnock, at Midland, Ont.

Glen Transportation Co., Toronto, Ont.—Glenafon, at Port Colborne, Ont.; Glencadam, Glenvegan, at Kingston, Ont.

Great Lakes Transportation Co., Midland, Ont.—Glenbrae, Glencairn, Glenclova, Glenfinnan, Glenisla, Glenlivet, Glenlyon, Glenmavis, Glenorchy, Glen-shee, Glenstriven, at Midland, Ont.

Honey Harbor Navigation Co., Midland, Ont.—City of Dover, Tenno, at Midland, Ont.

Hudson's Bay Co., Winnipeg.—Athabasca River, at McMurray, Alta.; Lady Kindersley, at Vancouver, B.C.; Mackenzie River, at Fort Smith, Northwest Territories; Weenuck, at Peace River Crossing, Alta.

Imperial Oil, Ltd., Toronto.—Imperial, Iocolite, Royalite, Sarnolite, at Sarnia, Ont.

International Transit Co., Sault Ste. Marie, Ont.—Algoma, at Sault Ste. Marie, Ont.

Keystone Transports, Montreal.—Key-bell, Keynor, Keyvive, Keywest, at Kingston, Ont.

Kingston Navigation Co., Kingston, Ont.—St. Lawrence, at Collins Bay,

Ont.; Brockville, at Davis drydock, Kingston, Ont.

Lake Erie Navigation Co., Walkerville, Ont.—Marquette and Bessemer No. 1, at Conneaut Harbor, Ohio.

Marquette & Bessemer Dock & Navigation Co., Walkerville, Ont.—Marquette and Bessemer No. 2, at Conneaut Harbor, Ohio.

Mathews Steamship Co., Toronto.—Bayton, Brockton, Laketon, Riverton, at Goderich, Ont.; Berryton, Mathewston, at Port McNicoll, Ont.; Clinton, at Cornwall, Ont.; Easton, at Port Stanley, Ont.; Huronton, at Port Colborne, Ont.; Malton, Yorkton, at Kingston, Ont.

Montreal & Cornwall Navigation Co., Cornwall, Ont.—Britannic, at Cornwall, Ont.

Nevada Shipping Co., Halifax, N.S.—Nevada, at Kingston, Ont.

Niagara, St. Catharines & Toronto Navigation Co., Toronto.—Dalhousie City, at Port Dalhousie, Ont.; Northumberland, at Toronto.

Northern Fish Co., Selkirk, Man.—Wolverine, at Selkirk, Man.

Northern Navigation Co., Sarnia, Ont.—Hamonic, at Collingwood, Ont.; Huronic, Louis Philippe, Noronic, Thousand Islander, at Sarnia, Ont.

Northern Trading Co., Edmonton, Alta.—Northland Echo, at Waterways, Alta.; Northland Trader, Northland Pioneer, at Bell Rock, Northwest Territories.

Pembroke Transportation Co., Pembroke, Ont.—Oiseau, at Pembroke, Ont.

Peninsula Tug & Towing Co., Wiarton, Ont.—Crawford, G. K. Jackson, at Wiarton, Ont.

Port Colborne & St. Lawrence Navigation Co., Toronto.—Benmaple, at Port Colborne, Ont.

Ships Registered in Canada During September, 1922.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons register.

STEAM.

No.	Name	Port of Registry	Where and when built	Length	Breadth	Depth	Gross Tons	Reg. Tons	Engines, n.h.p. etc.	Owner or Managing Owner

Prescott & Ogdensburg Ferry Co., Prescott, Ont.—Ferdinand, Miss Vandenberg, at Prescott, Ont.

J. Richardson & Sons, Kingston, Ont.—Susie Chipman, at Kingston, Ont.

Rockport Navigation Co., Kingston, Ont.—Waubic, at Kingston, Ont.

The Ross Navigation Co., Pas, Man.—Nipawin, at Pas, Man.

J. F. Sowards, Kingston, Ont.—Brantford, Jeska, Shanly, M. A. Lydon, Winnie Wing, W. A. Newland, at Kingston, Ont.

Sparrow Lake Steamer Line, Sparrow Lake, Ont.—Glympse, at Port Stanton, Ont.

Timagami Fur Co., Timagami, Ont.—Kiego, at Timagami, Ont.

Toronto, Hamilton & Buffalo Navigation Co., Hamilton, Ont.—Maitland No. 1, at Ashtabula, Ohio.

Union Transit Co., Toronto—Wahcondah, at Montreal.

Walkerville & Detroit Ferry Co., Walkerville, Ont.—Ariel, at Walkerville, Ont.

Webster Steamship Co., Montreal.—Colin W., Eric W., Richard W., at Montreal; Stuart W., at Louise Basin, Quebec.

Windsor & Pelee Island Steamship Co., Pelee Island, Ont.—Pelee, at Kingsville, Ont.

Wolfe Island Tp., Ont.—Wolfe Islander, at Kingston, Ont.

Steamship Maplehurst Wrecked.

Canada Steamship Lines' s.s. Maplehurst founded near the upper entrance to the Keeweenaw channel, Lake Superior, Dec. 1, when bound from Lorain, Ohio, to Fort William, with a cargo of coal, and 11 of the crew of 20 lost their lives. The ship encountered a storm on the previous day, and was headed down shore to enter the canal, but as the storm increased, it was decided to continue west, and about 3 or 4 miles off shore. At that time the velocity of the wind was about 60 miles an hour. Owing to the pounding the ship received, some of the superstructure began to break up, and flare signals were used, which brought the lifeboat crew from the canal coastguard station, and 9 of the crew were taken off safely, but one, in jumping from the ship, missed the lifeboat and was drowned. Capt. G. N. Menard, Kingston, stayed with the ship, but told the remainder of the crew to jump for the lifeboat if they wished to do so, but they evidently decided to remain with him. The Maplehurst was built at Chicago, Ill., in 1892, and was originally named Cadillac. She had a steel hull, of the well deck type, with double bottom for watertight ballast, 3 watertight and 2 non-watertight bulkheads, steel boiler house, etc. Her dimensions were: length b.p. 230 ft., breadth moulded 37 ft., depth moulded 19 ft.; tonnage, 1,263 gross, 1,068 net. The propelling machinery consisted of triple expansion engines, with cylinders 15, 25 and 42 in. diam. by 30 in. stroke, 500 i.h.p. at 80 r.p.m., supplied with steam by a Scotch boiler, 13 ft. diam. by 11½ ft. long, at 160 lb. It is stated that the ship and cargo, valued at \$200,000, are a total loss.

British Columbia Pilotage.—A Vancouver press report states that the amalgamation between the two pilotage associations in British Columbia, the B.C. Pilotage Association and Vancouver Pilots, Ltd., which was expected to have been consummated Oct. 1, 1922, has been declared off, each retaining its identity.

The Dominion Government's Illegal Suspension of the Coasting Laws.

The representations made to the Dominion Government to have the Canadian coasting laws suspended, to permit United States ships to enter the Canadian coasting trade on the Great Lakes, were dealt with fully in Canadian Railway and Marine World for Dec., 1922, on pg. 635, and the illegal method adopted by the Government to carry out the suggestions made was commented on and condemned. The acting Minister of Trade and Commerce's statement of Nov. 18 was given fully, in which he said in part: "The Government has been carefully investigating the situation in all its bearings, and after mature deliberation, has come to the conclusion that it can be materially assisted by allowing other than Canadian vessels the privilege of loading and storing cargoes and of discharging same at Bay ports during winter or early spring."

Following the acting Minister's statement, the Dominion Marine Association was officially advised, Nov. 24, 1922, that the Customs Department had instructed its men, late on the previous night, to issue clearances for U.S. ships loading grain at Port Arthur and Fort William for Georgian Bay ports, on condition that the cargoes would not be discharged until next spring, this permission being for storage cargoes only. On the same date, Canadian Railway and Marine World was advised by the Customs Department of the general purport of the instructions issued to the collectors at Port Arthur and Fort William, and, after writing several letters, we secured, on Dec. 6, the exact wording of the instructions, as follows: "Am now instructed that United States vessels may be permitted to load grain at your port on last trip and carry same to an eastern Canadian port, on condition that such grain shall be unloaded at such Canadian port after the close of navigation. You may therefore grant clearances to United States vessels to eastern Canadian ports, for such purpose, on last trip of vessel, and this condition should be noted on vessels' clearance, copy of clearance to be mailed to collector at eastern Canadian port."

As quoted above, the acting Minister of Trade and Commerce said that U.S. ships were to be given "the privilege of loading and storing cargoes and of discharging same at" (Georgian) "Bay ports during winter or early spring." As shown above, the instructions given the Customs collectors at Port Arthur and Fort William were to issue clearances for "Eastern Canadian ports," which does not limit them to Georgian Bay ports, as stated by the acting Minister of Trade and Commerce, who either did not know what he was talking about when he made the statement quoted above, or—we leave our readers to draw their own inference.

The provisions of the Canadian Coasting Law, as contained in Revised Statutes of Canada, chap. 113, which were given in our last issue, cannot be emphasized too much, and are therefore repeated as follows:

"955. No goods or passengers shall be carried by water, from one port of Canada to another, except in British ships.

"958. The Governor in council may, from time to time, declare that the foregoing provisions of this part shall not apply to the ships or vessels of any

foreign country in which British ships are admitted to the coasting trade of such country, and to carry goods and passengers from one port or place to another in such country."

The first section quoted limits distinctly Canadian coasting trade to British ships, and the next section provides for the admission of foreign ships to Canadian coasting trade only where reciprocal arrangements have been granted by the country so favored, and then only by order in council. The U.S. has not made any reciprocal arrangement, and therefore no such permission as has been given by the Government for the admission of U.S. ships to Canadian coasting trade could be given legally, not even by order in council, and much less by departmental instructions. It could only be done legally by Parliament, by an amendment to the Canada Shipping Act.

If the Government deliberately violates the provisions of one law, as it has done in connection with coasting trade, how can it expect the people to respect other laws? Law-makers should not be law-breakers.

Great Lakes Transportation Company Buys s.s. Matoa.

The Great Lakes Transportation Co., Midland, of which James Playfair is President and General Manager, has bought the s.s. Matoa in New York for operation on the Great Lakes. The ship has arrived at Montreal, where she will be cut in two to go through the canals, and it is probable that she will be afterwards lengthened by about 48 ft. Tenders for the work are now under consideration. A Montreal press report of Dec. 12 stated that the contract had been awarded to Montreal Dockyards, Ltd., but we were officially advised, Dec. 14, that this was incorrect. After passing through the canals in two sections, she will be joined again, either at Collingwood or Port Arthur, but no decision as to this has been arrived at, at the time of writing. The s.s. Matoa was built at Cleveland, Ohio, in 1890, and has a steel hull with double bottom for watertight ballast, steel boiler house, two watertight and two non-watertight bulkheads, hatches spaced 24 ft. centers, electric light, etc. She was wrecked at Port aux Barques, Lake Superior, in the great storm of Nov., 1913, on the Great Lakes, and the wreck was bought by the Reid Wrecking Co., Sarnia, who salvaged, overhauled and repaired her at Sarnia, and in 1915, sold her to Boston, Mass., parties for operation on the Atlantic coast. To enable her to pass through the canals, she was cut in two at Sarnia, and rejoined on the St. Lawrence River. Her dimensions are: length 290 ft., breadth 40 ft., depth 25 ft. She is equipped with triple expansion engines with cylinders 24, 38 and 61 in. diam. by 42 in. stroke, 1,200 i.h.p. at 80 r.p.m., supplied with steam by 2 Scotch boilers, each 14 ft. diam. by 12½ ft. long, at 160 lb.

The International Water Lines Passenger Association has ceased to function, and therefore has been removed from the list of Transportation Associations, Clubs, etc., published heretofore in each issue of Canadian Railway and Marine World.

Canadian Government Merchant Marine Operations, Etc.

Officers of Steamships.—The following chief engineers have been appointed in addition to those mentioned in previous issues: Canadian Coaster, E. G. Rankin; Canadian Squatter, W. Fotheringham; Canadian Volunteer, C. Christian; Canadian Voyageur, W. Geddie.

San Francisco Service.—It has been decided to increase the number of ships on the Vancouver-San Francisco run, from three to four. The s.s. Canadian Volunteer, which is being transferred from the Atlantic service, sailed from St. John, N.B., Dec. 15, to proceed via the Panama Canal, to Vancouver, where she is expected to arrive about Jan. 15.

St. John, N.B., Sailings:

Liverpool Service—Canadian Ranger, Jan. 10; Canadian Seigneur, Jan. 24.

London Service—Canadian Commander, Jan. 10; Canadian Victor, Jan. 24.

Cardiff and Swansea Service—Canadian Otter, Jan. 13; Canadian Squatter, Feb. 3.

Glasgow Service—Canadian Carrier, Jan. 11; Canadian Voyageur, Feb. 7.

Halifax, N.S., Sailings:

Australia and New Zealand Service—Canadian Constructor, Jan. 20.

Barbados, Trinidad and Demerara Service—Canadian Harvester, Jan. 13; Canadian Beaver, Jan. 27.

Hamilton, Nassau, Kingston and Belize Service—Canadian Fisher, Jan. 18; Canadian Forester, Feb. 8.

Newfoundland Service—Canadian Sapper, Jan. 6.

Vancouver, B.C., Sailings:

Australasian Service—Canadian Traveller, Jan. 7; Canadian Scottish, Jan. 20.

Oriental Service—Canadian Winner, Jan. 31; Canadian Prospector, Feb. 24.

The s.s. Canadian Gunner was considerably damaged and practically her whole cargo, chiefly flour, oats and hay, was destroyed by fire at St. John's, Nfld., Dec. 2. The fire was subdued on the night of Dec. 4, and the unloading of the damaged cargo was proceeded with at once. The estimated cargo damage is \$100,000. A survey of the ship was arranged for after the cargo had been cleared.

The s.s. Canadian Seigneur, which lost her rudder about 738 miles northeast of St. John's, Nfld., when bound from Garston, Eng., to Montreal, early in Nov., 1922, as mentioned in our last issue, was towed into St. John's, Nov. 24, by the C.G.M.M. s.s. Canadian Sapper. When word was received that she was in trouble, the Reid Newfoundland Co.'s s.s. Meigle was sent to her assistance, and stood by, but was found to be unfit for the service, on account of the heavy weather, so further help was asked for by wireless, and the Canadian Sapper was sent Nov. 16. During the tow, the cable between the Sapper and the Seigneur broke twice. The Canadian Seigneur used her own power, the steering of the ship being done by the Canadian Sapper, which was in charge of Capt. Blouin, the Canadian Seigneur being in charge of Capt. Potts, both of whom described the trip as a most trying one, chiefly on account of the contrary winds prevailing. After discharging her cargo of coal, the Canadian Seigneur was dry-docked by Newfoundland Dockyards, Ltd., for general overhaul and repairs. A new stern frame and rudder have been supplied by Canadian Vickers, Ltd., Montreal.

The s.s. Canadian Voyageur, which has been laid up in the eastern passage, Halifax, N.S., for some time, has been moved to the south end terminal, where she will undergo repairs.

Drydock Urged for Vancouver.

During the recent visit of the Dominion Minister of Public Works to Vancouver, a meeting of representatives of the business organizations in the city was arranged, and a memorial was presented embodying a voluminous resolution passed by the citizens of the contiguous territory on both sides of the Fraser River, urging the need of a drydock in Vancouver. The resolution protested against the Government's decision not to proceed with the agreement made by the previous Government for aiding the construction of a drydock at Vancouver, under the Drydock Subsidies Act, and requested a reconsideration of the matter. Statistics were quoted, and comparisons made between those for Vancouver, Victoria, Montreal and Seattle, which show that the number of ships entering Vancouver during 1921 was 11,779; Montreal, 5,541; Seattle, 21,556, while those for Victoria were not available. It was also pointed out that several large repair orders had been lost to Canada owing to the lack of drydock facilities at Vancouver, where ships requiring repair have discharged their cargoes. The Shipping Federation of Canada has endorsed the project of a drydock at Vancouver.

Additional Steamships for Great Lakes.

Recent press cables from Great Britain have referred to several orders for steamships for the Canadian Great Lakes trade, as having been given there, without mentioning the persons ordering. One dispatch of Dec. 7, stated that contracts had been signed with a number of British firms for building 10 ships of 2,500 tons d.w., for the Montreal-Buffalo route, for the Eastern Steamship Co. of Canada. It is stated that the price to be paid for them is £300,000, and that delivery is to be made by May. In this connection, we are advised that A. B. Mackay, formerly of Hamilton, Ont., now of London, Eng., has placed orders on the Clyde for the construction of 2 full Welland Canal size bulk freight steamships, with capacity for about 90,000 bush. of wheat, or 96,000 bush. of corn. These ships will be of the latest lake type, with all possible improvements, will be equipped with reciprocating engines, and will use oil as fuel.

The placing of contracts for the construction of an additional number of similar steamships, possibly 8, is being considered, and if ordered, they will also be built on the Clyde, but, at the time of writing, the orders for them have not been confirmed. The Eastern Steamship Co. has been incorporated, with head office at Port Colborne, Ont., for the operation of these ships.

It is said that Swan, Hunter & Wigham, Richardson, of Newcastle-upon-Tyne, are building 20 lake carriers on their own account, for sale, that 10 of these will be taken by Buffalo, N.Y., interests, and that the other 10 are being negotiated for by one of the largest Canadian shipowning companies on the Great Lakes.

The Anderson Co. of Canada, is reported to be about to place a contract for the construction of 8 full canal size, single deck, bulk freight steamships for delivery in Montreal, at the end of April. It is stated that these ships will be built to the British Corporation classification, and will have capacity for about 92,000 bush. on canal draft.

Keystone Transports, Ltd., Montreal, has ordered two full-sized Welland canal, single deck, steamships at Middlebrough, Eng. It is stated that they will be practically duplicates of the company's s.s. Keynor, with capacity for 85,000 bush. of grain each.

Atlantic Ocean Passenger Rates.

Representatives of steamship companies operating in the passenger service across the Atlantic Ocean, met in Brussels, Belgium, recently, to consider rates. The meeting was private, but it has been stated that the chief object of the discussion was the prevention of a possible rate war, and the adoption of a scale of reduction in fares. It is expected that some reductions will go into effect early in the year. The C.P.R. has denied the report that it has announced reductions in third class fares. The White-Star-Dominion Line is reported to have announced a reduction of 10% in the minimum rates on the s.s. Megantic, for the winter.

British Columbia Coast Freight Co., Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at Vancouver, to purchase the s.s. Alaskan, owned formerly by the Pacific Salvage Co., Victoria, B.C., and to carry on a general towing, navigation and transportation business. The Alaskan was built at Onetta, Oregon, in 1886, and is screw driven by engine of 13 h.p. Her dimensions are: length 96.5 ft., breadth 19 ft., depth 7.1 ft.; tonnage 150 gross, 102 net.

Atlantic and Pacific Oceans.

The Cairn Line's s.s. Cairndhu, which grounded at Cape Rouge, near Quebec, at the end of November, was refloated Nov. 28, and drydocked for examination and repairs.

The name of the s.s. Wisley, owned by Canada Steamship Lines, has been changed to Welland County. She was built at Sunderland, Eng., in 1904, and was originally named Wray Castle.

Canada Steamship Lines has announced that it will give four trans-Atlantic sailings each month during the winter out of St. John, N.B., to London and Hamburg, and to Havre and Rotterdam, in alternate weeks.

Furness, Withy & Co. are reported to be building a passenger and freight steamship for service between Liverpool, Eng., St. John's, Nfld., and Boston, Mass., to run in conjunction with the s.s. Digby. It is stated that she will have accommodation for 200 first class and 100 second class passengers, and that she will be named Humber.

The Italian s.s. Montegrappa, which sailed from Montreal, Nov. 5, after having had some repairs made by Canadian Vickers, Ltd., was reported, Dec. 4, to have been abandoned at sea in a sinking condition, about Nov. 14, while en route to Venice, having encountered a severe storm. The crew of 45 were rescued by the White Star Line's s.s. Pittsburgh and landed at Southampton, Eng.

Canadian Robert Dollar Co.'s s.s. Stuart Dollar was towed into Seattle, Wash., Nov. 29, having been severely damaged in a heavy storm during the latter days of the month. She lost her rudder, her deck load was washed away, her lifeboats completely smashed, and rails and stanchions shattered. When picked up by the steam tug Sea Monarch, Nov. 17, she was about 600 miles from the coast, having sailed from Vancouver, B.C., Oct. 18.

Maritime Provinces and Newfoundland.

The Lurcher shoal lightship, in the Bay of Fundy, which has been off her station temporarily, for repairs, has been replaced.

The Bras d'Or Steamship Co. is reported to have bought a steamboat to replace the s.s. Marion, which was burned at Whycocomagh at the end of October.

The Newfoundland Marine Department has placed a flashing white acetylene light, giving 15 flashes a minute, on Tonker Rock, about 300 yds. from Cann Island, Seldom-Come-By.

The Bedford Construction Co., which has the contract for building wharves, etc., at Courtenay Bay, St. John, N.B., is reported to have taken a contract of some extent in Jamaica.

The Norwegian s.s. Nordfjeld was reported ashore and a total loss at Flowers Cove Ledge, Nfld., towards the end of November, when bound from Sunderland, Eng., to Gaspé, Que., with coal.

The Newfoundland Government s.s. Prospero ran aground at Small Island, near Green Pond, on the east coast of Newfoundland, Dec. 16, and was refloated the next day, with nos. 1 and 2 holds damaged. The 120 passengers were landed safely.

F. M. Ross, Manager, St. John Drydock & Shipbuilding Co., who returned to St. John, N.B., from Ottawa, Dec. 7,

is reported to have stated that work on the drydock will be continued throughout the winter, with a reduced staff of about 100 men.

Halifax Towboat Co. has bought the steam tug Samson from Furness, Withy & Co. She was built at Shelburne, N.S., in 1907, and is screw driven, by engine of 33 h.p. Her dimensions are: length 83 ft., breadth 20.5 ft., depth 8.6 ft.; tonnage, 111 gross, 50 net.

The Dominion Public Works Department has completed the dredging of the public slip between the municipal wharf and W. A. Park's wharf, in the Miramichi River, Newcastle, N.B., for a length of 175 ft. and a width of 100 ft. The depth at the outer end is 10 ft., diminishing to 2.5 ft. at the inner end.

Province of Quebec.

The Marine Department received tenders Dec. 29, for the purchase of the old wooden Red Islet lightship, lying at Quebec, Que. Her dimensions are: length 102 ft., breadth 22 ft., depth 10.6 ft.; registered tonnage 152.

Ontario and the Great Lakes.

Canada Steamship Lines' s.s. Thunder Bay ran ashore in Lake Erie, near Port Colborne, Dec. 13, during heavy weather. The company announced Dec. 14 that the crew were all safe.

Insurance on Canadian ships on the Great Lakes was extended by London underwriters to midnight, Dec. 20, at 1% from Dec. 15, making the rate for December, 2½%. The U.S. underwriters' insurance expired midnight, Dec. 15.

The steam tug Wilrose, owned by Vanorder & Davis, Port Burwell, was burnt there Dec. 13. She was built at Collingwood, Ont., in 1915, and was screw driven by engine of 10 h.p. Her dimensions were: length 60 ft., breadth 15.8 ft., depth 6.3 ft.; tonnage 49 gross, 31 net.

C.P.R. freight shed 5, with 5 freight cars and their contents, were burnt at Fort William, Dec. 5. The total damage was estimated at \$1,000,000. The C.P.R. s.s. Assiniboia, and the Northern Navigation Co.'s s.s. Huronic, were alongside the dock, but both ships were floated to safety, although the first named was somewhat scorched.

The Mathews Steamship Co.'s s.s. Malton, which ran ashore on the Main Duck Islands, Lake Ontario, Nov. 17,

while running light from Montreal to Buffalo, was released by a salvage company, Nov. 30. She was taken to the Collingwood Shipbuilding Co.'s yard at Kingston, where she was docked for examination and repairs.

The U.S. Lake Survey reported the stages of the Great Lakes, in feet above mean sea level, for Nov., 1922, as follows: Superior, 602.35; Michigan and Huron, 579.54; St. Clair, 574.21; Erie, 571.41; Ontario, 245.15. Compared with the average November mean stages for the past 10 years, Superior was 0.25 ft. below; Michigan and Huron, 0.81 ft. below; Erie, 0.57 ft. below; Ontario, 0.54 ft. below.

The grain elevator capacity at Port Arthur will be increased during this year by about 5,000,000 bush. Elevators will be built by James Stewart Grain Co., 1,500,000 bush., \$850,000; N. Bawlf Grain Co., 1,500,000 bush., \$850,000; Mutual Elevator Co., 1,500,000 bush., \$800,000; Parrish & Heimbecker, 500,000 bush., addition, \$200,000; Saskatchewan Co-operative Elevator Co., cleaner extension, \$75,000. These figures are according to press reports.

The Lake Superior Paper Co.'s steam tug Reliance, during a storm Dec. 13, was wrecked on the rock of Lizard Island, Lake Superior, and 27 of the 36 people on board were reported missing. In addition to the crew of 14, there were on board a number of lumbermen taken from the lumber camp on the boat's last trip. It was announced, Dec. 18, that 23 of the 27 left on board had been rescued by the tug G. R. Gray, the remaining 4 being given up as lost.

Manitoba, Saskatchewan, Alberta and the Northwest Territories.

The Northland Trading Co.'s s.s. Northland Echo will be rebuilt at Waterways, Alta., during the winter, in readiness for the northern service next summer.

The Ross Navigation Co.'s s.s. Nipawin will undergo extensive repairs at Pas, Man., during the winter, including a new boiler and engine foundations, new main deck and paddle wheels.

British Columbia and Pacific Coast.

The Union Steamship Co. of British Columbia is having a steamship built at Glasgow, Scotland, for its coasting

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during November, 1922.

service, and it is expected that she will be ready for delivery during April, and will reach Vancouver some time during May.

West Vancouver Improvement Association passed a resolution, Dec. 6, that, provided satisfactory arrangements could be made with the provincial government for taking over part of the ferry indebtedness, and a guarantee as to satisfactory service and fares, the municipal ferry system be abandoned.

The Pacific Salvage Co. Victoria has completed the salvage of the Mexican s.s. Guerrero, which was stranded on the beach at Mazatlan, Mexico, and the ship has been towed to San Pedro, Cal. The company's s.s. Algerine left Victoria, Oct. 20, arrived at Mazatlan Oct. 30, refloated the ship and towed her to San Pedro, arriving there Dec. 1. It was stated that the Guerrero was to be taken to San Francisco for overhaul and repairs. The s.s. Algerine returned to Victoria Dec. 9.

The C.P.R. is going to establish a ferry service for motor car traffic between the mainland at Bellingham, Wash., and Vancouver Island, at Sidney. J. W. Troup, Manager, British Columbia Coast Service, C.P.R., is reported to have stated, Dec. 7, that the contract for building the boat had been given to Yarrows, Ltd., Victoria, and that delivery was required in May. The distance between the two terminals is about 40 miles, and it is intended to make it a 3-hour trip. Some details of the boat are given on another page under Shipbuilding and Ship Repairing Throughout Canada.

Mainly About Marine People.

Capt. William Davidson, formerly in command of the C.P.R. s.s. Scotian, which has been under charter to the British Government, for service between England and India, died at Southampton, Eng., recently. He was born in 1870 and entered C.P.R. steamship service Feb. 1, 1898. He was for some time on the trans-Pacific service, and served on the steamships Montezuma, Montrose (old), Mount Temple, Monmouth, Missanabie, Montfort and Montcalm (old). He served on various steamships during the war, and subsequently was on the steamships Empress of Russia, Lake Manitoba, St. George, Corsican and Scotian.

J. B. Gray, who died at Yarmouth, N.S., Dec. 11, aged 58, was at one time in charge of the Yarmouth Steamship Co.'s office at Yarmouth, operating steamships to St. John and Halifax.

Capt. J. D. Mackenzie, North Sydney, N.S., has been appointed Superintendent of Pilots for Sydney and North Sydney. He has acted as master of various ships since 1893, and has the record of never having lost or stranded a ship. For several years he has been in command of different ships for Canadian Government Merchant Marine.

J. E. McLurg, General Manager, Halifax Shipyards, represents the navigation interests on the Nova Scotia Accident Prevention Association's executive committee.

Capt. Isaac Watt, who had been master of one of the C.P.R. ferry steamships across the Detroit River until about a year ago, died at Windsor, Ont., Dec. 10, aged 66. During the war he went overseas, and was in charge of the car ferry steamship service, operated between Southampton, England, and Havre, France, by the British Government.

Canadian Pacific Railway Ocean Steamship Services.

The s.s. Empress of India is being overhauled and remodelled, and converted into a steamship of the mono class, and is to be renamed Montlaurier. In line with the company's policy of having all its mono class ships of the M series, the following changes of names will also be made: Corsican, to be changed to Marvale; Scotian, to Marglen; Tunisian, to Marburn; Victorian, to Marloch.

During the 1922 St. Lawrence navigation season, there were 59 arrivals and departures of C.P.R. ocean passenger steamships, which landed 16,722 cabin passengers at Montreal, and embarked 12,668 cabin, and 8,565 third class passengers there. At Quebec, there were 23 C.P.R. passenger steamship arrivals and departures, carrying 8,626 passengers eastbound, and 36,145 westbound. The last mentioned figures include all third class arrivals in Canada by the C.P.R. ships, Quebec being the landing port for that class.

It is announced that calls will be made at Belfast, Ireland, during 1923, both eastbound and westbound, by the company's ships sailing between Montreal and Glasgow, instead of only westbound, as during 1922. It is also stated that more extensive use will be made of Southampton, Eng., than formerly. The first sailing from Montreal will be by the s.s. Metagama, May 3, and the steamships Marburn and Marloch. The steamships Marglen and Marvale will be operated from Montreal to Cherbourg, Southampton and London, the call at London being only for freight. The s.s. Empress of Britain will run from Quebec to Cherbourg, Southampton and Hamburg, in conjunction with the steamships Empress of Scotland and Empress of France.

The s.s. Empress of Australia sailed from Vancouver, B.C., recently for the Orient, after having completed repairs to her turbine shaft and the installation of a new type of oil burners. It is stated that on a sailing test before leaving, she averaged 18 knots, whereas her average speed was 16.

An Associated Press dispatch of Dec. 3, from London, Eng., stated that the C.P.R. had announced revised rates on its trans-Atlantic steamships, mainly reductions in third class fares. A London cablegram, on Dec. 5, stated that C.P.R. officials there denied that reductions had been made in third class fares as stated in the previous dispatch.

The schedule for the 1923 St. Lawrence navigation season comprises 72 sailings from Montreal, and 27 from Quebec. It is expected that the season will open with the sailing of the s.s. Metagama from Montreal, May 3, for Belfast and Glasgow. The steamships Marburn and Marloch will also run on this route. The steamships Marglen and Marvale will run from Montreal to Cherbourg, Southampton and London eastbound, and London, Southampton and Havre westbound. The s.s. Montcalm will sail from Montreal, May 4, for Liverpool, and with the Montclare, Montrose and Montlaurier will maintain a weekly service to Liverpool, the last named making Quebec her Canadian port.

The Great Lakes and St. Lawrence River Rate Committee will meet at the Chateau Frontenac, Jan. 25.

Grain Shipped Through Vancouver.

During the crop year ended Aug. 31, 1922, the total amount of grain shipped through the Dominion Government elevator at Vancouver, was 6,401,678 bush., of which 3,506,419 were shipped to United Kingdom ports, 661,759 to European ports, and 2,233,500 to Japan. In addition to this amount, 978,371 bush. were shipped through the Vancouver Milling & Grain Co.'s elevator, making a total for the crop year of 7,380,049 bush.

During Sept., 1922, 210,012 bush. were received at Vancouver, and 33,083 bush. were shipped to Japan; during October, 1,749,454 bush. were received at Vancouver, and 985,119 bush. were shipped, of which 281,333 were sent to United Kingdom ports, 687,219 to European ports, and 16,567 to Japan.

In November, 1,898,451 bush. of wheat, 351 bush. of oats, and 56,302 bush. of rye, a total of 1,955,104 bush., and 103,520 lb. of mixed grains, were received at the Dominion Government elevator, and 2,189,252 bush. of wheat were shipped by ocean. Of this total, 1,921,252 bush. went to the United Kingdom, and 268,000 to other European ports.

Pilotage on the St. Lawrence River.

The Marine Department has called attention to the fact that pilotage on the St. Lawrence River is optional, though the payment of pilotage dues is compulsory between Father Point and Quebec, Father Point and the head of the Saguenay River, and Quebec and Montreal, and all intermediate points, with the following exceptions: Ships employed wholly in Government service or while so employed by either the British or Canadian Government; ships propelled wholly or in part by steam: (1) in trading from port to port, in the same province, or employed in any one port or harbor; (2) in trading between any one or more of the Provinces of Quebec, New Brunswick, Nova Scotia, and Prince Edward Island, and any other or others of them; (3) in voyages between any port or ports in the said province, or any of them and New York, or any port in the U.S., on the Atlantic, north of New York; (4) in voyages between any port in any of the said provinces and any port in Newfoundland; (5) registered in Canada, and engaged in shipping, and (6) engaged in salvage or towing operations; ships registered in Canada of not more than 250 tons register.

Montreal and Quebec pilotage districts are under the Marine Department, which controls the pilotage dues. Ships requiring pilots inbound, may secure them at Father Point, from the pilotage tender there, and pilots change at Quebec to take ships to Montreal. There are pilotage offices at Father Point, Quebec and Montreal, but above Montreal there are no licensed pilots.

In the enquiry into the Calgarolite-Frontenac collision, held at Montreal, Nov. 22, reported on another page of this issue, the Dominion Wreck Commissioner called attention to the St. Lawrence Pilot, Canadian Edition, 1920, stating that pilotage is compulsory, said that this was likely to misguide navigators, and suggested that a correction be made. As quoted above, pilotage is optional, but the payment of pilotage dues is compulsory, except with certain ships mentioned.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Collision of s.s. Cymric Queen and Barge S.O.Co. no. 41.

Held at Quebec, Que., Oct. 25, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. B. Henry, as nautical assessors, into the collision of the Anglo Belgique Shipping Co's Cymric Queen, with the Imperial Oil Ltd. barge S.O.Co. no. 41, lashed to the steam tug Gerald Morgan, near Isle aux Raisins, Lake St. Peter, Sept. 30. The s.s. Cymric Queen, and the barge S.O.C. no. 41, were represented by L. Beauregard, and the tug Gerald Morgan by C. A. Pentland, K.C., and A.C.M. Thompson. Evidence was given by Capt. G. Higginbotham, D. Cheeseman, second officer, N. Peckett, wheelsman, G. Veldhoen, lookout man, W. Cousins, chief engineer and G. J. Lawrence, third engineer of the Cymric Queen. Owing to the absence of witnesses from the tug, who were delayed by weather, the court adjourned to hear additional evidence. The hearing was resumed at Montreal, Nov. 2, when evidence was given by A. Bonin, master, M. Mongeau, wheelsman, L. Lussier, first engineer of the tug Gerald Morgan, C. H. Harmonson, master of the barge S.O.Co. no. 41, A. Gosselin, pilot of the s.s. Cymric Queen and A. Desrochers and W. Noble. The court found that, under the circumstances the Cymric Queen complied with all the regulations, and exercised proper judgment, and therefore exonerated the master, officers and pilot. Owing to an unforeseen happening to the machinery of the tug Gerald Morgan, over which the master had no control, he was also exonerated, the court accepting his statement that the anchor was let go to check the advance of his ship. With reference to the barge S.O.Co. no. 41, the master C. H. Harmonson testified that it would have been better if there had been a man at the wheel steering. He was the only seaman on board, and he was there to look after the owners' interests. There had been friction between his employer and himself, and he was not in the company's service at the time of the hearing. He went to bed leaving someone on deck, and was awakened by the sound of a whistle. He did not think of letting go the anchor. The court expressed the opinion that, though the master reluctantly took command of the barge, having accepted the responsibility, he should have been on deck instead of being in bed. The court's understanding of the situation was, that the barge not being required to carry a certificated master, he was acting purely as a representative, or foreman. Owing to dissension between himself and his employer, the court felt that the employer would have been better advised to have secured someone without a grouch, and in view of this, the court considered the barge was insufficiently manned, and the property left unguarded, when the master retired to his room. Had someone interested and qualified been in charge, the letting go of the starboard anchor was imperative as a seamanlike and timely operation. In the absence of data respecting the conditions of the towing contract, if any, between the tug and the barge, the court considered that the crew of the barge did not make any effort to prevent the collision. If the only seaman

on board had been on deck, and let go the anchor, the only method of checking the advance under the circumstances, the collision might have been avoided, and certainly minimized. As the barge is not required to carry a certificated master, the master's certificate was not dealt with, and the court found that the tug, being the master of the tow, must share responsibility with the barge for the casualty.

Grounding of s.s. Modica.

Held at Montreal, Oct. 27, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and J. B. Henry, as nautical assessors, into the grounding of the Norwegian s.s. Modica, off the Canada Cement Co's wharf in Montreal harbor, Oct. 17, when she was detained about 70 hours, and released after lightering a portion of her cargo, but sustained no hull damage. The master, Capt. L. M. Jensen, and pilot Lacroix were the only witnesses, the former not being represented by counsel, L. Guerin, acting for the latter. The s.s. Modica is a steel ship, 370 ft. long, 50 ft. broad, drawing 24 ft. aft and 22½ ft. forward, driven by a single screw, with speed of 10 knots, and a crew of 34, including 3 deck officers and 3 engineers. She is owned by I. A. Christensen, of Christiania, and was bound from Blyth, Eng., to Montreal, with coal. Counsel for the pilot having no argument to offer, the court adjourned. On Nov. 2, the court gave judgment, finding that the grounding of the ship at a place where signals, indicated on the chart, give an assurance of safety, was not caused through negligence, or lack of judgment, and therefore exonerated the master, officers and pilot from all blame. The court suggested that an inspection of the place be made, in order that pilots and navigators generally, may be assured that anchoring in that vicinity will not be fraught with danger.

Lock Gate Accident on Lachine Canal.

Held at Montreal, Nov. 7 and 8, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Lefebvre, as nautical assessor, and B. Langan, Superintending Engineer, Hall Engineering Works, Montreal, as engineer assessor, into the cause of Interlake Navigation Co's s.s. Saskatoon striking and destroying gates of lock no. 1, Lachine Canal, resulting in the sudden emptying of the basin between locks 1 and 2, causing various damages to the s.s. Winnipeg, grain elevator, and presumably to the s.s. Gracia of the Donaldson Line, and to other property, Oct. 21. The various interests concerned were represented as follows: s.s. Winnipeg, by A. R. Holden, K.C.; underwriter of s.s. Saskatoon, by E. M. McDougall, K.C.; owners of s.s. Saskatoon, by G. G. Hyde, K.C.; Donaldson Line, owner of s.s. Gracia, by A. H. Elder; and Montreal Warehousing Co., owner of the elevator and barge Ethel, by W. B. Scott. The court, with counsel, visited lock 1 and the s.s. Saskatoon, and watched the arrival of the s.s. Inland, noting the method used with snubs, and lines, and the place where checking was performed, and taking measurements of distances between posts. On the Saskatoon, the snubbing wire and compressor were examined, and various measurements were taken, and the engine room inspected.

Evidence was given by the following:

Capt. W. E. Cornett, master; J. B. McLaren, at the time of the accident, chief engineer; D. Leslie, chief engineer; J. Daigneault, first mate; J. Lazenby, wheelsman; J. Ruttan, seaman, of the s.s. Saskatoon; D. H. Mapes, Jr., Manager; W. Norcross, Mechanical Engineer, Interlake Navigation Co.; R. Milloy, lockmaster, and L. S. Parizeau, acting Superintendent, Quebec canals.

Capt. W. E. Cornett stated that the Saskatoon was well equipped, having passed Lloyd's inspection in England. On arriving at lock 1, he followed the usual custom of snubbing, ringing full speed astern when his ship was at the place and position required, but he noticed that she gained impetus, and struck the gates, the check wire, through the increased advance of the ship, slipping through the compressor for its entire length. As soon as the ship had been carried through the gates, he ordered the starboard anchor let go, which was done promptly, thus avoiding other serious damage to shipping. The evidence varied somewhat with respect to the speed at which the Saskatoon entered lock 1, being estimated at 1½ miles by the crew and "too fast" by the lock master. Yet it was agreed, almost unanimously, that had the order from the bridge been obeyed in the engine room, the ship's speed could have been checked and her way stopped at the required position.

It appeared to the court that the master, whilst perhaps entering the lock at a greater speed than safety warranted, took proper action, and gave proper orders at the time, and the custom of snubbing was followed. His subsequent action in ordering the anchor let go, and the prompt doing so by the mate are commendable. The equipment and the condition of the ship were vouched for by Lloyd's certificate of inspection. An examination of the engine room indicated that dirt had accumulated, but the court expressed the opinion that it was not due to neglect, but to lack of time and facilities to attend to that detail after her voyage across the ocean. The attachment for operating the engines, either in the astern or ahead movement, was accepted by the inspectors as suitable and appropriate, and this was proved by the fact that the ship had crossed the ocean and made one round trip to the lakes, negotiating the canals and locks without mishap. What really happened has not been clearly defined. Notwithstanding the information given by the present master, Capt. L. Patenaude, to the Collector of Customs, which was based on hearsay, the preponderance of evidence indicated that the execution of a contrary order to that received was due to the quick handling of the lever. The error could have been remedied immediately had the engineer's attention been on the motion of his engine in response to the lever's action, which went ahead, instead of astern. The error, was noticed, but not before the ship had gained additional impetus, which could not be resisted by snub, or check wire and compressor. The engineer has 30 years of clean record, and the fact that he did not observe at once, the result of his work of the lever, could not be attributed to negligence, lack of knowledge or carelessness, but to momentary inattention. The dirt perceived did not contribute to rendering the reversing gear ineffective. The court's interpretation of

rule 27 of the regulations governing the navigation of Canadian canals, is that the 4 lines mentioned are not meant to be placed at the time the ship is in movement to reach a certain position, but that when the ship is in the required position she must be held secure there by the 4 lines. In this case, 3 additional lines were in readiness and were to be used. There is nothing in the rules which compels a ship to have 2 check or snub lines. The plea by counsel for the s.s. Saskatoon, that the accident was inevitable, was rejected, as the evidence showed that, had the engineer looked at his reversing gear, he would have seen at a glance, and rectified the mistake before the screw had gathered power. The moment of inattention excluded the inevitability of the accident. The fact that the owner of the s.s. Saskatoon did not entertain such a view was shown by the company suspending the chief engineer immediately following the accident. The court therefore expressed the opinion that, under the circumstances, and through no fault of its employees, the s.s. Saskatoon must be held to be to blame for the damages caused, and found that the accident and subsequent damages were due to the faulty movement of the Saskatoon's engines. The court added the following rider: "In order to meet a possible recurrence of the mishap, or false movement in the engine room, it is recommended that 2 snub wires be placed on posts simultaneously with the other lines which regulation 27 calls for, and that the forward snub line be placed, not at the post nearest to the sign 'Stop,' but to the one preceding it. This should apply to every ship, whether up or down bound, and the lock master should insist on the above being done." The master of the Saskatoon was exonerated from blame, and the chief engineer, J. B. McLaren, who, in the court's opinion, made a mistake in operating the levers, was, as it was not done maliciously, wilfully, or from incompetence, but through a momentary lack of reflection, severely reprimanded and cautioned to be more careful in future.

Grounding of s.s. Canadian Farmer.

Held at Vancouver, B.C., Nov. 17, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, into the accident to Canadian Government Merchant Marine s.s. Canadian Farmer, when she struck a submerged object in Stewarts Passage, B.C., June 18. Evidence was given by Capt. W. J. Boyd, then master of the ship, to the effect that Capt. M. Edgecombe, then chief officer, and J. Abrams, chief engineer, had falsified entries in the log. During the course of the latter's evidence, the Wreck Commissioner stated that his impression was that witness was trying to hide something when there was nothing to hide, and that his evidence was palpably cooked. It was found that the accident was one that might happen to anyone, and Capt. Boyd was slightly reprimanded.

Calgarolite-Frontenac Collision.

Held at Montreal, Nov. 22, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Lefebvre and H. W. Robson, as nautical assessors, into the collision between Imperial Oil Ltd. s.s. Calgarolite and the s.s. Frontenac, operated in ferry service between Quebec and the Isle of Orleans, Nov. 15, when both ships, and the wharf and pontoon, in Quebec harbor, were considerably damaged. Imperial Oil

Ltd. was represented by A. W. Atwater, K.C., and L. Beauregard; the owner of the s.s. Frontenac by A. C. M. Thomson, and Pilot Thivierge, of the s.s. Calgarolite, by F. P. Brais. The court found that every precaution was taken by the s.s. Calgarolite's crew, and therefore exonerated the master and first officer from any blame. With regard to Pilot L. F. Thivierge, it was shown that, owing to the flood tide existing, he brought his ship in too rapidly, and when it came to the transference of pilots, the stopping of the engines left the ship at the mercy of the flood tide, which had the tendency of approaching the ship unknown to him. For this lack of inattention to the ship's speed, in view of the tide's condition, the court found that he did not exercise proper vigilance, and fined him \$100, to be paid by Dec. 15, 1922. At the conclusion of this finding, the court stated that the St. Lawrence Pilot, Canadian Edition, 1920, states that pilotage is compulsory, which is likely to misguide navigators, and it suggested that a correction be made by the authorities.

Welland Ship Canal Construction.

During the summer, construction was carried on vigorously on sections 1 to 5, inclusive. The contractors for sections 1 and 2 are J. P. Porter, Standifer Bros. & Porter; for sections 3 and 4, P. Lyall & Sons Construction Co.; and for section 5, Canadian Dredging Co. These sections extend from Port Weller, on Lake Ontario, to Port Robinson. No construction has been done on the portion of the canal between Port Robinson and Lake Erie.

During 1922, on sections 1 and 2, nine of the large concrete cribs required for the docking at Port Weller, were built and placed in position. The harbor is being dredged and the embankments on each side are being built with excavated material. Concrete is being placed at locks 1 and 2, and their weirs, and these structures are nearing completion. Excavation is being carried on in the canal prism, south of the Queenston road, and to some extent at other points on the sections. About 820 men were employed during the year, but this force has been somewhat reduced, owing to the curtailment of concrete work during the winter.

On sections 3 and 4, excavation of the canal prism, north of lock 4, and throughout the greater part of sec. 4, was carried on. Concrete work is well advanced on twin locks 6, and a small amount has been done at lock 7. The relocation of the G.T.R. Welland Division on sec. 4, has been graded and ballasted, and track has been laid, and operation over the diverted line will probably commence in April, when it is expected that a couple of necessary structures will be completed. About 840 men have been employed on these sections during the year. On section 5, dredging was carried on and the substructure of bridge 12 is nearing completion. The work on this section is almost finished. About 170 men were employed during the year.

For this work, the Dominion Parliament appropriated \$8,000,000 for the financial year ending March 31, and about \$5,000,000 had been spent to Nov. 30, 1922.

The general contractor for sections 3 and 4, P. Lyall & Sons Construction Co., Montreal, has let subcontracts as follows: Earth and rock excavation, con-

crete work in lock and culvert, washing concrete walls with cement, stone protection to banks, bearing piles and foundations, side steel sheet piling, placing reinforcing steel, drilling 3 in. vertical and horizontal holes in rock, placing 12 in. and 18 in. vitrified or concrete pipe, and channeling rock, to Sir William Arrol & Co., St. Catharines, Ont. Class 1 and 2 excavation, transporting and placing excavated material in harbor embankments at Port Weller, to A. E. Rigby, St. Catharines, Ont. Class 1 and 2 excavation, rehandling excavated material into watertight embankments, transporting and placing excavated material at outer ends of Port Weller embankments, to G. L. Campbell, Allanburg, Ont. Excavation in connection with relocation of G.T.R., to J. E. Constable, Thorold, Ont. Concrete forms, to Blaw-Knox Co., Pittsburgh, Pa.

Esquimalt Drydock.—The Dominion Public Works Department will receive tenders to Jan. 31, for the supplying and installation of machinery for the equipment of the new Esquimalt drydock. Power will be supplied on the bus bars of the Department's switchboard in the pump house, and the work for which tenders are being received will start at and include those points, and includes fireproof power house, with mechanical engineer's office, store room, oil room, lavatories, etc.; tunnels and conduits; complete electric lighting system; machine shop equipment for small running repairs to plant; 7 electric capstans; 3 main pumps of 60,000 imp. gall. capacity, 2 pumps of 9,000 imp. gall. capacity, sump pump, fire pump, sluice and non-return valves, etc. The work is to be completed within 18 months of the signing of contract.

The icebreaking steamship J. D. Hazen, which was sold during the war to the Imperial Russian Government, and renamed Mikula, and which was rebought by the Canadian Government last year, for service in the St. Lawrence ship channel, has been completely overhauled and is now ready for service. An unconfirmed press report states that she will probably be renamed Courcellette.

H.M.S. Raleigh, which was wrecked at Amour Point, Belle Isle Strait, Aug. 8, and which has been abandoned by the Admiralty, is reported as being looted by fishermen, and others in the neighborhood, some of them being camped in the vicinity to take anything removable as opportunity offers. During low tide, people can walk aboard the wreck without difficulty.

The Oceanic Transportation Co., Ltd. has been incorporated under the Dominion Companies Act, with \$30,000 authorized capital stock and office at Quebec, Que., to own and operate ships and carry on business as common carrier on the high seas and within inland navigation. The incorporators are: J. A. Gravel, K.C., A. C. M. Thomson, J. S. M. Smith, E. I. Gall, Quebec, Que., and J. A. Rochette, St. Romuald d'Etchemin, Que.

Echo Towing & Freighting Co., Ltd. has been incorporated under the British Columbia Companies Act, with \$25,000 authorized capital, and office at New Westminster, to take over the towing and freighting business carried on by A. C. Little, on Burrard Inlet and adjoining waters, together with all ships and other assets, and to carry on business as shipowner, for towing ships and carrying passengers, mails and freight.

Dominion Express Co's Motors and Trailers in Toronto.

Canadian Railway and Marine World for January, 1922, contained an illustrated description of motor trucks being used in Montreal by the Dominion Express Co., which have proved so successful that similar ones have been introduced in Toronto. Motor tractors and LaPeer 2-wheel semi-trailers are used to handle the large volume of express matter passing to and from the railway stations and the company's substations.

which has a very short wheel base, is equipped with a fifth wheel, or turning plate, mounted in place of the ordinary truck body. The fifth wheel contains half of an automatic coupling device, which fits into the other half of the device which is attached to the semi-trailer. The coupling and uncoupling is done quickly, the driver never leaving his seat. In coupling, the tractor is backed into position in front of the trailer, which rides up onto the rear of the tractor, the brakes being automatically released, and the coupling automatically locked. The complete unit is

Dominion Express Co's Tractor and Trailer.

There are 2 tractors and 7 semi-trailers. This provides sufficient trailers to be at the railway stations and substations, both receiving and discharging loads while others are being moved by the tractors from one point to another. When a tractor arrives at a station with a trailer, it is uncoupled and immediately coupled up with another trailer and it pulls away. In the meantime the first trailer, or other trailers, are being unloaded, or loaded, awaiting the return of the tractor.

The semi-trailer, which has a capacity of 3½ tons, is equipped with a large completely enclosed body. Under the front of the trailer is a small pair of wheels. When the tractor is uncoupled from the trailer, these wheels automatically lower to the ground, and thus support the front end of the trailer, permitting it to stand alone. The tractor,

then ready to move away. When uncoupling, the driver first raises a conveniently placed lever, which unlocks the coupling, and then drives the tractor forward. This operation drops the front wheels to the ground and automatically sets the brake of the trailer, which is left standing for loading, or unloading, as the case may be.

The company's officials report that this expeditious and economical method of handling a huge amount of transfer express results in a decidedly improved service to the public.

Nova Scotia has won a boat race in the U.S.A. and an apple prize in England. If this had been in the old days, the whole province would have celebrated by everybody going off on a free ride on the Intercolonial Ry.—Manitoba Free Press.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertisers contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian Cleveland Fare Box Co., Preston, Ont., has been appointed Canadian agent for Arthur Power-Saving Recorder Co., New Haven, Conn., also manufacturers' distributors for Canada for C. L. Downey Co., coin counting and coin sorting machine manufacturers, Cincinnati, Ohio, and for the Nelson rapid ready change carriers.

Standard Underground Cable Co. of Canada, Hamilton, Ont., has issued a booklet, "Standard Rubber Insulated Wire," describing and illustrating its N.E.C. Standard.

Guy Tombs, Ltd., transportation agent, Montreal, has appointed Nagle & Wigmore as its representative at St. John, N.B., and will represent that firm in Montreal.

Canadian Ingersoll-Rand Co., Sherbrooke, Que., has issued the following illustrated bulletins: K311, air or gas compressors, power driven, single stage, straight line; K602A, Circo direct vertical lift air hoists; 7057C, Cameron centrifugal, single stage, double suction fire pumps.

Transportation Conventions in 1923.

For many years the Q & C Rolled Steel Step Joint has been rendering a satisfactory service to the railroads throughout the Dominion. Our success is attributed to the fact that we have not once swerved from our purpose—to build the strongest, most economical step joint possible, putting into its structure, without thought of cost, all that honest metal could give and devoted workmanship could avail.

With this idea in mind we have succeeded building a joint that gives a perfect fit, is low in maintenance upkeep, and is a factor of safety on the road which it serves.

Now Ready!

Standard Specifications for Carbon-Vanadium Steel

THE rapidly extending use of Normalized Carbon-Vanadium Steel for locomotive forgings, and the adoption of this steel as standard by several leading railroads have brought repeated requests for standard specifications covering this material.

To meet these requests we have prepared the following specifications;

Normalized Carbon-Vanadium Steel Axles, Shafts
and other Forgings for Locomotives and Cars.

Carbon-Vanadium Steel Billets for Locomotive
Forgings.

These specifications have been approved and adopted by a number of leading railroads (one of which has had Carbon-Vanadium Forgings in service since 1918), by the locomotive builders, and by the leading steel producers and forging companies.

Send for a copy—or several copies—of these specifications. While primarily intended for the guidance of both purchasers and producers of Normalized Carbon Vanadium Steel, they will give you a better understanding of the simple but tough alloy steel which meets every railroad requirement.

Carbon-Vanadium Forging Steel: simple, unquenched, strong and tough. Just the steel for a railroad shop.

Your Ideal of Service Is Our Everyday Practice

THE service which you would consider ideal is prompt shipments to satisfy steady consumption and ample stock to take care of larger quantities demanded by emergencies.

This is the service Dominion Oxygen Company Limited offers to you for your oxygen and dissolved acetylene supply—plus:

A contract based on generous terms and friendly relations.
 The latest type of cylinders, safe, light in weight and strong.
 A liberal policy of cylinder loans.
 A desire to meet your requirements.
 Oxygen and dissolved acetylene of a higher standard of purity than is usual for commercial use.

We will appreciate an opportunity of placing our proposition before you and quoting prices, whether for small or large quantities, before you make arrangements for the year's supply.

Use the
right brushes

YEARS of experience in making brushes have qualified us to supply the right brush for every type of railway motor. Correct brushes reduce commutator wear and losses due to "tie up". Take advantage of our experience to help you select the correct brushes.

True Varnish Economy

In the long run, length of service
is the real measure of Varnish values.

Berry Brothers' Railway and Marine varnishes and enamels give long service because they are especially adapted to withstand the peculiar wear and exposure involved. They have been standard since 1858.

St. Henry, MONTREAL

Toronto Office:
Bank of Hamilton Building

YOU can effect a SAVING in Lubrication costs by using TULC for it will give results not to be obtained by the use of any other Lubricant.

**T
U
L
C**

Will not splash over commutators.
Will not cause short circuit or burnt armatures.
Will not leak or rot fields.
Will so save in brass and babbitt to pay for itself.
Will only feed sufficient to lubricate properly.
Will save dripping losses.
Will make axles and journals last longer.
Will cut down a lot of pull-ins.
Will eliminate hot boxes and cut axles.
Will be sent for trial on request.

Canadian National Railways

Co-ordination of Canadian National Railways and the Grand Trunk System, and What It Means to Industry

The best engineering brains of Canada have been and are still, engaged in the study of the latest and best modern railway equipment, in order to formulate new standards for adoption by the co-ordinated Canadian National and Grand Trunk Railways.

Hitherto, each railway system had its own standards and its own traditions. But old standards and old traditions are being tested in the crucible of open-minded modern efficiency engineering; and only the "fit" will survive.

This revolution in Canadian railway practice offers a fertile field—an "open field and no favors"—to inventors, to designers and manufacturers of worthy devices and appliances for railway use.

Perhaps in all the history of rail-roading no parallel opportunity has been offered the railway supply industries. And now is the time to secure and hold the attention of a group of men whose buying power runs into exceedingly large figures.

Have you any device that you believe will add to the safety, or efficiency or economy of Canadian railways or that will contribute to the comfort of its patrons, on trains or at terminals?

Tell your story in full pages, in CANADIAN RAILWAY AND MARINE WORLD and be sure that it will be read by eyes that **command**, by men of vision who are devoting all their waking hours to a study of the betterment of Canadian rail-roading.

An accurate maintenance record tells the unvarnished truth about a machine. It can always be consulted with confidence

Are being used with great success on small industrial locomotives

*The
G-E Turbine Generator
for headlight*

In one southern clay pit, sets are mounted on steam shovel roofs, furnishing current for G-E floodlights which light the workings.

Over Three Years in Operation Upkeep Only 37 Cents a Month

On one American railroad more than 250 G-E Headlight Turbine Generator Sets have been in operation for over three years. A carefully kept maintenance record shows but 37 cents a month per machine for spare parts. This exceedingly low upkeep, coupled with the dependability of this sturdy lighting set, accounts for its increasing popularity with engineers and executives.

The severe tests of four years' service and the manufacturing experience the General Electric Company has had with turbines great and small, combine to make G-E Headlight sets reliable. They are strong, highly efficient and can be closely regulated.

COLD WEATHER ENORMOUSLY INCREASES TRAIN RESISTANCE!

Actual tests made and reported in the Proceedings of the American Railway Engineering Association show that when a train stood still long enough to "freeze up," starting resistance ran up to

30 lb. per ton

—over five times the starting resistance of the same train after it had stopped only a few minutes.

This enormous resistance is directly chargeable to the journal bearing, oil and packing congealing into one solid mass.

With STAFFORD ROLLER BEARINGS the journal is not held in the vise-like grip of a friction bearing, nor is it immersed in the oil-soaked packing; thus "frozen up" conditions cannot possibly occur.

Stafford Roller Bearings are guaranteed three years.

Proper Feed Water Treatment Is Now a Simple Detail

Prevention of scale, foaming, pitting and corrosion in locomotive boilers is a matter-of-fact, every-day affair on many railroads all over the world.

Proper feed water treatment to accomplish this happy condition is a simple detail. The saving of hundreds of thousands of dollars in coal annually is an accomplishment confidently expected.

The Dearborn Chemical Company, through scientific analysis of waters, constant supervision and laboratory control, furnishes this service.

Our customers place the responsibility upon us. They cease to worry about fuel losses, and attendant "maintenance" evils of untreated or improperly treated waters.

There is nothing complicated or expensive about Dearborn Service. We analyze the water supplies, and send treatment made to suit your conditions. The application is simple. Your men apply it systematically and regularly. Results are sure.

Dearborn Treatment is used in the boilers of thousands of locomotives all over the world NOW!

Let us prove Dearborn to you. Write us that you are willing to be shown.

**A modern well-equipped CANADIAN factory
Making material for Canada's Electrical Industry**

Overlooking Niagara Falls, in the midst of one of the world's greatest Hydro-electric developments and dedicated to the service of Canada's electrical industry, the plant of Dominion Insulator & Manufacturing Company, Ltd., is busy manufacturing materials for some of Canada's most important electrical projects.

This factory—equipped with every modern facility and manned by skilled, experienced labor—manufactures by the most advanced processes, the latest, approved designs of High Tension Porcelain Insulators. It is also planned, so far as possible, to manufacture other O-B products such as Trolley Material and Rail Bonds for Electric Railways and Mines, Electric Railway Car Equipment and Steam Road Electrification Materials.

MAY WE SERVE YOU ?

Dominion Insulator & Manufacturing Company, Ltd.

(Manufacturing Ohio Brass Company Products)

Niagara Falls - Ontario

The Q & C trade mark stamped on each of our step joints is an assurance of dependable service. For many years Q & C Rolled Steel Step Joints have been guarding the leading railroads and industries throughout the Dominion against accidents, delays and high maintenance costs.

Q & C Step Joints are made of a high grade, open hearth rolled steel.

They are reinforced both at the head and base. Each joint is pressed to make a perfect fit.

We are prepared to join any combination of "T" rails made.

Specify Q & C Rolled Steel Step Joints on your requisition.

Could You Do This With *your* Forgings?

THESE forgings of Carbon-Vanadium Steel, made by the Erie Forge Company, Erie, Pa., were *bent cold* under a powerful press. They were bent this way to give you some idea of the great strength and toughness of Carbon-Vanadium Steel and its fitness for severely stressed service in reciprocating and revolving parts.

Carbon-Vanadium is a naturally tough steel. It requires neither quenching nor tempering. Heat it, cool it in still air and you have an unusually strong steel of great toughness.

Physical characteristics and composition of forgings illustrated above:

Write us for a copy of Bulletin LF-1, descriptive of Carbon-Vanadium, the non-quenched forging steel a railroad shop can handle.

	<i>Tensile Strength</i> (lbs. per sq. in.)	<i>Elastic Limit</i> (lbs. per sq. in.)	<i>Elongation</i> <i>in 2 inches</i> (Per cent)	<i>Reduction</i> <i>of area</i> (Per cent)
Round specimen	100,500	69,000	27.5	55.2
Square specimen	100,100	65,500	28	54.6

Composition

Carbon.....	.50

Showing Reinforcing Steel in Harbour Head Walls.

Harbour Head Walls under construction, showing pre-moulded blocks in place.

Concrete Plays Important Part in Toronto Harbour Work

The construction of the retaining walls—for reclaimed areas of the Toronto Harbour Improvement—is one of the most interesting features of this great development work.

For the Harbour Head Walls, from Bathurst Street to Yonge Street, the structure consists of rock-filled crib work.

After the cribs were sunk in position, lined, filled with stone and allowed a reasonable time for settlement, the vertical posts were cut off and capped and the flooring laid to receive the pre-moulded concrete blocks.

The superstructure consists of pre-moulded concrete blocks 8' x 5' x 5' with sides bevelled front to back, thereby making possible a perfect alignment. After being placed and lined, the blocks

are keyed to the plank flooring and also to each other. The concrete mass, as shown in section, is placed on the blocks and tied to the latter by reinforcing steel. Contraction joints are placed every fifty feet.

The modernizing of a water-front is a type of construction work for which Concrete is pre-eminently adapted. Indeed it is almost impossible to conceive a development of the magnitude of Toronto's Harbour improvement on any other plan than that which employs Concrete for the major portion of the work.

Not only is Concrete used for Harbour Head Walls, but also for the Ship Channel Walls, as well as for the huge Bathing Pavilion—the latter a beautiful structure of Monolithic Concrete.

Let the "Meteor" Safety Train Signal Protect Your Trains

Wanklyn Patent 20-21

**EASILY and QUICKLY
APPLIED---GRIPPING
RAIL FIRMLY**

"Surest and best rear end train protection ever offered"

(Endorsement of Railway Official)

OFFICIAL TEST

As reported to the Board of Railway Commission for Canada, by Chief Inspector of the Explosive Division, Department of Mines, Dominion of Canada:—

The Detonation was found to be reliable under trials, the conditions of which were more severe than those likely to be encountered in actual service.

The volume of sound is well above the average, sharp and arresting, accompanied by a brighter flash than given by any other torpedo tested, and plainly seen from the cab of the locomotive.

The detonation was not affected after the signals had been subjected to special treatment, for exposure to rain, snow, steam, saturated atmosphere and rough usage. No "dangerous" debris was projected at the trials, and the results were superior to those obtained with any other torpedo tested.

The brass wire swivel spring is of a form which renders the operation of attaching the signal to the rail simple and quick and cannot be knocked off by the wheel of the locomotive.

After tests under service conditions on the Canadian Pacific Railway, from the Atlantic to the Pacific, practical railroaders affirm that no engineman can possibly run over one of these signals and fail to recognize that a signal is intended. This opinion from men who are familiar with the use of track signals fully endorses all that has been said in favor of the "METEOR."

The "METEOR" differs from all other torpedoes. It appeals to three senses—Hearing, Seeing and Smelling—and thereby makes assurance trebly sure.

The "METEOR" has been adopted as "Standard" on the Canadian Pacific Railway over the entire 18,000-mile system, also by the Grand Trunk Railway and other Canadian Railways.

CANADIAN EXPLOSIVES LIMITED

Head Office: 120 St. James St., Montreal

ON OLD WORK OR NEW GTD MAXITAPS

Record Performance

While checking up staybolt tap performance, one mid-western road tried out four GTD Maxitaps on regular boiler repair work, keeping records of the number of holes tapped.

The Result? After working on five engines, it was found that 4711 holes had been tapped by the four taps—an average of nearly 1200 holes per tap on repair work, the hardest test a staybolt tap has to meet; with one tap still serviceable. Even this is not a Record Performance—GTD “Maxitaps” have gone as high as 1800 holes per tap in other shops—but it does represent the average service your boilermakers will get from Maxitaps on repair work.

The Reason? Fifty years' experience in manufacture of taps and dies insures correct heat treatment. For example: “Maxitaps” required for repair work are differently heat treated from those required for work on new boilers. This type of service explains why Maxitaps are found in shops where dollars are carefully counted. This “personality” built in when the tap is made guarantees every “Maxitap” long life under all conditions.

**Record Performance Is Usual Performance
With GTD Maxitaps.**

8% or 1% on Files?

Money that is bringing low returns on an investment you withdraw and re-invest.

Why not do the same with files?

A file that is slightly dull is a low dividend earner. Scrap it, and buy a new file that bites clean and deep at every stroke. It is a better investment.

Make this a rule. And to make sure of long service before that first dullness comes, specify one of these standard brands:

"Safety" Car Lighting Regulator Panel

When you buy Safety Equipment, you buy more than high-grade apparatus, electrically and mechanically right. With the physical value goes all the pioneer experience in car lighting—a mastery of the science gained in over 35 years of specialization—the assistance of experts skilled in this specialty—a service country-wide in scope. Safety Equipment represents standard practice as determined by daily contact with operating conditions. And back of it are the resources and responsibility of this Company as a warranty of sound design and honest construction.

Lamp Failures Cause Wrecks!

Signal and long-time-burning oils must be clean and fresh—or signals will fail. To be absolutely sure of continuous service, store your oils in Bowser tanks. Thus, lamp failures—so dangerous in railroad operation—will be averted.

At signal towers, in storehouses, and along the right of way wherever oils are stored, Bowser equipment has for 36 years been recognized and accepted as the best.

Booklet C-14 is of special interest to signal supervisors and storekeepers—write for it today. It tells how the oil is pumped directly into the lamps by Bowser accurate measuring pumps from Bowser all-metal, oil-tight tanks. Waste or spillage are averted and the fire hazard is reduced to a minimum.

Save Money by Purchasing Canadian Made Armature Coils

For some years we have been giving special attention in our shop to the manufacture of coils for electric railways, and every coil is subject to rigid inspection before shipment.

A number of lines we have been supplying report splendid service with them, and we can refer you to many satisfied customers.

A stock of standard railway coils is always kept and we can also duplicate any sample coil and make quick delivery. Give our coils and service a trial.

SAVING A TON OF COAL EACH TRIP

Universal Valve Chest

"After converting, engine No. 1922, equipped with the Universal Valve Chest, is consuming a ton of coal less per trip over the 120 mile division. It has no difficulty in running at 70 miles per hour to maintain the extremely fast schedule."

—Road Foreman of Engines.

Conversion, and all the economies conversion makes possible, can be secured without cylinder changes.

Universal Valve Chests can be easily applied on top of the old slide valve seats. This saves the cost of new frame ends, new cylinders and the cost to machine and apply them.

Universal Valve Chests make converting inexpensive and quick.

Reamers

With Eccentric Relief

THE cut below shows our patent eccentric relief which is an exclusive Pratt & Whitney feature. Eccentrically relieved Reamers, as made by us, have the distinguishing advantage that they can be sharpened by grinding on the face of each flute, thus retaining a true working size for a much longer period than is otherwise possible.

Pratt & Whitney Reamers are the only reamers having this eccentric relief, which should not be confused with the so-called "Eccentric tooth," which is nothing more than unequal spacing and adds nothing to the life of the tool.

—a stronger tooth—a smoother hole
—no chatter—maintained size

All P & W Adjustable Reamers have *eccentric* relief, can be set to size without regrinding and can be made to *face the bottom of a hole*.

In order to set these reamers, it is only necessary to loosen the shoes and run back the nuts. The blades can then be pushed back and the shoes tightened slightly. Then, upon coming up with the adjusting nut, the diameter will gradually decrease until the desired size is obtained. Lock-nut and shoes are now firmly tightened and the reamer is ready for use. Quick, positive and convenient.

These reamers are made with 12 different sizes of bodies giving an adjustment from .020 to .060 in., according to the diameter. Shell, hand or chucking reamers with the same number of body have interchangeable nuts, shoes, screws and wrenches. Shell and chucking reamers with the same number of body have interchangeable blades also.

Be Sure They
Are Stamped

Canadian Railway and Marine World

February, 1923

Gasoline Motor Passenger Car for Grand Trunk Railway.

The developments which have taken place in the self propelled car field on Canadian railways in 1921 and 1922, as recorded in Canadian Railway and Marine World from month to month, were most important, and it certainly must be evident that the self propelled car has established for itself a definite place in the rail transportation industry. The operation of branch lines by steam locomotives and train has long been a losing proposition, and electrification of those lines has been, and is, an economically undesirable undertaking, by reason of the very feature which made steam operation unprofitable, viz., light traffic density. In the self propelled car, equipment to handle the traffic offering

durability. The car will have the following dimensions:

Length over end sills.....	54 ft. 1½ in.
Width over side sheathing.....	8 ft. 9 in.
Height top of rail to floor.....	3 ft. 9½ in.
Height top of rail to roof.....	12 ft. 0 in.
Height top of rail to center of couplers.....	2 ft. 10½ in.
Center to center of bolsters.....	32 ft. 3 in.
Truck wheel base.....	5 ft. 8 in.
Seating capacity, passenger compartment.....	48
Seating capacity, baggage compartment.....	10
Total capacity, standing and seated.....	100
Baggage allowance.....	10,000 lb.
Weight.....	40,000 to 45,000 lb.

Underframing.—The center sills will be of the fish belly type, continuous from end sill to end sill, spaced 36 in. apart, with 5/16 in. web plate, with 3 x 3 x ¾ in. top and 3½ x 3 x ¾ in. bottom angles. The bolsters, arranged for roller side

ilar manner to the sides, and the car will be insulated with ¾ in. salamander.

The roof will be of the single arch type. The carlines, of flat steel bars bent to the roof contour, will be riveted to the side plates by angle connections, and will have wooden furring bolted on for the application of the ceiling and roof boards. The roof boards will be of ½ in. thick poplar, tongued and grooved, laid longitudinally and nailed to the carline furring. The roof boards will be covered with canvas well bedded in white lead.

The floor will be of double ¾ in. tongued and grooved long leaf yellow pine, laid longitudinally, with a layer of tar paper applied between the two

Gasoline Railway Motor Car, Grand Trunk Railway.

with profit, or with a large decrease in operating loss, has been developed, and because it is economically justified, it is reasonable to expect that even greater development will take place in the self propelled car field in the future than in the past. That such will be the case, is clearly indicated by the G.T.R. management's action in ordering a gasoline motor car which will be of large capacity, and which will be driven by a power plant with an output greatly in excess of anything yet attempted along similar lines in the Canadian or U.S. railway field. The car will be completely equipped with the standard A.R.A. car and locomotive devices, and with safety appliances in accordance with Interstate Commerce Commission regulations. The wheels and trucks will be of heavy construction, in order to hold the track well, and furnish riding comfort at high speeds. The body will be made of special steels, to afford lightness with strength, and efficient design will afford low center of gravity. The drive will be of simple construction, designed with heavy overload capacity, and with a special view to

bearings, will be built up of pressed steel diaphragms, with 9 channel center fillers and 14 x 5/16 in. top and bottom cover plates. The center plate will be of cast steel. The cross bearers will be of pressed steel diaphragms with 6 x ¼ in. top and bottom cover plates, and the floor supports will be three 6.7 lb. rolled steel Z bars securely riveted to the center and side sills. The side sills will be of 5 x 3 x ¾ in. rolled steel angles riveted to bolsters and cross bearers.

The sideframing will include side posts, which will be fabricated of rolled steel angles placed back to back, riveted to the side sills and side plates. The corner posts will also be rolled steel angles placed back to back, and the end posts will be rolled steel I beams. The side plates will be rolled steel angles, continuous from end to end of car, and the sides of the body will be straight sheathed outside with no. 16 patent levelled sheet steel, riveted to the side posts, side sills and belt rail. The joints in the side sheathing will be covered with sheet steel splice plates. The front and rear ends will be sheathed in a sim-

ilar manner to the sides, and the car will be insulated with ¾ in. salamander.

Doors and steps.—There will be a single sliding door at each side of the car in the baggage compartment, with a 4 ft. opening; a passenger compartment door on each side at the rear end of car, arranged to swing in, with a 2 ft. opening, and a swinging door in the rear vestibule for use when a trailer is attached. The doors will have glass in the upper panels, protected with vertical steel bars. At each baggage compartment door, a steel stirrup will be riveted to the side sill. At the passenger compartment doors, stationary oak steps, with steel hangers and fenders, will be provided, the step treads to be equipped with 3 in. safety tread. The step openings will be provided with trap doors.

The interior of the car will be divided by a partition equipped with a swinging door, giving a 22 in. clear door opening into a passenger and a baggage compartment. The seats in the passenger compartment, arranged transversely, as shown in the accompanying drawing,

will be upholstered in green plush, and the seat backs will be equipped with bronze grab handles. The inside finish will be in cherry, with the ceiling, and the side lining below the window sills in the passenger compartment, of $\frac{1}{4}$ in. agasote. A wood housing, flashed with galvanized iron, will be provided over the engine, and an air duct connected to this housing will take the fumes from the engine. The interior will be equipped with a lavatory, complete with hopper, wash stand and mirror, and a drinking water fountain with gravity tank. Each side of the body will have 16 windows, and each end of the body 3 windows. The window sash will be of cherry. All side sash and sash over the radiators will raise, and the vestibule sash will be arranged to drop. All windows will be equipped with storm sash. Sash fixtures will be of bronze, and window sill capping will be of no. 16 sheet steel. Window shades will be applied to all windows, and will be of silk faced pantasote. Additional interior equipment will include a conductor's bronze bell, with loose hammer attachment at the front end, connected with a bell chain the full length of the car, and two fire extinguishers will be provided, to be carried in the baggage compartment. An emergency tool box will also be provided.

Exterior equipment will include a light weight locomotive type pilot fitted to the front of car, five ventilators on the roof, one opening into the baggage compartment and the other four into the passenger compartment, front coupler of A.R.A. engine type, attached to cast steel radiator support, rear coupler with A.R.A. head with riveted wrought yoke and spring draft gear, air sanding apparatus, Westinghouse semi-automatic air brake system with clasp brakes, Westinghouse air compressor driven by power take-off from transmission, and standard classification and marker lamp and flag brackets.

The trucks will be of the pedestal type, with swing motion bolster, as shown, the truck frames to be of 6 in. structural channels, with structural angle transoms, securely riveted. The pedestals and equalizer spring caps will be of cast steel. There will be 2 forged steel equalizer bars on each side of the trucks, resting on top of the journal boxes, with cast steel equalizer spring seats. The truck bolsters will be built up of structural channels and plates, with cast steel center plates and roller side bearings, and the bolster spring caps, seats and rockers will be of cast steel. The trucks will be equipped with 36 in. diam. steel tired wheels, with cast steel spoke centers, and the o.h.s. axles will be arranged for roller bearings. The journal bearings will be of the Stafford roller type, with roller end thrust, and the journal boxes will be cast steel. Each truck will be equipped with 2 triple elliptic bolster springs and 4 helical equalizing springs.

Heating.—The car will be heated by a hot water heater, which, together with the coal box, will be located in a separate compartment between the baggage room and lavatory. Hot water pipes will be located along each side of the car, under the seats.

The lighting equipment will include a U.S.L. type F generator with chain drive from the engine, and a 16-cell U.S.L. battery. There will be 2 lamps in the baggage compartment, 8 pendant lamps in the passenger compartment, and 2 rear vestibule lamps. Each end of the car will be equipped with a headlight,

mounted in brackets on the letter board as shown.

The power plant.—The engine will be a Sterling, Dolphin type, 6-cylinder gasoline engine, with cylinders $5\frac{1}{4}$ in. bore and $6\frac{1}{2}$ in. stroke. The power rating will be as follows: at 800 r.p.m., 116 h.p.; at 1,000 r.p.m., 144 h.p.; at 1,200 r.p.m., 180 h.p.; at 1,400 r.p.m., 205 h.p.; at 1,600 r.p.m., 225 h.p. The cylinders of this type of engine, cast in pairs, are of the overhead valve type with detachable cylinder heads, and are made of high tensile strength special cylinder iron. The water jackets extend to the base flange, affording uniform cooling, and the cylinder wall is skirted into the upper base, so as to give the piston guidance the full length of the stroke. The upper base is a single iron casting, and the main bearings, carried in this upper base, are strongly ribbed and attached to the cylinders, relieving the outer shell of explosion stresses. The lower base is a single casting of semi-steel, with integral lugs for supporting and attaching the engine to the foundation. The lower base extends the full length of the engine, enclosing the flywheel, and the flywheel housing clears the inside of the foundation. The pistons are of aluminum, the piston pins of steel, and the long connecting rods, of I beam section, are of special steel, drop forged and double heat treated. The rods are 14 in. long on centers. The main bearings are $3\frac{1}{2}$ in. long and $2\frac{1}{2}$ in. diam. The intermediate and end main bearings are unusually large, while all bearings are line reamed and worked in by hand. The crankshaft is a drop forging of chrome nickel steel, equipped with counterbalance weights opposite the throws, dynamically balanced, and has a tensile strength of 115,000 lb. A characteristic of these engines is the large valve area; there are 2 inlet and 2 exhaust valves for each cylinder, and the fact of the water jacket being continuous around the seat ensures uniform cooling. The rocker arms are drop forged, the push rods, enclosed, are of steel, fitted with large roller for cam action, the camshafts are drop forgings, the push rod guides are of bronze, and removable, the crankshaft and camshaft gears are steel drop forgings and are helical, and the other timing gears are of phosphor bronze. On the exhaust side of the engine is a bronze water circulating pump, with positive shaft drive. An oil circulating pump of gear type, driven from the camshaft through spiral gears, is also provided, as is also an oil supply pump of the plunger type, attached to the top of the base and driven through worm gearing on the camshaft. With the engine, a special type gasoline pump will be provided. The gasoline will be carried in two 50-gallon tanks supported beneath the car body. The engine will be equipped with a northeast generator with U.S.L. battery for ignition. In these engines lubrication is by pressure feed through the camshaft, the pump taking oil from the tank in the lower base casting. The oil is returned to the supply tank by 2 scavenging pumps, which pick it up through strainers from either end of the engine. It is claimed that the engine will operate on a 45% grade without affecting the lubrication. The engine will be equipped with a northeast type 32-volt starting system with gears enclosed.

A Stromberg carburetor will be employed. The engine and clutch will be mounted on a frame hung between the center sills, with standard 3-point sus-

pension. This will be arranged so that the entire frame, engine and clutch can be removed through the end of the car by unbolting the front striking plates. The clutch will be of the multiple disc type, running in oil, and the universals, of the all-metal type, will be such that all angles will be reduced to less than 5 degrees on 23 degree curves. The transmission will provide for 4 speeds forward and 3 reverse, and will be of sliding gear type, with a special arrangement cutting off the load when changing gears. The rear truck will be direct connected without gears in high speed. As the drive will be through the leading axle of the rear truck and the trailing axle of the front truck, power will be transmitted to the trailing axle of the front truck through a jackshaft, which may be thrown out of engagement when little tractive effort is necessary. The gear ratios will be as follows: low, 5.19 to 1; 2nd, 2.7 to 1; 3rd, 1.67 to 1; high, 1 to 1.

The drive will be through spiral bevel gearing pressed on the driving axles, with keys. The gearing will be enclosed in cast steel 2-part housings, with ball bearings on the axles, all parts running in oil or grease. The ratio of the bevels will be approximately 3 to 1, giving a speed of 36 m.p.h. at 1,000 r.p.m. of the engine. To relieve the shock of starting and stopping, the gear housings will be fitted with cast steel torque arms, rubber cushioned and suspended to the truck equalizer bars. The car will have sufficient tractive power to pull a trailer of equal capacity or a loaded 50-ton box car. With the gear ratios as above indicated, the following speeds will be obtainable:

R.P.M. of motor.	High.	3rd speed.	Miles per hour.	
			2nd speed.	1st speed
1800	63	37.8	23.4	12.15
1400	49	29.4	18.2	9.45
1200	42	25.2	15.6	8.1
1000	35	21	13	6.75
800	28	16.8	10.4	5.4
400	14	8.4	5.2	2.7

The first, second and third speeds will be reversible. The car is being built by the National Steel Car Corporation, Hamilton, Ont.

Fast Runs on Michigan Central Railroad.

That the M.C.R.'s Canada Division is continuing to live up to its reputation in connection with motive power performance, is shown by some runs which were made lately. We are officially advised that on Dec. 26, 1922, train 15 made the trip between Bridgeburg and Windsor, 224 miles, in 205 min., the 114 miles from Bridgeburg to St. Thomas being done in 110 min., and the 110 miles between St. Thomas and Windsor in 95 min. The average speed between Bridgeburg and St. Thomas was 62.18 m.p.h., and between St. Thomas and Windsor, 69.46 m.p.h. We are further advised that on Dec. 30, train 15 covered the distance between St. Thomas and Windsor in 99 min., the average speed being 66.66 m.p.h. There is nothing unusual about such runs as the above on the M.C.R., as they are made very frequently. When trains depart late from their terminals, locomotive men are permitted to make up lost time, with the result that very often an apparently exceptional run is made.

The G.T.R. Repair Shop at Mimico, Ont., terminal yards, was destroyed by fire, Jan. 3, the damage being estimated at \$10,000.

The Hudson Bay Railway's Condition and Future.

The question of whether or not the long-projected railway to give the prairie provinces an outlet to a port on Hudson Bay, will be completed, is the subject of considerable discussion in Winnipeg, Regina, Saskatoon, and other middle-west centers. The matter was brought into prominence by a statement said to have been made by Major Graham A. Bell, Deputy Minister of Railways and Canals, at the end of Dec. 1922, that 120 miles of the track laid on the line from mile 214 to Kettle Rapids, mile 334, would be taken up. This matter had been under consideration for some time, but the final decision was not made until the Governor-General, on Nov. 4, 1922, approved of the following, which was passed as an order in council: "The Committee of the Privy Council have had before them a report, dated Nov. 22, 1922, from the acting Minister of Railways and Canals, representing, in connection with the operation of the Hudson Bay Ry., that the Vice President and General Manager of the Canadian National Rys. has submitted a report to the board of directors, relative to the advisability of lifting the rails between miles 214 and 334, consisting of 120 miles of no. 1, 80 lb. rails, the same to be used on the mainline subdivision between Vermillion and Edmonton, to replace 60 lb. rails requiring renewal.

"With reference to the traffic offering on the Hudson Bay Ry., and the condition of the line beyond mile 214, the Vice President advises, as follows: 'The steel rails have been laid on this line from Pas, a distance of 334 miles, to Kettle Rapids bridge, and a fortnightly service is being given as far as mile 182, with occasional trips to mile 214, but even with this restricted service there has been very little traffic to handle. There are some mining prospects being developed between Pas and mile 182, which involves the movement at times of a small number of men and small quantities of supplies, and there appears to be a possibility of securing a limited amount of fish as far as mile 214, but everything indicates that there is at present little or no traffic to be secured beyond the latter point. The track between miles 214 and 334, due to the heaving of bridges, washouts and settlement of dumps, is impassable, and temporary repairs, which are estimated will cost about \$16,000, are now under way, in order to permit the removal of material, consisting of rails, rail fastenings, ties, lumber, etc., which have been held at points along the line between mile 214 and mile 334, pending decision as to laying of track beyond mile 334. This material is now being brought out, as it can be used to advantage at other points along the system, and because, if left in its present location any longer, it would deteriorate very rapidly and the ties and lumber become valueless.'

"Based upon the Vice President and General Manager's report, the board of directors, at a meeting held on Oct. 20, 1922, passed the following resolution: 'It was unanimously resolved that in the opinion of the directors, the rails between miles 214 and 334 of the Hudson Bay line should be taken up; and that a recommendation of the directors to this effect be sent to the Governor in council, so that if approved by him, such recommendation be carried out as soon as possible.'

"The Minister, upon the advice of the

said board, concurred in by the Deputy Minister of Railways and Canals, accordingly recommends that authority be granted to take up the track on the Hudson Bay Ry. from mile 214 to mile 334, and to use the material therefrom at such points upon the Canadian National Rys. as the said Board may deem expedient. The Minister observes that until such time as the financial condition of the country would warrant the completion of the Hudson Bay Ry. project, the using of the lifted rails on another portion of the system would appear to be an economical procedure, as, if left where they are, they would in a short time deteriorate to such an extent as to become of no value. The committee concur in the foregoing recommendation and submit the same for approval."

Prairie members of Parliament are reported to have been conferring with each other, and with various interests, for the purpose of arriving at some conclusion as to how far they may go in pressing for the completion of the railway to Port Nelson. Meetings have been held at different centers west and north of Winnipeg, and others are being arranged, for the purpose of stimulating interest in the project.

The Lieutenant Governor's speech at the opening of the Manitoba Legislature on Jan. 18, contained the following paragraph: "In view of the fact that the expenditure required to complete the Hudson Bay Ry. is only a fraction of the amount expended already on the construction of 332 miles of it, including two steel bridges over the Nelson River; that the delay in proceeding with the laying of steel on the remaining 92 miles, on which grade construction was completed several years ago, has resulted in deterioration of the work done, which, if allowed to continue, will cause serious loss and necessitate greater ultimate expenditure, and that provision was made many years ago by the Dominion Government for defraying the whole cost of construction out of the sale of western land, a resolution will be submitted to you declaring that the completion of the railway should be proceeded with as a matter of vital importance to western Canada, without delay."

The matter was brought before Sir Henry Thornton, President, Canadian National Rys., during his visit to Regina, Saskatoon and other points recently, and he is reported to have stated that it was intended to appoint a Vice President who would deal with the development of the natural resources of the western provinces, and make a thorough inspection and investigation of the Hudson Bay Ry. That there was some misunderstanding of his statement is evident from the fact that at Saskatoon, on the following day, he is reported to have said: "The problems concerning the completion or otherwise of the Hudson Bay Ry. I will deal with personally. I realize that the question of the H. B. Ry. in particular, and transportation and terminal ports in general, are of great interest to the people of the west. It will be one of my first duties to enter into a close consideration of the H. B. line." He is further reported to have said it would be waste of money for the H. B. line to be discarded entirely if the route is really feasible and its ports of practical worth. He added that no rails were being removed from the line, except for the purpose of preserving them.

British Columbia's Appeal of Freight Rates Decision.

British Columbia has appealed to the Dominion Government from the Board of Railway Commissioners' decision in the equalization of rates case, as affecting that province, which was given in Canadian Railway and Marine World for Aug. 1922, pg. 398. It was expected that the appeal would be heard in Ottawa on Jan. 24, but an Ottawa press dispatch of Jan. 23 stated that, while Premier Oliver, of British Columbia, and G. G. McGeer, counsel for the province, had arrived in Ottawa Jan. 23, the railways were not ready to begin, and a date for the hearing had not been set. It also stated that Premier Greenfield of Alberta had telegraphed Mr. McGeer that the Alberta Government would join with the B.C. Government in the appeal. Alberta was not allied with British Columbia in the proceedings before the Board last year, but the situation now apparently is that the development in the export of western grain through Vancouver, and other traffic considerations, has convinced Alberta that her interests are identical with British Columbia's in the matter.

A Winnipeg press report of Jan. 20 stated that the Winnipeg Board of Trade would oppose British Columbia's appeal, and that Isaac Pitblado, K.C., had been retained to represent it at the hearings.

United States Railways' Financial Results.

The net operating income earned by U.S. class 1 railways in Nov. 1922, \$78,869,080, representative of an annual return of 4.46% on the tentative valuation, was much larger than in August, September or October, when earnings were at the annual return rate of but 2.65%, 2.88% and 4.05%, respectively. Gross operating revenues for November were \$523,011,686, compared with \$465,933,394 in Nov. 1921; operating expenses were \$409,453,212, compared with \$368,087,471 in Nov. 1921; and net earnings were \$113,558,474, compared with \$97,845,923 in Nov. 1921, making an operating ratio in Nov. 1922 of 78.29, compared with 79 in Nov. 1921. For the first 11 months of 1922, net railway operating income for the U.S. class 1 roads was \$693,212,406, compared with \$566,281,878 for the first 11 months of 1921. An encouraging factor in the Nov. 1922 results is that they were more favorable than in Nov. 1921, while the results for August, September and October 1922 were not as good as in corresponding months of 1921. Results in the first half of 1922 were much better than in the first half of 1921, and with the shopmen's strike over and traffic still moving in large volume, the feeling exists in U.S. railway circles that the more favorable returns, beginning with Nov. 1922, will continue.

Railway Lands Patented.—Letters patent were issued during Dec., 1922, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Albertan & Great Waterways Ry.....	164.47
Calgary & Edmonton Ry.....	316.70
Canadian Northern Ry.....	53,426.00
Canadian Northern Western Ry.....	4.12
Canadian Pacific Ry. grants.....	174.24
Canadian Pacific Ry. roadbed and station grounds.....	10.14
Total.....	54,095.67

Railway Rolling Stock Orders and Deliveries.

The Timiskaming & Northern Ontario Ry. has received 4 locomotives which have been rebuilt by Canadian Locomotive Co.

The C.P.R., between Nov. 14 and Dec. 16, ordered a single track, steel under-frame flanger, to be built at its Angus shops, Montreal, and bought 2 Jordan ballast spreaders.

The G.T.R. has received a steel under-frame from Canadian Car & Foundry Co., for mail car 48, under construction at the G.T.R. Point St. Charles shops, also 11 steel underframe cabooses from its Montreal shops.

The Brazilian Railway Board's mikado (2-8-2) locomotive, 39 $\frac{3}{4}$ in. gauge, details of which were given in Canadian Railway and Marine World for Oct., 1922, page 528, has been delivered by Montreal Locomotive Works.

The C.P.R. has ordered 16 Pacific type locomotives from American Locomotive Co., and has made enquiries for the following additional rolling stock:—12 combination mail and baggage cars; 6 cafe parlor car frames; 6 buffet car frames; 300 composite coal cars, 75 tons capacity; 50 oil tank cars, 50 tons capacity;

Flues, diam.5 $\frac{1}{2}$ in.
Grate area16.16 sq. ft.
Heating surface, tubes and flues.....415 sq. ft.
Heating surface, firebox.....86 sq. ft.
Heating surface, total.....501 sq. ft.
Superheater heating surface.....95 sq. ft.
Water capacity1,560 gall.
Fuel capacity2 tons

As will be seen by the accompanying illustration, the locomotive is labelled Abitibi Railway & Navigation Co., as some of the company's other rolling stock is. That was the name under which it was originally proposed to incorporate, but the company was incorporated as Abitibi Transportation & Navigation Co., as stated in Canadian Railway and Marine World at the time.

Canadian National Railways' Orders.

As stated in Canadian Railway and Marine World for January, R. C. Vaughan, Vice President, Purchasing, Supplies and Stores Department, C.N.R., received tenders to Dec. 14, 1922, for a large quantity of rolling stock and work equipment, and orders have since been given for 77 locomotives, 155 passenger train cars, 2,700 freight cars, 272 freight car bodies, 100 ballast cars, and a quantity of work equipment, details of which are as follows:

Locomotives.—Thirty-five mikado type

Injector.....Hancock type EA for 3,500 gall. on right side only

Trailing truck.....Commonwealth

Engine truck.....Economy

Cab.....steel, vestibule type

Eight mikado type for Grand Trunk U.S. lines from American Locomotive Co., 4 for Central Vermont Ry. and 4 for G. T. Western Lines. These will be very similar in design to the standard U.S. R.A. light mikado, and will have the following chief specifications:

Wheel base, engine, rigid.....16 ft. 9 in.
Wheel base, engine.....36 ft. 1 in.
Wheel base, engine and tender.....71 ft. 5 $\frac{1}{2}$ in.
Cylinder, diam.26 in.
Cylinder, stroke30 in.
Firebox.....114 $\frac{1}{4}$ x 84 $\frac{3}{4}$ in.
Tubes, number216
Tubes, diam.2 $\frac{1}{4}$ in.
Tubes, length.....19 ft.
Flues, number40
Flues, diam.5 $\frac{1}{2}$ in.
Boiler pressure.....200 lb.
Weight on drivers.....220,000 lb.
Tractive power.....54,700 lb.
Tender, trucks.....4-wheel
" water capacity.....10,000 U.S. gall.
" coal capacity.....16 tons
" weight loaded.....190,000 lb.
Valve gear.....Walschaert
Stoker.....Duplex
Feedwater heater.....Superheater Co.'s

Ten mountain type for Canadian National Rys., and 6 mountain type for the G.T.R., from Canadian Locomotive Co. The only available details concerning these are as follows:

Wheel base, engine, rigid.....19 ft. 6 in.
Wheel base, engine.....41 ft. 8 in.
Wheel base, engine and tender.....about 79 ft.
Heating surface, firebox and arch tubes.....348 sq. ft.
Heating surface, tubes and flues.....3,731 sq. ft.
Heating surface, total.....4,079 sq. ft.
Driving wheel diam.....73 in.
Driving wheel centers.....cast steel
Driving journals, main.....12 x 13 in.
Driving journals, other.....10 x 13 in.
Cylinder, diam.26 in.
Cylinder, stroke30 in.
Boiler, type.....radial stayed, with combustion chamber

Boiler, pressure210 lb.
Tubes, number188
Tubes, diam.2 $\frac{1}{4}$ in.
Flues, number40
Flues, diam.5 $\frac{1}{2}$ in.
Tractive power.....49,600 lb.
Tender, water capacity.....10,000 imp. gall.
" coal capacity.....15 tons
" tank.....water bottom
" trucks.....Commonwealth 6-wheel
" wheels.....34 $\frac{1}{4}$ in. diam.
" wheels.....semi-steel centers with steel tires
" frame.....Commonwealth cast steel

Feedwater heater.....Superheater Co.'s
Stoker.....Duplex
Valve gear.....Walschaert
Superheater.....Robinson
Brakes.....Westinghouse no. 6 E.T.
Safety valves.....3 World type
Injector.....Hancock type EA, for 3,500 gall. on right side only

Trailing truck.....Commonwealth
Engine truck.....Commonwealth
Cab.....steel, vestibule type

Five 8-wheel switching for G. T. Western Lines, from Lima Locomotive Works, Lima, Ohio. The chief dimensions will be as follows:

Wheel base, engine.....15 ft. 6 in.
Wheel base, total.....53 ft. 4 $\frac{1}{2}$ in.
Cylinder, diam.26 in.
Cylinder, stroke30 in.
Firebox.....108 $\frac{3}{4}$ x 75 $\frac{3}{4}$ in.
Tubes, number228
Tubes, diam.2 in.
Flues, number32
Flues, diam.5 $\frac{1}{2}$ in.
Flues, length.....15 ft.
Weight on drivers.....240,000 lb.
Weight of tender.....166,360 lb.
Tractive power.....52,300 lb.
Boiler pressure.....190 lb.
Tender, water capacity.....9,000 U.S. gall.
Tender, coal capacity.....10 tons
Valve gear.....Young
Power reverse gear.....Ragonnet

Three 6-wheel switching locomotives for Central Vermont Ry., from Lima Locomotive Works, Lima, Ohio. The chief details will be as follows:

Wheel base, engine.....11 ft. 6 in.
Wheel base, total.....46 ft. 1 $\frac{1}{2}$ in.
Cylinder, diam.26 in.
Cylinder, stroke26 in.
Driving wheel diam.....56 in.

Shay Locomotive, Abitibi Transportation & Navigation Co.

300 steel underframe flat cars, 40 tons capacity.

United States locomotive builders shipped 210 new locomotives in Dec., 1922, the largest number since Jan., 1921, 194 being for domestic use and 16 foreign. The unfilled orders on Dec. 31, 1922, were 1,498 domestic, and 94 foreign. The total shipments for 1922 were, domestic, 1,056; foreign, 218; total, 1,274, against domestic, 830; foreign, 519, and total, 1,349, in 1921.

Abitibi Transportation & Navigation Co.'s Shay locomotive, which has been received at Iroquois Falls, Ont., from Lima Locomotive Works, Lima, Ohio, as mentioned in Canadian Railway and Marine World for Dec., 1922, has the following chief details:

Gauge.....4 ft. 8 $\frac{1}{2}$ in.
Fuel.....Bituminous coal
Engine wheel base.....27 ft. 2 in.
Truck wheel base.....4 ft. 2 in.
Weight, total.....96,000 lb.
Weight on drivers.....96,000 lb.
Maximum tractive power.....20,835 lb.
Factor of adhesion.....4.61
Diam. driving wheels.....29 $\frac{1}{2}$ in.
Cylinders, no.3
Cylinders, diam.10 in.
Cylinders, stroke12 in.
Boiler, diam.42 $\frac{1}{4}$ in.
Boiler, pressure.....180 lb.
Firebox, length.....54 $\frac{3}{4}$ in.
Firebox, width.....42 $\frac{1}{2}$ in.
Tubes, no.63
Tubes, diam.2 in.
Tubes, length.....8 ft. 11 in.
Flues, no.10

for Canadian National Rys. from Montreal Locomotive Works, and 10 mikados for G.T.R. from Canadian Locomotive Co. The only details concerning these available at the time of writing are as follows:

Wheel base of engine, rigid.....16 ft. 6 in.
Wheel base of engine, total.....35 ft. 1 in.
Wheel base, engine and tender.....about 68 ft.
Heating surface, firebox and arch tubes.....300 sq. ft.
Heating surface, tubes and flues.....3,297 sq. ft.
Heating surface, total.....3,597 sq. ft.
Diameter of driving wheels.....63 in.
Driving wheel centers.....cast steel
Main journals.....11 x 13 in.
Other driving journals.....10 x 12 in.
Cylinder diameter.....27 in.
Cylinder stroke30 in.
Boiler, type.....extended wagon top type
Boiler, pressure.....185 lb.
Tubes, number244
Tubes, number244
Tubes, diam.2 in.
Flues, number40
Flues, diam.5 $\frac{1}{2}$ in.
Flues, length.....18 ft.
Tender, water capacity.....8,300 imp. gall.
" coal capacity.....12 tons
" trucks.....4-wheel pedestal and equalizer type
" wheel diam.....34 $\frac{1}{4}$ in.
" wheel type.....Semi-steel centers with steel tires
" tank, style.....water bottom
" frame.....Commonwealth cast steel
" journals.....6 x 11 in.
Tractive power.....54,600 lb.
Feedwater heater.....Superheater Co.'s on 10 and Worthington on 35
Stoker.....Duplex
Valve gear.....Walschaert
Superheater.....Superheater Co.'s type A
Brakes.....Westinghouse E. T. no. 6
Safety valves.....3 World type

Truck wheel base.....	11 ft.
Tubes, diam.....	2 in.
Tubes, length.....	12 ft. 4 in.
Flues, number.....	28
Flues, diam.....	5 3/8 in.
Firebox.....	96 1/2 x 75 1/4 in.
Weight on drivers.....	175,900 lb.
Tractive power.....	36,290 lb.
Boiler pressure.....	190 lb.
Tender, weight.....	131,850 lb.
" water capacity.....	5,000 imp. gall.
" coal capacity.....	9 tons
Valve gear.....	Baker
Power reverse gear.....	Ragonnet

Passenger Train Cars.—Thirty standard steel sleeping cars for Canadian National Rys. from Canadian Car & Foundry Co., Montreal. They will have steel underframe, superstructure and sheathing, and wood and canvas roof. The chief details are as follows:

Length over end sills.....	75 ft. 6 in.
Length between truck centers.....	57 ft. 6 in.
Length over buffers.....	84 ft. 4 1/2 in.
Width over side sills.....	9 ft. 9 3/8 in.
Width over all at eaves.....	10 ft. 1 7/8 in.
Width of clerestory.....	5 ft. 11 1/4 in.
Height track to roof at center.....	14 ft. 2 in.
Height over lamp jacks.....	14 ft. 5 in.
Height, rail to eave moulding.....	11 ft. 2 1/2 in.
Height, track to sill at end.....	3 ft. 7 1/2 in.
Height, track to sill at center.....	3 ft. 9 in.

Trucks will be 6-wheel Commonwealth type, with cast steel bolsters, 36 in. steel tired wheels and 5 x 9 journals. Other things specified are: Miner A-5-P friction draft gear; Miner B-10 buffing mechanism; Westinghouse brakes, LN-18-12; Stone-Franklin lighting equipment; Vapor heating system; and an emergency hot water heating system; McCord journal boxes.

Ten mail and express cars for Canadian National Rys. from Canadian Car & Foundry Co., Montreal. They will be of steel construction, with wood and canvas roof, and will have the following dimensions:

Length over end sills.....	73 ft. 6 in.
Length between truck centers.....	57 ft. 6 in.
Length over buffers.....	77 ft. 6 in.
Width over side sills.....	9 ft. 9 3/8 in.
Width over all at eaves.....	10 ft. 1 7/8 in.
Width of clerestory.....	5 ft. 11 1/4 in.
Inside length mail compartment.....	60 ft.
Inside length express compartment.....	12 ft. 6 in.
Inside width.....	9 ft.
Height track to roof at center.....	14 ft. 2 in.
Height over lamp jacks.....	14 ft. 5 in.
Height rail to eave moulding.....	11 ft. 2 1/2 in.
Height track to sill at end.....	3 ft. 7 1/2 in.
Height track to sill at center.....	3 ft. 9 in.
Truck wheel base.....	11 ft.

Their equipment will include Miner A-5-P friction draft gear; Miner type B-10 buffing mechanism; Pintsch gas lighting system; Miner side bearings; Commonwealth all steel 6-wheel truck, with 36 in. steel tired wheels and 5 x 9 in. journals; McCord journal boxes; Vapor heating system, and Westinghouse schedule LN-18-12 brake system, with clasp brakes.

Ten standard steel first class cars for Canadian National Rys., and 25 standard steel first class cars for G.T.R., from Canadian Car & Foundry Co., Montreal. They will have steel underframe, side framing and sheathing and wood and canvas roof. Following are the general dimensions:

Length over end sills.....	73 ft. 6 in.
Length between truck centers.....	57 ft. 6 in.
Length over buffers.....	82 ft. 4 1/2 in.
Width over side sills.....	9 ft. 9 3/8 in.
Width over all at eaves.....	10 ft. 1 7/8 in.
Width of clerestory.....	5 ft. 11 1/4 in.
Height track to roof at center.....	14 ft. 2 in.
Height rail to eave moulding.....	11 ft. 2 1/2 in.
Height track to sill at end.....	3 ft. 7 1/2 in.

Equipment will include Commonwealth 6-wheel trucks, with cast steel bolsters; 36-in. steel tired wheels and 5 x 9 in. journals; Westinghouse schedule LN-18-12 brake system, with clasp brakes; Miner A-5-P friction draft gear; Miner type B-10 buffing mechanism; Miner side McCord journal boxes. The lighting system on 20 cars will be Stone-Franklin bearings; Vapor heating system, and

on the other 15 cars the Safety Car Lighting & Heating Co. system.

Twenty steel baggage cars for Canadian National Rys., and 10 steel baggage cars for the Grand Trunk Ry., 20 from Canadian Car & Foundry Co., Montreal, and 10 from National Steel Car Corporation, Hamilton, Ont. They will have the following dimensions:

Length over end sills.....	73 ft. 6 in.
Length between truck centers.....	57 ft. 6 in.
Length over buffers.....	77 ft. 6 in.
Width over side sills.....	9 ft. 9 3/8 in.
Width over all at eaves.....	10 ft. 1 7/8 in.
Width of clerestory.....	5 ft. 11 1/4 in.
Height track to roof at center.....	14 ft. 2 in.
Height over lamp jacks.....	14 ft. 5 in.
Height rail to eave moulding.....	11 ft. 2 1/2 in.
Height track to sill at end.....	3 ft. 7 1/2 in.
Height track to sill at center.....	3 ft. 9 in.

Equipment will include Commonwealth 6-wheel trucks with cast steel bolsters; Pintsch gas lighting; Miner A-5-P friction draft gear; Miner side bearings and B-10 buffing mechanism; Vapor heating system; Westinghouse schedule LN-18-12 brake system, with clasp brakes; 36 in. steel tired wheels; 5 x 9 in. journals, and McCord journal boxes.

Fifty express refrigerator cars for Canadian National Rys., from National Steel Car Corporation, Hamilton, Ont. They will have steel underframes, steel superstructure, wood sheathing and wood and canvas roof. Following are the general dimensions:

Length over end sills.....	45 ft.
Length inside between ends.....	44 ft. 1 in.
Length between ice boxes.....	37 ft. 1 in.
Width over side sills.....	9 ft. 9 3/8 in.
Width inside lining.....	8 ft. 10 1/2 in.
Height top of side sill to underside of side plate.....	7 ft. 5 1/2 in.
Height inside, top of floor rack to top lining.....	7 ft.
Bolster centers.....	33 ft. 8 in.
Truck wheel base.....	7 ft.
Width of door opening.....	5 ft.
Height of door opening.....	6 ft. 3 in.

They will be equipped with 4-wheel trucks; 36 1/2 in. steel tired wheels; 5 1/2 x 10 in. journals; McCord journal boxes; type D couplers; Miner A-5-P friction draft gear, and Westinghouse schedule LN-14-12 brake system.

Freight Cars.—One thousand five hundred 40-ton box cars for Canadian National Rys., and 1,000 40-ton box cars for G.T.R.; 1,000 from Canadian Car & Foundry Co., 1,000 from National Steel Car Corporation, and 500 from Eastern Car Co., New Glasgow, N.S. They will have steel underframe and superstructure and single wood sheathing, and will be equipped with Hutchins all-steel flexible roofs. The chief dimensions will be as follows:

Maximum axle load.....	132,000 lb.
Length inside.....	36 ft.
Width inside.....	8 ft. 6 1/2 in.
Height floor to bottom of carline.....	8 ft. 0 1/2 in.
Width of side door opening.....	5 ft.
Height of side door opening.....	7 ft. 8 1/2 in.
Length between end sills.....	37 ft. 1 1/2 in.
Width over side sills.....	8 ft. 9 1/2 in.
Height rail to top of brake mast.....	13 ft. 10 in.
Height rail to top of running board.....	13 ft. 4 3/4 in.
Height rail to center of coupler.....	2 ft. 10 1/2 in.
Height sill to bottom of side plate.....	7 ft. 10 3/16 in.
Height top of rail to eaves.....	12 ft. 7 1/2 in.
Width over eaves.....	9 ft. 3 1/2 in.
Center to center of body bolsters.....	26 ft. 10 in.
Light weight.....	39,900-40,000 lb.

They will have 4-wheel arch bar trucks, with 5 x 9 in. journals, and 33 in. cast iron wheels. The following are also specified: Cast steel bolsters on 1,000 and Simplex bolsters on 1,500; Cardwell friction draft gear on 1,500, and Miner friction draft gear on 1,000; Symington malleable iron journal boxes on 500, and McCord and National boxes on the remainder; Camel door fixtures.

One hundred steel hopper cars for G.T.R. from Eastern Car Co. They will be of all steel construction and of the usual hopper bottom coal car type, and will be of 50-ton capacity with a maximum axle load of 169,000 lb. They will be

30 ft. long inside, 9 ft. 6 in. wide inside, and height from top of rail to top of body will be 10 ft. Four-wheel trucks will be used, with 33 in. cast iron wheels and 5 1/2 x 10 in. journals, and the cars will be equipped with Cardwell friction draft gear and Simplex bolsters.

One hundred 50-ton general service cars, steel underframe, steel posts and wood sides, for G.T.R., from Eastern Car Co. They will be of the composite type, with steel underframe, steel posts and bracing, and wood sides. There will be 6 doors on each side. The maximum axle load will be 169,000 lb. The dimensions will be as follows:

Length over striking castings.....	43 ft. 0 5/8 in.
Width over all.....	10 ft. 2 1/2 in.
Width inside.....	9 ft. 2 in.
Height inside.....	5 ft. 2 1/2 in.
Height, top of rail to top of side.....	9 ft. 6 1/2 in.
Height, top of rail to floor.....	4 ft. 4 in.
Truck centers.....	31 ft. 10 1/2 in.
Car wheel base.....	37 ft. 4 1/2 in.
Truck wheel base.....	5 ft. 4 1/2 in.
Length of door opening.....	5 ft. 6 in.
Capacity, level.....	73.4 cu. yds.
Capacity, heaped at 30 degrees.....	90 cu. yds.

Four-wheel trucks will be used, with 33 in. cast iron wheels, and 5 1/2 x 10 journals. Cardwell friction draft gear and Simplex bolsters will be used.

Two hundred and seventy-two coal car bodies for Canadian National Rys., from Eastern Car Co. The dimensions of these, which will be mounted on 4-wheel trucks, will be the same as those of the bodies for the general service cars, as given above. Cardwell friction draft gear will be installed.

One hundred general service cars for the Grand Trunk Ry. U.S. lines from the Pressed Steel Car Co., Chicago.

In addition to the orders for freight equipment which have been given as stated above, we are officially advised that negotiations are proceeding for 1,000 automobile cars, and it is expected that this order will be placed in the near future. We are also officially advised that the management has directed that 8 first class passenger cars and 20 milk cars be built in G.T.R. shops at Port Huron, Mich., for the Central Vermont Ry.; and that 1,000 thirty-ton steel frame box cars will be converted to stock cars, and 50 box cars to cabooses, at the Canadian National Rys. shops at Moncton, N. B., the work to begin in the near future.

Ballast Cars.—One hundred Hart-Otis ballast cars for G.T.R. from Canadian Car & Foundry Co., Montreal. Following are the chief dimensions:

Length inside.....	40 ft.
Length over striking plates.....	42 ft. 2 in.
Width inside.....	8 ft. 9 in.
Width between plough guards.....	8 ft. 8 in.
Width over side stakes.....	9 ft. 9 in.
Height inside.....	3 ft. 6 in.
Height from rail to top of side.....	7 ft. 9 1/2 in.
Height from rail to center of coupler.....	2 ft. 10 1/2 in.
Height from rail to top of floor.....	4 ft. 3 3/4 in.
Truck centers.....	31 ft. 2 in.
Truck wheel base.....	5 ft. 6 in.
Capacity, load level with top.....	1,225 cu. ft.
Capacity, load heaped.....	1,575 cu. ft.

These cars will be mounted on 4-wheel trucks, with 5 1/2 x 10 in. journals. Equipment will include Hall draft gear and Simplex bolsters.

Work Equipment.—One Erie ditcher, from International Equipment Co.; two 160-ton self propelled Industrial wrecking cranes, from F. H. Hopkins & Co.; one 150-ton self propelled Industrial wrecking crane, from F. H. Hopkins & Co.; 4 Jordan all-steel spreaders, with ditching attachments, 2 Jordan spreader ditching attachments, and three 20-ton locomotive cranes from F. H. Hopkins & Co.

One 15-ton locomotive crane from Browning Co., Cleveland, Ohio.

One 22-ton locomotive crane from Holden Co., Montreal.

Two center ballast ploughs from F. H. Hopkins & Co.

Two right and 2 left ballast ploughs from Dominion Equipment & Supply Co., Winnipeg.

We are officially advised that, in addition to the work equipment ordered as above, orders for 4 clamshell buckets and 2 hoisting engines will probably be given in the near future.

The cost of the equipment ordered by the Canadian National Rys., as above, will be approximately as follows: Locomotive, \$5,000,000; passenger train cars, \$4,300,000; freight and ballast cars, \$7,500,000; work equipment, \$250,000; total, \$17,050,000.

Traffic Orders by Board of Railway Commissioners.

Exchange Surcharge on International Freight Shipments.

General order 373, Dec. 30, 1922.—Re general order 372, Nov. 24, 1922, relieving railway companies, until further order, from complying with requirements of paragraph 3 of general order 326, Jan. 14, 1921, in the matter of exchange surcharge on all international shipments, other than coal and coke: Upon its appearing that the rate of exchange quoted for New York funds exceeds 1%, the Board orders that, for the present and until further order, general order 372 be rescinded.

Binder Twine Freight Rates.

33,245, Dec. 26, 1922.—Re order 15,266, March 15, 1910, as amended by order 15,386, Nov. 14, 1911, prescribing certain rates to be charged by Grand Trunk Ry. and the Michigan Central Rd. on binder twine: Upon reading what is filed on behalf of the Canadian Freight Association, the Plymouth Cordage Co. consenting, the Board orders that orders 15,286 and 15,386 be rescinded.

Rates on Apples for Export.

33,263, Jan. 5.—Re complaint of Nova Scotia Shippers' Association, of Kentville, N.S., against rates charged by Dominion Atlantic Ry. on apples, in carloads, to Halifax, for export: Upon hearing the complaint at Kentville, Sept. 27, 1921, the complainant and the railway company being represented at the hearing, and what was alleged, and upon reading the written submissions filed, the Board orders that the complaint be dismissed.

Comparison of Wheat Rates in Canada and United States Adjoining Territories.

—In the map in Canadian Railway and Marine World for January, on pg. 12, which was reproduced from one issued by the Railway Association of Canada, the distance from Fort William, Ont., to Medicine Hat, Alta., was given as 818 miles, and from Fort William to Lethbridge, Alta., as 769 miles. A subscriber at Washington, D.C., has written that these figures must be incorrect, as Medicine Hat is west of Maple Creek, which was given as 1,013 miles from Fort William; and Lethbridge is west of Grassy Lake, which was given as 1,125 miles west of Fort William. On looking into the matter, we find that the distances given were from Vancouver and not from Fort William. The distances from Fort William, according to C.P.R. working time tables, are as follows: Medicine Hat, 1,074.9 miles; Lethbridge, 1,176.2 miles. We suggest that subscribers change the figures on the map in the January issue accordingly.

Railway Wages and Working Conditions in Canada and the United States.

January did not see very many outstanding developments in the railway wage and working condition situation in Canada, and harmonious relations appear to be the rule between the railways and their employees of all classes. The last dispute arising out of the wage reductions made last summer—that between the C.P.R. and its clerical employees, the majority of whom are members of the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees—was adjusted in a manner satisfactory to both company and men on Jan. 17, when an agreement was reached between Geo. Hodge, Assistant General Manager, Eastern Lines, and W. A. Mather, General Superintendent, Saskatchewan District, representing the company, and F. H. Hall and W. Turner, General Chairmen for Eastern and Western Lines for the employees' association, representing the employees, by which the employees had restored to them a portion of the amounts by which their rates were decreased. When these employees' wages were first cut, a conciliation board, of which D. Urquhart was chairman, and on which the company was represented by J. T. Arundel, formerly General Superintendent of the Ontario District, C.P.R., and the men by J. G. O'Donoghue, Toronto, was appointed, and the majority report was against the wage reduction. The company, however, decided to proceed as recommended in Mr. Arundel's minority report, and stated that the reduced wages would be kept in effect, but further representations made by the employees resulted in the undertaking of negotiations which resulted in the agreement mentioned above.

The principal C.P.R. shops were closed on Dec. 22, 1922, with the intention of leaving them closed till Jan. 8. On representations from the employees, however, that they considered that this enforced period of idleness, in conjunction with the recent wage reduction, and the extended period during which the shops had been working short time, would be unduly hard on them, the shops were reopened on Jan. 3.

Canadian Association of Railway Enginemen's Convention.—A Winnipeg press report of Jan. 22 states that the Canadian Association of Railway Enginemen's annual convention opened in Winnipeg on that date, delegates from both eastern and western Canada being present.

C.B.R.E. Co-operation with Canadian National Rys.—A. R. Mosher, President, Canadian Brotherhood of Railway Employees, is stated, in an Ottawa press dispatch, as having addressed his membership on Jan. 10, as follows: "As we, as an organization, have advocated and supported government ownership and operation of public utilities, we are in duty bound to lend every assistance to make government ownership a success. The conclusion I have arrived at is that in the new president, Sir Henry Thornton, we have a gentleman with whom we can and will most heartily co-operate in making the Canadian National Rys. a success from every standpoint." It was further stated that Mr. Mosher called upon the brotherhood members to put the greatest possible measure of efficiency into their work, to avoid waste of every description, and to realize that

such steps will not only assist greatly in the railways' success, but will pave the way for better conditions for the men.

C.B.R.E. and International Brotherhood Amalgamation.—The proposal for amalgamation between the Canadian Brotherhood of Railway Employees and the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, concerning which negotiations had proceeded for some time, with indications that amalgamation would not be improbable, now appears to have been abandoned.

Shopmen Desire 44-hour Week.—Press dispatches from various points state that Canadian National Rys. and G.T.R. shopmen have instructed their representatives to take up with the railway managements the question of the number of hours to be worked weekly. A 40-hour week has been the rule for some time past, and it is said that the majority of the employees desire the hours increased to 44. We are advised that the G.T.R. shops changed from a 40 to a 44-hour week on Jan. 22.

Sir Henry Thornton and Canadian National Rys. Employee.—A conference, which was arranged for by Tom Moore, President, Dominion Trades and Labor Council, and one of the C.N.R. directors, was held in Ottawa, Jan. 5, Senator Gideon Robertson presiding, at which Sir Henry Thornton, President, accompanied by S. J. Hungerford, Vice President and General Manager, Canadian National Rys., and W. D. Robb, Vice President and General Manager, G.T.R., met representatives of the employees. It was announced afterwards that Sir Henry had stated that he had decided to cancel the order given by the former President, D. B. Hanna, not to allow officials or employees who became candidates for the Dominion Parliament or a provincial legislature, to remain in the railways' service, and that the employees' representatives had assured Sir Henry that he could depend on the employees' whole-hearted effort in his endeavor to make the C.N.R. a success.

U.S. Situation.—As in Canada, so in the U.S., there have not been many outstanding developments lately in the railway labor field. The chief development was a decision by the Labor Board, announced in the latter part of Dec., 1922, by which new rules covering maintenance of way men's employment were established. These cover matters of seniority, promotion, and rates applicable to overtime and extra work, and provide specifically that "promotion shall be based on ability, merit and seniority; ability and merit being sufficient, seniority shall prevail, with the management to be the judge." The decision denied the employees punitive overtime rates for Sundays, holidays, and work done in the 9th and 10th hours of continuous employment. This ruling was attacked in a dissenting opinion issued by A. O. Wharton, a labor member of the Board.

The Daugherty injunction, enjoining striking railway shopmen from interfering with railway employees or property, details of which were given in preceding issues of Canadian Railway and Marine World, was continued in effect till at least May 2, by Judge Wilkerson in the U.S. District Court at Chicago early in January. A final hearing, to determine whether the injunction will be made permanent, was set for May 2.

Mainly About Railway People Throughout Canada.

J. H. Barber, Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, who has retired on pension, was born near Cobourg, Ont., Dec. 20, 1856, and educated in Toronto. He was an article pupil of James Ross, C.E., from 1875 to 1878, and was engaged as Assistant Engineer, and Division Engineer, on various sections of location and construction on the C.P.R. up to 1891. In 1891 he was appointed Resident Engineer, Maintenance of Way Department, C.P.R., Toronto, and was later appointed Division Engineer, Atlantic Division, C.P.R., St. John, N.B., holding that position until April, 1906. He was, to 1916, Division Engineer, Eastern Division (now Quebec District), C.P.R., Montreal; 1916 to April, 1920, on special work at various points, including double tracking and grade separation, etc., Toronto; Apr., 1920, to Jan. 1, 1923, Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto. On his retirement, H. C. Grout, General Superintendent, Ontario District, C.P.R., in presenting him, on behalf of his associates, with a framed address, a case of pipes, and a bouquet of roses for Mrs. Barber, spoke of his long services with the company, his sterling qualities, unflinching loyalty, and uniform courtesy and kindness to all those with whom he came in contact. During Mr. Barber's long service, he was especially identified with the construction of the Credit Valley Ry., the Ontario & Quebec Ry., the Guelph Jct. Ry., all now parts of the C.P.R., the Richelieu River bridge, double tracking the St. Lawrence River bridge, Sortin yard, double tracking Montreal to Farnham, bridge reconstruction Dominion Atlantic Ry., double tracking Lachine Canal swing bridge, and grade separation at North Toronto. He was one of the original members of the Canadian Society of Civil Engineers, which was founded in 1867, and his first work in Toronto was as engineer in charge of laying track from the Don River for five miles down the Kingston Road, for the Toronto Gravel Road & Concrete Co., of which E. B. Osler (now Sir Edmund Osler and a director of the C.P.R.) was President. This line now forms a portion of the Toronto Transportation Commission's trackage. Mr. Barber has been a subscriber to Canadian Railway and Marine World since July, 1898.

E. W. Beatty, K.C., President, C.P.R., and party, spent the New Year holiday at the Chateau Frontenac, Quebec, Que.

Alfred Ernest Bennets, Locomotive Foreman, C.P.R., North Bend, B.C., died there, Dec. 30. He was born Aug. 16, 1862, and entered C.P.R. service in Oct., 1898, since when he had been, to Jan. 6, 1899, fitter, Revelstoke, B.C.; Jan. 6, 1899, to Jan. 2, 1900, Assistant Locomotive Foreman, Nakusp, B.C.; Jan. 2 to April 1, 1900, Assistant Locomotive Foreman, Smelter Jct., B.C.; Sept. to Nov. 1, 1900, fitter, Revelstoke, B.C.; Nov. 1, 1900, to Jan. 8, 1901, fitter, Nelson, B.C.; Jan. 8, to Feb. 1, 1901, fitter, Eholt, B.C.; Feb. 1, 1901, to May 1, 1902, Assistant Foreman, Eholt, B.C.; May 1 to July 7, 1902, leading hand fitter, Nelson, B.C.; July 7, 1902, to Aug. 1, 1905, Locomotive Foreman, Eholt, B.C.; Aug. 1, 1905, to Nov. 6, 1912, Locomotive Foreman, Kamloops, B.C.; Nov. 6, 1912, to Jan. 23, 1913, Locomotive Foreman, Eholt, B.C.; Jan. 23, 1913, to Aug. 10, 1919, Locomotive Foreman, Grand Forks, B.C.; Aug. 10 to

Oct. 10, 1919, Shop Foreman, Revelstoke, B.C.; Oct. 10, 1919, to Aug. 25, 1920, Night Locomotive Foreman, Revelstoke, B.C., and from Aug. 25, 1920, Locomotive Foreman, North Bend, B.C.

Walter Box, locomotive man, G.T.R., Stratford, Ont., who retired on pension Jan. 15, after 50 years service with the company, 45 of which were spent as locomotive man. It is said that he never had an accident which cost either life or injury to passengers or train crew.

W. R. Buckberough, of the Passenger Department, C.P.R., Hong Kong, was married there recently, to Mrs. R. Meyeringh, who was given away by Thos. Monaghan, of the C.P.R. steamships' catering department.

R. A. Bush, who died at Brockville, Ont., Jan. 2, aged 96, was one of the original locomotive men on the G.T.R., between Montreal and Brockville. He was born in Belgium, came to Canada in early life, and was a veteran of the Fenian Raid.

W. W. Butler, President, Canadian Car & Foundry Co., Montreal, has been elected a director of Hattie Gold Mines, Ltd., succeeding the late John Irving, of the Nova Scotia Steel Co., whose holdings have been taken over by a Montreal syndicate, of which Mr. Butler is a member.

Harry A. Carson, who has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., Montreal, was born at Toronto, Aug. 26, 1886, and entered railway service Sept. 1, 1905, since when he has been, to July 1, 1910, in various clerical positions, District Freight Agent's office, G.T.R., Toronto; July 1, 1910, to May 1, 1912, Soliciting Freight Agent, G.T.R., Toronto; May 1, 1912, to May 25, 1917, Travelling Freight Agent, G.T.R., Toronto; May 25, 1917, to July 1, 1920, City Freight Agent, G.T.R., Montreal; July 1, 1920, to Dec. 31, 1922, City Freight Agent, Canadian National-Grand Trunk Rys., Montreal.

Lewis Carvell, financial broker, Boston, Mass., who died there suddenly, Jan. 6, was a brother of Hon. F. B. Carvell, Chief Commissioner, Board of Railway Commissioners for Canada.

F. H. Clendenning, Foreign Freight Agent, C.P.R., Vancouver, B.C., has been elected Chairman of the Pacific West-bound Conference.

George C. Cochlan, whose appointment as District Freight Agent, C.P.R., Toronto, was announced in our last issue, was born at Port Huron, Mich., Nov. 27, 1876, and entered railway service Aug. 28, 1891, since when he has been, to Sept. 30, 1895, customs and general clerk, G.T.R., Port Huron, Mich.; Oct. 1, 1895, to June 1, 1900, customs agent, G.T.R., Port Huron, Mich.; June 2, 1900, to July 1, 1902, rate inspector, Trunk Line Association, Port Huron, Mich.; July 2, 1902, to June 1, 1906, customs agent, G.T.R., Port Huron, Mich.; June 2, 1906, to Feb. 1, 1907, Travelling Freight Agent, Lackawanna and G.T.R. lines, Chicago, Ill.; Feb. 2, 1907, to Aug. 1, 1908, Import Freight Agent, C.P.R., Chicago, Ill.; Aug. 2, 1908, to Oct. 9, 1915, Export Freight Agent, C.P.R., Chicago, Ill.; Oct. 10, 1915, to Dec. 31, 1922, District Freight Agent, C.P.R., Detroit, Mich.

George Edward Costello, who has been given charge of the Passenger Department, C.P.R., at Yokohama, Japan, was born May 10, 1890, and entered

the company's service July 7, 1916, as ticket clerk and stenographer, Passenger Department, Hong Kong, China, from May, 1918, to Nov., 1920, was Passenger Agent there, and from Nov., 1920, to the date of his present appointment, General Agent, Yokohama, Japan.

J. C. Crombie, who has retired from active service, after 47 years with the G.T.R., was entertained at dinner at Toronto, Jan. 20, by a number of the company's officials, and presented with a case of pipes. He was, for a number of years, Master of Transportation, London, Ont.; from Jan., 1913, to Dec., 1921, Joint Superintendent, G.T.R. and Wabash Rd., St. Thomas, Ont., and from Dec., 1921, Special Inspector of Transportation, Ontario Lines, G.T.R., Toronto.

William Crowe, who has been appointed Locomotive Foreman, Canadian National Rys., Wainwright, Alta., was born at Fergus, Ont., June 12, 1871, and entered railway service, April 10, 1888, since when he has been, to April 16, 1891, locomotive wiper and fireman, G.T.R., Hamilton, Ont.; Nov. 19, 1892, to June 22, 1894, locomotive fireman, C.P.R., Fort William, Ont.; Aug. 3, 1894, to Oct. 31, 1896, locomotive fireman, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.; Nov. 4, 1896, to Nov. 30, 1900, locomotive fireman, C.P.R., Toronto; July 27, 1905, to May 15, 1920, locomotive fireman and locomotive man, C.P.R., Calgary, Alta.; Aug. 10, 1920, to Dec. 31, 1922, Assistant Locomotive Foreman, Canadian National Rys., Big Valley, Alta.

Arthur Crompton, Valuation Engineer, G.T.R., Montreal, read a paper on railway valuation, before the Engineering Institute of Canada, Toronto branch, on Jan. 18.

M. C. Dunn, who has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., Kingston, Ont., was born at Enterprise, Ont., Dec. 16, 1864, and entered railway service in Oct., 1888, since when he has been, to March, 1912, agent and operator, Bay of Quinte Ry., Yarker, Ont.; March, 1912, to Oct., 1920, City Freight and Passenger Agent, Canadian Northern Ry., latterly, Canadian National Rys., Kingston, Ont.; Oct., 1920, to Jan. 1, 1923, City Passenger Agent, Canadian National Rys., and City Freight Agent, Canadian National-Grand Trunk Rys., Kingston, Ont.

Maurice Fitzgerald, who has been appointed Special Representative, C.P.R., Yokohama, Japan, was born June 7, 1879, and entered the company's service Jan. 1, 1896, as clerk in the General Traffic Department, Yokohama, and from May, 1914, was Assistant to the Manager, General Traffic, there.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, has been elected a member of the Audit Bureau of Circulation's Canadian Advisory Committee.

D. B. Hanna, ex-President, Canadian National Rys., left Toronto, Jan. 22, with Mrs. and Miss Jean Hanna, for Bermuda, expecting to return to Toronto early in March.

Miss Laura Hazen, daughter of the late Wm. Hazen of St. John, N.B., and sister of H. T. Hazen, Chief Engineer, Canadian Northern Ry. lines east of Port Arthur, was married in Toronto, Jan. 10, to A. G. Dick, of Winnipeg.

Lieut.-Col. James A. Hesketh, C.M.G., D.S.O., Assistant Engineer, Western Lines, C.P.R., Winnipeg, died there, Jan.

27. He went overseas early in 1915, and had a distinguished career during the war, receiving the Military Cross and the Distinguished Service Order, and was also made a Companion of the Order of St. Michael and St. George.

Mathew Kelly, who has been appointed Division Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, was born at Thamesville, Ont., July 6, 1874, and entered railway service Aug. 1900, since when he has been, to Apr. 1902, bridge man, G.T.R., London, Ont.; May 1902 to Apr. 1905, bridge man, C.P.R., London, Ont.; May to July 1905, chain man, C.P.R., London, Ont.; Aug. 1905 to Mar. 1906, rodman, C.P.R., London, Ont.; Apr. 1906 to Apr. 1910, transit man, C.P.R., London, Ont.; May 1910 to Apr. 1911, Resident Engineer, C.P.R., Toronto; May 1911 to May 1913, Resident Engineer, C.P.R., White River, Ont.; June 1913 to June 1915, Resident Engineer, C.P.R., Brownville Jct., Me.; June 1915 to Dec. 1916, Resident Engineer, Toronto Terminals, C.P.R., Toronto; Dec. 1916 to Jan. 1, 1923, Resident Engineer and Division Engineer, consecutively, C.P.R., Farnham, Que.

L. B. Ladd, dispatcher, Canadian National Rys., Capreol, Ont., lost his life in a fire which destroyed several buildings there, Jan. 4.

W. B. Langmore, Assistant to the Secretary, Canadian National Rys., who was found in the vault in his office, with the door closed, Jan. 2, with a bullet wound in his head, believed to have been self inflicted, died at the General Hospital, Toronto, Jan. 13, aged 47. He had been on leave of absence, owing to ill health, for three months, and had just returned to duty.

W. B. Lanigan, General Freight Traffic Manager, C.P.R., is reported in a press dispatch to have stated at Regina, Jan. 26, that he would retire from the service in the near future. As stated in Canadian Railway and Marine World for Feb., 1922, Mr. Lanigan bought property in Uplands, near Victoria, some time ago, with a view of retiring there as soon as circumstances would permit, and he would probably have retired ere this but for the many pressing matters which it was desirable for him to attend to in connection with freight rate questions.

Mrs. Leitch, widow of Mr. Justice Leitch, of the Supreme Court of Ontario, and a former Chairman of the Ontario Railway and Municipal Board, died at Los Angeles, Cal., Jan. 20.

Alexander Lindsay, who died at Vancouver, B.C., Dec. 30, aged 75, is stated in a press report to have been a telegraph operator and later Traffic Superintendent at Yale, B.C., in the C.P.R.'s early days.

R. W. Lumsden, C.P.R. trainman, Smiths Falls, Ont., has been given the Royal Humane Society's medal for saving life at peril of his own on June 9, 1922, at Chesterville, Ont., when a woman fell across the track in front of a freight train, and he ran from the train, threw himself beside her and rolled her and himself to safety.

P. J. Lynch, Superintendent, Barrie Division, Ontario Lines, G.T.R., Allandale, Ont., who is on leave of absence owing to illness, is a patient at Wellesley Hospital, Toronto.

Mrs. H. C. Martin, wife of the Freight Traffic Manager, G.T.R., Montreal, died in the General Hospital there, Jan. 18.

D. W. McDonald, Assistant Superin-

tendent, Sydney & Louisburg Ry., Glace Bay, N.S., who had one of his legs badly crushed by a moving train at Victoria Jct., N.S., in November, is progressing satisfactorily. He was removed from the hospital to his home, Jan. 6. The leg has been saved, and it is anticipated that the use of it will be unimpaired.

George Merkley, until recently agent, Canadian National Rys., Brockville, Ont., died at Newboro, Ont., suddenly, Dec. 26, after 52 years of railway service. In his earlier days, he was in G.T.R. service, and served as operator and dispatcher at Gorham, N.H., and Richmond, Que., and transferred to C.P.R. service, serving as dispatcher at North Bay, Sudbury, Sault Ste. Marie, and Ottawa, Ont. He had been in C.N.R. service for about 20 years.

C. W. Milestone, at one time in the C.P.R. service, at Winnipeg and at Moose Jaw, Sask., whose death was mentioned in Canadian Railway and Marine World for January, had lived for some time previously at Yarmouth, N.S., where he died,

W. E. Weegar,
Acting Superintendent, Barrie Division, Ontario
Lines, Grand Trunk Railway.

following an operation, and nat Truro, N.S., as stated in a press report.

Charles Sedgewick Morse, whose appointment as District Freight Agent, C.P.R., Ottawa, Ont., was announced in our last issue, was born there Aug. 31, 1889, and entered C.P.R. service Mar. 1, 1906, since when he has been, to Jan. 1, 1909, stenographer, tracing clerk and export clerk, Winnipeg; Jan. 1, 1909, to Apr. 1, 1912, Travelling Freight Agent, Calgary, Alta.; Apr. 1, 1912, to July 15, 1914, District Freight Agent, Fort William, Ont.; July 15, 1914, to June 1, 1920, District Freight Agent, London, Ont.; June 1, 1920, to Jan. 1, 1923, District Freight Agent, Toronto.

Herbert James Page, who has been appointed Chief of Investigation Department, Canadian National Rys., Ottawa, Ont., was born at St. John, N.B., Sept. 25, 1871, and from 1884 to 1890, was machinist, Geo. Yates Engine Co., London, Ont.; 1890 to 1905, erecting steam

plants, E. P. Allis Engine Co., Milwaukee, Wis.; 1895 to 1899, mechanic, David Maxwell & Sons, implement manufacturers, St. Marys, Ont.; 1899 to 1902, Assistant Superintendent and Special Instructor, International Correspondence Schools, Scranton, Pa.; 1902 to 1904, mechanical expert, Continental Heat & Light Co., Montreal; 1905 to 1906, Superintendent in charge of construction, Royal Alexander Hospital, Montreal; 1906 to 1908, confidential investigator for British capitalists, reporting to Silas Carpenter, Chief of Detectives, Montreal; 1908 to 1911, Detective Inspector, Eastern Lines, C.P.R., Montreal; 1911 to 1915, Special Agent, with investigations for management, Canadian Northern Ry., Toronto, and returned to operating department, Dec. 1, 1911; 1915 to 1921, Chief Special Agent, Canadian National Rys., Toronto; Dec. 31, 1921, to Dec. 29, 1922, Superintendent of Police and Special Service Departments, Canadian National Rys., Toronto.

A. F. Phillips, who died at Stratford, Ont., Dec. 26, aged 77, was formerly station agent, G.T.R., there.

William Phillips, European Manager, Canadian National Rys., London, Eng., was expected to arrive in Canada about the end of January, on a business trip.

F. H. Phippen, K.C., and Miss Phippen, have left Toronto for a visit to Honolulu. Mrs. Phippen will join them in San Francisco early in March.

Capt. Kenneth G. Polyblank, who has been appointed District Engineer, in charge of construction, Longlac-Nakina cutoff, Canadian National Rys., Longlac, Ont., was born at Bristol, Eng., Aug. 17, 1884, and entered railway service in April, 1904, since when he has been, to Oct., 1905, in Timiskaming & Northern Ontario Ry. office, North Bay, Ont.; Oct., 1905, to Mar., 1907, in C.P.R. office, Fort William, Ont.; Mar. to Aug., 1907, rodman, Grand Trunk Pacific Ry., Fort William, Ont., Aug., 1907, to Aug., 1911, rodman, draftsman, instrument man and Resident Engineer, consecutively, National Transcontinental Ry., Kenora, Ont., and Winnipeg; Aug., 1911, to May, 1912, Resident Engineer, Canadian Northern Ry., Port Arthur, Ont.; May, 1912, to Oct., 1914, Division Engineer, Canadian Northern Ry., Port Arthur, Ont.; 1915 to 1919 in military service overseas as Captain in Canadian Engineers Light Railways Co.; July, 1919, to Jan., 1920, Resident Engineer, Canadian National Rys., Winnipeg; June to Nov., 1920, Resident Engineer, C.N.R., Hornepayne, Ont.; Nov., 1920, to Jan., 1923, District Engineer, Nipigon Division, Ontario District, C.N.R., Hornepayne, Ont.

James Rankin, who has been appointed General Agent for Japan, C.P.R., Yokohama, was born in June, 1869, and entered the company's service May 18, 1887, as clerk, General Passenger Department, Montreal, and from Nov., 1892, to Jan., 1906, was clerk at Hong Kong, China, and Kobe and Yokohama, Japan; from Jan., 1906, to Feb., 1915, Agent, Kobe, Japan, and from 1915 to the date of his present appointment, Assistant Agent at Yokohama.

Commander J. K. L. Ross, O.B.E., director, C.P.R., and Mrs. Ross, sailed from Vancouver, B.C., at the end of December, on the s.s. Empress of Russia, for Manila, to visit Mrs. Ross's sister. They expect to return to Canada during March.

Gerard Ruel, K.C., who has been appointed Vice President and General Counsel, Canadian National Rys., includ-

ing Canadian Northern, Canadian Government, Grand Trunk and Grand Trunk Pacific Rys., with office temporarily at Ottawa, Ont., was born at St. John, N.B., July 5, 1866, and studied law there, subsequently graduating in law at Harvard University, Cambridge, Mass., in 1889. He practised in St. John for a number of years, and was for some time a partner in the law firm of Blair, Ruel & Blair. From July, 1899, to Oct. 1, 1903, he was Law Clerk, Railways and Canals Department, Ottawa; from Oct. 1, 1903, to 1909, Assistant Solicitor, Canadian Northern Ry., Toronto; 1909 to Dec. 31, 1918, Chief Solicitor, Canadian Northern Ry., Toronto; Jan. 1, 1919, to Apr. 1920, Counsel, Canadian National Rys., Toronto; Apr. 1920 to Dec. 1922, General Counsel, Canadian National Rys., Toronto.

William A. B. Russell, who has been appointed Division Freight Agent, Canadian National-Grand Trunk Pacific Rys., Calgary, Alta., was born at Rednersville, Ont., Jan. 1, 1886, and entered railway service Mar. 20, 1904, since when he has been, to Apr. 30, 1904, clerk, Local Freight Department, Central Vermont Ry., St. Albans, Vt.; May 1 to Nov. 17, 1904, stenographer, General Freight Agent's office, same road, St. Albans, Vt.; Nov. 17, 1904, to Aug. 14, 1905, stenographer to General Freight Agent, same road, St. Albans, Vt.; Aug. 15, 1905, to Apr. 30, 1908, stenographer to General Freight Agent, G.T.R., Montreal; May 1 to Dec. 31, 1908, stenographer to Assistant Freight Traffic Manager, Winnipeg; Jan. 1, 1909, to Dec. 31, 1910, clerk, Freight Traffic Department, same road, Winnipeg; Jan. 1, 1911, to Dec. 31, 1915, chief clerk, Freight Traffic Department, same road, Winnipeg; Jan. 1 to Sept. 30, 1916, chief clerk to Traffic Manager, G.T.P.R., and Western Traffic Manager, Canadian Government Rys., Winnipeg; Oct. 1, 1916, to Sept. 4, 1920, Commercial Agent, G.T.P.R., Regina, Sask.; Sept. 4, 1920, to Dec. 26, 1922, Division Freight Agent, Canadian National-Grand Trunk Pacific Rys., Saskatoon, Sask.

Frank W. Thompson, who has been appointed Chairman, Canadian Car Demurrage Bureau and Canadian Freight Association, Western Lines, Winnipeg, was born at Toronto, June 14, 1873, and entered railway service in Oct., 1886, since when he has been, to 1889, apprentice, Freight Department, G.T.R., Toronto; 1890 to 1893, freight clerk, G.T.R., Toronto; 1894 to 1897, rate clerk, Division Freight Office, G.T.R., Montreal; 1898 to 1902, chief clerk, General Freight Department, Canadian Government Rys., Montreal; 1902 to 1903, rate clerk, Canadian Northern Ry., Winnipeg; May, 1903, to April, 1904, Freight Inspector, Canadian Freight Association, Winnipeg; May, 1904, to Dec., 1905, Freight Inspector, C.F.A., Port Arthur, Ont.; Jan., 1906, to April, 1907, Freight and Car Service Inspector, C.F.A., Edmonton, Alta.; May, 1909, to Nov., 1910, Freight Inspector, C.F.A., Fort William, Ont.; Dec., 1910, to Sept., 1912, Travelling Freight Inspector, C.F.A., Regina, Sask.; Oct., 1912, to Dec., 1917, Chief Freight Inspector, C.F.A., Winnipeg; Jan., 1918, to July, 1922, Assistant Secretary, C.F.A., Winnipeg; July, 1922, to Jan. 1, 1923, acting Chairman, Canadian Car Demurrage Bureau and Canadian Freight Association, Western Lines, Winnipeg.

D. H. Way, agent, Timiskaming & Northern Ontario Ry., Cobalt, Ont., died there suddenly, Jan. 11, aged 52.

Mrs. C. J. Whellams, who died at Winnipeg recently, was the mother-in-law

of A. L. Graburn, General Fuel Agent, Canadian National Rys., Toronto.

William Edwin Weegar, who has been appointed acting Superintendent, Barrie Division, Ontario Lines, G.T.R., Allandale, Ont., was born in Stormount County, Ont., Dec. 17, 1870, and entered G.T.R. service Nov. 17, 1888, since when he has been, to 1899, freight brakeman, District 5, Montreal Division; 1899 to 1913, freight and passenger conductor, same district; 1913 to 1918, Trainmaster, Eastern Lines; 1918 to Jan. 8, 1923, Trainmaster, Ottawa Division, Eastern Lines, Ottawa, Ont.

W. H. Winterrowd, who has been appointed Assistant to President, Lima Locomotive Works, with office at New York, N.Y., was born at Hope, Ind., Apr. 2, 1884, and educated at Shelbyville, Ind., and Purdue University, whence he graduated with the degree of B.S. in 1907. He entered railway service in 1905, since when he has been, to 1906, blacksmith's helper, Lake Erie & Western Ry., Lima,

Ohio; 1906 to 1907, air brake and car repair man, Western Lines, Pennsylvania Rd., Dennison, Ohio; 1907 to 1908, special apprentice, Lake Shore & Michigan Southern Ry., Elkhart, Ind.; 1908 to 1909, Roundhouse Foreman, Lake Erie, Alliance & Wheeling Ry., Alliance, Ohio; 1909 to 1910, Night Roundhouse Foreman, Lake Shore & Michigan Southern Ry., Youngstown, Ohio; 1910, Roundhouse Foreman, same road, Cleveland, Ohio; 1910 to Sept., 1912, Assistant to Mechanical Engineer, same road, Cleveland, Ohio; Sept., 1912, to May, 1915, Mechanical Engineer, Angus locomotive shops, C.P.R., Montreal; May, 1915, to Apr. 1, 1918, Assistant to Chief Mechanical Engineer, C.P.R., Montreal; from Apr. 1, 1918, Chief Mechanical Engineer, Montreal. He is a member of the general committee, American Railway Association, Mechanical Division, and is also a member of the executive committee, of which he was Vice Chairman last year.

Canadian National Railways Construction, Betterments, Etc.

Dominion Atlantic Ry. Connection.—Referring to the Board of Railway Commissioners' order as to the connection between the Halifax and South Western Ry. and the Dominion Atlantic Ry. at Middleton Jct., quoted in Canadian Railway and Marine World for January, on pg. 11, we are officially advised that the proposed change will probably not be made until the diamond crossing, which is to be eliminated, is worn out.

Dorchester St. Stairway, Montreal.—The Canadian Northern Ry. has built an iron stairway from Dorchester St., Montreal, to the platform of the tunnel terminal station, to give more convenient access between the station and the street car line on Dorchester St. The surface of Dorchester St. bridge is 49 ft. above the C.N.R. tracks. The total length of the stairway overall is 114½ ft., consisting of a series of steps and landings. The length of the top landing at the level of Dorchester St. is 9 ft. Each of the other 5 landings is 5 ft. 1 in. long. There are 6 flights of steps, the lower being 11 ft. 10 in. long, and each of the others 13¾ ft. long. The clear width between railings is 6 ft., and the width of the ornamental portal at Dorchester St. entrance is the same. At this portal there is a collapsible steel gate, which, when open, is entirely out of the way. The width of each tread in the stairway is 11 in. and each rise is 6 7/16 in. Mason treads, on 5/16 in. plate, are used throughout. The stairway is carried on towers, the tops of the towers forming the landings, and the steps are carried on steel stringers between the towers. The towers are of steel, the posts being formed of angles, and cross bracing is of lateral angles. All connections are rivetted. Posts are founded on concrete pedestals, which in turn rest on solid rock. Along each side of the stairway there is corrugated galvanized iron to a height of 4 ft., the upper portion on each side being left open. The top is covered with a corrugated galvanized iron roof. The distance between framing on the stairway is 7¼ ft. There is a wooden hand rail on each side.

Napanee Connection and Station.—Both the Canadian Northern and the Grand Trunk had stations at Napanee, Ont. One of the first results of co-ordination was an arrangement for both lines to use the G.T.R. station. This

necessitated some re-arrangement of tracks, and to enable Canadian Northern trains to reach the station, that company in 1921 built a connection south of the G.T.R., approximately 1,200 ft. long, which leaves the C.N.R. approximately 465 ft. south of the diamond crossing of the C.N.R. and G.T.R. main lines, and joins the G.T.R. about 820 ft. east of the diamond crossing. In 1922 the C.N.R. graded another connection, leaving the G.T.R. about 1,660 ft. east of the diamond crossing, running north approximately 3,751 ft. and joining the C.N.R. about 4,300 ft. north of the diamond. Track will be laid on this connection this year and as soon as this is done the C.N.R. will be able to abandon the diamond crossing and use the two connections as parts of its main line.

Relaying Steel on Western Lines.—During 1922, 338.93 miles of heavy steel rails were laid to replace lighter ones, of which 305.83 miles were laid with 85 lb. rails and 33.1 miles with 80 lb. rails, as follows: Graham, Quibell and Kasha-bowie Subdivision, Ont., 35.14 miles of 85 lb.; Sprague Subdivision, Minnesota, 8.20 miles of 85 lb.; Minaki, Gladstone, Pleasant Point, Harte, Maryfield and Togo Subdivisions, Man., 211.99 miles of 85 lb.; Maryfield Subdivision, Sask., 50.50 miles, 85 lb.; Craik Subdivision, Sask., 26.6 miles, 80 lb.; Vegreville and Battle River Subdivisions, Alta., 6.5 miles, 80 lb.

Leon Revised Location.—The Board of Railway Commissioners has approved revised location plans for the Canadian Northern Ry. line between miles 72.06 and 72.74, near Leon, Man. Leon is on the line from Portage la Prairie to Brandon, etc.

Brazeau Subdivision Bridge.—We are officially advised that the Jamieson Construction Co., Edmonton, Alta., has been given a contract for the excavation of a rock cut of approximately 19,000 cubic yards adjoining the bridge at mile 157.3, Brazeau Subdivision, Alberta District, and the placing of the material excavated to form a rock dyke across the adjoining ravine.

Kamloops Interswitching Plans.—A press report states that plans prepared by the C.N.R. Engineer's Department, for interswitching facilities with the C.P.R. at Kamloops, B.C., are under consideration by the city's engineer. (Jan., pg. 11.)

Sir Henry Thornton's Western Inspection Trip.

Sir Henry Thornton, President, Canadian National Rys., left Ottawa Jan. 6 for an inspection of the Western Lines, going through to Victoria, B.C., and returning to Ottawa on Jan. 28. He was accompanied throughout the trip by Major Graham A. Bell, Deputy Minister of Railways and Canals, and Vice President, Canadian National Rys.; by the following C.N.R. officials: S. J. Hungerford, Vice President and General Manager; M. H. MacLeod, Vice President of Construction; C. A. Hayes, Vice President, Traffic; E. E. Fairweather, Assistant General Counsel; F. J. Buller, Assistant Treasurer; C. B. Brown, Engineering Assistant to Vice President, Operation and Maintenance; C. S. Gzowski, Assistant to Vice President, Construction Department; and by the following G.T.R. officers: J. E. Dalrymple, Vice President, Traffic; C. G. Bowker, Operating Manager. W. S. Thompson, Publicity Agent, G.T.R., also accompanied the party. Walter Pratt, Manager, Sleeping, Dining and Parlor Cars and Hotels, C.N.R., went west from Port Arthur. F. G. Dawson, of Prince Rupert, B.C., one of the directors, joined Sir Henry at Winnipeg, and went west with him. R. P. Ormsby, Secretary, C.N.R., met him at Vancouver, and returned part of the way with him. The following C.N.R. Eastern Lines' official went as far as Port Arthur, Ont.: W. A. Kingsland, General Manager; L. S. Brown, Assistant General Manager; W. U. Appleton, General Superintendent of Rolling Stock, and T. C. Hudson, General Master Mechanic. At Port Arthur Sir Henry was met by the following Western Lines' officials: A. E. Warren, General Manager; H. H. Brewer, Assistant General Manager; R. H. M. Temple, General Solicitor; A. H. Eager, General Superintendent of Rolling Stock; A. McCowan, Master Car Builder; W. G. Manders, Assistant Freight Traffic Manager; and R. Creelman, Assistant Passenger Traffic Manager, who accompanied him on the trip over the Western Lines. The general superintendents of the Ontario, Manitoba, Saskatchewan and Alberta Districts, and the Assistant General Manager of the British Columbia District, with their chief officials, travelled with the special train over their respective districts, and the superintendents and other divisional officials similarly went over their respective divisions. General Manager Kingsland, of the Eastern Lines, met Sir Henry at Armstrong, Ont., on the return trip, and accompanied him east. The President's special train was composed as follows, from the rear to the front: Compartment observation car, Fort William; Dominion Government official car, 101; G.T.R. business cars, Ontario and Canada; C.N.R. business cars, 51 and 53; baggage car. The general managers' business cars were attached to the train over their respective jurisdictions and the general superintendents' business cars were attached over their respective districts.

The special train, which left Ottawa on Jan. 6, at 10 p.m., was routed over the Canadian Northern Ry. for Winnipeg. Stops of only a few minutes were made at the divisional points, North Bay, Capreol, Folyet and Hornepayne, and Port Arthur was reached on Jan. 8 at 9 a.m. Throughout the whole trip, the terminals, etc., at the various points at which lengthened stops were made were thoroughly inspected, and a num-

ber of luncheons and dinners tendered by public bodies were attended by Sir Henry and his party, at most of which he spoke. The following notes of the occurrences at the various places are compiled from press reports:—

Port Arthur and Fort William, Jan. 8.—Inspection of grain elevators, terminals and industrial plants at Port Arthur in the morning. Fort William Canadian Club luncheon at noon. Inspection of Fort William terminals in afternoon. Port Arthur Chamber of Commerce dinner in evening, at which Sir Henry urged the two cities to amalgamate.

Winnipeg.—Arriving Jan. 9, about 10.30 a.m., the balance of the morning was spent going over the general offices, station building, etc., followed by luncheon at the Fort Garry Hotel, at which a member of the Western Lines' officials, not in the travelling party, were present. Afternoon, inspection of Winnipeg terminals, Fort Rouge and Transcona shops. Evening, dinner given by James Stewart, one of the C.N.R. directors, at Fort Garry Hotel, attended by a number of politicians and business men, the speakers being Mr. Stewart; Sir Henry Thornton; Premier Bracken, of Manitoba, who urged the speedy completion of the Hudson Bay Ry.; Premier Dunning, of Saskatchewan; Hon. T. A. Crerar, M.P.; and Hon. George Langley. Jan. 10.—Noon, Canadian Club luncheon; evening, dinner at Government House.

Brandon, Man.—Winnipeg was left on Jan. 11 at 9 a.m., Brandon being reached at 2 p.m. The local offices were visited. Sir Henry addressed a public meeting, and also the United Farmers' convention, leaving at 5 p.m.

Regina, Sask., was reached early on Jan. 12. A Weyburn deputation asked for an extension to be built southwest, to connect Weyburn with the Radville line, and several other delegations were received, one asking for the linking up of the C.N.R. with the C.P.R. at Northgate, and others asking for various branch lines and for the completion of the Hudson Bay Ry. Sir Henry had a conference with the Saskatchewan Government, at the Legislative Buildings, regarding the branch line programme for the province, and then met the city council at the city hall, when the Mayor referred to the unfulfilled agreement between the Grand Trunk Pacific Ry. and the city, respecting station and hotel buildings and freight terminals, Sir Henry replying that he did not think it would be possible to carry out the agreement in its entirety. After a luncheon by the Canadian club and the Regina Board of Trade, representatives of associated boards of trade were met; Regina being left at 3 p.m.

Moose Jaw, Sask., was reached on Jan. 12, at 4.30 p.m., after Sir Henry had seen a deputation from Swift Current asking for improvements in its transportation situation. The Moose Jaw terminals were inspected, the board of trade was met, and a civic dinner was attended, the party being entertained afterwards at the Prairie Club, and leaving at 9.30 p.m. for Saskatoon.

Saskatoon, Sask., was reached on Jan. 13, at 9.30 a.m., the whole day being spent there, and was left on Jan. 14 at 1 a.m., via Drumheller, where half an hour was spent, Calgary being reached at 7.30 p.m.

Calgary, Alta., Jan. 15.—Several delegations of farmers were received, asking

for construction of branch lines, Sir Henry explaining that only a certain amount of money would be available, and that the policy would be to collect all the information possible and to render assistance where relief was needed most urgently. It was not proposed to adopt a dog in the manger policy, or to try to keep out the C.P.R., if the latter was prepared to afford a measure of relief. The mayor and council urged the providing of a union station for both the C.P.R. and the C.N.R., but were told that this was too expensive a project for the present, and that there would be a consolidation of traffic between the Canadian Northern and the Grand Trunk Pacific lines. A board of trade luncheon was attended at the Palliser Hotel, over 500 being present. The question of shipping Alberta grain via Vancouver was discussed, Sir Henry stating that the C.N.R. could not undertake to build elevators at Vancouver, which must be left to private enterprise.

Edmonton, Alta., was reached on Jan. 16, at 1.30 a.m. The terminals were inspected, and a city council delegation urged the construction of subways, a new station, and other improvements, which Sir Henry stated could not be undertaken this year. A deputation headed by the Alberta Coal Commissioner asked a reduction in coal rates for train lots to eastern Canada. A deputation headed by D. M. Kennedy, M.P., for Edmonton West, asked for the building of a branch line from Brule to Grand Prairie, about 150 miles. Hon. Vernon Smith, Alberta Minister of Railways, headed a deputation asking for the reopening of work on the S line, on which some construction was done a few years ago. At a dinner at the Hotel Macdonald, Attorney General Brownlee welcomed Sir Henry, who referred to the board of trade's resolution urging the building of grain elevators at Vancouver, and confirmed what he had said at Calgary, that the work must be left to private enterprise. Edmonton was left at 10.30 p.m. for the Pacific coast, the train staying at Jasper, B.C., on Jan. 17, from 6.30 to 8 a.m., the next stop being at Kamloops, B.C., from 8 to 8.15 p.m., Vancouver being reached on Jan. 18 at 7 a.m.

Vancouver, Jan. 18.—The terminals, offices, etc., were inspected. The mayor and members of the city council were reported to have been told that the site on which the C.N.R. station stands and the ground surrounding it will be improved, and that a permanent highway will be built through the False Creek property, as a continuation of Terminal Ave. A request for construction of grain elevators was given the same answer as at Calgary and Edmonton. Strong representations were made in favor of the removal of the floating drydock from Prince Rupert to Vancouver. A dinner given by the board of trade at the Hotel Vancouver was attended by over 600. Sir Henry referred to the demand for grain freight rates from prairie province points to the coast, in proportion to east-bound rates from the same points according to distance, and said every consideration would be given to the representations. Before leaving Vancouver, he was presented with a report on Vancouver Island resources, prepared by the Victoria Chamber of Commerce, which sent a delegation across to meet him.

Victoria, B.C., was reached early Jan.

19. Starting at 6.30 a.m., Sir Henry walked about the city, including the ocean wharf; played his first game of golf in Canada with J. Wilson, Captain of the Victoria Golf Club, against Hon. T. D. Patullo, B.C. Minister of Public Works, and A. T. Goward, Local Manager, B.C. Electric Ry., afterwards attending a chamber of commerce luncheon, which was followed by conferences with the B.C. Minister of Railways, and with the chamber of commerce, the latter in regard to harbor and terminal facilities, the necessity for a grain elevator and the development of the lumber industry. An Esquimalt deputation urged the development of the area contiguous to Lyall St., by providing communication with the outer docks. The Lieutenant Governor gave a dinner, and Victoria was left at night for Vancouver.

Vancouver, Jan. 20.—Conferences were held with the harbor commissioners in regard to general plans of harbor development in conjunction with the railway system; with delegations from North Vancouver, South Vancouver, New Westminster, and Burnaby; on the grain situation, with R. H. Gale and M. A. Macdonald. The Canadian club gave a luncheon.

Vancouver was left on the eastward return journey on Jan. 21 at 9 a.m. A 15 minutes stop was made at Kamloops, and Jasper was reached on Jan. 22 at 8.30 a.m., a stop being made till 4 p.m. Sir Henry went through Jasper Park, under the Superintendent's guidance, first proceeding towards the base of Pyramid Mountain, and seeing several herds of elk. The Athabasca River was crossed to Lac Beauvert, where the extension being made to Jasper Park Lodge, and which will give a total accommodation for 125 guests, was inspected. Buffalo Park, Wainwright, was then visited. Edmonton was passed through on Jan. 23 early in the morning. A stop was made at North Battleford, from 4.30 to 5.30, and Prince Albert was reached at 11 p.m., being left again on Jan. 24

train proceeding over the National Transcontinental Ry., via Cochrane, La Tuque, Hervey Jct., Grand Mere, Shawinigan Falls, and Joliette, to Ottawa, which was reached on Jan. 28 at 8 p.m.

Sir Henry's speeches at the various luncheons and dinners, which were reported pretty fully in western papers, covered a wide range of subjects, some of the principal topics being the necessity for a vigorous immigration policy; the want of more business over the C.N.R. to wipe out the deficits; the policy

in regard to the building of branch lines; and a promise to give grain rates earnest consideration. He paid a warm tribute to his predecessor, D. B. Hanna, and the excellent staff of officials the latter had built up, and explained his reason for rescinding the no politics order with regard to employees becoming candidates for parliament or legislatures. He received an enthusiastic reception at every place visited, and undoubtedly created a most favorable impression.

Steel Pit Flat Cars and Depressed Center Flat Cars, Canadian Pacific Railway.

Canadian Railway and Marine World for April, 1922, gave some details of the 3 depressed center flat cars built for the C.P.R. by Canadian Car & Foundry Co., Montreal, together with an illustration of one of them. A side elevation is given herewith. Their chief dimensions are as follows:

Length over striking castings.....	43 ft.
Length over end sills.....	42 ft. 3 in.
Length of depressed platform portion.....	18 ft. 6 in.
Width over stake pockets.....	9 ft. 11 1/4 in.
Width over side sill web.....	9 ft.
Height, top of rail to top of floor plate at ends.....	3 ft. 5 1/2 in.
Height, top of rail to top of floor plate at center.....	2 ft. 4 in.

These cars are designed for transportation of large machinery, the depressed center permitting a taller load to be carried within clearance limits of bridges, tunnels, etc. Details of the underframing, flooring, trucks, air brake equipment, etc., were given in the article in the April number.

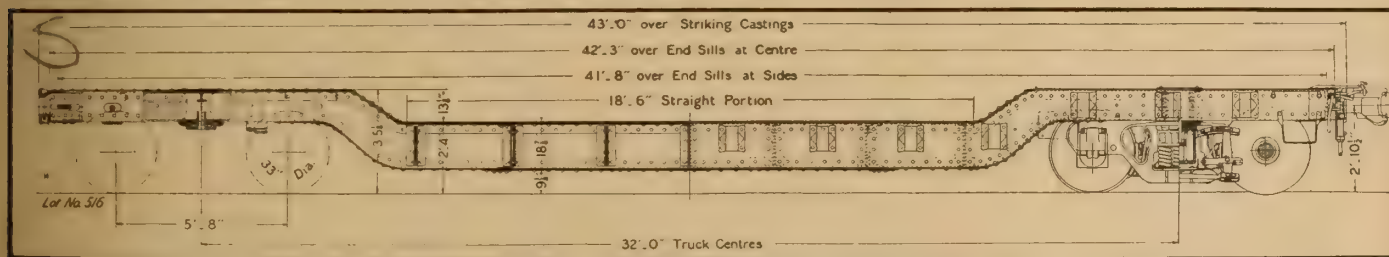

The C.P.R. also had 5 pit flat cars built by Canadian Car & Foundry Co., a side elevation of one of which is given herewith. Their chief dimensions are as follows:—

Length over striking castings.....	37 ft. 6 in.
Length over end sills.....	36 ft. 9 in.
Width over flooring.....	10 ft. 3/4 in.
Height, top rail to top of floor.....	3 ft. 11 1/2 in.

with 3/8 in. top cover plate, 5/8 in. bottom cover plate and 3/8-in. diaphragms. The end sills are 10 in. channels.

The 4-wheel trucks are equipped with A.R.A. axles, the axle capacity, in accordance with the latest A.R.A. recommendations, being 210,000 lb. The journals are 6 x 11 in. Air brakes are Westinghouse K.D. 812 double equipment and A.R.A. standard no. 3 brake beams, with Creco 4-point support, are used. The cars are equipped with cast steel center plates, A.R.A. type D couplers, XL forged steel coupler yokes, Cardwell friction draft gear class G-25-A, Ureco drop type hand brakes and Western angle cock holders. When the pit is not in use, temporary covers are placed over it, allowing the car to be used as a flat car. When the pit is in use, these covers are stored at the ends of the car. The tare weight of each of the cars is 47,800 lb., and maximum capacity 162,200 lb.

The Canadian Industrial Traffic League and the Transportation Club of Toronto, held a joint dinner on Jan. 10. The League's President, W. R. Dickie, of Imperial Oil, Ltd., presided. J. H. Beek, Executive Secretary, National Industrial Traffic League, Chicago, gave a very

Depressed Center Flat Car, Canadian Pacific Railway.

Pit Flat Car, Canadian Pacific Railway.

at 10 a.m. At the hour of Hon. W. C. Kennedy's funeral, the train was stopped for a few minutes, during which Sir Henry addressed the other members of the party, who had assembled in the observation car, and referred feelingly to the Minister's death.

Winnipeg was reached again on Jan. 25 at 6 a.m., the principal feature of the visit being a dinner given by the board of trade, at the Fort Garry Hotel. Winnipeg was left on Jan. 26 at 9 a.m., the

The underframing consists of box girder side sills, fish belly type, each consisting of 3/8 in. web plates, two 4 x 4 x 5/8 in. top angles, four 4 x 4 x 1/2 in. bottom angles, and one 3/8-in. top cover plate; built up center sills, with 3 1/2 x 3 1/2 x 5/16 in. top angles, 5 x 5 x 1/2 in. bottom angles, 1/4 in. top cover plate and 1/2 in. bottom cover plate. The center sill runs from end sill to edge of pit in the floor of the car, 4 ft. behind the body bolster. The body bolsters are built up

interesting address on traffic matters, and the relations which should exist between the shippers and the railways.

Sir Henry Thornton, President, Canadian National Rys., will address the Toronto Canadian Club on Feb. 12. He has been asked to speak before the Buffalo, N.Y., Canadian Club, the members of which want to interest him in the proposed enlargement of the G.T.R. international railway bridge between Bridgeburg and Buffalo.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 373, Dec. 30.—Rescinding general order 372, Nov. 24, 1922, relieving railway companies, until further order, from complying with requirements of par. 3 of general order 326, re exchange surcharge on all international shipments, other than coal and coke.

General Order 374, Jan. 16.—Amending general order 370, re rule 33 of General Train and Interlocking Rules, by striking out last sentence and substituting, "Where gates are provided, a red light must be displayed by night. In both cases such light shall be hooded so as to show along the highway only."

33,207, Dec. 11.—Ordering New York Central Rd. to continue train 25 between Valleyfield and Montreal, and to provide train service from Montreal to Valleyfield, Que.

33,208, Dec. 11.—Approving plan showing revision of north home signal on G.T.R. at interlocking plant protecting crossing of G.T.R. and Grand River Ry., at Dundas St., Galt, Ont.

33,209, Dec. 9.—Relieving Canadian National Rys. from providing fencing, gates and cattle guards, on certain mileage on its Dorion Subdivision, Ont.

33,210, Dec. 11.—Authorizing New York Central Rd. to use on its locomotives a double crimped wire netting, the mesh of which shall not be larger than 3/16 in. wide and 3/4 in. long.

33,211, Dec. 9.—Ordering Canadian National Rys. to regrade approaches up to 5% grade at crossing at Dauphin, Man.

33,212, Dec. 9.—Ordering Canadian National Rys. to provide fencing on its Swan River-Prince Albert line opposite William Edwards' farm, Bowsman River, Man.

33,213, Dec. 11.—Approving plan showing changes in interlocking plant at crossing of G.T.R. by Michigan Central Rd. at Appin, Ont.

33,214, Dec. 7.—Rescinding orders 30,886 and 31,636, Apr. 11 and Oct. 8, 1921, respectively, authorizing spur for Merchants Grain Co., Fort William, Ont.

33,215, Dec. 13.—Declaring that for the present Canadian National Rys. crossing of Chevrier Boulevard, Fort Garry rural municipality, near Portage Jct., Man., is protected to Board's satisfaction.

33,216, Dec. 13.—Authorizing G.T.R. to operate over spur and extension to Ontario Fertilizers, Ltd., siding in York Tp., Ont.

33,217, Dec. 13.—Authorizing G.T.R. to build spur for Canadian National Express Co., Toronto.

33,218, Dec. 7.—Approving erection of gates at Michigan Central Rd. crossing at Furncoal Road, Rodney, Ont.

33,219, Dec. 13.—Authorizing G.T.R. to use overhead bridge carrying John St., Paris, Ont., over its tracks.

33,220, Dec. 13.—Amending order 32,909, Sept. 27, 1922, requiring that Quebec Central Ry. gasoline cars be equipped with air brakes by Dec. 15, 1922.

33,221, Dec. 14.—Authorizing C.P.R. to build spur for Ford Motor Co. of Canada, Calgary, Alta.

33,222, Dec. 14.—Declaring that for the present Canadian National Rys. crossing near Lac aux Sables, Que., is protected to Board's satisfaction.

33,223, Dec. 14.—Declaring that for the present C.P.R. crossing near Simpson station, Sask., is protected to Board's satisfaction.

33,224, Dec. 15.—Authorizing C.P.R. to use bridge 8.6, Teeswater Subdivision, Ontario District.

33,225, Dec. 16.—Authorizing Canadian Northern Ry. to cross highway and divert creek at mile 47.9, Athabasca and Edmonton Subdivisions, between Secs. 15 and 16, Tp. 61, Range 24, West 4th Meridian, Alta.

33,226, Dec. 7.—Ordering Canadian National Rys. to erect standard shelter and platform at Carillon, Que., by May 1, 1923.

33,227 to 33,230, Dec. 15.—Approving Bell Telephone Co. agreements with Goderich Telephone Co., and Colborne Tp. Municipal Telephone System, Huron county, Ont.; Euphrasia Tp. Municipal Telephone System, Grey county, Ont., and Chapeau Rural Telephone Co., Pontiac county, Que.

33,231, Dec. 18.—Declaring that for the present, C.P.R. crossing east of Rock Forest station, Que., is protected to Board's satisfaction.

33,232, Dec. 18.—Declaring that for the present, the Canadian National Rys. crossing at Wadena station, Sask., is protected to Board's satisfaction.

33,233, Dec. 19.—Authorizing C.P.R. to open for traffic, portion of its Weyburn-Lethbridge line from mile 214.2 to 251.04.

33,234, Dec. 18.—Authorizing Niagara, St. Catharines & Toronto Ry. to divert its line slightly and extend it, on Great Western St., St. Catharines, Ont.

33,235, Dec. 19.—Ordering C.P.R. to build shallow box culvert 30 ft. long, 18 in. deep, and 3 ft. wide, at Duval, Sask.

33,236, Dec. 19.—Authorizing G.T.R. to build spur for Charcoal Fuel Co., Kearney, Ont.

33,237, Dec. 19.—Authorizing Canadian Northern Ontario Ry. to build spur for Jas. McCreary & Son, Bethnal, Ont.

33,238, Dec. 19.—Authorizing Canadian Northern Ontario Ry. to build spur for Western Stevedore Co., at mile 2.95, Dorion Subdivision, Ont.

33,239, Dec. 26.—Declaring that for the present, Canadian National Rys. crossing near Grand Mere station, Que., is protected to Board's satisfaction.

33,240, Dec. 30.—Declaring that for the present, C.P.R. crossing west of Lytton station, B.C., is protected to Board's satisfaction.

33,241, Dec. 26.—Declaring that for the present the Michigan Central Rd. crossing west of Hawtree station, Ont., is protected to Board's satisfaction.

33,242, Dec. 18.—Authorizing Michigan Central Rd., at G.T.R. expense, to change westbound home signal from lower to upper quadrant, and remove eastbound home signal to a position adjacent to main track, all on G.T.R. at Canfield Jct., Ont.

33,243, Dec. 26.—Approving revised Canadian Northern Ry. location between miles 72.06 and 72.74, near Leon, Man.

33,244, Dec. 26.—Approving agreement between Bell Telephone Co. and Humphrey Tp. Telephone System, Parry Sound District, Ont.

33,245, Dec. 26.—Rescinding orders 15,286 and 15,386, March 15, 1910, and Nov. 14, 1911, respectively, prescribing rates to be charged by G.T.R. and Michigan Central Rd. on binder twine.

33,246, Dec. 26.—Relieving Canadian National Rys. from erecting fences on Main St., inside station grounds, at Ribstone, Alta.

33,247, Dec. 26.—Authorizing Quebec Highways Department to make highway crossing over C.P.R. at Lac Sagauy.

33,248, Dec. 26.—Approving C.P.R. and Ottawa & New York Ry. timetables, effective Oct. 1, 1922, showing train service at Finch, Ont.

33,249, Dec. 26.—Approving Canadian National Rys. plan of interlocking plant to be installed at crossing of Grand Trunk Pacific Ry. in n.w. 1/4 Sec. 14, Tp. 53, Range 24, West 4th Meridian, Edmonton (East), Alta.

33,250, Dec. 28.—Approving agreement between Bell Telephone Co. and South Malahide Telephone Co., Elgin county, Ont.

33,251, Jan. 2.—Amending order 16,194, March 28, 1912, authorizing British Columbia Government to carry Park Ave. across C.P.R. in Slokan City, by adding that the cost of maintenance be paid by the city.

33,252, Dec. 30.—Authorizing Alberta Public Works Department to make highway crossing over Grand Trunk Pacific Ry. in s.w. 1/4 Sec. 3, Tp. 54, Range 16, west 5th Meridian.

33,253, Jan. 2, 1923.—Declaring that for the present the C.P.R. crossing near Florenceville, N.B., is protected to Board's satisfaction.

33,254, Dec. 29, 1922.—Approving agreement between Bell Telephone Co. and North Renfrew Telephone Co., Renfrew county, Ont.

33,255, Jan. 2, 1923.—Declaring that for the present the G.T.R. crossing near Kingston Jct., Ont., is protected to Board's satisfaction.

33,256, Dec. 20, 1922.—Approving agreement between Bell Telephone Co. and St. Angele de Laval Rural Telephone Co., Nicolet county, Que.

33,257, Jan. 2, 1923.—Declaring that for the present C.P.R. crossing near Swift Current station, Sask., is protected to Board's satisfaction.

33,258, Jan. 2.—Approving plan showing change in method of operating bell at C.P.R. and Grand River Ry. crossing over Beverly and Dundas Sts., Galt, Ont.

33,259, Jan. 3.—Authorizing C.P.R. to build spur for Automatic Sprinkler Co. of Canada, Montreal.

33,260, Jan. 3.—Authorizing C.P.R. to build revision of spur for McGillivray Creek Coal & Coke Co., Coleman, Alta.

33,261, Dec. 28.—Declaring that for the present the G.T.R. crossing near Marshville station, Ont., is protected to Board's satisfaction.

33,262, Jan. 4.—Dismissing application of United Farmers of Alberta, Juncos, Alta., for order requiring Canadian National Rys. to provide loading spur on n.e. 1/4 Sec. 26, Tp. 53, Range 10, west 5th Meridian, Alta.

33,263, Jan. 5.—Dismissing complaint of Nova Scotia Shippers' Association against rates charged by Dominion Atlantic Ry. on apples in carloads to Halifax, for export.

33,264, Jan. 3.—Authorizing C.P.R. to build spur for St. Maurice Lumber Co., St. Francois Xavier de Batiscan Parish, Que.

33,265, Jan. 8.—Amending order 33,211, Dec. 9, 1922, requiring Canadian National Rys. to regrade approaches up to 5% at crossing of highway, by showing location of crossing as between Secs. 22 and 27, Tp. 30, Range 3, Ross Jct., instead of Dauphin, Sask.

33,266, Jan. 5.—Declaring that for the present the G.T.R. crossing near Brookfield, Ont., is protected to Board's satisfaction.

33,267, Jan. 9.—Ordering Kettle Valley Ry. to fence gap on its right of way, north side, between miles 29.5 and 35, and on south side, between miles

29.5 and 34, by May 1.

33,268, Jan. 8.—Declaring that for the present, Canadian National Rys. crossing near Lyalta, Alta., is protected to Board's satisfaction.

33,269, Jan. 3.—Recommending to Governor in Council for sanction, agreement between G.T.R. and C.P.R., re joint use of Brockville passenger station, Ont.

33,270, Jan. 9.—Approving agreement between Bell Telephone Co. and Gore Mutual Telephone Co., Essex county, Ont.

33,271, Jan. 11.—Declaring that for the present, Canadian National Rys. crossing, 10 poles west of mile 663, Blackfoot Subdivision, Alta., is protected to Board's satisfaction.

33,272, Jan. 13.—Declaring that for the present, Lake Erie & Northern Ry. crossing at Waterford, Ont., is protected to Board's satisfaction.

33,273, Jan. 13.—Authorizing C.P.R. to build spur for A. MacDonald & Co., near Galloway, B.C.

33,274, Jan. 13.—Authorizing British Columbia Public Works Department to make highway crossing over Great Northern Ry. at Cawston, B.C.

33,275, Jan. 13.—Authorizing City of Stratford, Ont., to make highway crossing over G.T.R. at Delamere Ave.

33,276, Jan. 15.—Authorizing Canadian Northern Ry. to build spur for Newcast Coal Co., Drumheller, Alta.

33,277, Jan. 17.—Approving agreement between Bell Telephone Co., and South Colchester Telephone Co., Essex county, Ont.

33,278, Jan. 4.—Ordering Grand Trunk Pacific Ry. to repair fencing on right of way near Viking, Alta., between miles 715 and 716, south side, by May 1.

33,279, Jan. 3.—Approving specifications and plans of Simon Collran award drain and the Ferry award drain, Caledonia Tp., Ont., where same cross Central Ry. of Canada.

33,280, Jan. 18.—Declaring that for the present, C.P.R. crossing near St. Thomas, Ont., mile 30.3, St. Thomas Subdivision, is protected to Board's satisfaction.

33,281, Jan. 16.—Approving plan showing automatic signal protection for gauntlet track at Port Robinson, Ont., and authorizing G.T.R. to operate over said section without first stopping.

33,282, Jan. 3.—Relieving C.P.R. from maintaining speed restrictions of 15 miles an hour between miles 6.5 and 12.34, Manitoba and North Western Ry.

33,283, Jan. 16.—Approving revision of Canadian Northern Ry., miles 32.41 to 38.42, Kasha-bowie Subdivision, near Mokomon, Ont.

33,284, Jan. 8.—Ordering C.P.R. to build subway at Julien's crossing, about 1/2 mile east of station at Pont Rouge, Que.

33,285, Jan. 5.—Dismissing application of L'Enfant Jesus Parish, Beauce county, Que., for authority to make highway crossing over Quebec Central Ry., which would lead to Vallee Jct. station.

33,286, Jan. 8.—Authorizing Quebec Ry., Light, Heat & Power Co. to build across Canadian National Rys. at Beauport Road, Limoilou, Que.

33,287, Jan. 18.—Declaring that for the present, the second crossing east of Port Credit, Ont., over G.T.R., is protected to Board's satisfaction.

33,288, Jan. 13.—Declaring that for the present, the Brantford & Hamilton Electric Ry. crossing of Trinity Road, between Alberton and Summit, Ont., is protected to Board's satisfaction.

33,289, Jan. 18.—Approving Canadian National Rys' clearances at locomotive house doors and coaling plant at Longue Pointe, Que.

33,290, Jan. 15.—Approving plan of interlocking plant to be installed at crossing of C.P.R. and Canadian National Rys. at Hurdman, Ont.

33,291, Jan. 18.—Authorizing G.T.R. to divert public road between Lots 1 and 2, Con. 1, Waterloo Tp., Ont., to connect with concession road between Broken Front Con. 1 and Con. 1.

33,292, Jan. 18.—Extending to Feb. 15, time within which C.P.R. may complete station building at Superb, Sask.

33,293, Jan. 13.—Declaring that for the present, first crossing north of Essondale station, B.C., over C.P.R., is protected to Board's satisfaction.

33,294, Jan. 20.—Approving and authorizing clearances at bridges joining buildings of Durant Motors of Canada, Leaside, Ont.

33,295, Jan. 20.—Recommending to Governor in Council for sanction, agreement between B. C. Telephone Co., Ltd., and B. C. Telephone Co., providing for transfer of the former's undertaking, etc., to the latter.

33,296, Jan. 18.—Approving detail plan showing interchange track between Canadian National Rys. and C.P.R. at Kamloops, B.C.

33,297, Jan. 19.—Authorizing G.T.R. to build spur for Muskoka Wood Mfg. Co., at Huntsville, Ont.

33,298, Jan. 19.—Approving plan showing location of dyke and stop-gap on Canadian National Rys. right of way, mile 74, at Fraser River and Atcheltz Dyke crossings, Sumas Dyking District, B.C.

33,299, Jan. 19.—Ordering C.P.R. to maintain speed restriction of 10 miles an hour at crossing at St. Stephen, N.B., crossing to be protected by flagman at C.P.R. expense, during the four days of the annual exhibition.

Canadian Railway AND Marine World

ESTABLISHED 1898.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Canadian National Newspapers and
Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, FEBRUARY, 1923.

The Pacific Grain Route.

British Columbia people are deter-
mined to make Vancouver a port of im-
portance in handling Canadian prairie
grain on its way to Europe, and are
strongly advocating, first, enlargement
of elevator capacity at the port, and, sec-
ond, reduction of rail rates on grain
from prairie province points to the
Pacific coast for export. The need for
enlarged elevator capacity was called to
the attention of Dr. J. H. King, Dominion
Minister of Public Works, who visited
Vancouver in the latter part of Dec., 1922,
and a Winnipeg press report of Jan. 4
quoted him as having stated that the
capacity of the Government elevator at
Vancouver would be doubled this year.
A subsequent Ottawa press dispatch
characterized this statement as prema-
ture, however, stating that the facts were
that Dr. King had been impressed with
the feasibility of using Vancouver as an
export port for grain going to Europe,
that he realized the need for increased
elevator capacity there, and that he would
recommend to his colleagues that such
increased capacity be provided. An Ot-
tawa press dispatch of Jan. 11, stated
that the Government elevator in Van-
couver had been transferred by order in
council from the Trade and Commerce
Department's jurisdiction to that of the
Vancouver Harbor Commissioners for
operation, the change to be effective Aug.
31. One of the commissioners, R. E.
Beattie, is quoted by a Vancouver paper
as having said in this connection: "This
leaves us free to go ahead and make all
arrangements for increasing storage,
dockage and other grain handling facili-
ties. There is no antagonism in the east
to the development of the Pacific route.
Neither the Winnipeg Grain Exchange,
the Fort William elevator people, nor
Montreal interests are anything but sym-
pathetic toward the proposal." The de-
velopments mentioned above indicate
that every effort is to be made to have
the grain handling facilities at Vancou-
ver increased and rendered more suffi-
cient. In the 1921-22 crop year, ended
Aug. 31, 1922, 7,380,049 bush. of grain
were handled through Vancouver, and in
the first three months of the 1922-23
crop year 3,207,453 bush.

In addition to wanting enlarged ele-
vator capacity, the B.C. people are even
more insistent in demands for lower rail
rates on westbound grain for export. In
this connection, an appeal from the Board
of Railway Commissioners' decision on
freight rates, as affecting British Colum-
bia, was to be heard before the Dominion
Cabinet on Jan. 25, when Premier Oliver,
of British Columbia, was to appear in an
effort to get rates further reduced, but
the hearing has been postponed till some
time in February. The Board of Rail-
way Commissioners' decision in the
equalization of rates case was given in
Canadian Railway and Marine World for
Aug., 1922, the part of it applying to the
British Columbia situation being on pg.
398.

In support of their contention that the
route via Vancouver is the logical one for
the export of a large quantity of Cana-
da's surplus grain, Vancouver people
claim that part of Saskatchewan's and
Alberta's crop, possibly 200,000,000 bush.,
can move more economically via the
Pacific and the Panama Canal than via the
eastern route. They contend that at the
rates existing in the latter part of 1922,
a saving of about 10c a bush. would
accrue to the prairie farmers, if their

grain went by the western route rather
than by the eastern, this being arrived
at as follows: via Vancouver, the trans-
portation charge on a bushel of wheat
was 15c from Calgary, or Edmonton, to
Vancouver, and 22c from Vancouver to
Liverpool, a total of 37c; via Fort Wil-
liam, the rate from Calgary, or Edmon-
ton, to Fort William was 15½c; from
Fort William to Montreal, lake and rail,
20c, or from Fort William to St. John,
via the winter route, 21c, and from At-
lantic ports to Liverpool, 12c, making a
total charge by the eastern route of about
47c. They claim that the existing rail
rate of 15c a bush. from Edmonton, or
Calgary, to Vancouver, 640 miles, as
against 15½c from Edmonton, or Cal-
gary, to Fort William, 1,280 miles, con-
stitutes a discrimination against British
Columbia and Western Canada gener-
ally, which should be eliminated, although
the railways claim that the westbound
rates are not discriminatory on account
of operating costs being higher in the
mountain districts than on the prairies.
The B. C. people further contend that,
by using the Pacific route, the prairie
farmer would be able to sell his wheat
any time during the year, instead of be-
ing forced to dump it on a speculative
market before the close of navigation on
the lakes, and argue that this feature
alone should add easily 3c a bushel to
the price received by the grain grower,
or a total of \$6,000,000 on a 200,000,000
bush. crop.

There are men in the grain trade who
do not share the optimism about Van-
couver as a grain export port which the
people of that city display, as is shown
by a report quoting a well-known Cal-
gary grain man, to the effect that he
considered the Vancouver route imprac-
ticable, except for winter shipments. He
is reported to have stated that if a mar-
ket for Canadian cereals could be de-
veloped in the Orient, it would change
the situation, but he did not believe that
a stable market for grain would ever be
secured in the Oriental countries. He
contended that the development which
Vancouver had experienced as a grain
shipping port in the last two years was
largely due to the ocean traffic situation,
wherein freights were scarce and rates
had dropped to unprecedented levels, and
was of the opinion that plentiful offer-
ings of traffic and increasing rates would
make the route commercially impractic-
able. Despite adverse opinions, however,
there is a great body of opinion in Al-
berta and Saskatchewan in favor of the
route, and an Edmonton press dispatch
of Jan. 12, states that Premier Greenfield
and other members of the Alberta Gov-
ernment, at a conference held in Edmon-
ton on Jan. 11, and attended by Premier
Oliver, of British Columbia, approved the
plans of Vancouver and British Colum-
bia to develop the export of grain by the
western route, in every way possible.

Examination into this matter demon-
strates that with rates bearing the same
relation to each other as they have in
the immediate past, it is cheaper to ship
Canadian wheat from certain prairie
territory, via Vancouver and the Panama
Canal, than via Fort William and Atlan-
tic ports, and it further demonstrates
that just how far east this territory will
extend must depend chiefly on rate rela-
tionships and terminal handling charges,
that is, on the relationship as between
total carrying charges. As carrying
charges fluctuate in their relationships

to each other, the economically correct dividing line as between those territories which should ship east and those which should ship west will also shift in position. At all events, though, the Pacific coast people appear determined to have Canadian grain for export move westward from as far east as economic and geographical conditions will justify, and the developments which take place in this connection in the next few years will be interesting from a transportation and traffic viewpoint and well worth watching.

Party Journalism Gone Mad.

The Toronto Mail and Empire's Ottawa correspondent, in a recent two column article on "Liberalism laughs at laws to abolish party patronage," says in regard to the Canadian National Rys.:—"In the Lanark election, while Premier King was appealing to the electors for support, his workers were distributing pamphlets at the door promising national railway contracts if that appeal was answered satisfactorily. There is no doubt that the contracts would have been forthcoming, for recently \$10,000,000 worth of equipment was ordered without a dollar being voted by Parliament, and without James Stewart, the only business man of standing on the executive, being consulted. Who ordered the equipment? Not, surely, Sir Henry Thornton, because he has not yet completed his inspection. Members of the executive were not consulted. It is stated on sound authority that the new equipment would be unnecessary if the Grand Trunk and Canadian National were co-ordinated, and the joint equipment properly allocated. . . . The recent orders are patronage on a large scale."

The charge about the Lanark election is undoubtedly true, as printed matter was widely distributed urging support for the Government candidate, and promising orders to be placed at Smiths Falls. Of course, the C.N.R. management had nothing to do with that, which was probably the work of local politicians, but Hon. T. A. Low, minister without portfolio, who appeared to have charge of the general campaign, did not disavow the action, as far as Canadian Railway and Marine World is aware.

But the charge that the orders placed recently for rolling stock were patronage, is absolutely foundationless. They were no more patronage than the orders given from time to time under D. B. Hanna's Presidency, and were placed on a similar business basis. It was well known for a considerable time past that both the Canadian National and the Grand Trunk were badly in want of additional rolling stock, and the placing of orders was deferred pending the management's reorganization. It was not necessary for Sir Henry Thornton to make a trip over the lines to enable him to decide what orders should be given. Full data of the requirements were prepared, under the direction of S. J. Hungerford and W. D. Robb, Vice Presidents and General Managers of the Canadian National and Grand Trunk, respectively, and were submitted to Sir Henry, who decided to have the orders given collectively, full particulars of which appear on an earlier page of this issue. Canadian Railway and Marine World believes that the prompt placing of the orders was sound business policy. In addition to filling much needed requirements, they will provide work for a large number of men at New Glasgow, Montreal, Kingston and Hamilton at a

time when it is much needed. There is nothing in the contention that the new equipment would be unnecessary if the C.N.R. and the G.T.R. were fully co-ordinated and the joint equipment allocated properly. There has been interchange of equipment between the C.N.R. and G.T.R. for some time past.

Steam Railway Track Laid in 1922.

Revised and completed returns received by Canadian Railway and Marine World, show that the total mileage of new single track, exclusive of second track, laid in Canada in 1922 was 160.25 miles, as follows:—

Canadian National Rys.	Miles	Miles
Magnolia, Alta., connection with Grand Trunk Pacific Ry...	0.83	
Battle-Duhamel, Alta., connection with G.T.P. Ry.....	3.51	
Lampman extension.....	1.52	
Regina connection.....	3.67	
		9.53

Total		

Of this new track, 93.82 miles were laid on the C.P.R. and lines owned or operated by it; 9.53 miles by the Canadian National Rys.; 44.40 miles by the Timiskaming & Northern Ontario Ry., owned by the Ontario Government, and 12.50 miles by the Lacombe & North Western Ry., owned by the Alberta Government. New track laid was distributed among the various provinces as follows: Ontario, 44.40 miles; Alberta, 40.65; Saskatchewan, 31.00; Quebec, 21.50; British Columbia, 16.90; Manitoba, 5.80.

In connection with the industrial and logging railway mileage, given in Canadian Railway and Marine World for January, the actual length of the Abitibi Transportation & Navigation Co's line from Iroquois Falls to Hughes, Ont., is 15.76 miles, instead of 16 miles, as reported.

Carriage of Intoxicating Liquor on Railways.—Towards the end of 1921, G. Rideout, a liquor inspector at Moncton, N.B., seized a car containing liquor in the Canadian National Rys. yard at Sydney, N.S., consigned to one Petrie, and billed to Glace Bay. The points upon which the case reached the higher court was as to the legality of the seizure, and who had jurisdiction. On behalf of Petrie, it was claimed that the seizure was invalid, as the consignment had not reached its destination at the time; and also that the Doherty Act, under which the seizure was made, had been superseded by the Canada Temperance Act, part 4. The Nova Scotia Supreme Court decided that seizures made under the Doherty Act are valid, and that jurisdiction lies with the magistrate at whatever point the seizure is made, and not exclusively at the point of destination. It is said that the case will be taken to the Supreme Court of Canada.

Canadian Pacific Railway Construction, Betterments, Etc.

New Brunswick District.—We are advised that the betterments in 1922 included the following:—

Woodstock Division.—Relaying 17 miles of track on Edmundston and Tobique Subdivisions with 85 lb. rail; and relaying 3 miles of sidings with heavier rails; 10 miles of ballasting on Tobique and Shogomoc Subdivisions, and placing 90,000 ties and 60,000 tie plates, throughout the division. Three new sidings were built, totalling 400 ft.; and 24 new 85 lb. switches were installed releasing lighter ones. considerable amount of repair and new concrete work was done on the smaller bridges and culverts—and other miscellaneous work on buildings, banks and wharves.

Brownville Division.—Twelve miles of main line relay rails were put in for repairs throughout the division, and 17 miles of 72 lb. rails were laid on the Shore Line Subdivision, releasing 48 lb. rails. Bridge abutments at Long Point and Megantic, on the Moosehead Subdivision, were rebuilt in concrete, and a number of small concrete culverts were built on the smaller waterways, replacing timber structures. About 1,000 ft. of wooden trestle deck was renewed along the wharf sheds at West St. John.

Montreal Subway.—Montreal City Council has been authorized by the Quebec Legislature to borrow \$300,000 without a vote of the people, to rebuild the subway under the C.P.R. tracks at Ontario St., Montreal. The council's executive committee is reported to be making preparations for having the work done during the summer.

Ottawa, Northern & Western Ry.—The Dominion Parliament is being asked to extend the time for the construction of a line from the present terminus of the Waltham Branch at Waltham, Que., through Waltham, Chichester and Sheen Townships, Que., and across the Ottawa River to a junction with the C.P.R. near Chalk River, Ont.

Port Arthur Track Extension.—A press report states that it is proposed to add considerable yard trackage at Port Arthur, Ont., during the year, in connection with the enlargement of grain elevators.

Fort William Freight Sheds.—A press report states that the two freight sheds burned in 1922, will probably be rebuilt this year.

Manitoba & North Western Ry.—The Dominion Parliament is being asked to extend the time for the commencement and completion of the following lines: (1) From near Tuffnel, in Tp. 30, Range 10 or 11, west of 2nd Meridian, thence northwesterly, northerly and westerly to a crossing of the North Saskatchewan River, in Tp. 49, 50 or 51, Range 14 or 15, west 2nd Meridian, and thence westerly to Prince Albert, Sask. (2) From near Theodore Tp. 28, Range 6 or 7, west 2nd Meridian, generally westerly to between Govan and Lanigan, Sask., on the C.P.R. Pheasant Hills Branch.

Weyburn-Lethbridge Line Completion.—The Board of Railway Commissioners, on Dec. 19, 1922, authorized the opening for traffic of the recently completed section of the Weyburn-Lethbridge line, mile 314.2 to 351.04. Of the mileage authorized for operation, track was laid on 15.55 miles during 1922; the other portion having been laid in 1921. (Jan., pg. 28.)

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Car Demurrage Bureau—Canadian Freight Association, Western Lines.—F. W. THOMPSON, heretofore acting Chairman, has been appointed Chairman, with jurisdiction over freight inspection, warehouse storage, weight agreements and car demurrage on all lines west of and including Port Arthur and Armstrong, Ont. Office, Winnipeg.

Canadian Government Merchant Marine Ltd.—R. B. TEAKLE, heretofore Manager, has been appointed General Manager. Office, Montreal.

Canadian National Rys.—J. BLACKLOCK, heretofore at Mount Yard, West Fort William, Ont., has been appointed Roadmaster, Port Arthur, Ont., vice F. McInnery, assigned to other duties.

H. A. CARSON, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Montreal, has been appointed Commercial Agent, Canadian National-Grand Trunk Rys. there. Office, 230 St. James St.

W. CROWE has been appointed Night Locomotive Foreman, Wainwright, Alta. W. S. DOUGLAS has been appointed foreman welder, Transcona shops, Transcona, Man., vice D. Nelson, who has left the service.

M. C. DUNN, heretofore City Passenger Agent, Canadian National Rys., and City Freight Agent, Canadian National-Grand Trunk Rys., Kingston, Ont., has been appointed Commercial Agent, Canadian National-Grand Trunk Rys. there. Office, 217 Princess St.

H. W. FLEMING, heretofore Assistant Engineer, Ottawa Division, Ontario District, has been transferred to Hornepayne, Ont., during the absence of K. G. Polyblank, Division Engineer, Nipigon Division, Ontario District, who has been granted extended leave of absence from the Operating Department, to take charge of the construction of the Longlac-Nakina cutoff.

R. C. FAIR, heretofore City Freight Agent, Calgary, Alta., has been appointed Division Freight Agent, there, vice W. A. B. Russell, appointed Division Freight Agent, Saskatoon, Sask.

D. E. GALLOWAY, heretofore Assistant Vice President, G.T.R., has been appointed Assistant to President, Canadian National Rys. Office, Ottawa.

F. G. GOULD, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Toronto, has been appointed Commercial Agent there. Office, New Union Station.

L. S. IRVINE, heretofore Soliciting Freight Agent, Regina, Sask., has been appointed Soliciting Freight Agent, Calgary, Alta., vice R. C. Fair, City Freight Agent, appointed Division Freight Agent there.

J. LOWE, heretofore Assistant Foreman, Joliette, Que., has been appointed Locomotive Foreman there, vice W. H. Walker, resigned.

F. P. NELSON, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Hamilton, Ont., has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., there. Office, 54 Federal Life Bldg.

H. J. PAGE, heretofore Superintendent of Police and Special Service, Toronto, has been appointed Chief of the Investigation Department, in charge of police

matters and investigations, reporting to, and receiving instructions from the President, but he and his department will be available to the various vice presidents, and will act under their instructions as required. Office, Ottawa, Ont.

K. G. POLYBLANK, Division Engineer, Nipigon Division, Ontario District, Hornepayne, Ont., has been granted extended leave of absence from the Operating Department, and has been appointed Division Engineer in charge of construction of the Longlac-Nakina cutoff. Office, Longlac, Ont.

G. A. ROBERTS has been appointed acting night chief dispatcher, Fort Rouge, Man., vice M. D. McDonald, assigned to other duties.

GERARD RUEL, K.C., heretofore General Counsel, Canadian National Rys., has been appointed Vice President and General Counsel for all lines, including Canadian Government, Canadian Northern, Grand Trunk and Grand Trunk Pacific. Pending a decision as to the general headquarters he will have an office at 122 Bank St., Ottawa. In the meantime the members of his staff in Toronto will remain there.

W. A. B. RUSSELL, heretofore Division Freight Agent, Calgary, Alta., has been appointed Division Freight Agent, Saskatoon, Sask., vice B. R. Marsales, resigned to enter commercial business.

P. SCHLAMP, heretofore Soliciting Freight Agent, Winnipeg, has been appointed Soliciting Freight Agent, Regina, Sask., vice L. S. Irvine, appointed Soliciting Freight Agent, Calgary, Alta.

Canadian Pacific Railway.—T. B. BALANTYNE, heretofore Division Engineer, Schreiber, Ont., has been appointed Division Engineer, Farnham Division, Quebec District, vice M. Kelly, appointed Division Engineer, Toronto Terminals. Office, Farnham, Que.

DOCTORS E. MURRAY BLAIR AND C. DE MUTH are reported to have been appointed by the C.P.R. and its employees' medical association as medical officers for Vancouver, to devote practically all their time to the work. It is also stated that Doctors A. W. Hunter, A. J. MacLachlan and F. P. Patterson, who devoted only portions of their time to the work, have retired.

G. E. COSTELLO, heretofore General Agent, Yokohama, Japan, has been appointed in charge of the Passenger Department there, under the General Agent, J. Rankin.

M. FITZGERALD, heretofore Assistant to Manager, General Traffic, Yokohama, Japan, has been appointed Special Representative there.

Miss M. C. HALL, formerly Society Editor, Winnipeg Free Press, is reported to have been appointed Chief Assistant, in the C.P.R. Western Lines Publicity Department, at Winnipeg.

F. J. JONES, heretofore Locomotive Foreman, MacTier, Ont., has been appointed Locomotive Foreman, McAdam, N.B., vice H. L. Scott, appointed General Foreman there.

M. KELLY, heretofore Division Engineer, Farnham Division, Quebec District, Farnham, has been appointed Division Engineer, Toronto Terminals Division, Ontario District, vice J. H. Barber, retired on pension. Office, Toronto.

R. A. MILLER, heretofore General Foreman, McAdam, N.B., has been appointed Locomotive Foreman, Lambton, Ont., vice E. J. Murphy.

E. J. MURPHY, heretofore Locomotive Foreman, Lambton, Ont., has been appointed Locomotive Foreman, MacTier, Ont., vice F. J. Jones, transferred to McAdam, N.B.

J. RANKIN, heretofore Assistant Agent, Yokohama, Japan, has been appointed General Agent for Japan. Office, Yokohama.

H. L. SCOTT, heretofore Locomotive Foreman, McAdam, N.B., has been appointed General Foreman there, vice R. A. Miller, appointed Locomotive Foreman, Lambton, Ont.

W. H. WINTERROWD, Chief Mechanical Engineer, Montreal, has resigned to become Assistant to President, Lima Locomotive Works, at New York, N.Y.

Edmonton, Dunvegan & British Columbia Ry.—M. W. BOUCHER, heretofore General Locomotive Foreman, who has been appointed Assistant Superintendent at McLennan, Alta., as stated in Canadian Railway and Marine World for January, has, in addition to his duties in the mechanical department, general control of locomotive men, firemen, conductors and trainmen, who report to him.

S. R. LAMB, Resident Engineer, who has had his jurisdiction extended over maintenance of way, as stated in Canadian Railway and Marine World for January, is in control of the engineering, maintenance of way, and bridge and building departments.

All matters pertaining to accounting, performed formerly by the Superintendent's accountant, have been transferred to the General Auditor, E. J. BULGIN. Dispatchers, agents and others, not specifically mentioned above, report to J. A. MACGREGOR, Manager, on all matters excepting accounting.

Grand Trunk Ry.—R. BUSBY, heretofore ticket clerk, Tunnel Terminal, Montreal, has been appointed ticket agent there, vice H. J. LeClair, appointed Passenger Agent, Montreal City Office.

H. A. CARSON, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Montreal, has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., there. Office, 230 St. James St.

F. G. GOULD, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Toronto, has been appointed Commercial Agent, Canadian National-Grand Trunk Rys., there. Office, New Union Station.

W. E. HORNE, heretofore chief clerk to General Agent, has been appointed Northbound Agent, Boston, Mass. Office, 294 Washington St.

J. E. JOUBERT, heretofore Passenger Agent, Montreal City Office, has been appointed Terminal Passenger Agent, Bonaventure Station, Montreal.

H. J. LeCLAIR, heretofore ticket agent, Tunnel Terminal, Montreal, has been appointed Passenger Agent, Montreal City Office, vice J. E. Joubert, appointed Terminal Passenger Agent, Bonaventure Station, Montreal.

J. S. McADAM, heretofore Trainmaster, Districts 31 and 32, Ottawa Division, Ontario Lines, Madawaska, Ont., has been appointed Trainmaster, Ottawa Division, W. E. Weegar, heretofore Trainmaster, District 30, having been appointed acting Superintendent, Barrie Division, Allandale, Ont. Office, Ottawa.

F. P. NELSON, heretofore City Freight Agent, Canadian National-Grand Trunk Rys., Hamilton, Ont., has been

appointed Commercial Agent, Canadian National-Grand Trunk Rys., there. Office, 54 Federal Life Bldg.

G. F. TARBELL, heretofore Travelling Freight Agent, has been appointed East-bound Agent, Boston, Mass. Office, Old South Building, 294 Washington St.

W. E. WEEGAR, heretofore Train-master, District 30, Ottawa Division, Ontario Lines, Ottawa, has been appointed acting Superintendent, Barrie Division, Ontario Lines, during the absence on account of illness of P. J. Lynch, Superintendent. Office, Allandale, Ont.

Northern Pacific Ry.—W. H. JAYNES, who is stated in a press report to have been chief clerk to Assistant General Freight Agent at Portland, Ore., is said to have been appointed Assistant General Agent at Vancouver, B.C., and it is also stated that H. Swinford, General Agent there, will retire on March 31, and be succeeded by Mr. Jaynes.

Pacific Great Eastern Ry.—T. KILPATRICK, formerly Superintendent, District 1, British Columbia Division, C.P.R., Revelstoke, B.C., from which position he resigned in Nov., 1912, is reported to have been appointed General Manager, P.G.E.R., vice A. B. Buckworth, reported appointed Deputy Minister of Railways for British Columbia.

Self Propelled Cars on Steam Railways.

The Canadian National Rys. management has ordered the construction of a storage battery car at the Niagara, St. Catharines and Toronto Ry. shops at St. Catharines, Ont., and the plans are being prepared. The car will be numbered 15,804, and will be equipped with Edison batteries and 4 G.E. 261-A motors of 25 h.p. each.

Gas-electric car 15,800, which has been operating for some time between Winnipeg and Transcona, Man., has been sent to St. Catharines, Ont., to be converted into a storage battery car. It will be equipped with 250 Edison batteries and 4 G.E. 261-A motors.

When the two conversions mentioned above have been completed, the C.N.R. will have 5 storage battery cars in operation, nos. 15,800; 15,801, bought from Railway Storage Battery Car Co.; 15,802 and 15,803, bought from Cambria & Indiana Rd., and 15,804. At present car no. 15,801 is operating between Toronto and Beaverton, Ont., on the schedule given in a preceding number of Canadian Railway and Marine World, and nos. 15,802 and 15,803 are being overhauled at St. Catharines. Car 15,802 will have 266 cells and 4 Westinghouse V-65 A-3 motors of 25 h.p. each, and will be placed on the Bathurst-Campbellton run, in the Maritime District. Car 15,803 will be fitted with Exide batteries and will be placed on the Brockville-Westport run, on the Ontario District.

Gasoline car service between Cross Creek and Stanley, on the Nashwaak and Stanley Subdivisions, Edmundston Division, Maritime District, which was furnished by car 15,111, has been discontinued for the winter, service now being furnished by steam train.

Vancouver Transportation Building.—A press report states that the construction of a building, designed especially for transportation company offices, and to cost \$1,000,000, is projected in Vancouver.

Death of Hon. W. C. Kennedy.

Hon. William Costello Kennedy, Minister of Railways and Canals, died at Naples, Florida, Jan. 17, from heart failure, while recuperating from the effects of two operations in Montreal for gall stones. The first operation took place Aug. 26, and the second, Sept. 20, 1922, and for some time the worst was feared, but his partial recovery was due to his extraordinary vitality. He left the hospital in Montreal on Nov. 20, and stayed at Stratford, Ont., with his sister, until Dec. 26, when he went to his home in Windsor, Ont., leaving there on Jan. 3 with Mrs. Kennedy for Florida.

He was a son of Wm. and Julia (Costello) Kennedy, was born at Ottawa; Ont., Aug. 27, 1868, and educated at separate school, and De La Salle Institute, Toronto. He began his business career with the London & Canadian Loan & Agency Co., Toronto, in 1887, remaining in its service until 1897, when he engaged in gas and oil business at

Hon. W. C. Kennedy. M.P.

Windsor, Ont. He was President, Windsor Gas Co., 1903 to 1917, and afterwards became a gas and oil operator. He was President, Windsor Board of Trade, 1909 to 1910; trustee, Windsor Board of Education, 1913 to 1918; councillor, Ojibway, 1913 to 1918. He was elected to the House of Commons for North Essex, Ont., Dec. 1917, and again in Dec. 1921. He was a Liberal and a Roman Catholic. He married Glencora Bolton, of Detroit, Mich., May 8, 1907. He was a member of the following clubs: Detroit; Detroit Athletic; Essex County Golf; Ontario (Toronto); Rideau (Ottawa); Country (Ottawa).

The body was met at Washington, D.C., by J. W. Pugsley, Secretary, Railways and Canals Department, and transferred to the Dominion Government official car, in which Mr. Kennedy made his inspection trip over the Canadian National Rys., and also in which he made his last trip south. After arrival at Windsor, Ont., the body lay in state

at the armories, from 2 to 9 p.m., after which it was removed to his house. The funeral took place at Windsor, Jan. 24, the Governor General being represented, and the Prime Minister and other members of the cabinet acting as honorary pall bearers. Among those present were: Right. Hon. Arthur Meighen, ex-Prime Minister; Hon. F. B. Carvell and Calvin Lawrence, Board of Railway Commissioners; Alex. Johnston, Deputy Minister of Marine; G. W. Yates, Assistant Deputy Minister of Railways and Canals; Sir Joseph Flavelle, ex-Chairman, Board of Directors, G.T.R., and a number of officials of the Canadian National, Canadian Pacific and Grand Trunk Rys.

Grain in Store at Elevators.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that for the week ended Jan. 5, the quantity of grain in storage increased as follows: Oats, 203,684 bush.; barley, 553,018; flax, 34,525; rye, 201,865. Wheat decreased 548,236 bush.

Western country elevators' decreases were: Wheat, 1,146,109 bush.; flax 6,780; rye, 10,460; and increases: oats, 239,157; barley, 53,064. Receipts for the previous week were 3,985,985 bush. and shipments 5,853,473.

Interior terminal elevators increases were: Wheat, 255,824 bush.; oats, 35,364; flax, 1,241; rye, 7,263. Barley decreased 1,251 bush.

At public and private terminal elevators at Fort William and Port Arthur, there were increases in all grains: Wheat, 3,127,412 bush.; oats, 317,869; barley, 194,179; flax, 40,064; rye, 210,090; a total increase of 3,889,614 bush. Total receipts at Fort William and Port Arthur, from Sept. 1, 1922 to Jan. 5, 1923, were 226,516,639 bush., and at Vancouver, B.C., 7,650,587.

Winnipeg private terminal elevators showed increases of wheat, 7,903 bush.; oats, 20,601, and barley, 553, decrease.

In eastern public elevators, the increases were: Wheat, 1,111,480 bush.; oats, 72,669; barley, 149,691. Rye decreased 36,832 bush. The total receipts of all grains were 1,033,036 bush. by ship, and 1,200,882 by rail; and shipments were, 1,075,809 by ship, and 1,251,119 by rail.

The quantity of U.S. grain in store at Canadian eastern public elevators was 3,131,383 bush., compared with 6,135,237 for the same period last year. At U.S. lake ports, Buffalo and Duluth, there were decreases: Wheat, 3,756,864 bush.; oats, 372,760; and increases: Barley 152,631, and rye 666. At U.S. Atlantic seaboard ports, there were decreases: Wheat, 147,882 bush.; oats, 109,216; and increases: Barley, 5,257 bush.; rye, 31,138.

Sir Robert D. Reid's Estate.—Miss Harriet D. Reid, daughter of the late Sir Robert D. Reid, formerly President Reid Newfoundland Co., took action some time ago to compel the trustees of the estate, Lord Shaughnessy, Sir William D. Reid, H. D. Reid and R. G. Reid, to pay to the Royal Trust Co., \$2,97,125, as a quarter of her father's holdings in the Reid Newfoundland Co. At Montreal, on Jan. 22, the trustees' application for further delay, on the ground that Sir William Reid could not be examined on account of his ill health, was refused. It is stated that action has been taken to interdict Sir William, who is also a former President of the company, and to declare him unfit to manage his own affairs.

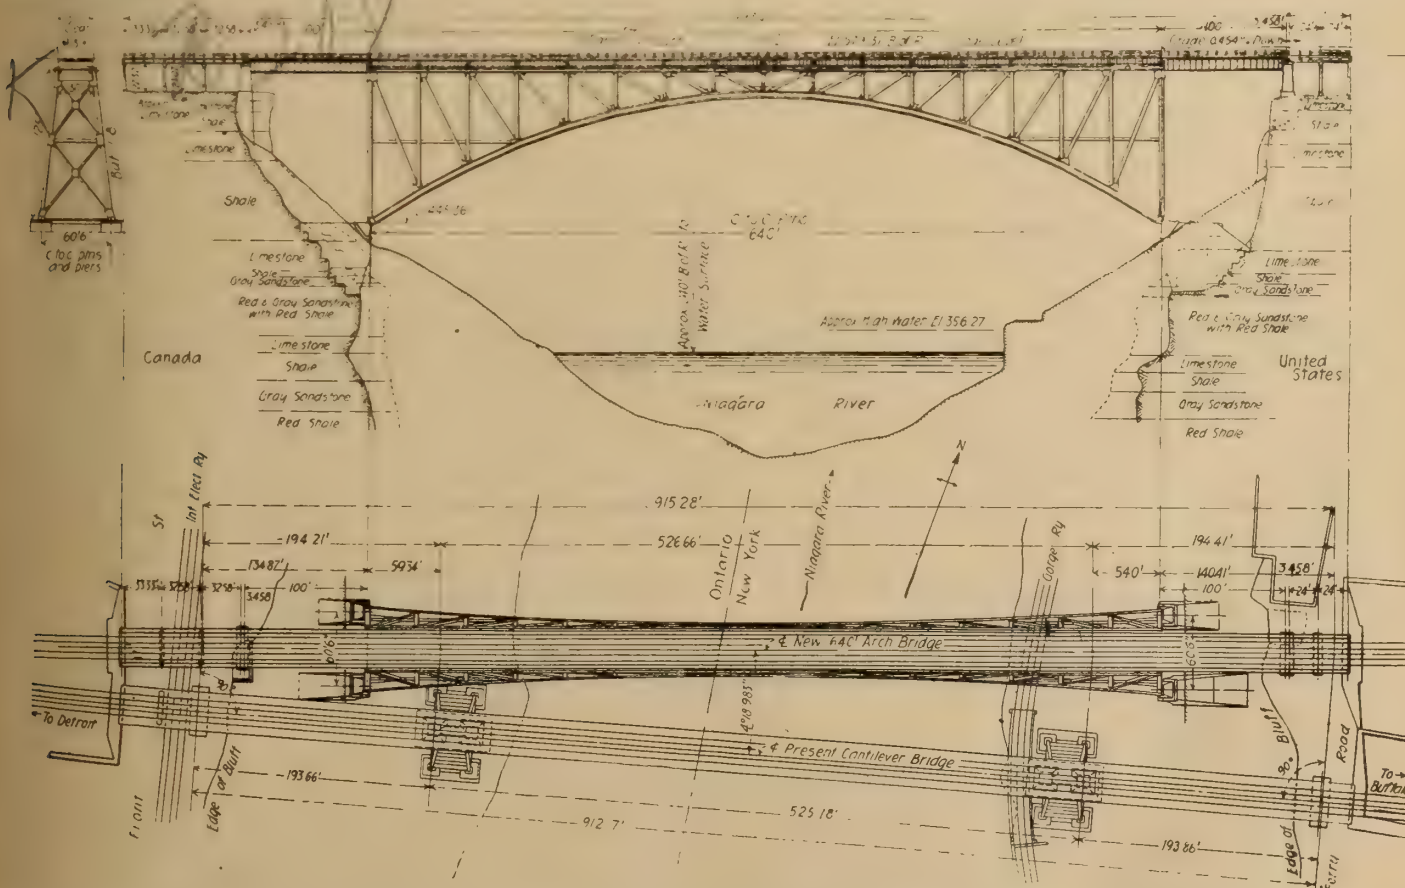

New Bridge Over Niagara River for Michigan Central Railroad.

The cantilever bridge carrying the Michigan Central Rd. tracks over the Niagara River, between Niagara Falls, Ont., and Niagara Falls, N.Y., will, within the next two years, be replaced by a new double track steel arch bridge, of the spandrel braced type, located immediately north of the present bridge, which was built in 1883 from designs by C. C. Schneider, and was a notable structure for its time. It spans a chasm 850 ft. wide and 210 ft. deep to the surface of the water. The river at that point, which is above the whirlpool rapids, is 425 ft. wide, and the velocity of the current, at the center, is $16\frac{1}{2}$ miles an hour. The total length of the bridge is 910 ft. The cantilever towers are spaced 495 ft. center to center; the river arms are 175 ft. long; the anchor arm 195 ft. long; and the suspended span is 120 ft. long. The tower piers are located very close to the river's edge. No borings were made for the examination of the foundations for these, but it was expected that solid rock would be found about at the elevation of the top of the water. The excavation proved, however, that the solid rock was not to be found at this point, but that the formation consisted of very large irregular shaped pieces of rock, closely bonded and interlocked with each other, which in earlier times had broken off from the cliffs above and rolled into the river. As it

Later core borings have shown that the solid rock is 196 ft. below the ground at this point and that the over-lying material consists of large rock, intermingled with smaller boulders and clay.

The cantilever bridge was designed to

the old trusses. This increased the live load capacity of the bridge about 50%, making it equivalent to a Cooper's E 35 loading and this was as much as it was practicable to strengthen it. The maximum loading permitted on the bridge at

was impracticable to excavate much below the level of the water, it was decided to place a heavy bed of concrete on top of this rock, as a foundation for the tower piers, which are 38 ft. high and are built of Queenston limestone backed by Black Rock stone. While more or less cracked, they are still in fair condition.

carry on each track a live load consisting of two 66-ton locomotives, followed by 2,000 lb. per lineal foot, corresponding to a Cooper's E 23 loading. The bridge was strengthened in 1900, by adding a center truss and tower post, resting on new center piers, and also by increasing the sections of some of the members of

present is equivalent to a Cooper's E 45 loading, and as the bridge has for some time shown the effects of overload, which has made extensive repairs necessary from time to time, and as the necessary restrictions in loading and speed had become undesirable, it was deemed advisable to rebuild the bridge.

The first problem to solve in deciding on the character and length of the new structure was the examination of the rock formation of the gorge, in the neighborhood of the present bridge. The slope of the banks, at this point, rising from the water's edge at an inclination of about 1.3 horizontal to 1 vertical, consists of disintegrated material mixed with large and small boulders which have broken off from the rock ledges of the cliffs. Large boulders also fill the gorge below the water's level, standing

at about the same slope as the banks above the water's level, for about 100 ft. out from the water's edge, after which the slope is much flatter. The depth of the water at the center is about 80 ft. and there is at this point at least 120 ft. of loose rock overlying the solid rock. Extensive core borings made with the diamond drill, from a point just south of the present bridge to a point about 170 ft. north of the same on the United States side and 130 ft. north on the Canadian side, disclosed the profile and the

character of the solid rock formation, underlying the sloping bank of loose material. The information gained from these borings indicated that the gorge narrows up considerably north of the present bridge and that the slope of the rock surface is very steep.

The natural and the most economic structure for a location of this kind is an arch, and so as to shorten the span as much as possible, and make it possible to erect the structure without interfering with traffic on the present bridge, it was

decided to move the new structure as far north of the present bridge as it was practicable to do without making the connections with the present track arrangements, on both sides of the river, difficult. To meet these conditions, the arch span was made 640 ft. long, center to center of end hinges, and was located 51 ft. north of the center line of the present bridge at the Canadian side and 119 ft. at the U.S. side. The location is shown in fig. 1. The location selected brings the thrust of the arch fairly on the solid ledge of gray limestone known as the Clinton ledge. The strata immediately underlying this ledge is a heavy forma-

The new bridge will carry two tracks and is designed for Cooper's class E 70 loading. The arch trusses are designed to carry all the dead load, up to and including the steel work of the floor, as a 3-hinged arch. After the floor has been erected, the top chords of the center panels will be rivetted together, so that the rest of the dead load and the live load and temperature stresses will be carried by the arch in a 2-hinged condition. The arch span will be divided into 16 panels, each 40 ft. long. The rise of the arch will be 105 ft. and the depth at the crown 20 ft. The arch trusses will be 30 ft. apart, center to center of top chords,

diaphragms milled to bear against the top chord cover plates, so as to properly distribute the load from the longitudinal girders. Transverse floor beams, supporting an I-beam and solid plate, ballasted deck, will be rivetted to the longitudinal girders. Each panel length of floor will form a separate unit, and provisions for expansion and contraction are made for each panel. This floor construction, which is rather unusual, will be used, partly to prevent the floor system from partaking in the arch stresses, and causing secondary stresses in the truss members, and partly to facilitate possible future changes in track elevation.

The skew-back casting supporting the arch truss will measure 14 ft. by 14 ft. 8½ in. on the bottom, and will weigh 53 tons. The upper and lower hinge castings, which will join on a pin 19 in. in diameter and 6 ft. long, will weigh 39 tons. The bottom chord of the arch span will be a closed box girder section, 5 ft. 6¼ in. deep, back to back of angles, with the two girders spaced 3 ft. ¼ in. apart between inside of webs. Each of these girders, which will be of uniform section throughout the bottom chord, will consist of 6 angles, 8 x 8 in. by ¾ in. thick, and webs 66 in. deep by 2½ in. thick. The chord will vary in section from 557.3 sq. in. for the center panels to 714.8 for the end panels, and the variation will be made up entirely by the variation of thickness of the 60 in. wide top and bottom cover plates, which will be ¾ in. thick in the center panel and 2-1/16 in. thick in the end panel. The two side slabs of the chord will be connected together with batten plates rivetted to the center angles, and the chord will be further braced by transverse diaphragms, rivetted to all four sides of the box section. There will be manholes at each panel point, to give access to the inside of the chord.

The top chord will be of the ordinary chord type, with built-up channel side sections, with a cover plate on the top and lacing on the bottom flange. The vertical posts and diagonals will be made up of 2 channel shaped slabs, composed of plates and angles. The vertical posts will have longitudinal diaphragms connected to the webs, and will have lacing on both flanges. The diagonals will have no longitudinal diaphragms, but will be laced on both outside flanges. The top and bottom lateral bracing, the longitudinal and the sway bracings will be rigid sections throughout, and the lacing bars in both main members and the bracing will be either angle or channel sections.

Each half of the arch span will of necessity be erected as a cantilever, and will be anchored, at each corner, to the rock bluffs of the gorge, by anchors made of heavy steel plate girders, which will be placed in a chamber, 13 x 20 ft. in dimensions, tunneled out of the rock at a depth of about 50 ft. from the surface. These anchors and the parts of backstays, which will be inside the face of the bluff, will be permanently concreted in place. The parts of the backstays which come outside the face of the bluff, will be eye-bar links pinned to heavy sliding plates, so designed that hydraulic jacks placed between the plates will lengthen or shorten the backstays, and impart necessary movement to each cantilevered half of the arches, when they are to be connected at the center of the span. The maximum horizontal pull in each of the four backstays will be 3,700,000 lb. and each of the four jacks operating them will have a capacity of 3,000 tons.

tion of grey and red sandstone, intermingled with shale. This strata weathers badly when exposed to the air, but is solid where protected by overlying material, and as the place where the toe of the piers touches this layer will always be protected by a fill of about 34 ft. in depth, there will be no chance for it to disintegrate. If the new bridge was built in the same location as the present bridge the arch span would have to be lengthened to 700 ft. to obtain the same favorable foundation condition as obtained in the new location with the 640 ft. span.

and will be on a batter of 1 to 8, so that they will be 60½ ft. apart, center to center, at the springing line. The truss joints will be rivetted throughout, with the exception of the connections for the two first vertical posts each side of the center. It will be necessary to connect these posts on a pin, so as to relieve them of the very high secondary stresses to which they would be subject if the connections were rivetted.

The floor system on the arch span will consist of longitudinal girders resting on castings set on top of the top chord over each vertical post. These posts will have

Birthdays of Transportation Men in February.

The approach spans to the arch at either end will consist of 100 ft. long deck plate girders, with solid I-beam plate, and ballasted floor. One end of these girders will be seated on the heavy box girders, rivetted between the end vertical posts of the arch, and the other end will be seated on rollers supported on the concrete piers at the edge of the bluffs. These rollers will take care of the movement in the arch span, as well as the approach span, the maximum total movement in either direction being $3\frac{1}{2}$ in., or a total movement of 7 in. Included in the work there will also be two bridges over street crossings at either side of the river.

The unit stresses used for proportioning of parts of the arch span are as follows:—

Dead load tension.....	20,000 lb. per sq. in.
Dead load compression.....	18,000—80 1-r
Live load tension.....	18,000 lb. per sq. in.
Live load compression.....	16,000—70 1-r

The floor on the arch span and the approach spans have been proportioned both for live load and dead load for:—

Tension	18,000 lb. per sq. in.
Compression	16,000—70 1-r

The material used, for all the structures will be open hearth, medium structural steel. Rivet holes in material more than $\frac{3}{4}$ in. thick will be drilled from the solid; in material $\frac{3}{4}$ in. thick and under, rivet holes may be punched and reamed, except that in bracing, lacing and stay plates, less than $\frac{5}{8}$ in. thick rivet holes may be punched full size.

The heaviest member in the bridge will be the end panel bottom chord, which will weigh $70\frac{1}{2}$ tons. The total weight of the arch trusses, including bracing and castings, will be 4,800 tons; the floor on the arch span will weigh 1,250 tons and the total weight of the steel, including approach spans, street spans and backstays, will be 7,500 tons. There will be about 11,000 cubic yards of concrete masonry in foundations, piers, and approach spans, and about 28,000 yards of excavation.

The design of the bridge has been developed under the direction of H. Ibsen, Special Bridge Engineer, who has been assigned to this project, assisted by C. L. Christensen, Assistant Bridge Engineer. The project is under the general direction of J. F. Deimling, Chief Engineer, Michigan Central Rd., Detroit, Mich. Col. Geo. H. Webb, late Chief Engineer of the M.C.R., had the general direction of the project from its start, until he went to France in July, 1917, as Lieut. Col. with the Sixteenth (Railway) Engineers, and also after his return, in April, 1919, until his death on Nov. 3, 1921. Olaf Hoff, consulting engineer, New York, is acting as advisory engineer.

The contract for the steel work, and its erection, has been let to the American Bridge Co. The price for the total steel work erected, including approach spans, and spans over two streets, averages \$109 a ton, without freight, which the M.C.R. pays, and with the freight included, the price will be approximately \$116 a ton. The total estimated cost of the whole project is about \$2,000,000.

Railway Association of Canada.—Consequent on the resignations of D. B. Hanna, as President, Canadian National Rys., and H. G. Kelley, as President, G.T.R., Sir Henry Thornton, President, Canadian National Rys., and G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, have been elected to fill the vacancies caused on the Railway Association of Canada's executive committee.

Many happy returns of the day to:—

W. J. Atkinson, Superintendent, St. Maurice Division, Quebec District, Canadian National Rys., Quebec, Que., born at Levis, Que., Feb. 14, 1880.

T. Britt, General Fuel Agent, C.P.R., Montreal, born there, Feb. 3, 1871.

G. E. Bunting, General Traffic Agent, Canadian National Rys., and Australasian Manager, Canadian Government Merchant Marine, Auckland, New Zealand, born at Toronto, Feb. 8, 1873.

J. S. Byrom, General Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born at Jersey City, N.J., Feb. 10, 1872.

B. E. Chace, City Ticket Agent, C.P.R., Nelson, B.C., born at New York, N.Y., Feb. 29, 1884.

H. R. Charlton, General Advertising Agent, G.T.R., Montreal, born at St. Johns, Que., Feb. 9, 1866.

R. Chisholm, Inspector of Agencies, Canadian National Rys. and Grand Trunk Pacific Ry., Winnipeg, born at Georgeville, N.S., Feb. 25, 1871.

R. Colclough, Superintendent, Saguenay Division, Quebec District, Canadian National Rys., Quebec, Que., born at Bic, Que., Feb. 24, 1871.

G. M. Cordingley, Chief Dispatcher, C.P.R., Saskatoon, Sask., born at Montreal, Feb. 13, 1886.

R. Crawford, Northwestern Agent, Northern Navigation Co., Winnipeg, Man., born at Kingston, Ont., Feb. 21, 1870.

V. A. G. Dey, Division Engineer, Bruce Division, Ontario District, C.P.R., Toronto, born at Aberdeen, Scotland, Feb. 4, 1883.

H. H. Disher, Purchasing Agent, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont., born there, Feb. 5, 1883.

E. A. Evans, consulting engineer, ex-General Manager and Chief Engineer, Quebec Ry., Light & Power Co., Quebec, born at Kensington, Eng., Feb. 26, 1855.

Goodwin Ford, General Superintendent Western Lines, Dominion Express Co., Winnipeg, born at Bordentown, N.J., Feb. 23, 1859.

U. E. Gillen, General Manager, Toronto Terminal Ry. Co., Toronto, born at Brooklyn, Mo., Feb. 27, 1867.

T. Ginnelly, Assistant Freight Claims Agent, Canadian National Rys., Western Lines, Grand Trunk Pacific Ry. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., born in Ireland, Feb. 11, 1880.

L. L. Grabill, General Baggage Agent, G.T.R., Toronto, born at Walkerton, Ont., Feb. 6, 1878.

S. M. Greene, City Ticket Agent, Canadian National Rys. and Grand Trunk Pacific Ry., Regina, Sask., born at Derby, Eng., Feb. 15, 1887.

A. J. Hills, Assistant to President, Canadian National Rys., Toronto, born there, Feb. 15, 1879.

T. C. Hudson, General Master Mechanic, Eastern Lines, Canadian National Rys., Montreal, born at Brockville, Ont., Feb. 20, 1873.

H. Hulatt, ex-Manager of Telegraphs, G.T.R., born at London, Eng., Feb. 15, 1883.

A. H. Jones, Assistant Engineer, Canadian National Rys., Toronto, born at Liverpool, Eng., Feb. 16, 1884.

A. E. McAmmond, Chief Dispatcher, Kenora Division, Manitoba District, C.P.R., Kenora, Ont., born at Britannia Bay, Ont., Feb. 19, 1879.

John McCraw, Travelling Representative, G.T.R., New London, Conn., born at Craigville, Ont., Feb. 6, 1868.

J. K. McNeillie, General Manager's office, Delaware & Hudson Rd., Albany, N.Y., born at Toronto, Feb. 23, 1874.

J. D. McNutt, Assistant Superintendent, Halifax Division, Maritime District, Eastern Lines, Canadian National Rys., Halifax, N.S., born at Stewiacke, N.S., Feb. 8, 1873.

D. C. Macdonald, Assistant General Claims Agent, C.P.R., Winnipeg, born at Elmsdale, N.S., Feb. 9, 1874.

C. S. Maharg, Superintendent, Vancouver Division, British Columbia District, C.P.R., Vancouver, born in Dufferin County, Ont., Feb. 4, 1867.

V. J. Melsted, ex-Engineer of Water Service, C.P.R., now of Milton Hersey Co., Winnipeg, born at Gardar, N.D., Feb. 20, 1887.

G. A. Montgomery, Vice President and General Manager, Algoma Central & Hudson Bay Ry., and President, Algoma Eastern Ry., Sault Ste. Marie, Ont., born at Bradford, Ont., Feb. 11, 1871.

A. Z. Mullins, General Agent, Freight Department, Canadian National-Grand Trunk Rys., Grand Rapids, Mich., born at Appin, Ont., Feb. 14, 1862.

F. Norman, Superintendent, Canadian National Express Co., Winnipeg, born at Picton, Ont., Feb. 24, 1874.

C. T. Ridalls, Car Foreman, C.P.R., London, Ont., born at St. Heliers, Jersey, Channel Islands, Feb. 8, 1864.

A. E. Rosevear, General Freight Agent, Canadian National Rys., Western Lines, and Grand Trunk Pacific Ry., Winnipeg, born at Montreal, Feb. 20, 1863.

J. G. Scott, ex-General Manager, Quebec & Lake St. John Ry., and Great Northern Ry. of Canada, Quebec, born there, Feb. 13, 1847.

J. J. Scully, General Manager, Eastern Lines, C.P.R., Montreal, born there, Feb. 3, 1872.

E. M. Snell, General Agent, Erie Rd., Toronto, born at Wingham, Ont., Feb. 16, 1872.

J. M. Sparling, Assistant to Vice President, Traffic, G.T.R., Montreal, born at Toronto, Feb. 16, 1882.

G. Spencer, Chief Operating Officer, Board of Railway Commissioners, Ottawa, born in London, Eng., Feb. 21, 1865.

R. E. Swain, Liverpool Passenger Agent, C.P.R., Liverpool, Eng., born at Birkenhead, Eng., Feb. 23, 1882.

A. P. Villain, City Ticket Agent, C.P.R., San Francisco, Cal., born there, Feb. 6, 1891.

F. L. Wanklyn, General Executive Assistant, C.P.R., Montreal, born at Buenos Aires, Feb. 25, 1860.

J. R. Watson, Assistant Superintendent, Sleeping, Dining and Parlor Cars and News Service, Eastern Lines, C.P.R., Montreal, born at Morpeth, Eng., Feb. 8, 1873.

A. Williams, Superintendent, Farnham Division, Quebec District, C.P.R., Farnham, born at Mono Road, Ont., Feb. 22, 1872.

A Mountain Pass Defined.—The Board of Regents of New York State asked a number of questions of school children recently, among them being "What is a mountain pass?" The answer given by one of the children was: "A mountain pass is a pass given by the railways to their employees, so that they can spend their holidays in the mountains."

Railway Operating Revenues, Expenses and other Statistics for October.

The following comparative table for October, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Transcontinental and various local lines in

the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry., but does not include electric lines.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employes is also a new feature of this year's reports.

	All railways.		Canadian National		Canadian Pacific		Grand Trunk

*Contains a proportion of mixed train miles.

The Railways' Operating Results for October, 1922.

The results secured by Canadian railways in Oct., 1922, as shown in the table on the preceding page, are of outstanding importance, as showing that the railways as a whole carried the largest freight traffic in any month in Canadian railways' history, and the excellence of the financial results the railways are capable of obtaining with a traffic approaching the limit imposed by the capacity of the facilities for handling it, despite the magnitude of the rate reductions which have been effected.

The record freight movement handled had the effect of increasing the freight traffic revenue enjoyed by the railways as a whole by 5% over Oct., 1921, but the Oct., 1922, revenue was 7% smaller than in Oct., 1920, which was an outstanding month as regards railway freight traffic, and this traffic having been carried at the high rates which had been ordered a short time previously, exceptional freight earnings resulted. Passenger traffic revenue in Oct., 1922, slightly decreased from Oct., 1921, but the increased freight traffic revenue was more than sufficient to compensate for the loss in passenger traffic revenue and other items, so that the total revenues for the month were in excess of Oct., 1921.

An examination of the expense accounts for the railways as a whole, particularly transportation expense, shows that the wage reductions and other expense reductions were more than adequately reflected in the results obtained, when consideration is given to the much larger volume of traffic moved. The increase in operating expenses in its relation to the increase in operating revenues is reflected, as seen on reference to the tabulated results, in an increased operating income, and a lessened operating ratio, for the month. The operating ratio in Oct., 1922, of 76.26, is by far the best that Canadian railways, collectively, have been able to exhibit for some time, and marks further progress in that improvement in the industry which, as noted in a preceding number of Canadian Railway and Marine World, set in in Sept., 1922.

Analysis of the freight traffic handled in Oct., 1922, shows that it was 26.5% greater than in Oct., 1921, and 26.6% greater than in Oct., 1920. The grain crop harvested in 1922, the largest in Canadian history, with the long haul to eastern points, was of course the chief factor in the record ton-mileage handled, but a heavy movement of coal, lumber and other building materials and general merchandise, helped to increase the total to the remarkable figure of 4,332,260,487 ton miles of revenue freight for the month.

The ability of the railways to show such good net results on the reduced rates in effect arose largely from their ability to handle such an increased freight traffic with a much smaller increase, proportionately, in freight train mileage. As stated, the number of tons of revenue freight handled during the month was 26.5% greater than in Oct., 1921, but the number of freight train miles operated during Oct., 1922, was but 17.1% greater than in Oct., 1921. This fact is significant, as showing the increase in operating efficiency. It is, in a measure, a natural consequence of increased traffic that train loading should increase, so that an increase in ton mileage would not be expected to be accom-

panied by a corresponding percentage increase in freight train mileage, but a 26.5% increase in ton mileage, accompanied by but a 17.1% increase in train mileage, is more than an ordinary achievement in this respect, and suggests that the heavy power and other improved facilities now being used by the railways were utilized to the best possible advantage during the heavy traffic month under review.

The increased train loading, which the relative increases in freight traffic and train mileage indicates, had its origin not only in an increased number of cars per freight train, but also arose from the better average loading of cars. The average number of cars per freight train in Oct., 1922, was 34.1, of which 22.5 were loads and 11.6 empties, compared with an average number of cars in Oct., 1921, of 32.8, of which 21.9 were loads and 10.9 empties. The increase in the average number of tons per loaded freight car of from 27.1 to 28.3 is a substantial improvement.

Regarding briefly the results secured by the three chief railways individually, it may be seen that the Canadian National carried the largest freight traffic in a single month in its history, the revenue ton-mileage being 28.9% greater than in Oct., 1921, and 50% greater than in Oct., 1920. The average load per car having increased from 27.8 tons, and 28.2 tons, in Oct., 1921, and Sept., 1922, respectively, to 29.5 tons in Oct., 1922; and average train loading for the month being 92.2 tons heavier than in Oct., 1921, a large increase in operating efficiency was evident. The Canadian Pacific also made a record for ton miles carried in a single month, and with an increased operating efficiency, represented by the increase stated in train and car loading, secured net results reflected in the extremely low operating ratio of 66.53, and the biggest monthly net earnings secured in its history. A comprehensive review of the financial results secured by the Canadian National and Canadian Pacific Rys. in October, and the first 10 months of 1922, was given in Canadian Railway and Marine World for January, pg. 23. The Grand Trunk, not participating in the grain traffic, which furnished such opportunity to the Canadian National and Canadian Pacific to increase their car loading and train loading in substantial measure, experienced decreases in its average train and car loading, and because the increased traffic secured by it was of such a nature that the big bulk and low expense movements characteristic of the western grain traffic were not present, operating expenses could not be reduced in as great measure as on the roads enjoying that traffic. Revenues were 6% better than in Oct., 1921, but expenses were 9% greater, resulting in the operating ratio being increased from 87.08 to 89.59.

As stated above, the results secured by Canadian railways in Oct., 1922, advanced considerably the improvement which set in during the previous month, and information concerning the results secured by the three large systems in November, with preliminary information for December, as published elsewhere in this issue, show that this improvement has continued to manifest itself. Much of the improvement has been due, of course, to a continuation of the heavy traffic arising from movement of farm products, and although a large part of

this movement has been at comparatively low rates, it has been profitable, because it has been so large. The manner in which the rate reductions cut into the railways' unit revenues is evident, on noting that the average freight receipt per revenue ton mile for the railways as a whole was but 0.884c. in Oct., 1922, compared with 1.044c. in Oct., 1921. While the major part of this decrease may be ascribed to the restoration of the Crowsnest agreement rates on grain, it must be remembered that the rate reductions prescribed for other commodities were of importance. Just what result on railway earnings the present rates will have when the grain movement has been completed, has been the cause of a lot of conjecture. The results secured in the spring and summer of 1922, when traffic conditions were not extraordinarily good, were disappointing, but if the increase in general traffic which accompanied the heavy grain movement in the autumn of 1922, be sustained, there is cause to hope that railway operating results will continue to exhibit some of that improvement which was ushered in in Sept., 1922.

Freight Car Locations on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Canadian railways as of Jan. 1, 1923, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada; Central Vermont, in Canada; Michigan Central, in Canada, and Pere Marquette, in Canada, as follows: Cars owned by reporting railways, 220,592; home cars on Canadian foreign lines, 18,899; home cars on U.S. lines, 57,304; home cars on home roads, 144,389; Canadian-owned foreign cars on home lines, 17,284; U.S.-owned foreign cars on home lines, 32,938; total cars on lines, 194,611; per cent. on lines to total owned, 88.2; deficiency on lines to total owned, 25,981; home cars in bad order, 10,404; foreign cars in bad order, 561; total cars in bad order, 10,965; per cent. in bad order, 5.6; privately-owned U.S. cars on lines, 1,817; privately-owned Canadian cars on lines, 966.

Canadian Exhibition in France.—The Dominion Government has appointed an executive committee, to organize and manage the proposed Canadian exhibition in France. Among the members are Senator C. B. Beaubien, one of the Canadian Car & Foundry Co.'s directors; Hon. W. C. Kennedy, Minister of Railways and Canals (since deceased); E. W. Beatty, President, C.P.R.; Sir Henry Thornton, President, Canadian National Rys., and J. H. Walsh, General Manager, Canadian Manufacturers' Association.

Manitoba's Coal Supply.—C. Murphy, General Manager, Western Lines, C.P.R., is reported as stating that Manitoba is now getting 75% of its coal supply from Alberta. A few years ago the Manitoba market was supplied almost entirely with U.S. anthracite coal.

Longlac-Nakina Cut-Off Contract, Canadian National Railways.

The Canadian National Rys. management has given a contract for clearing, grading, culverts, timber bridging, and substructures for bridges on the 29.4 miles connection between the Canadian Northern Ontario Ry., near Longlac, 480.7 miles northwest of North Bay, and the National Transcontinental Ry., near Nakina, 272.25 miles west of Cochrane, to Foley Bros. & Hervey. The members of the firm are Foley Bros., of St. Paul, Minn., and Brig.-Gen. Chilion L. Hervey, D.S.O., C.E., Montreal. There was spirited competition for the work, among the other tenderers being V. T. Bartram and A. H. Britton; Chambers, McQuigge & McCaffrey; Hugh Doheny & Co.; Dominion Construction Co.; John-

dian Northern Ontario Ry., to a point near Nakina station, 15.9 miles west of the divisional point of Grant, on the National Transcontinental Ry., authority be given to proceed immediately with the proposed work. It is observed that the proposed cutoff will shorten the route between points in eastern Canada and Winnipeg by 102.6 miles, and between Fort William and Quebec by 99.1 miles; the latter being an important factor in connection with the haulage of grain for export from the head of Lake Superior to the Atlantic seaboard; that, after the construction of the proposed cutoff, it is estimated that there will be an annual saving of \$389,200 in the movement of traffic; further, that a large increase in

of the line, with consequent loss of profit; that, providing immediate authority is given to proceed with the proposed work, a great deal of preliminary work, such as making tote roads, arranging for supplies, establishing camps, clearing right of way, and excavating rock, can be performed advantageously during the winter months, which will permit of actual construction work commencing as soon as the snow is off the ground in the spring. The Minister, therefore, on the advice of the Deputy Minister of Railways and Canals, recommends that authority be given accordingly. The committee advise that the requisite authority be granted."

The work will be under the Canadian

Location, Longlac-Nakina Cutoff, Canadian National Railways.

Profile, Canadian Northern Railway, Longlac, Ont., to Winnipeg.

Profile, National Transcontinental Railway, Grant, Ont., to Winnipeg.

son Bros. & Tomlinson; R.A.R. & Ian R. Sinclair; Grant Smith & Co. and McDonnell, Ltd.

The authority for the construction was given by the following, which was approved by the Governor-General, on Dec. 22, 1922, and passed as an order in council:—"The committee of the Privy Council have had before them a report, dated Dec. 21, 1922, from the acting Minister of Railways and Canals, representing that the Chairman of the Boards of Directors and President of the Canadian National Rys. has submitted a report, recommending that, in connection with the Long Lake cutoff, which is a connection 29.5 miles in length, proposed to be constructed from a point near Long Lake station, at the most northerly point in Ontario, on the Cana-

passenger traffic will accrue as the result of shorter schedules, which will make possible an estimated annual increase in earnings of \$600,000, without any material increase in expenses. It is, further, observed that the total estimated cost of the work will aggregate \$1,944,006, including the removal of the terminal facilities from Grant to the new junction point, and that sufficient funds are available to provide for any expenditure up to March 31, 1923, but that, in view of the fact that the proposed work will obligate the Government to the above mentioned expenditure, \$1,944,006, it is considered that authority should be obtained before proceeding with such work. It is pointed out that if the work is not commenced immediately, a delay of one full season will result in the completion

National Rys. Construction Department, of which M. H. MacLeod, C.E., is Vice President, the engineering being under the direction of H. T. Hazen, Chief Engineer, Canadian Northern Ry. Lines East of Port Arthur, who visited its locality in the middle of January, having been preceded by H. T. Morrison, Locating Engineer, C.N.R., who was engaged on the preliminary surveys and made the final location one, and by R. A. Baldwin, District Engineer of Construction, Ontario District, C.N.R., both of whom went over the route to lay out the work for the contractors. The construction will come under Mr. Baldwin, and the Division Engineer of Construction will be Capt. K. G. Polyblank, heretofore Division Engineer, Nipigon Division, Ontario District, C.N.R., Hornepayne, who will

have four resident engineers under him. O. W. Swenson, Secretary-Treasurer of Foley Bros., also visited the locality early in January to make preliminary arrangements for the work. Both the C.N.R. and the contractors' headquarters for the work will be at Longlac.

Canadian Railway and Marine World for Dec., 1922, gave, on pg. 623, the reasons for building the connection, a description of the surveys made, a table of the savings in distances which will be effected, and particulars of the country through which it would run. The accompanying plan shows the connection's location. The curvature on the line will be very light, the maximum being 4°. The maximum grade in each direction will be 0.4%, compensated for curvature. The elevation at the point where the connection will leave the Canadian Northern Ry. is 1,032 ft. above sea level, and the point where it will join the National Transcontinental Ry. is 1,045 ft. The country to be traversed being fairly flat, the summit for the whole connection will be but 1,085 ft. above sea level. At the south end of the route there is a considerable quantity of rock, and on the balance of the line there are long stretches of spruce swamp, with clay subsoil. The north middle portion of the line is partly sand and gravel, and at the north end the country is again swampy. The principal bridges will be at the crossings of the Kenogamisis River at mile 6; the crossing of Devilfish Lake, mile 13.7, and the crossing of McDonald Creek, mile 28.8, at each of which places a plate girder span will be erected on concrete abutments. There will be 6 small pile trestles.

The article in our December issue gave details of the distances to be saved through the building of this connection, and the profiles of the Canadian Northern line between Longlac and Winnipeg, and the National Transcontinental line between Nakina and Winnipeg, given herewith, show the advantages to be derived in the matter of grades. Trains using the cutoff will not have to dip down to the Lake Superior level and climb up again; westbound trains will miss the long climb west out of Fort William, elevation 613 ft., to Huronian, elevation 1,571 ft., a difference in elevation of 958 ft., while the advantage in the way of grades for eastbound trains using the National Transcontinental Ry. and the cutoff, from Winnipeg to Longlac, compared with the Canadian Northern route from Winnipeg to the same point, is evident on comparing the two profiles.

The terminal facilities at Grant, the present divisional point, 254.2 miles west of Cochrane, and 15.9 miles east of Nakina, will be removed to Nakina next summer.

Canadian Passenger Association Committees, etc.—At the annual meeting in Montreal, Jan. 9, the following were elected to serve during 1923:—Advisory committee, G. T. Bell, H. H. Melanson and C. B. Foster; chairman, S. Lebourveau. Executive committee, W. B. Howard, chairman, R. F. MacLeod, G. D. Wadsworth and C. W. Johnston. Rules committee, Jas. Morrison, chairman, R. F. Hill, C. W. Johnston, and W. B. Howard. Baggage car traffic committee, J. O. Apps, chairman, L. L. Grabill, W. M. Skinner and R. L. Fairbairn. Publicity committee, H. R. Charlton, chairman, J. M. Gibbon and W. L. Crichton. Secretary, G. H. Webster.

A Canadian National Railways' Director Denies Being a Bootlegger.

Canadian Railway and Marine World for Dec., 1922, reproduced an article from the Renfrew, Ont., Mercury, a Liberal newspaper, referring to a charge made by Sir Henry Drayton to the effect that F. G. Dawson, of Prince Rupert, B.C., one of the Canadian National Rys. directors, was a bootlegger. Shortly afterwards, Mr. Dawson denied the charge, in an interview at Vancouver, the press report in regard to which was published in our January issue, in order to give both sides of the question. Just after our January issue had gone to press we received a letter from Mr. Dawson, as follows:—

"I am just in receipt of a copy of the December issue of your publication, and notice an article headed 'A serious charge against a C.N.R. director.' The statement purported to be made by Sir Henry Drayton was not a definite one, but, as you state, he 'intimated' that I was a 'bootlegger' on a large scale. I challenge Sir Henry Drayton, or any other man, to make this as a definite charge. I am engaged in the wholesale grocery business, under the firm name of F. G. Dawson Limited, and have always done a legitimate wholesale business and have never handled liquor, either legally or illegally, but when the B.C. Moderation Act came into force and the B.C. Government opened liquor stores at all strategic points in B.C., our firm were appointed distributing agents for Northern B.C., by a Victoria, B.C., brewery, to distribute their beer, in the territory contiguous to Prince Rupert, to the Government liquor stores and to the export liquor houses, who, by the way, are permitted by the Federal Government, and licensed by the B.C. Government, to carry stocks for sale without the province, or as the name would imply, for export purposes. All beer leaving the brewery is under the supervision of a Government inspector, the Government also have inspectors, whose duty it is to keep a check on brewery agents, so there is no chance of bootlegging even if a person were so inclined.

"This unsavory bit of publicity was started in B.C. by Hon. H. H. Stevens, M.P. for Vancouver, who, in a public speech, after my appointment was announced, made the statement that it was 'reported' that upon inspection being made, my stock was found to be some 1,600 barrels short, and that the information was 'presumably' in the hands of the Attorney General, but because I was a friend of the Attorney General, no action had been taken. This accusation was made just at the time I was leaving for the east, so I immediately demanded a complete investigation by the Liquor Control Board, who sent their Chief Inspector here, during my absence, who had full and complete access to all our books and records, and who made a report that everything was found correct, and everything fully accounted for. The matter was also investigated by the Public Accounts Committee of the B.C. Legislature, who absolutely exonerated me and my firm. The report of the Chief Inspector and the report of the public accounts committee were tabled in the Legislature. In my opinion, and in the opinion of all who know the circumstances, my exoneration could not be more complete.

"If there was the least atom of truth

in the charges, I would unhesitatingly resign from the board, as I do not in any way care to embarrass the Government who appointed me, or my co-directors. Unfortunately politics are politics, and charges, during a political campaign, are very often made by innuendo, that are not actually charges, and which cannot possibly be substantiated, but again unfortunately, some politicians go on the assumption that if enough mud is thrown some of it is bound to stick. I hope you will do me the honor of publishing my side of the story and give same as much prominence as the article on pg. 608 of your December issue."

The Prince Rupert Board of Trade's Secretary has sent Canadian Railway and Marine World a copy of a resolution passed by the Board, of the executive council of which F. G. Dawson is a member, as follows: "Whereas statements have been made, by public men from Vancouver, which carry an innuendo that F. G. Dawson, Ltd., had trafficked in beer contrary to the provision of the Government Liquor Act; and whereas the said matter has been investigated and reported upon by the Chief Inspector for the British Columbia Liquor Control Board which report shows that neither F. G. Dawson nor F. G. Dawson, Ltd., have been guilty of any conduct contrary to the provision of said act; and whereas the matter was further fully investigated by the public accounts committee of the British Columbia Legislature, and it was clearly shown that F. G. Dawson and F. G. Dawson, Ltd., had carried on their business entirely according to law, and with no blame of any sort attached to F. G. Dawson, or said firm; and whereas the first referred to statements have been widely circulated and quoted in distant parts of Canada, evidently for political advantage, while very little publicity has been given to Mr. Dawson's vindication; and whereas we know the said innuendo has no foundation in fact, and we believe the statements were made purely to satisfy sectional and political feeling in Vancouver, and with intent to injure Mr. Dawson, particularly with respect to his recent appointment to the directorship of the Canadian National Railways board; now therefore, we the Prince Rupert Board of Trade go on record as stating that we have the utmost confidence in F. G. Dawson as a law abiding citizen, a successful business man, and a man morally, intellectually, and from his wide experience well qualified to represent Canada on the said board, and as regretting the unreasonable sectional and vindictive stand taken by representative men."

The G.T.R. Time Table Folder, January issue, has two pages of skeleton or index maps, to facilitate the finding of the various time tables. These have numbers on different portions of the lines, which refer to the time table numbers in the folder. The index of stations showing the time table number for every station is continued, but the index maps will frequently render it unnecessary to consult the general index.

Canadian Railway Club.—F. O. Farey, chief chemist, Robert W. Hunt Inspection Co., read a paper on kiln drying of lumber, before the club, in Montreal, on January 9. The club's annual dinner was held on Jan. 27.

Canadian Pacific, Canadian National and Grand Trunk Railways' Earnings.

The monthly reviews of railway earnings published in Canadian Railway and Marine World have shown that in the early part of 1922, and throughout the summer, the railways were obtaining results which could not be classed as other than disappointing. While the Canadian National lines were showing some decrease in the operating deficit, it was not an extraordinarily substantial one, although as great as conditions could justify one in expecting, and the C.P.R. net earnings lagged behind those of 1921 consistently. The G.T.R. was obtaining better results than the other two roads, the shopmen's strike in the U.S. contributing in a measure to its traffic, and aiding operating economy to get returns which were much more favorable than in either 1920 or 1921. Up to the beginning of Sept., 1922, it appeared that the rate reductions which had been imposed upon the railways, combined with a flow of traffic which, while an improvement over that of 1921, was not sufficient to at all tax the railways' capacity to handle it, were going to result in a very poor year for Canadian railways. With the coming of autumn, however, conditions changed materially for the better. The great improvement which took place in September was commented upon in Canadian Railway and Marine World for Dec., 1922, and the continuation of better conditions in October, with results as noted in Canadian Railway and Marine World for January, showed that the exceptional grain traffic, in combination with the larger general traffic resulting from improved economic conditions, bid fair to save the year for the railways.

That the improvement in September and October, which must, of course, be regarded as largely seasonal, has not dropped away as rapidly as it manifested itself, is evident from the railways' earnings statements for November, and preliminary weekly statements for December. The C.P.R. November gross earnings were \$21,421,078, an increase of \$2,633,398 over Nov., 1921, this being the largest November gross the company ever had, with one exception, viz., Nov., 1920, when a large traffic was carried at rates which, reflecting in some measure the extraordinary degree of inflation then existing, were at their peak. Operating expenses for the month were \$15,695,285, an increase of \$579,407 over Nov., 1921. The larger increase in gross earnings than in operating expenses resulted in net earnings for the month, \$5,725,793, being \$2,053,991 greater than the Nov., 1921, net. While these net earnings represented a substantial decrease from the exceptional net derived in the preceding month, it is notable that they constitute the best net results the company has secured in any November but one in its history, the single exception being in Nov., 1915, when net earnings were \$6,354,413.

In immediately preceding numbers of Canadian Railway and Marine World, the opinion was expressed that the large grain and general traffic which the C.P.R. was handling would result in the company being able to overcome the deficiency in its net earnings, compared to those of 1921, and that the opinion was well founded is shown by the fact that the November results brought the total net earnings for the first 11 months of the year to \$552,927 more than the net for the first 11 months of 1921. Gross

earnings for the first 11 months of 1922, \$169,309,396, were \$7,955,534 less than those for the first 11 months of 1921, but operating expenses, \$136,472,510, being \$8,508,461 smaller than in the first 11 months of 1921, the betterment in the net result mentioned above was obtained.

While the Canadian National Rys. did not secure as great an improvement in Nov., 1922, over Nov., 1921, as did the C.P.R., some betterment was evident. The Canadian Northern, Canadian Government, and Grand Trunk Pacific Rys., steam lines only, gross revenues, in Nov., 1922, \$12,737,758, were \$24,249 more than for Nov., 1921, and operating expenses, \$11,983,938, were \$9,056 less than in Nov., 1921, resulting in the Nov., 1922, net, \$753,820, being \$33,305 more than in Nov., 1921. For the lines as a whole, including the electric ones, the gross earnings, \$12,872,740, were \$33,632 greater than Nov., 1921; and operating expenses, \$12,096,073, were \$15,686 less than in Nov., 1921, resulting in the net earnings, \$776,667, being \$49,319 more than in Nov., 1921. For the first 11 months in 1922, the Canadian National steam and electric lines' total gross earnings were \$109,400,670, a decrease of \$5,935,508 from those for the first 11 months of 1921, and the operating expenses, \$117,046,562, were \$13,394,898 smaller than in the first 11 months of 1921, decreasing the operating loss from \$15,105,283 to \$7,645,892, an improvement of \$7,459,391. A Canadian National officer has expressed the opinion that if the Crowsnest rates on grain had not been introduced on the 1922 grain traffic, the national lines would have broken even for the year, and bearing in mind the radical decrease in rates which was brought about by the reapplication of the Crowsnest agreement, it is evident that the operating deficit for 1922 would have been almost or entirely non-existent if the grain rates had been left alone.

The improvement secured by the Grand Trunk in 1922, compared with 1921, has been remarkable. For the system as a whole, the gross earnings for the first 11 months of 1922 were \$96,989,651, an increase of \$2,198,388 over the first 11 months of 1921. Accompanying this improvement in gross was a substantial decrease in operating expenses, which were \$83,031,092 for the first 11 months of 1922, or \$6,047,020 less than in the corresponding period of 1921. This resulted in net earnings for the first 11 months of 1922 of \$13,958,559, being \$8,246,308 more than in the corresponding period of 1921. In Nov., 1922, the G.T.R. system as a whole enjoyed a continuation of the heavy traffic which came to it in the early autumn, the gross earnings of \$10,084,710 being \$1,363,889 more than in Nov., 1921, while the operating expenses, \$8,861,393, were but \$609,582 greater, resulting in the net earnings for the month, \$1,223,317, being \$754,306 more than in Nov., 1921. The G.T.R. figures referred to are for the entire system. For the Canadian lines, a corresponding improvement for both November and the first 11 months of 1922, as compared with corresponding period of 1921, is evident. The results on the company's Canadian lines are given in tabular form on another page of this issue.

On combining the results secured by the G.T.R. portion of the entire national system, with those secured by the original Canadian National Rys. portion, it

is evident that the prediction made in a preceding number of Canadian Railway and Marine World, that an operating surplus would be shown by the combined system for 1922, will be correct. To the end of November, the net earnings of \$13,958,559 secured by the G.T.R. system, combined with the operating loss of \$7,645,892 sustained by the Canadian Northern, Canadian Government and Grand Trunk Pacific Rys., steam and electric lines, show an operating surplus of \$6,312,667. Preliminary earnings statements for Dec., 1922, show an increase in Canadian National earnings for the week ended Dec. 7 of 4.7%, and a decrease for the week ended Dec. 14 of 5.6%, while preliminary statements for the G.T.R. show an increase in the week ended Dec. 7 of 19.04%, and for the week ended Dec. 14 of 20.8%. On this basis, it is probable that the December results will increase in appreciable degree the net earnings secured by the national lines as a whole in the first 11 months of 1922.

Preliminary earnings statements for the C.P.R. show that in the week ended Dec. 7, 1922, its gross earnings were 22.1% greater than in the corresponding week of Dec., 1921; the increase in the week ended Dec. 14 was 7.9%; in the week ended Dec. 21, the increase was about \$130,000, and in the 10 days period ended Dec. 31, the increase was \$408,000. From these figures, and those given above, covering all the railways' earnings for the first 11 months of 1922, it is evident that the railways are now enjoying returns representing a great improvement over those of the first part of 1922, and, indeed, of the past few years. The results reviewed indicate that the grain traffic, particularly on the C.P.R., has held out remarkably well, but further than that, they indicate that the movement of general traffic is large. With the seasonal falling off in the grain traffic, it would naturally be expected that the railways' gross earnings would contract considerably, and, taking into consideration the lowered rates prevailing, it would also be expected that net earnings would undergo more than a proportionate shrinkage. With improved economic conditions originating a large volume of general traffic, however, it seems probable that the railways will continue to obtain results which may be designated as satisfactory, and it is to be hoped that conditions will retain all the improvement effected to date, and go on improving, so that the railways may continue to derive adequate earnings on the present rates, after the heavy traffic consequent on the 1922 crop has all been handled.

Beer and Wine on Dining Cars in Quebec Province.—In reference to the matter published under this heading, in Canadian Railway and Marine World for January, pg. 27, we are officially advised that it has been decided to sell beer and light wines on Canadian National Rys. dining cars operating between Montreal and Quebec.

Quiet on Sleeping Cars.—The G.T.R. is displaying in sleeping cars, between 9 p.m. and 7 a.m., notices reading: "Quiet is requested for the benefit of those who have retired." One notice is placed in the smoking room and the other two in the passages, to try and prevent loud talking by thoughtless people which disturbs other occupants.

Major Graham A. Bell's Positions.

Major Graham A. Bell, C.M.G., then Assistant to the Minister, and also Financial Comptroller of the Railways and Canals Department, was, on Nov. 5, 1917, appointed a Dominion Government representative on the Canadian Northern Ry. directorate. On June 22, 1918, he was appointed acting Deputy Minister, and continued as a C.N.R. director. On Sept. 6, 1918, Sir William Mackenzie, Sir Donald Mann, and the other directors, except D. B. Hanna and Major Bell, retired. He was appointed Deputy Minister June 1, 1919, and, on Aug. 4, 1922, was appointed by the Government as a director of the G.T.R. Co. On Oct. 4, 1922, when the new directorate for the Canadian National Rys., including the Canadian Northern, the Canadian Government, the Grand Trunk and the Grand Trunk Pacific Rys., was appointed, headed by Sir Henry Thornton, Major Bell was included, and at the first meeting of the combined boards on Oct. 10, 1922, he was elected Vice President, and Vice President of Finance, of each of the companies.

The following was approved by the Governor-General on Jan. 5, 1923, and passed as order in council 10:—The committee of the Privy Council have had before them a report, dated Jan. 4, 1923, from the acting Minister of Railways and Canals, submitting that the Chairman of the Boards of Directors and President of the Canadian National Railways has preferred a special request that the services of Mr. Graham A. Bell be placed temporarily at the disposal of the railways for a period now estimated to be about three months. The Chairman has pointed out that Mr. Bell has been in very intimate touch with railway matters in Canada for a great many years, and that, in addition to being thoroughly conversant with railway problems from a general standpoint, he is in a unique position, as being particularly well informed as to those relating to the finances of all the Government owned and controlled lines, and it is consequently essential that his experience and knowledge be directly availed of at this time. The Chairman has stated further that, during Mr. Bell's absence for the above purpose, the railways will refund to the Department the amount paid to him in the usual way as civil government salary. In view of the request of the Chairman, and for the considerations aforesaid, the Minister recommends that authority be granted accordingly. The committee submit the same for approval."

Dearborn Station, Chicago, Burned.—The Union station at Dearborn St., Chicago, Ill., owned by the Chicago & Western Indiana Rd., and used by the Grand Trunk, as well as by other railways, was destroyed by fire Dec. 21, 1922. It was announced on the following day that G.T.R. traffic would not be interrupted, as all trains would enter and depart from the Taylor St. annex, which had been untouched.

Sight Testing for Railway Employees.—The Ontario Optometrical Association passed a resolution recently urging on the Board of Railway Commissioners the advisability of passing a regulation providing for examination of steam railway employees' eyesight by competent optometrists. It was stated in the preamble that in certain parts of the country these examinations are conducted by other than qualified men.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System (steam lines only), Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net deficits	
			1922	1921
Jan.	\$8,210,401	\$10,433,564	\$2,223,163	\$2,863,058
Feb.	7,650,743	10,026,572	2,375,829	2,986,998
March	9,418,100	10,397,547	979,447	2,532,959
April	7,804,222	9,153,738	1,349,516	2,636,639
May	9,678,965	9,726,020	47,055	2,554,540
June	8,235,603	10,199,592	1,963,989	2,595,257
July	8,877,776	10,510,778	1,633,002	1,334,569
Aug.	9,569,780	10,399,617	829,837	17,105
Sept.	11,726,459	11,123,750	*602,709	*467,685
Oct.	14,074,025	11,917,281	*2,156,744	*1,033,321
Nov.	12,737,758	11,983,938	*753,820	*720,515

\$107,983,832 \$115,872,397 \$7,888,565 \$15,299,604

Decrease \$ 5,760,459 \$ 13,171,498 \$7,411,039

*Net operating revenue.

Approximate gross earnings for Dec., 1922, \$10,685,573, and for three weeks ended Jan. 21, \$6,298,226, against \$11,666,288 for Dec., 1921, and \$5,739,353 for three weeks ended Jan. 21, 1922.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,975	\$10,854,498	\$483,477	\$157,948
Feb.	11,303,693	10,649,205	654,488	158,904
March	13,847,627	11,427,120	2,420,507	30,402

Increase \$4,270,199

Decrease \$ 210,794 \$ 4,480,993

*Deficit.

Approximate gross earnings for Dec., 1922, \$8,967,397, and for three weeks ended Jan. 21, \$5,622,205, against \$7,618,869 for Dec., 1921, and \$4,851,865 for three weeks ended Jan. 21, 1922.

The Bad Order Car Situation.

That Canadian railways have come through the peak traffic period with little or no let-up in the efficiency with which freight cars have been kept in good order, is evident from reports issued by the Railway Association of Canada. The report for the period ended Jan. 1, 1923, shows that at the end of the period, out of a total of 194,611 freight cars on Canadian lines, there were only 10,965 in bad order. The usual 7% allowance, which the American Railway Association prescribes as a reasonable percentage of cars to be in bad order, would allow Canadian lines to have 13,623 cars in bad order without exceeding the 7% standard, but the figures given above show that 2,658 less cars than this were unfit for service. The actual number in bad order was 5.6%. The report shows the car shortage as having been overcome, a surplus of 244 cars in good order being reported.

The great excellence of the condition in which Canadian railways kept their freight equipment throughout the period of heavy traffic in the latter part of 1922 is shown by the fact that on Oct. 1 the percentage of bad order cars on Canadian lines was but 7.03, on Nov. 1 but 6.1, on Dec. 1 but 5.2, and at the end of December, but 5.6. That such a low percentage of bad order equipment could be maintained throughout a period when every car was in continuous demand, must be looked upon as a fine achievement.

The latest report available at the time of writing, issued by the American Railway Association's Car Service Division, shows that at Dec. 15, 1922, the total number of freight cars on line on the U.S. class 1 roads was 2,265,683, of which 213,837, or 9.4%, were in bad order. Out of 1,033,769 box cars, 93,219, or 9%, were in bad order; out of 58,694 refrigerators, 5,598, or 9.5%, were in bad order; out of 954,174 gondolas, 96,252, or 10.1%, were in bad order; out of 81,220 stock cars, 7,112, or 8.8%, were in bad order, and out of 95,737 flat cars, 8,953, or 9.4%, were in bad order. The percentage of all cars in bad order, 9.4, compares with a percentage of 9.9 on Dec. 1, and 10.4% on Nov. 15, 1922. In view of the fact that but a few months ago between 13 and 14% of the U.S. class 1 roads' cars were in bad order, the improvement accomplished on the U.S. lines has been substantial, although a wide margin still remains between the Canadian and U.S. bad order percentage.

The C.P.R. and Agricultural Courses.

—E. W. Beatty, President, C.P.R., has offered to the four prize winners of the young farmers' clubs of Great Britain, full summer courses in the Alberta agricultural schools. The four young men selected will arrive in Canada in time to commence the summer course in the schools in May, and after visiting various areas in the west, and attending fairs, etc., will return to Great Britain in the autumn. They are to make reports of their visit for immigration propaganda.

Railway Mechanical Convention.—The American Railway Association, Mechanical Division, will not hold its usual annual convention, with railway supply exhibits, at Atlantic City this year, but a business meeting will be held in Chicago, opening on June 20, and lasting for two or three days.

Storms Interfere with Traffic in the Maritime Provinces.

A storm of long duration, marked by extremely heavy snowfall, high winds and low temperatures, struck Nova Scotia, New Brunswick and Prince Edward Island on the afternoon of Jan. 12, and increased in intensity on Jan. 13, continuing to rage until about noon of Jan. 14, when it was succeeded by extreme cold. Due to the heavy snowfall, and the high winds filling the railway cuts with snowdrifts which packed hard, train service on practically the entire Canadian National Rys.' Maritime District was interfered with seriously. At the beginning of the storm, snow ploughs and flangers were put to work, but with the storm increasing in violence, the tracks filled up as fast as cleared, and it was consequently decided to hold all freight trains at terminals until the storm subsided. Ploughs and flangers were kept operating, however, in an effort to keep passenger trains moving. The Ocean Limited stalled in a heavy drift about 7 miles east of Sackville, N.B., on Jan. 13, and was not released till Jan. 14. On Jan. 15 the lines in New Brunswick and Nova Scotia were nearly all cleared, and normal traffic conditions again prevailed on Jan. 16. In Prince Edward Island the storm raged with great intensity, and on Jan. 13 and 14 all tracks became snowed in completely, with the result that traffic practically came to a standstill on Jan. 14 and 15. Ploughs and flangers were kept at work, however, with the result that a few trains moved on Jan. 16, and on the evening of Jan. 17 conditions were restored to normal.

Grading and Track Laying on Canadian National Railways, Western Lines.

The C.N.R. Western Lines grading and tracklaying programme for 1922 was chiefly one of constructing connections and revisions, to enable traffic to be routed by shorter or better lines, and eliminate railway crossings and interlocking plants, thus reducing operating costs and quickening freight and passenger traffic. The following is a list of these undertaken:

Battle-Duhamel, Alta.—Connection between Canadian Northern and Grand Trunk Pacific Rys.: Leaves C.N.R. near Battle at mile 53.29, Battle River Subdivision, joining G.T.P.R. near Duhamel at mile 33.78, Bashaw Subdivision. Total length of connection 3.51 miles, which was graded and track laid during 1922. Grading contractor, F. Mannix, Calgary, Alta.

Lampman, Sask.—Connection between Grand Trunk Pacific and Canadian Northern Rys.: Leaves G.T.P.R. two miles east of Minard, at mile 117.10, Boundary Subdivision, joining C.N.R. at Lampman, at mile 67.26, Lampman Subdivision. Total length of connection 1.79 miles. Graded during 1922, 1.79 miles. Track laid 1.52 miles. Grading contractors, Gibbs Bros., Lumsden, Sask.

Magnolia, Alta.—Connection between Canadian Northern and Grand Trunk Pacific Rys.: Leaves C.N.R. near Magnolia, at mile 67.67, St. Albert Subdivision, joining G.T.P.R. about 27 miles east of Entwistle, at mile 857.19, Evansburgh Subdivision. Total length of connection 0.83 mile, which was graded and track laid during 1922. Grading contractor, J. Fitzgerald, Edmonton, Alta.

Regina, Sask.—Connection between Grand Trunk Pacific and Canadian Northern Rys.: Leaves G.T.P.R. near West Yard, Regina, at mile 3.88, Riverhurst Subdivision, joining C.N.R. near Ardmore, at mile 5.50, Craik Subdivision. Total length of connection 3.67 miles, which was graded during 1922, and track laid. Grading contractors, Roasa & Wikstrand, Saskatoon, Sask.

Where track has been laid on the connections mentioned above, ballasting will be started early in the spring.

Ansell-Bickerdike, Alta.—Line revision on Grand Trunk Pacific Ry. between Ansell, at mile 60.71, Brule Subdivision, and Bickerdike, at mile 64.46, Brule Subdivision. Total length of revision 3.90 miles, which was graded during 1922, but no track laid. Grading contractor, D. Fitzgerald, Carstairs, Alta.

Rowan, Ont.—Line revision on Canadian Northern Ry. near Rowan, between mile 35.65, Kashabowie Subdivision, and mile 38.59, Kashabowie Subdivision. Also connection from revised line to National Transcontinental Ry. about 3 miles west of Dona, at mile 30.52, Graham Subdivision. Length of revision 2.73 miles. Graded during 1922, 0.70 mile. No track laid. Length of connection, 0.66 mile. Graded during 1922, 0.22 mile. No track laid. Grading contractor, W. A. Dutton, Winnipeg, Man.

Neebing, Ont.—At Neebing, 3.2 miles west of West Fort William, work was started on a terminal yard which will be completed this year. It includes 24-stall roundhouse; 350-ton coaling plant; 150,000 gall. water tank with 8 in. pipe line, 2¼ miles long, to City of Fort William water mains; other facilities, and a yard designed to accommodate the special requirements of traffic at this point of 3,100 car capacity. Double tracking the line between Port Arthur and the new connection at Rowan was commenced during 1922, and is practically completed from Port Arthur to Neebing Yard.

Large Orders for Steel Rails.

The Canadian National Rys. have given orders recently for a very large tonnage of 85 lb. steel rails, standard C.N.R. section.

The Dominion Iron & Steel Co. has been given an order for 25,000, delivery to be taken at Sydney, N.S., or Montreal, commencing early in the spring. A further order for 15,000 tons, to be delivered at Port Arthur for Western Lines, is under negotiation.

The Algoma Steel Corporation has been given an order for 40,000 tons, principally for Western Lines, delivery to commence about March 1.

The aggregate cost of the 80,000 tons will be between \$3,500,000 and \$4,000,000.

In addition to the above, the G.T.R. has on order 34,824 tons, details of which were given in Canadian Railway and Marine World for Nov. 1922, pg. 561.

Among the Express Companies.

The Canadian National Ex. Co. has opened offices at Pellett River, N.B., and Eckville, Alta., and has closed its offices at McNeills Mills, P.E.I., Petite Riviere, Les Eboulements and Ste. Irene, Que., Mowat, Ont., and Ridpath, Sask.

The National Dairy Council appealed to the Dominion Government recently against a Board of Railway Commissioners' ruling placing ice cream in the first class. It is claimed that as ice cream is a

necessary food product, it should be in the second class. The case was heard by a sub committee of the cabinet, Jan. 12 and judgment was reserved.

The Railways and Canals Department is reported to have notified the Dominion Ex. Co. and the Canadian National Express Co., the latter as successor of the Canadian Ex. Co., that the arrangements they have for operation over the Canadian Government Rys. and subsidiary lines, will be terminated on March 31. The Dominion Ex. Co., which operates exclusively over the Canadian Pacific and several other privately owned lines, also operates jointly over the Intercolonial, the Prince Edward Island, and several small affiliated railways in the Maritime Provinces over which the Canadian National Ex. Co. also operates. The latter company operates exclusively over Canadian Northern, Grand Trunk, Grand Trunk Pacific, National Transcontinental and several other lines. The impression prevails that the giving of the notice referred to is a preliminary to giving the Canadian National Ex. Co. exclusive rights on the various lines to be comprised in the Canadian National Rys. system when co-ordination is completed.

Telegraph, Telephone and Cable Matters.

G. D. Perry, Vice President and General Manager, Canadian National Telegraphs, and Mrs. Perry, left Toronto, Jan. 11, for California, expecting to return early in February.

Canadian National Telegraphs have opened offices at St. Ulric, Riviere Blanche, Que.; Alonsa, Man., and Peesane, Ridgedale and Spruce Lake, Sask., and have closed offices at Peninsula, Que.; Cayuga, Kingscourt Jct., MacDiarmid, Ont.; Redpath, Sask., and Bonar, Alta.

A. H. Morse, whose resignation as Managing Director, Marconi Wireless Telegraph Co. of Canada, Montreal, was announced in our last issue, was born at Bournemouth, Eng., in 1880, and entered telegraph service at the Central Telegraph Office, London, Eng., in 1897. During the Boer War, 1899 to 1901, he served with the telegraph battalion, Royal Engineers, and in 1902 was engaged in telegraph line construction across the Karoo Desert. In 1904-05 he was Inspector of government telegraphs in Northern Nigeria, West Africa, and built a part of the first telegraph line to Sokoto. He came to Canada in 1905, and was for some time with Dominion De Forest Wireless Telegraph Co. as Assistant Engineer, and was later Superintendent in charge of service between Montreal, Ottawa and Quebec, which is said to have been the first commercial overland wireless telegraph service in the world. He entered Dominion Government service in 1907, and was responsible under the Marine Department for the erection of the first five government wireless telegraph stations on the Pacific coast. In 1909 he entered United Wireless Telegraph Co.'s service in New York, and went to Alaska as Superintendent of Construction and Maintenance. In 1910 he was appointed Superintendent, European Division, of that company, and entered Marconi Wireless Telegraph Co.'s service in 1912. He was appointed wireless advisor to the Indo-European Telegraph Co. in 1915, and in 1919 was appointed Managing Director, Marconi Wireless Telegraph Co. of Canada, at Montreal.

Electric Railway Department

Rehabilitation and Extension of Toronto Street Railway System.

Since the Toronto Transportation Commission took over the Toronto Railway Co. and the Toronto Civic Railway lines in Sept., 1921, for operation, it has not only done extensive repair and track renewal work, but also a comprehensive programme of track construction, so that the track mileage now being operated is considerably greater than when the Commission assumed control, with a corresponding increase in the area being furnished with electric railway service.

sumed control of the lines, was very short, a start was made at once, and rehabilitation work gone ahead with. This work done in the 1921 season was as follows: On Bathurst St., 2.261 single track miles of 122-S-G standard and 1.279 of 122-C-A standard; on Church St., 0.212 mile 122-S-G; on Dundas St., 0.161 mile 122-C-G; on Yonge St., 4.127 miles 122-C-G and 0.046 mile 122-S-G; on College St., 0.317 mile 122-C-A; on Avenue Road, 0.680 mile 122-S-G; on

girder rail, and granite block wearing surface; 122-C-G provides for concrete track foundation, 122 lb. steel, and granite block wearing surface, and 122-C-A provides for concrete foundation, 122 lb. steel, and asphalt wearing surface. The standards call for either softwood ties, 6 in. thick by 8 in. wide by 8 ft. long, with tie plates; or white oak ties of the same dimensions, without tie plates; $5\frac{1}{2}$ x $9\frac{1}{16}$ in. spikes; tie rods $5\frac{1}{4}$ ft. long by $\frac{3}{8}$ x $2\frac{1}{8}$ in. flat, with 1 in. round ter-

Map showing location of Toronto Transportation Commission's Work.

Canadian Railway and Marine World has given, from time to time, details of the progress made by the Commission in its track work, together with descriptive articles on the most important jobs, and data in connection with methods, materials and construction standards, but with the 1922 construction season now past and the major part of the Commission's entire track construction and rehabilitation programme now carried out, a review of the work done since the lines were placed under the Commission's control will be of interest. Although in practically all cases the lines are double track, all distances will be referred to in terms of single track miles. For example, if a mile of double track was laid on a certain street, it will be referred to herein as two single track miles of track.

Although the working season remain-

ing in 1921, after the Commission assumed control of the lines, was very short, a start was made at once, and rehabilitation work gone ahead with. This work done in the 1921 season was as follows: On Bathurst St., 2.261 single track miles of 122-S-G standard and 1.279 of 122-C-A standard; on Church St., 0.212 mile 122-S-G; on Dundas St., 0.161 mile 122-C-G; on Yonge St., 4.127 miles 122-C-G and 0.046 mile 122-S-G; on College St., 0.317 mile 122-C-A; on Avenue Road, 0.680 mile 122-S-G; on

Front St., 0.619 mile 122-C-G; on York St., 0.065 mile 122-S-G; on Bloor St., 0.047 mile 122-S-G; on Lansdowne Ave., 0.071 mile 122-S-G. The total rehabilitation work done in 1921 was 9.885 single track miles. By rehabilitation is meant a complete renewal of the track structure, from subgrade to top of rail; in all work classed as rehabilitation for the purposes of this article, the old track was completely removed, the track allowance excavated to 2 ft. below the finished grade of top of rail, new foundation installed and the new track structure, including new ties, rails and track fixtures, placed. The three standard types of track construction used by the Commission in both rehabilitation and new construction were shown in cross and longitudinal section in Canadian Railway and Marine World for Dec., 1922, pg. 626. The 122-S-G standard provides for

broken stone foundation, 122 lb. grooved

minals; joint plates welded top and base, and joint bolts 1 in. diam.

The track extensions in 1921 were as follows: On Coxwell Ave., between Queen St. and Danforth Ave., 1.377 miles of 100-C-G construction; on Bloor St., at the west end, between Jane St. and Runnymede Road, 0.829 mile, 122-C-A; on Bathurst St., between Davenport Road and St. Clair Ave., 0.454 mile, 122-C-A, and 0.416 mile, 122-C-G, and between Dupont St. and Davenport Road, 0.151 mile, 122-C-A, and 0.244 mile, 122-C-G; on Teraulay St. (now Bay St.), between College and Bloor Sts., 1.154 miles, 122-C-A; a loop on Albert, James and Teraulay Sts., near the city hall, 0.090 mile, 122-C-A; a line connection on Gerard St. at Greenwood Ave., 0.086 mile, 122-C-G; a siding on St. Clair Ave. at Caledonia Road, 0.029 mile of open track construction; sidings on Kingston Road, 0.072 mile open track construction. The

new construction in the short 1921 season amounted to 4.902 single track miles.

In addition to the foregoing work done in 1921, the Commission effected a large amount of major repairs to track which greatly needed it. Under this classification was the following work: Resurfacing pavement and welding joints; welding and building up joints; laying new rail; laying new paving on old foundation; relaying rail on old foundation. In 1921, the following major repairs were carried out: On Danforth Ave., 0.082 mile; on Yonge St., 0.017 mile; on St. Clair Ave., 0.150 mile; on College St., 0.050 mile; on Queen St., 0.655 mile; on Dundas St., 0.101 mile; laid between special track work and non-rehabilitation track, 0.365 mile; total, 1.420 miles.

The 1921 season also saw a good start made on the installation of main line special track work, including the various turnouts, crossings, etc., necessary for facility in car routing. The term main line special track work is used to differentiate it from that required on account of car houses and yards, material yards, etc., such special work being dealt with later. The main line special track work is further subdivided as between rehabilitation special track work, which is that installed in a location where there were special track facilities before, irrespective of the fact that the routing established by the new layout may have differed from that existing according to the original layout. Extension special track work is that placed in a location where there was no special track work before. In 1921, the Commission installed 27 pieces of rehabilitation main line special work, totalling 4.067 single track miles, and 16 pieces of extension main line special track work, totalling 1.050 single track miles, or a total for the year of 5.117 single track miles.

The main line track rehabilitation work done in 1922 was as follows: On King St., 0.719 mile 122-S-G, 0.056 mile other construction, and 1.876 miles 122-C-G; on Bloor St., 3.877 miles 122-S-G, 0.026 mile other construction, and 1.227 miles 122-C-G; on Parliament St., 0.165 mile 122-C-A and 0.287 mile 122-S-G; on Gerrard St., 1.189 miles 122-C-G, 0.003 mile other construction, and 0.051 mile 122-S-G; on Dovercourt Road, 1.974 miles 122-C-A; 0.040 mile with stone foundation and asphalt wearing surface; 0.007 mile 122-S-G, 0.021 mile other construction, and 0.022 mile 122-C-G; on Dufferin St., 0.826 mile 122-C-A, 0.084 mile 122-C-G, 0.012 mile 122-S-G, and 0.043 mile of open track work on Dufferin St. loop; on Dupont St., 1.064 mile 122-C-A and 0.011 mile 122-C-G; on Queen St., 1.438 miles 122-C-G, 1.160 miles 122-S-G, 2.447 miles 122-C-A, 0.336 mile other construction, and 0.102 mile with stone foundation and asphalt wearing surface; on Howard Park Ave., 0.780 mile 122-C-A, 0.023 mile with stone foundation and asphalt wearing surface, 0.062 mile open track construction and 0.026 mile 122-S-G; on Spadina Ave., 0.435 mile 122-S-G and 0.028 mile open track construction; on Church St., 0.276 mile 122-S-G, 1.867 miles 122-C-A, 0.003 mile 122-C-G, and 0.023 mile with stone ballast and asphalt wearing surface; on York St., 0.357 mile 122-C-A, 0.026 mile 122-C-G, and 0.119 mile 122-S-G; on Carlton St., 0.450 mile 122-S-G; on McCaul St., 0.443 mile 122-C-A, 0.006 mile with stone foundation and asphalt wearing surface, and 0.008 mile open track construction; on Dundas St., 0.152 mile 122-S-G; on Roncesvalles Ave., 1.780 miles 122-C-G, 0.039 mile 122-S-G, and

0.087 mile other construction; on Ossington Ave., 0.568 mile 122-C-A, 0.047 mile stone foundation and asphalt wearing surface, and 0.011 mile 122-S-G; on Lansdowne Ave., 0.905 mile 122-C-A and 0.067 mile 122-S-G; on Hallam St., at Dovercourt Road, 0.016 mile 122-S-G, and on Yonge St., at Woodlawn Ave., 0.056 mile 122-C-G. The total rehabilitation for the 1922 season amounted to 27.698 single track miles.

Main line track extensions in 1922 were as follows: On Kingston Road, 0.096 mile 122-S-G construction, 0.169 other construction, and 3.409 miles of 122-C-G construction; Queen St. and Kingston Road loop, 0.042 mile open track construction; Lake Shore Road extension from Roncesvalles Ave. to Humber River, 1.882 miles 122-C-G and 0.399 mile 122-S-G, with loop at west end of

The 1922 extensions totalled 16.187 single track miles.

Major repairs, including work of the class above noted under this head for 1921, were carried out in 1922 as follows: On Avenue Road, 0.847 mile; Bloor St., 1.307 miles; Dufferin St. loop, 0.007 mile; Queen St., 4.235 miles; College St., 1.788 miles; Spadina Ave., 0.389 mile; York St., 0.038 mile; Dundas St., 4.054 miles; King St., 2.941 miles; Victoria St., 0.167 mile; Church St., 0.457 mile; Bay St., 0.513 mile; Ossington Ave., 0.434 mile; Adelaide St., 0.718 mile; Lansdowne Ave., 1.021 miles; Gerrard St., 0.405 mile; Front St., 0.402 mile; Yonge St., 0.051 mile; Bloor St. viaduct, 0.066 mile. Total major repairs for 1922 were 27.534 single track miles.

Special track work installations in 1922 were as follows: Rehabilitation main line special track work, 57 pieces, totalling 7.429 single track miles of steel; extension main line special track work, 33 pieces, totalling 2.320 single track miles of steel.

In addition to the main line rehabilitation, extension and repair work, the Commission did a great deal of track laying in car yards, and installing special track work in the yards and at the turnouts from the main lines to the yards and houses. The following is the single track mileage of the steel laid in connection with car houses, the figures including not only the straight track laid in yards and approaches thereto, but also the special work and turnouts from the main lines necessitated by the existence of the yard or house. These figures are for both 1921 and 1922, as owing to the work being characterized by a good deal of continuity as between the construction seasons, it was not deemed advisable to try to classify the work done between the two seasons: Hillcrest yard, 0.500 mile; Coxwell Ave. yard, 0.065 mile; small yard on Bloor St., west of Dundas St., 0.042 mile; St. Clair Ave. car house and yard, 2.738 miles; Russell car house and yard, 3.101 miles; Danforth car house and yard, 3.208 miles; Eglinton car house and yard, 4.394 miles. The total car house and yard track work amounted to 14.048 single track miles.

The Commission's track work since the lines were taken over is summarized as follows: Rehabilitation in 1921, 9.885 miles; in 1922, 27.698 miles; total, 37.583 miles. Extensions in 1921, 4.902 miles; in 1922, 16.187 miles; total, 21.089 miles. Major repairs in 1921, 1.420 miles; in 1922, 27.534 miles, total 28.954 miles; 1921 main line rehabilitation special track work, 4.067 miles; in 1922, 7.429 miles; total 11.496 miles; 1921 main line extension special track work, 1.050 miles; 1922, 2.320 miles; total 3.370 miles. Total car house and yard track work, 14.048 miles.

The location of the works specified in this article is shown in the accompanying map of the Toronto street railway system as at the end of 1922. By constructing the line from the foot of Roncesvalles Ave. to near the Humber River, the double track on Yonge St. to the northern city limits, and the double track line on Kingston Road to the eastern city limits, the Commission has extended the street railway service to portions of the city which were previously considered outlying districts, and by the additional track construction in the more central portions of the city, ability to more adequately cope with conditions of great traffic density has been provided. The Commission's bus service, de-

Canadian Electric Railway Association.

extension, 0.045 mile of open track construction; on Main St., from Gerrard St. to Danforth Ave., 0.486 mile 122-C-G, 0.030 mile 122-S-G, and 0.051 mile open track construction; on Dovercourt Road, from Van Horne St. to Davenport Road, 0.422 mile 122-C-A and 0.180 mile 122-C-G; on Bay St., from Bloor St. to Davenport Road, 0.350 mile 122-C-A and 0.027 mile 122-S-G; on Carlaw and Pape Aves., from Gerrard St. to Danforth Ave., 1.590 miles 122-C-A, and 0.018 mile 122-S-G; on Yonge St., from Woodlawn Ave. to Deloraine Ave., 5.398 miles 122-C-G and 1.301 miles 122-S-G; loop on Yonge St. at Glenecho Drive, 0.063 mile open track construction; tail track on Pape Ave. at Gerrard St., 0.018 mile 122-S-G; track on Eglinton Ave. for car house entrance connection, 0.117 mile 122-C-G; tail track on Glencairn Ave., 0.023 mile 122-C-G; tail track on McLean Ave., 0.030 mile open track construction.

scribed in preceding issues of Canadian Railway and Marine World, has proved of great aid in finding a solution for the city's transportation problem. A serious problem still remains in the western part of the city, west of the intersection of Dundas and Keele Sts., where Dundas St. is occupied by the Toronto Suburban Ry tracks. Negotiations for the purchase of this line from the Dominion Government by the city have been under way for some time, and it is not likely that an adequate solution of West Toronto's transportation problem will be arrived at until a decision in that matter is reached.

The foregoing will give some idea of how the Transportation Commission has grappled with the problem of rehabilitating a badly run-down street railway system, and, by providing extensions, rounding it off into a transportation machine suitable for a city of Toronto's population. While figures as to costs are not available, it may be assumed that the cost of the work has been large, but, having in mind the great advantages to be gained from adequate transportation, there can be no doubt that the returns secured from this new and larger system, operated efficiently and economically with large car units, and in accordance with the most modern standards of electric railway operation, will amply justify the investment made.

Toronto Transportation Commission's 1922 Work.

H. H. Couzens, General Manager, Toronto Transportation Commission, has furnished the following report:—

Track.—During 1922 the Commission continued to carry out with vigor the extension and rehabilitation work first commenced in 1921. In 1922 nearly 28 miles of extensions were laid, of which over 18 miles were on streets and the balance in car houses and yards. In addition, 35 miles of former Toronto Ry. track have been totally rebuilt, while another 28 miles of track have been given general repairs. With the conclusion of the 1922 work, the bulk of the track rehabilitation programme has been completed, excluding the Toronto Suburban Ry. The total mileage of all tracks operated by the Commission is 199 miles, against 143 formerly operated by the Toronto Ry.

Passenger Equipment.—During the spring of 1922 the Commission received 59 large new cars, being the balance of the 250 ordered in 1921. Further orders for 200 of these cars were placed in 1922, the first of which are now being delivered. Four trackless trolleys and 3 single-deck motor busses were also added to the passenger equipment during the year.

One hundred and seventy-eight former Toronto Ry. cars have been permanently removed from service, and of these 85 were dispatched to Haileybury to be utilized as temporary dwellings by the fire sufferers.

Car Houses and Yards.—The Commission has completed extensions to two car houses and three yards, while one entire new car house and yard has been built.

Service.—The rehabilitation work as carried out on the track has added very much to the comfort of service, and with other improvements has enabled better operating speeds to be obtained. The extensions which have been made have greatly increased the usefulness of ser-

vice, and the area now served under one fare is about 35 square miles, against 17 square miles formerly served by the Toronto Ry. Unnecessary stops have been eliminated, new routes have been opened, headways on the trunk lines have been improved. The service given has been substantially improved during the year and increased accommodation offered. With more modern rolling stock and the necessary facilities for the accommodation of the same, also adequate repair shops, a still further improvement can be confidently predicted.

In view of the progress of the work of reconstruction to date, the Commission hopes to be able to anticipate the period previously estimated as necessary for the rehabilitation of the system and complete this work by the end of 1923.

During the year fares for children have been decreased from cash, 4c., to cash, 3c., and tickets which were formerly 7 for 25 cents, are now 10 for 25 cents.

The Toronto Clean Up Deal's History.

G. R. Geary, K.C., Corporation Counsel, Toronto, made the following report on Dec. 22, 1922, which gives the history of the clean-up deal:—"The city council, on Dec. 8, 1920, adopted paragraph 2 of the Hydro-Electric Power Commission of Ontario's report to the Board of Control, dated Dec. 3, 1920, which involved the purchase by the Commission of the various properties as set out therein. Of these properties, the distribution systems of the Toronto & Niagara Power Co. and the Toronto Electric Light Co., and the tracks, poles, etc., of the Toronto & York Radial Ry. Metropolitan Division, situate upon the highway within the city limits, were to be acquired for and on behalf of the city. Following this, certain legislation was passed in the spring of 1921, viz.: The Toronto Power and Railway Purchase Act, providing for the purchase of the assets above described, and the issue of bonds therefor, and for the operation of the property acquired, i.e., as to electricity by the Toronto Electric Commissioners and as to street railway by the city as it was then operating its railways. Then there was the Toronto Radial Railway Act, 1921, which set out that on the completion of the purchase, the Metropolitan Division (with the Schomberg and Aurora Ry.), the Mimico Division and Scarboro Division should be vested in the Commission on behalf of the city, subject to certain agreements set out in the act, and being largely the ordinary form of radial railway agreement under the Hydro-Radial Act. Then on Dec. 19, 1921, by bylaw 8947, the council authorized the execution of an agreement with the Hydro-Electric Power Commission for the transfer to the city of the electrical distribution system within the city, and the Metropolitan Ry. within the city. Negotiations between the Toronto Ry. Co. and the Hydro-Electric Power Commission were somewhat protracted, and it was not till the summer of 1922 that the agreement was finally consummated. On being advised that the matters were then ready to close, on July 27, 1922, bylaw 9301 was passed authorizing the entering into of the three agreements as to the Metropolitan, Mimico and Scarboro Divisions under the Toronto Radial Railway Act above referred to. The signing of the main agreement was followed by the transfer of all named assets on Nov.

1, 1922. Since then they have been operated by the Hydro-Electric Power Commission and the City of Toronto, respectively. The term of the original agreement is that all operations were to be on account of the city and the Hydro Commission from Dec. 1, 1920.

Electric Railway Track Laid in 1922.

Preliminary figures showing new electric railway track laid in Canada in 1922 were given in Canadian Railway and Marine World for January. Following are revised figures, the mileages being those of first track, that is, from point to point, exclusive of second track or sidings:

	Miles	Miles
British Columbia Electric Ry.—		
Broadway West, Vancouver.....		1.00
Kitchener & Waterloo St. Ry.—		
Albert St. to city limits, Kitchener, Ont.....		1.00
Lake Erie & Northern Ry.—		
Interchange tracks with G.T.R. at Simcoe, Ont.....		0.25
Montreal Tramways Co.—		
Church St., Drake to Wellington St.....	0.71	
Bordeaux spur.....	0.16	
Red Star refineries spur.....	0.09	
		0.96
Quebec Ry., Light & Power Co.—		
St. Valier St. and Bells Lane extension.....	0.46	
Charlebourg Road extension.....	0.42	
Marguerite-Bourgeois extension.....	0.15	
Loops and sidings.....	0.04	
		1.07
Regina Municipal Ry.—		
Edward St. line extension.....		0.10
Toronto Transportation Commission—		
Kingston Road, Queen St. to eastern city limits.....	1.799	
Lake Shore Road, Roncesvalles Ave. to Humber River.....	1.406	
Main St., Gerrard St. to Danforth Ave.....	0.270	
Dovercourt Road, Van Horne St. to Davenport Road.....	0.313	
Bay St., Bloor St. to Davenport Road.....	0.224	
Carlaw and Pape Avenues, Gerrard St. to Danforth Ave.....	0.878	
Yonge St., Woodlawn Ave. to north city limits.....	3.492	
		8.382
Winnipeg Electric Ry.—		
Ash St. to Lindsay St.....		0.50
Total.....		12.762
In 1921 the track laid was 7.757 miles.		

British Columbia Electric Ry. Services Upset.—Owing to a sudden thaw near the end of Dec., 1922, and a consequent flood on the Fraser River, about 400 ft. of the company's bridge across the north arm of the river was washed out, and other damage was done. Car service was as a consequence upset, and owing to the breaking of a high tension wire, the car service to Lulu Island was suspended, but was resumed in a couple of days.

The Montreal Public Service Corporation, in which E. A. Robert, President Montreal Tramways Co., and Quebec Railway, Light & Power Co., is interested, applied recently to the Quebec Legislature for authority to change its name to the Quebec-New England Hydro-Electric Corporation, and to do business outside the province.

Major A. B. Shearer of the Dominion Air Station at Halifax, N.S., is reported to have completed an air survey of the Nova Scotia Government hydro-electric developments at St. Margaret's Bay and Sheet Harbor, and to be making similar surveys of the New Brunswick hydro-electric development area at Musquash.

"Why are they not going to have electric cars any longer?" "Because they are long enough."

Electric Railway Operating Statistics for Year Ended Dec. 31, 1921.

Name of Railway	1st Main track mileage	Gross earnings from operation	Miscellaneous income	Operating expenses	Taxes funded debt, etc.	Net income or loss	Total car mileage	Fare passengers carried	Freight carried tons

See explanatory notes on next page.

Notes to Electric Railway Statistics.

The figures in the table on the preceding page are taken from statistics prepared by the Dominion Bureau of Statistics. The following abbreviations are used in the names of railways: E., electric; E.R., electric railway; E.S.R., electric street railway; S.R., street railway. The minus (—) mark in the column for net income or deficit shows that there was a deficit in the operation of the line to the extent of the figures given.

The mileages in the first column of figures are of the first main track, in addition to which the railways reporting have 499.58 miles of second track and 238.79 miles of yard track and sidings.

The Toronto Ry. Co.'s line was acquired by the City of Toronto, Sept. 1, 1921, and, together with the Toronto Civic Ry. lines, was placed under the Toronto Transportation Commission. The figures given in the several columns showing earnings, etc., for these two lines, cover their operation for the 8 months ended Aug. 31, 1921, the figures for the remaining 4 months of 1921 had not been received by the Bureau in time to be included in the report for the year.

Hamilton & Dundas Street Railway to Cease Operation.

The Dominion Power & Transmission Co., we are officially advised, notified the Dundas, Ont., Town Council on Jan. 13, that the electric car service on the Hamilton & Dundas St. Ry. would cease at midnight on Jan. 31. The railway extends from Hamilton to Dundas, with a total length of 6.98 miles, of which 0.20 of a mile is double track; it has also 1.60 miles of turnouts and sidings. The Dominion Power & Transmission Co., which owns the line, is reported to have lost \$91,078 in its operation since 1916. The net loss from operation for the year 1921 was \$17,934.34, and the total corporate loss was \$24,707.59. During 1922, the revenue failed to meet the operating expenses by approximately \$25,000. The company's total capital is \$200,000, of which \$100,000 is common stock and the balance bonds. The reason given for closing down is the continued falling revenue, which has brought about a condition of insolvency, and there appears to be little doubt that the company will be forced to go into liquidation. At the time of writing (Jan. 20), there is no definite information obtainable as to whether bankruptcy proceedings will precede the cessation of operation, whether operation will be entirely discontinued, or whether the shutdown order will ultimately affect only the portion of the line within Hamilton city.

The company is reported to have asked the Dundas Town Council recently for permission to abolish workmen's tickets, which is said to have been refused.

The Toronto, Hamilton & Buffalo Ry. operates a freight service over a portion of the H. & D. S. Ry., from West Hamilton Jct., a short distance outside the city limits, to Dundas, and is reported to do a large business. The electric railway is operated under provincial jurisdiction, and the freight service would, in a way, we presume, come under the Board of Railway Commissioners' jurisdiction. A local report states that if the line is closed down for passenger traffic, the T. H. & B. R. will probably buy such portions of the right of way as are necessary to maintain its freight service.

Project for Hydro Electric Railway from Toronto to St. Catharines Defeated.

Under the provisions of the Ontario Hydro Electric Railways Act, 1914, a number of plans for the construction of electric railways concentrating on Toronto were promoted, the ownership to be vested in the municipalities through which they would be built, and the operation to be vested in the Hydro Electric Power Commission of Ontario. Two of the plans provided for a line to enter Toronto from the west, the junction point of the two being at Port Credit. The first of the two lines was one from Toronto to London, via Port Credit, Milton and Guelph, the majority of the bylaws for which were approved at the municipal elections in Jan., 1916, and confirmed by the Ontario Statutes of 1916, chap. 37. The second of the two lines was to extend from Port Credit via Hamilton to St. Catharines. The municipalities through which it was to pass, with one exception, voted at the annual elections in Jan., 1917, and with one exception approved of the bylaws, which were confirmed by the Ontario Statutes of 1919, chap. 45. The whole question of hydro electric railway construction was referred by the Ontario Government to a committee headed by Mr. Justice Sutherland, as a result of which the Municipal Railway Act of 1922 was passed by the Ontario Legislature. This repealed the Hydro Electric Railways Act, 1914, and the subsequent amending acts, and provided for the construction of municipally owned electric railways on a new basis. Following the recommendation of the Sutherland Commission, it was provided by sec. 29 and its subsections, that the provisions of the act of 1914 and its amendments were to continue in force in regard to the proposal to build an electric railway from Toronto to Port Credit, and from Port Credit to St. Catharines. These railways were to be built under new agreements which might be made between the municipalities and the Hydro Electric Power Commission without the ratepayers' consent, provided the councils of the municipalities interested passed resolutions reaffirming the original bylaws before Oct. 15, 1922. In the event of the municipalities not so reaffirming, or of 15% of the ratepayers petitioning for a revote, the agreements were to be resubmitted to a vote of the electorate. Following is a list of the municipalities interested, arranged in order from Toronto, with the amounts to be provided by debentures:—

Toronto City.....	\$4,240,196
Etobicoke Tp.....	401,333
Mimico Town.....	111,200
New Toronto Town.....	82,350
Port Credit Village.....	345,355
Toronto Tp.....	54,050
Toronto Tp.....	243,087
Trafalgar Tp.....	538,735
Nelson Tp.....	374,812
Oakville Town.....	203,098
Flamboro East Tp.....	266,626
Flamboro West Tp.....	66,669
Burlington Town.....	144,536
Hamilton City.....	5,868,286
Barton Tp.....	284,484
Saltfleet Tp.....	1,002,296
North Grimsby Tp.....	424,077
Grimsby Town.....	101,817
Clinton Tp.....	473,746
Beamsville Village.....	57,469
Louth Tp.....	536,595
Grantham Tp.....	128,280
St. Catharines City.....	623,750

\$16,572,847

Of these municipalities, West Flamboro Tp. did not consent to submit the bylaw in 1917, or since. Saltfleet Tp. defeated the bylaw in 1917, and again

in March, 1919. Following the passing of the act of 1922, resolutions reaffirming the original bylaw were passed by Toronto City, Etobicoke Tp., Mimico Town, New Toronto Town, Toronto Tp., Port Credit Village, Trafalgar Tp., Oakville Town and Beamsville Village, and in these places the bylaw was not resubmitted to a vote. The councils of the following municipalities passed resolutions approving of the agreement, but as 15% of the ratepayers petitioned for a vote, the bylaw was resubmitted: Flamboro East Tp., Burlington Town, North Grimsby Tp., Grimsby Town; Louth Tp., and St. Catharines City. In the case of Barton Tp., which voted in favor of the bylaw in 1917, a section of the township was subsequently annexed to the City of Hamilton, and as this was the portion through which the line is routed, the Government expressed the opinion that it was not necessary for the ratepayers of the township to vote. However 15% of them petitioned that the bylaw be resubmitted, which was done, and it was defeated by 276 votes. The following municipalities also had to vote owing to the failure of the councils to reaffirm the agreement: Nelson Tp., Hamilton City, Clinton Tp., and Grantham Tp.

The voting in the 10 municipalities affected, as well as in Barton Tp., which the Government stated need not vote, took place at the municipal elections on Jan. 1, the results being as follows:—

	For	Against
Nelson Tp.....	157	117
Flamboro East Tp.....	187	268
Burlington Town.....	481	290
Hamilton City.....	5,813	7,035
Barton Tp.....	343	619
North Grimsby Tp.....	204	227
Grimsby Town.....	155	137
Louth Tp.....	216	102
Grantham Tp.....	404	294
St. Catharines City.....	2,049	582
Clinton Tp.....	266	134

The amendments to the Hydro Electric Railway Act, 1914, passed by the Ontario Legislature in 1919, chap. 45, sec. 9, provided that where any municipal corporation named as a party to an agreement for the construction of an electric railway failed to pass a bylaw approving of the agreement, the municipalities approving the agreement could assume the cost of the line through the municipality or municipalities in question, provided the cost of the line therein did not exceed 10% of the total cost of the line. This provision was continued in the 1922 act, except that the liability of dissenting municipalities which might be assumed by assenting municipalities was raised to 15%, instead of 10%. The cost of the Port Credit-St. Catharines section of the line, which was a separate undertaking from the Toronto-Port Credit line, was estimated at \$11,360,363. Under the provisions of the act, the bylaws might be defeated in several municipalities and not endanger the plan, provided the total liability did not exceed 15%, or \$1,704,054.45, and that the other municipalities were willing to shoulder the additional cost. In the voting on Jan. 1, the municipalities defeating the bylaw represented more than 50% of the estimated cost of the line from Port Credit to St. Catharines.

The Hydro Electric Rys. Toronto & York Division is, we are advised, trying a 10-minute service on the Humber-Port Credit line.

Toronto's Voting on Hydro Electric Railways Entrance.

Toronto citizens entitled to vote on money bylaws voted, on Jan. 1, on the following question, under a bylaw passed by the city council, Dec. 4, 1922: "Are you in favor of the hydro radial agreement passed by the city council, Sept. 6, 1922?" This agreement was one of those drawn up in connection with the clean up deal under which the Toronto Ry. Co's power and radial railways interests were acquired by the Hydro Electric Power Commission of Ontario and the City of Toronto. The property passing to the Commission included the Toronto & York Radial Ry's Mimico Division, from the Humber to Port Credit on the west, and the T. & Y. R. Ry's Scarboro Division from the eastern city limits to near West Hill on the Kingston Road. The Commission was interested in the promotion of an extensive plan for the construction of an electric railway from Toronto to Hamilton and St. Catharines, as well as projects for a line east of the city, the first mentioned being the one upon which it was proposed to proceed with construction in the immediate future. The particular question involved in the final clean up negotiations was the entrance of these lines into Toronto. Under the original agreement for the construction of the Toronto-Port Credit-London line, in 1916, the city agreed to provide a right of way for such entrance from the west, and in 1921, it agreed to provide a right of way for an entrance into Toronto of a line from the east. It was generally understood that this right of way would be provided on lands at the waterfront controlled by the Toronto Harbor Commissioners. Following the passing of a resolution by the city council on July 27, 1922, requesting the Hydro Electric Power Commission of Ontario to proceed with the construction of the Toronto-Port Credit line, the negotiations as to the right of way entered the final phase, and a proposed agreement was approved by the council on Sept. 6, 1922, after lengthened negotiations between the city council, the harbor commissioners and the Hydro Electric Power Commission of Ontario. This proposed agreement as submitted to the council, was approved by the city board of control, and by the Hydro Electric Power Commission of Ontario. It provided for the leasing to the H. E. P. C. of certain lands described in detail, and marked on a plan attached, extending from the Humber River, on the west, to Morley Ave., on the east, upon conditions set out in a schedule attached, occupying 15 closely printed pages. The right of way to be granted under the agreement was for a 6-track railway, right along the waterfront, and provision was also made for a right of way for a subway from the waterfront, near Bay St., to the city hall. The proposed agreement was not approved of by the Harbor Commission, and an action was taken by certain ratepayers to enjoin the city from approving and signing it. The court held that the agreement should not be signed without being submitted to the ratepayers to vote on.

The submission of this question interjected a very important matter into the municipal elections, and the campaign, prior to the vote on Jan. 1, was a vigorous and acrimonious one. The retiring Mayor—C. A. Maguire—ran on what was called a pro-radial platform, and was opposed by R. J. Fleming, formerly General Manager, Toronto Ry., on what was termed the anti-waterfront grab plat-

form. Meetings were held all over the city, at which the agreement was discussed from every angle by the mayoral and aldermanic candidates, Sir Adam Beck and others on behalf of the Hydro Electric Power Commission of Ontario, and the other interests involved. On the day of the voting, 23,129 ratepayers qualified to vote on money bylaws answered the question in the affirmative, and 28,832 in the negative, a majority of 5,703 against. Over 80,000 votes were cast for the mayoralty candidate, the largest number ever recorded in Toronto, and Mr. Maguire was re-elected mayor by a majority of 989 over Mr. Fleming. There were a considerable number of changes among the aldermen elected as compared with the 1922 membership, for whereas in Sept. 1922, the agreement was approved by 18 to 10, one member being absent, on account of illness, the new council was claimed to stand 16 for to 13 against the agreement on Jan. 1, and may now be changed owing to a recount replacing S. Ryding, a pro-radial alderman, by W. Baird, on a recount.

At the 1923 city council's inaugural meeting Mayor Maguire, in referring to the vote on the agreement, said, "I regret this decision very much, and I believe the citizens will realize at no distant date that a mistake was made. However, the will of the people must prevail, and it will be carried out to the letter."

Electric Railway Projects, Construction, Betterments, Etc.

Edmonton Radial Ry.—The estimated cost of projected repairs to the tracks for this year is \$71,000.

Hydro-Electric Railways, Toronto & York Division.—Toronto City Board of Control, on Jan. 12, authorized the raising of \$600,000 to be paid to the Hydro-Electric Power Commission of Ontario for betterments, etc., on the Hydro-Electric Railways' Toronto & York Division, formerly the Toronto & York Radial Ry., Metropolitan Division. The betterments, etc., will include a terminal now being built at the city limits, heavier rails to be laid north from Toronto for some 10 or 12 miles; increase in equipment of power house and feeders, and from 10 to 15 additional motor cars.

Kitchener & Waterloo St. Ry.—We are officially advised that about half a mile of double track is being built from Union St. to William St., Waterloo, Ont. (Sept. 1922, pg. 479.)

Montreal Tramways Co.—The Montreal City Council's executive committee has been asked to study a request for a double track line on Iberville St., between Mason and Belanger Sts., as provided for in the contract between the city and the company. (Jan., pg. 36.)

Niagara, St. Catharines & Toronto Ry.—The Board of Railway Commissioners passed order 33,190, Dec. 1, directing the company to relocate its line on Oak and Merritt Streets, Merriton, Ont., in accordance with paragraph 4 of an agreement entered into between the company and Merriton Town Council, July 23, 1914, the work to be started by March 15 and completed by May 1. We are officially advised that the work directed to be done is part of a number of improvements by the management, provided it obtains new franchises from the municipalities. A press report states that

the various improvements contemplated would involve an expenditure of \$1,500,000. (Jan., pg. 36.)

Hamilton St. Ry.—A press report, Jan. 20, states that it is proposed to build an extension to the junction of Sterling and King Streets, in connection with the development of the McKittrick building estates. The McKittrick syndicate will, it is reported, guarantee the company against any loss on the operation of the extension, and the company desires the opinion of the city council before agreeing to build the extension.

Electric Railway Finance, Meetings, Etc.

The Regina, Sask., City Solicitor is reported to have stated that of the 97 collision accidents in which the Regina Municipal Ry.'s cars and motor cars were involved, during the 10 months ended Oct. 30, 1922, 90% were caused by the carelessness of motor car drivers. In two cases the street car motormen were wholly to blame, and in 8 others they were partly to blame. The total damage to the street cars during the period was \$735.82, of which \$290.22 had been collected from the motor car owners.

The Toronto Transportation Commission has ordered 45,000 ties and 103,750 granite blocks recently.

Repair Shops and Stores Building for Toronto Transportation Commission.

The Toronto Transportation Commission has been considering for some time the construction of large repair shops, stores building and auxiliary buildings at Davenport Road and Bathurst St., Toronto, and, as stated in Canadian Railway and Marine World for January, an appropriation of \$1,500,000 was passed by the city council recently, to provide for this work. Tenders for the construction of the main repair shop building and stores building, boiler house and subsidiary buildings, including excavation, concrete, structural steel, masonry, plumbing, heating, ventilating, electric wiring, automatic sprinkler installation and outside fire protection provision, were received to Jan. 18; tenders for horizontal return tubular boilers, boiler settings, underfeed stokers, draft fans, and boiler feed pumps, and installation of this equipment, were received to Jan. 17; and tenders for a complete coal and ash handling plant, including 2 reinforced concrete bins, track hopper, apron feeder, coal crusher, elevator conveyor, flight conveyor, ash elevator, etc., were received to Jan. 22. We are officially advised that it is expected to start construction in the very near future.

The main repair shop building, to be 467 ft. square, will have a steel frame, and brick walls, with concrete foundations, and gypsum roof with sawtooth monitors. A transfer table will be provided across the center of the building, with the repair tracks running at right angles to it. The building will be divided to accommodate a truck and motor shop, forge shop, machine shop, armature shop, erection shop, paint shop and woodworking shop. Track connection to the transfer table will be from both Davenport Road and Bathurst St.

Adjacent to the main repair shop will be a boiler house, 86½ ft. x 44 ft. 8 in., of steel frame, brick wall and concrete foundation construction, divided into a boiler room, and a room for compressors and other machinery. Heat will be supplied from here to all buildings on the property. Near the boiler house will be a coal handling and storage plant of 1,000 tons capacity, the chief units of which will be 2 large cylindrical concrete storage bins. Machinery for handling coal and ashes with the maximum economy will be provided. At the Davenport Road side of the property a 100,000 gall. capacity hemispherical steel water tank will be erected. At the Bathurst St. side a stores building, 302 x 117 ft., of concrete construction, will be built. A basement and 3 stories will be provided at first in this building, but provision will be made to increase its height to 8 stories. This will be the central storage depot for the entire street railway system. An office building, 50 x 72 ft., will also be built, and will be of the steel frame, brick wall and concrete foundation type. All buildings will be sprinklered, and, in addition, a thorough fire protection system will be provided by hydrants, located at strategic points throughout the property.

When these buildings are built and in operation, the paint shop now operated by the Commission at the Russell car house; the body shop, at the northwest corner of Frederick and Front Sts., and the motor shop, south of Front St.,

between Frederick and Sherbourne Sts., can be abandoned. We are officially advised that the Commission hopes to have the new facilities in operation by next autumn.

Since the above was written we have been officially advised that contracts have been let as follows: For construction of repair shop building, stores building and boiler house, John V. Gray Construction Co., Toronto; for boilers, Engineering & Machine Works, St. Catharines, Ont.; for boiler settings, J. H. Wenting, Toronto; for feed pumps, J. T. Hepburn, Toronto; for fans and fan motors, Canadian Blower & Forge Co., Toronto; for stokers, Jones Underfeed Stoker Co. The time for receiving tenders for the coal and ash handling plant was extended to Jan. 31. The total amount involved in all the contracts, basing calculations on those already awarded and estimating the cost of the coal and ash handling plant, is \$1,335,000.

Mainly About Electric Railway People.

Ira P. McNab, Superintendent of Tramways, Nova Scotia Tramways & Power Company, Halifax, N.S., has resigned, and has moved to Calgary, Alta., to enter the Riverside Iron Works' service. He had been connected with the Nova Scotia Tramways & Power Co. since 1916. On leaving Halifax, he was given a chest of silver by the motormen and conductors, a travelling bag by the company's baseball team, a cigarette case by the Technical College Alumni, and cigarettes, cigars and pipes by the building committee of St. Andrews Church.

S. Nelson, track superintendent, Winnipeg Electric Ry., died at Winnipeg recently, aged 53.

J. G. Ramsden, who has been appointed by the Ontario Government as a member of the Hydro Electric Power Commission of Ontario, succeeding the late Fred R. Miller, was born at Thornhill, Ont., in 1867, of English parents, and for some years was engaged in the baking business in Toronto. He has been associated with politics from his early life, and was a Parliamentary candidate in the Liberal interest in 1917, and later Chief Inspector, Indian Affairs Department. He was a member of the Toronto Board of Control in 1920, and was, until recently, a partner in Ramsden & Roxborough, electrical contractors, Toronto. His son, Capt. J. Ramsden, M.C., is member of the Ontario Legislature for Southwest Toronto.

Canadian Electric Railway Association.—Some slight changes have been made in the composition of the committee on accounting of maintenance and depreciation of street railway assets, since information in regard to it was published in Canadian Railway and Marine World for January. The committee is now composed as follows: H. E. Weyman, Manager, Levis County Ry., chairman; W. G. Hewson, Railway Engineer, Hydro Electric Power Commission of Ontario; F. S. Livingstone, Traffic Manager, Hydro Electric Rys., Toronto & York Division; L. Tait, Secretary-Treasurer, London Street Ry., and G. E. Waller, General Superintendent, Dominion Power & Transmission Co. H. E. Smith, Comptroller, Montreal Tramways Co., found it impossible to become a member of the committee, but will give it any assistance in its work that he can.

Electric Railway Passenger Fares.

British Columbia Electric Ry.—The B.C. Legislature has passed an act to regulate passenger rates chargeable by the company. A summary of the provisions of the bill as introduced was given in Canadian Railway and Marine World for January, on pg. 36. In passing through the committee stage, some amendments in details were made. Attempts were made by North Vancouver, Point Grey, and New Westminster municipalities to have special provisions inserted, but the Attorney-General objected, stating that the measure simply provided for the appointment of a commission to investigate, when the company, any municipality or group of residents, complained that unjust rates were being charged, which would not work a hardship on any municipality, but would help matters out by providing a ready means of settling any dispute. He said the right of private bargaining was fully maintained. If the company was not put under this bill it would be under a Dominion charter, and the Dominion always maintained existing rates until there was a demand for a change.

The Burnaby Tp. Council, on Dec. 27, 1922, appointed a committee to interview the company's management respecting fares charged on the Hastings East line.

Calgary Municipal Ry.—Commissioner Graves has recommended the Calgary, Alta., City Council to reduce the fares on the railway for a sufficient period to ascertain whether they will induce increased patronage. Tickets are now sold 4 for 25c, or 18 for \$1, and the suggestion is that they be 5 tickets for 25c.

London St. Ry.—On Jan. 1, the company put on sale slips of 22 tickets for \$1, good between 6 and 8.30 a.m., and 5 and 6.30 p.m. The sale of limited or workmen's tickets was suspended June 14, 1922, when the 5c. fare was put in operation under the provisions of the Ontario Statutes, 1922, chap. 141, sec. 2.

Toronto Transportation Commission.—Mayor Maguire, of Toronto, said in his recent inaugural address to the city council:—"I still hold the opinion which I expressed last year in regard to fares. We should have a 5c. fare. I hope the receipts during the 16 months of public operation will warrant a speedy return to the old rate."

Waterloo-Wellington Ry.—The Ontario Railway and Municipal Board has authorized the company to increase the fare between Kitchener and Bridgeport, Ont., from 5c. to 7c. cash, with 4 tickets for 25c., conditional upon an improved service being put in operation during the early morning hours, so that business people may get to their work in time, and that the cars be heated better.

R. A. Brown, Superintendent Calgary, Alta., Municipal Ry., is reported to be preparing a report on methods of paying fares on the cars. At present passengers pay fares as they enter, but the pay-as-you-leave system in use in Lethbridge, and the dual systems of pay-as-you-leave on outbound cars and pay-as-you-enter on inbound cars are being investigated.

The British Columbia Electric Ry. is reported to have ordered two motor buses, to augment the street-car service in the east end of Vancouver. The cars will have a capacity of 35 passengers each, will be capable of travelling at 25 miles an hour, and are estimated to cost \$7,500 each.

Oshawa Railway Rolling Stock Orders.

The Oshawa Ry., Oshawa, Ont., has ordered 2 double truck, double end, passenger cars from Ottawa Car Manufacturing Co., for delivery in April. They will be of the latest design, 33¼ ft. long, wooden bodies, and steel underframes. It has also ordered an electric locomotive from Canadian Westinghouse Co., of 43 tons capacity, equipped with four type 552 motors, having an output of 75 h.p. each when operated at 600 volts, and of 95 h.p. each when operated at 750 volts; and HLF multiple unit, double end control. The continuous tractive effort will be 9,000 lb., or 11,200 lb. for one hour, and a maximum of 21,500 lb. The motors will be equipped with helical forged steel gears and pinions, and the air brake equipment will be type 14-EL double end control, including 2 type D-3-M compressors. Length between coupler knuckles 32 ft. 7¼ in., length between bumpers or end frames 29½ ft., height over roof 11 ft. 10½ in., total wheel base 22½ ft., wheel dia. 33 in., width over all 10 ft. A switchman's step and rigid drawbar will be fitted, instead of the usual pilot and radial drawbar. The drawbar pull will be transmitted through the cab underframing and center pins, and each driving axle will be equipped with an independently geared motor, the weight of which will be carried partly on axle bearings and partly on the truck frame. All the cab equipment will be easily removable through the doors and windows.

An underframe has also been received from Ottawa Car Manufacturing Co., for an electric locomotive, which the company is rebuilding in its own shops, and increasing its weight from 28 to 40 tons.

Answers to Questions on Electric Railway Topics.

Answers to questions in the American Electric Railway Association's question box have been sent as follows by J. M. Ahearn, Assistant Manager, Ottawa Electric Ry.:—

Life of Commutators.—Have any companies figures as to the life of commutators on their non-interpole motors? Depends on condition, tension of brushes and composition of commutators, etc. Have observed ¾ in. wear in 54,000 car miles.

Axles Cracks.—Has any member company a method of locating cracks or checks in axles other than by the hammer test? Clean well and coat with whitening. When dry, cracks will be quite discernible.

Motor Repair Work.—In connection with car repair work, how do mechanical and electrical failures divide? Our mechanical repairs, including gears, etc., were believed to be about 75% of the failures.

Split Type Motors.—With split type motors, which is preferable, to swing lower half, or to take out hinge pins and lower the bottom half on the pit jack? Our practice has always been to swing the lower half.

Tightening Bearing Shells.—What is the most satisfactory way to tighten bearing shells which have worked loose in the bearing housings? Our practice is to rebore and install oversize bushing. They can be pressed in with a shim.

Guard Rails on Bridges.—What is the practice of member companies with reference to the installation of auxiliary inside steel guard rail on bridges? (b) What weight of rail is used? (c) How

frequently is it spiked to ties? (d) What is the distance between gauge line of running rail and face of guard rail? (e) How many bolts are used at joints? (f) How are ends of rails finished and what distance do they extend beyond each end of bridge? (a) Both running rails paralleled on the inside. (b) and (c) Same as running rail. (d) About 8 in. (e) Full bolted. (f) Tapered. We believe the farther extended, the better.

Cinders as Ballast.—Are any companies using cinder material as a top ballast or a sub-ballast? If so, has its use been found detrimental to the life of the ties, rails and bonds? We use cinders as top ballast, and there has been no noticeable change.

Canadian National Railways Electrification for Toronto District.

Canadian Railway and Marine World for January, gave on pg. 27, details of the Canadian National Rys.' tentative plans for providing an electric railway service into Toronto, Ont., from the east, by utilizing a portion of the Canadian National line between Toronto and Trenton, Ont., now operated as the Orono Subdivision of the Ottawa Division, Ontario District, and the Toronto Eastern Ry. We are advised that E. W. Oliver, General Superintendent, Electric Lines, C.N.R., has made a report on the situation as concerns electric traction east of Toronto, which is now in the C.N.R. management's hands.

During the recent municipal elections in Toronto, when a bylaw to permit entrance of a radial electric railway to be built by the Hydro Electric Power Commission of Ontario, into the city was defeated, the possibility of the C.N.R. furnishing an electric railway service between Toronto and Niagara Falls was widely discussed, and a statement made by Sir Henry Thornton, President, C.N.R., concerning the situation, was published in our January number. We are officially advised that Mr. Oliver has also made a report on a proposed programme of rehabilitation and expansion for the Niagara, St. Catharines & Toronto Ry., but no official information is available as to what investigations have been made with a view to linking up Toronto with Niagara peninsula points by electric railway service to be furnished by the C.N.R. This matter will, however, doubtless occupy the management's early attention.

Toronto Ry. Arbitration.—Mayor Alfred Maguire, in his inaugural address to Toronto's new city council recently, said:—"The arbitrators have not yet given their award determining the value of the Toronto Ry. Co.'s assets taken over by the city on the expiration of the franchise on Sept. 1, 1921. The arbitration began in June, 1921, and in July was adjourned until Sept. 19, on which day the real taking of evidence began. Altogether there were 158 days of sittings, and the matter was gone into thoroughly. The taking of evidence was finally completed on Nov. 29, 1922. The great length of time required to hear the evidence was occasioned largely by the fact that the reproduction value of the property, both on prices averaging throughout three years previous to Sept. 1, 1921, and on Sept. 1, 1921, was put forward strongly by the company, and had to be met by the city. This went into the greatest detail. I hope the making of the award will not be long delayed."

Safety Cars for Ontario Hydro Electric Rys., Essex Division.

The Hydro Electric Power Commission of Ontario has ordered 4 one-man-two-man double truck safety cars for the Ontario Hydro Electric Railways, Essex Division. They will be equipped for double end operation, and will have the following dimensions:

Length over all.....	43 ft. 9 in.
Length over vestibules.....	42 ft. 6 in.
Length over bulkheads.....	28 ft. 9 in.
Width over side sills.....	8 ft. 2 13/16 in.
Width over all.....	8 ft. 5 in.
Height, rail to top of floor.....	2 ft. 7¼ in.
Height, rail to top of roof.....	10 ft. 0¾ in.
Post spacing.....	2 ft. 6 in.
Truck centers.....	20 ft.
Passenger seating capacity.....	52
Weight.....	34,000 lb.
Wheel diam.....	26 in.

As the designation of the cars indicates, they will be suitable for one or two-man operation, and it is the intention to run them as two-man cars during rush hours and as one-man cars at other times. They will be equipped with 4 double doors, one at each corner, and a unique feature will be that the door operation will not only be interlocked with the control apparatus, but also with the brakes, so that when the doors are open, movement of the car will be prevented, not only by the impossibility of getting current to the motors, but also by the brakes being applied. Two trolley poles will be applied. The cars have been ordered from St. Louis Car Co., St. Louis, Missouri. The air brake and electrical apparatus will be supplied by Canadian General Electric Co. and the trucks by Taylor Electric Truck Co., Troy, N.Y. The cars are to be used in local service in Windsor, Walkerville and Sandwich, Ont.

The London & Port Stanley Railway Co's directorate for this year is composed of the following London City Council members: Mayor Weinge, Aldermen Watt, Judd, Greer, Drake, Colbert, Patterson, Burdick and Wilson. The railway, however, is operated by the London Railway Commission, on which there were two vacancies, the term of office of P. Pocock and F. E. Harley having expired. Nine names were submitted for the position at a private preliminary meeting of the council, Jan. 6, when, after several votes, F. E. Harley was re-chosen, and D. Wright was chosen in place of P. Pocock. At the open meeting of the council, Jan. 8, an effort was made to reinstate P. Pocock, but the previous decision was confirmed by 9 votes to 3. At the inaugural meeting of the Commission, Jan. 15, Sir Adam Beck was re-elected chairman, and F. E. Harley, vice chairman. P. Pocock is a member of the London Public Utilities Commission, which has charge of the electric light and power undertaking, waterworks, etc., and at the inaugural meeting of that commission, Jan. 12, was elected chairman of the playgrounds committee.

The Montreal Electrical Commission is reported to have awarded the Montreal Tramways Co. \$27,721.39 for overhead material expropriated by the city in districts 4 and 6, in order to clear the streets of unnecessary wires and place them underground. The wires in question had not been used for a considerable time.

Montreal City Council has appointed a committee to study the tramway situation in the city. The committee was instructed to consider the advisability of allowing traffic in both directions on St. Urbain St., between Ontario and St. Catherine Streets.

The Toronto Suburban Railway's Proposed Sale.

G. R. Geary, K.C., Corporation Counsel, Toronto, made the following report, Dec. 22, 1922:—"The part of the Toronto Suburban Ry. within the city was operated under a franchise which expired Jan. 1, 1921. Under bylaw 8487, passed Aug. 5, 1920, notice was given to the railway of the city's intention to take over the part of the railway operating under the franchise within the city on Sept. 1, 1921, the date of expiry of the franchise. Certain negotiations took place by which in the end Sir Adam Beck was fully authorized to act for the city in relation to the taking over and to negotiate for the purchase of the company's lines. The city also appointed him as its arbitrator to determine the value of the property. The company did not appoint its arbitrator and it was arranged between the company, or the Canadian National Rys., the owners of the property, and Sir Adam Beck, that the arbitration should stand without prejudice to the rights of the parties. As I am given to understand, the portions of the lines in the city were taken over by the city on Sept. 1, 1921, under arrangements made by Sir Adam, and have been operated by the company since that date on behalf of the city and the Toronto Transportation Commission. In the meantime, the negotiations of Sir Adam Beck continued and by report of the Board of Control, adopted in council Dec. 8, 1921, a bylaw was submitted to the qualified electors to provide for and authorize the city to enter into an agreement for the purchase of the Toronto Suburban Ry. Following that, the bylaw was voted on Jan. 1, 1922, and carried by a majority of 2,502. It appears then that the Legislature passed the statute, Ontario, 1922, chap. 35, providing for the acquisition of the Toronto Suburban Ry., and setting out the form of agreement to be entered into. This apparently followed also certain arrangements made on behalf of the city by the Mayor and Sir Adam Beck. The next step of which I have knowledge is that the agreement set out in the statute was passed by the council Nov. 8, 1922. The matter now awaits completion of the agreement between the Hydro-Electric Power Commission and the Canadian National Rys. for the sale of the road to the Commission. When this is completed, the questions of transfer to the city, settling the bonded indebtedness, and so on, will be up for consideration."

During the last few days of Dec. 1922, J. H. Spence, a Toronto lawyer, went to Ottawa, under instructions of Sir Adam Beck, to endeavor to get Sir Henry Thornton, President, Canadian National Rys., to sign the agreement for the sale of the whole of the T.S.R. lines to the Hydro Electric Power Commission, but Sir Henry refused to sign, saying that he would not do so, at least until he had been able to consider thoroughly whether it was desirable to retain the principal portions of them as part of the C.N.R. system, and also to give him time to consider the whole question of electric railway facilities for the Toronto district. The City of Toronto can, however, buy the portions of the lines within the city. As stated above, when the franchise for the city lines expired in Sept. 1921, the city, as successor to the Town of Toronto Jct., gave notice that it intended to take them over, and a valuation of about \$200,000 was put on them.

Since then the C.N.R. has been operating them for the city, and has been rendering monthly accounts for the operating deficits, which, however, have not been paid.

Montreal Tramways Co's 1922 Operations.

Traffic on the Montreal Tramways in 1922 showed some increase over 1921. The increase was in the latter half of the year, an indication of improved business conditions in that period. During the year, approximately 190,000,000 revenue passengers were carried, an increase of about 1,000,000 over 1921. There were 70,000,000 non-revenue passengers carried, including transfers and other free passengers.

The average fare for each revenue passenger was 6.08c, which would indicate a total passenger revenue of approximately \$11,500,000. In the uniform tariff territory 4.33% of the passengers pay 7c cash; 78.70% pay 6½c; 14.85% pay 6c, and 2.13% pay 3 4/7c.

During the peak load period of each day, between 5 and 7 p.m., there are 800 cars in operation on the city streets; the cost of heating and lighting the cars is over \$120,000 a year; the cost of sweeping and washing them is over \$100,000 a year; and the removal of snow costs approximately \$250,000.

During the year the company spent about \$1,500,000 on maintenance of tracks and roadways, renewals, betterment and extensions. It is anticipated that a corresponding amount will be expended during 1923 for the same purpose. While in regard to extensions to the system tentative plans have already been made, it is too early to disclose the same, as the city's plans for street improvements have yet to be announced.

Winnipeg Electric Railway Franchise Extension Negotiations.

The question of what will be done in connection with the tentative agreement arranged between the Winnipeg City Council's public safety committee and the Winnipeg Electric Ry. Co., has not been definitely settled. The 1922 council, on Dec. 7, gave a second reading to a bylaw approving of the agreement, and left it to the new council to deal further with it. The municipal elections resulted in S. J. Farmer, independent labor candidate, being elected mayor, largely on a proposal to submit the agreement to a popular vote. He is reported to have said, in his inauguration address, that the proposed extension of the franchise was not approved and should not be proceeded with, and that the principle of municipal ownership of public utilities was approved and on no account should be jeopardised.

The matter of providing a bus service in certain districts of the city was raised at a recent council meeting, and was brought up at a meeting of the public safety committee, on Jan. 10, by a letter from A. W. McLimont, the company's vice president, in which he said the suggestion for putting on buses in the areas mentioned was involved in the negotiations which had been proceeding for some time between the city and the company, and until the course of these negotiations was known, the company could not reasonably be expected to deal with the matter piecemeal, or otherwise than as part of the negotiations.

Ottawa Electric Railway Franchise and Purchase Questions.

Ottawa ratepayers qualified to vote on money bylaws, voted on Jan. 1, on the question: "Are you in favor of the corporation purchasing all the property and assets of the Ottawa Electric Ry. Co. at \$4,500,000, plus the cost of any capital expenditure incurred on and after July 31, 1922, and any other necessary expenditures, not to exceed in all \$75,000, to be operated by an independent commission?" The result of the vote was: Against purchase, 3,569; for purchase, 3,563. Majority against, 6.

The general body of voters were asked to vote on the following question on the same day: "Are you in favor of the corporation granting the Ottawa Electric Ry. a service-at-cost franchise agreement for 20 years from May 1, 1923, on the terms and conditions set out in the draft agreement, a synopsis of which was published in the city newspapers of Dec. 11, 18 and 26, 1922?" A summary of this draft agreement was given in Canadian Railway and Marine World for January. The result of the vote was as follows: Against the agreement, 9,289; for the agreement, 4,930. Majority against, 4,359.

The city council, on Jan. 8, decided to apply for a judicial recount of the votes recorded, on the purchase question, for which County Judge Mulligan made an order on Jan. 9. He commenced the recount on Jan. 17 and completed it on Jan. 19, the result being that the adverse majority was increased from 6 to 48.

Canadian Railway and Marine World is informed that there are a great many people in the city who looked upon the matter as a vote on a money bylaw, whereas it was simply a plebiscite, restricted to property owners and denying them the right, which they possess on ordinary money bylaws, to vote in every ward in which they own property. If the recount had resulted in showing a majority in favor of the purchase, the city would have had to apply to the Ontario Legislature for authority to issue \$4,500,000 of debentures to make the purchase. Whether this authority would have been obtained is a doubtful matter, as during the 1922 session the Legislature criticised the action of the city council very severely for constantly asking permission to borrow money, instead of obtaining authority from the property owners in the form of a money bylaw.

As the city is now not in a position to accept the company's offer to sell at \$4,500,000, or to give the necessary notice to take over the property, under the terms of the franchise, by Feb. 13, it is highly probable that the franchise will be automatically renewed for 5 years from Aug. 13 next. Such a renewal will hardly allow the company to make any extensions of lines, although it is possible that some additional rolling stock will be added.

Manitoba Power Co., which is controlled by Winnipeg Electric Ry. Co., put into operation on Dec. 28, 1922, the first unit of its new power plant at the Great Falls of the Winnipeg River. The total capacity will be six units of 28,000 h.p. each, a total of 168,000 h.p. The present construction will provide 2 units of 28,000 h.p. each, of which the first is being operated. This additional power will enable the Winnipeg Electric Ry. to close its steam plant, and so reduce operating expenses.

Underground Railway Proposed for Montreal.

Montreal City Council adopted a resolution recently, without discussion, authorizing the Executive Committee to consider the question of establishing underground tramway lines and the means to be taken to bring the project to a successful issue. The matter was first considered in 1914, the estimated cost then being about \$500,000 a mile. It is stated that this was a low figure for construction even at the time, while the present cost of such lines is put at from \$750,000 to \$1,000,000 a mile. The plan which those interested in the project are considering is for the construction of such underground lines as will relieve the present crowded condition of the surface cars from the Court House, along St. James St., to Bonaventure station, thence to Windsor St., to St. Catherine St., along that street to St. Denis St., and down St. Denis St. to connect with the downtown lines. It is claimed that the present is an opportune time to begin the study of the question, as it will take several years to arrange all the preliminaries.

Toronto Terminals Hydro Electric Railways, Toronto & York Division.

As stated in Canadian Railway and Marine World for Jan., pg. 35, the Toronto & York Radial Ry. has passed under the control of the Hydro Electric Power Commission of Ontario, and the former Metropolitan Division is being operated as the Hydro Electric Railways, Toronto and York Division. As stated in a preceding number, the line now starts from Toronto's northern city limits, the route within the city limits on Yonge St., where its tracks were located formerly, now being occupied by the Toronto Transportation Commission's lines. Consequent on the moving of the Toronto and York Division terminal to the northern city limits, the necessity arose for new terminal facilities, which are being provided east of Yonge St., adjacent to the Toronto Transportation Commission's loop at Glen Echo Road, and a concrete platform 352 ft. long, and varying from 27 to 36 ft. wide, has been provided as a passenger interchange facility between the Toronto Transportation Commission's tracks and those of the Hydro Electric Rys. Toronto and York Division. An umbrella shelter roof, 18 ft. wide at the eaves, covers the platform for 150 ft. of its length. At the northwest end of the platform, a station is being built, of buff colored tapestry brick, with concrete foundations, the building being partly of one story and partly of two story construction. The first floor will contain a waiting room, ticket office, conductor's office and registration room, baggage room, and lavatories, and in the upstairs of the two story portion will be offices for the Superintendent and Dispatcher, and staffs.

To the north of the station and interchange platform, a building containing a car repair shop, freight house and auxiliary shops is being put up. It is of steel truss and brick construction, and the car repair shop portion, to be served by 3 tracks, will have a continuous pit, 4 ft. 8 in. below track level, the tracks to be supported on reinforced

concrete piers. At the north side of the car repair shop, will be a blacksmith shop, machine shop and carpenter shop, and below the carpenter shop and machine shop portion will be a basement, which will contain the boilers and coal storage facilities, and above the machine and carpenter shops will be a second story containing the armature shop. The building will be served by a travelling hoist, arranged so that heavy material may be transported direct from the car repair shop to the armature shop, and vice versa. The freight shed portion of the building will be served by trackage parallel to that leading to the repair shop.

The concrete interchange platform and umbrella shelter, being a joint facility, was provided jointly by the Hydro Electric Rys. and the Toronto Transportation Commission, actual construction of the platform being done by Toronto Transportation Commission's forces, and the umbrella shelter by the Metallic Roofing Co. The station and repair shop buildings, however, and the trackage to serve them, are purely Hydro Electric Rys.' facilities. The contract for the station and repair shop buildings, which were designed by J. C. Krumm, Designing Engineer, Hydro Electric Power Commission of Ontario, Railway Department, was secured by Sullivan & Fried, Toronto, and construction is well advanced. It is expected that the new facilities will be in use early in the spring.

Electric Railway Notes.

Montreal & Southern Counties Ry. has received 2 motor and 2 trailer cars from Ottawa Car Manufacturing Co.

London, Ont., aldermen are reported as not being satisfied with having passes over the London & Port Stanley Ry. for themselves, but as desiring them also for their wives.

The Toronto Transportation Commission, as a convenience to the public, has transferred its lost article office to its head office building, Yonge and Front Sts., from the Lansdowne car house, which was a most inconvenient location established by the Toronto Ry. Co.

Montreal Tramways Co. is reported to have been asked by the Montreal Motorists' League to cut out some of the stops made by its cars in residential and business districts, and to direct that passengers leave the cars by the front door only. It is claimed that this would enable the traffic to be speeded up.

The London Railway Commission, operating the London & Port Stanley Ry., is reported to have approved the Toronto Transportation Commission's suggestion to seek legislation compelling claimants for damages to report accidents within seven days. The L. & P. S. Ry.'s Manager is said to have mentioned one case in which the claim had not been presented until seven months had elapsed.

Canadian Railway and Marine World for Sept. 1922, gave illustrated descriptions of additional rolling stock ordered by the Toronto Transportation Commission, consisting of 50 motor cars and 100 trailers from Canadian Car & Foundry Co., Montreal, and 50 motor cars from Ottawa Car Mfg. Co., Ottawa. We are officially advised that at Jan. 22, 50 motor cars had been received from Canadian Car & Foundry Co.

The Winnipeg Electric Ry. has called attention to the fact that during the

summer, when people can motor, cycle or walk at will, the company's cars carry 130,000 passengers a day, but in the winter, the average number carried is 220,000 a day, to provide for which the company has to maintain a large quantity of rolling stock which is revenue producing only in winter, and to operate it when operating costs are at the highest.

Walkerville, Ont., Brewing Co., some months ago, was fined in the Windsor, Ont., police court, under the Liquor Carriage Act, for shipping beer over the Windsor St. Ry., one of the electric lines operated as the Hydro-Electric Rys., Essex Division. An appeal was made to the county court, and Judge J. J. Coughlin gave judgment at Sandwich, Ont., Jan. 9, that the act was ultra vires, and therefore allowed the appeal, and dismissed the police magistrate's finding.

The Fort William Utilities Committee and the Port Arthur Public Utilities Commission held a joint meeting at Port Arthur, Ont., Jan. 17, to discuss a number of matters affecting the electric railways owned by the twin cities. The Fort William committee suggested the adoption of a 10-minute schedule on the line between the two cities, instead of the present 13-minute one; that employees' wages be raised, and that the cash fare between the two cities be increased to 10c. The first and the last of these matters were to be considered further at a subsequent meeting, and the managers of the two lines were instructed to meet the men in regard to wages and report at the next joint meeting.

Hydro Electric Railways, Toronto & York Division.—Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, is reported to have stated, in speaking at Aurora on Jan. 20, that the following improvements were being considered in connection with the taking over of the Toronto & York Radial Ry.'s Metropolitan Division, viz.: a 100-ft. highway from Toronto to Mulocks Corners, by the addition of 3 ft. to east side, the highway to be illuminated for that distance; reservation for double track trolley lines, with safety zones for passengers and parcel freight; two-way traffic road surface to be built as soon as warranted; sidewalks for pedestrians; high level steel viaduct at York Mills; larger cars of modern type to be run on limited schedule during rush hours; commutation fares to promote travel; mail boxes on through cars.

Toronto Railway Arbitration.—The arbitration proceedings to determine the amount the City of Toronto shall pay for the Toronto Ry. Co.'s property, which it took over on Sept. 1, 1921, continued intermittently during October, the sittings being devoted to hearing counsel's arguments. The date at which the arbitrators are to issue their award has been extended to Dec. 1, and it is probable that a further extension will have to be made.

New Brunswick Power Co.'s Proposed Sale.—The St. John, N.B., City Council was advised Jan. 2, by Sanford and Harrison, solicitors for holders of the company's 1st and 2nd preferred stock, that the offer made Dec. 15, 1922, to sell the company's property on the basis of a valuation of \$3,089,000, was withdrawn.

Stratford, Ont., City Council is reported to have asked the Hydro Electric Power Commission of Ontario to send an engineer there to look over the city and advise as to the possibility of establishing a trackless trolley service there.

Marine Department

St. John, N.B., Harbor and Drydock Work.

The St. John Drydock & Shipbuilding Co. has, in response to Canadian Railway and Marine World's request, furnished a report on its work, during 1922, at Courtenay Bay, St. John, N.B., as follows:—

Breakwater—During the spring and early summer, the finishing touches were given the 2,500 ft. breakwater extension, in the shape of a final trimming of the channel slopes, and the application of the finishing layer of large cover stone that now presents a solid and immovable barrier to the southerly and easterly gales, which, prior to the building of the breakwater, made Courtenay Bay seem only part of the open Bay of Fundy. Nothing remains to be done to complete this protection except the installation of a lighthouse at the breakwater head.

Dredging of Channel and Basin—Since the early spring the two dredges, Tornado and Leconfield, operated day and night, reducing the entrance channel and turning basin to their full dimensions and final grades. At the close of the 1922 dredging operations, which was marked by the dismantling of the Tornado for the winter, the entrance channel was fully completed, from its junction with the turning basin to a point only about 2,500 ft. from the main channel to St. John harbor. This remaining 2,500 ft. of the entrance channel will be completed to the main channel during next summer, and for this purpose the ladder dredge Leconfield will be re-equipped and strengthened during the winter, to facilitate its handling this part of the remaining dredging.

The projected turning basin at the entrance to the drydock has materialized into a fully completed deep water harbor 2,000 ft. or more in length and breadth, in which ships drawing up to 32 ft. may lie with perfect safety at all stages of the tide. Less than a year ago the first oil tanker entered Courtenay Bay, and docked at the oil wharf, after waiting a specially favorable high tide for this, then generally considered, very hazardous passage. On Dec. 11, 1922, the tanker Azov steamed into the bay and came to anchor in the basin, with no thought of favorable tides or winds. This will be her harbor between trips south for fuel oil during the winter.

Only a short barrier of some 500 ft. now divides the turning basin from the drydock, and two steam shovels and a force of men are removing the most difficult portions of this divide, some 18,000 yds. of rock inside the cofferdam enclosing the drydock. As this operation is one not materially affected by frost conditions, work will proceed throughout the winter, so that with the arrival in the spring of suitable dredging weather there will only remain a few months operations with the hydraulic dredge Tornado to completely remove this portion of the uncompleted drydock entrance, and so bring the waters of the bay up to the face of the drydock.

The 1922 dredging operations in figures represent the removal of over 2,000,000 cubic yards of material from the entrance channel and turning basin, of which 900,000 cubic yards were towed out to sea in scows, and the balance pumped to the seaward side of the breakwater,

where it has formed an invaluable aid to the breakwater itself and safeguard to the Independent Oil Co's tanks and properties. The two dredges provided steady employment for about 200 men for the last nine months of the year.

Before beginning dredging operations last spring the hydraulic dredge Tornado was converted into an oil burner. The results obtained from this change, after a trial of nine months, have, in increased output and general efficiency, more than justified the expense involved. In addition, two large powerful tugs, the Margaret A. Hackett and the Florence, were added to the dredging fleet during the year, greatly increasing the overall efficiency of the dredging organization.

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

Drydock—At the end of May, 1922, two 1-yard concrete mixers started on the construction of the concrete work of the drydock. This operation was continued without intermission throughout the summer and autumn, till, with the pouring during the first week of December of the roof of the pumping station, the outer 600 ft. division of the drydock was completed. This portion of the dock includes the dock entrance, across which will be placed the caisson, when preparing to empty the dock after a ship has been placed therein; also the pumping station, which forms an integral part of the dock wall and where will be installed in March three 48 in. centrifugal pumps electrically operated, which will be capable of emptying the whole dock in about three hours. These pumps, with their 750 h.p. motors, and smaller auxiliary pumps, are being made by Goldie & McCulloch Co., of Galt, Ont., and will be ready for shipment to St. John by the end of February. The suction rings and discharge valves are already incorporated in the concrete of the pumping station, together with the structural steel

girders for supporting the main and auxiliary motors. There are also incorporated in the entrance walls of the dock and in the foundation of the pumping station the cast iron sluice gate valves, with which the filling and emptying of the dock will be regulated. The larger of these, the emptying culvert gate valves, are 8 ft. wide and 10 ft. high and each gate weighs over 11 tons. All will be electrically operated and this equipment will be installed early this year.

In addition to the above, a tunnel has been provided throughout the length of each wall, with a series of electrical conduits alongside. This tunnel and conduit will provide the means of distributing such essentials as compressed air, water and electrical energy to all points about the dock, as well as electric current to a series of flood lights, for which recesses have been provided in the face of each wall near its top.

Similarly included in the walls now erected, is a complete and continuous sewerage system, to which a docked vessel can make direct connection, flushed by a constant flow of sea water from outside the dock, and discharging into a special well to which will be connected the auxiliary dock pumps which will discharge this sewerage into the bay. This latter feature of the dock equipment will eliminate the inconvenience and expense experienced recently at the new South Boston drydock, when the White Star liner Majestic was docked there, and it was found necessary to send a large proportion of her crew of 1,000 ashore and accommodate them at hotels in the city while the ship remained in drydock, as the ship's waste discharges had all to be closed, the drydock lacking facilities for receiving and disposing of such sewerage and waste water. Additional equipment equally as necessary as the above, such as ladders, manholes, mooring rings and caisson anchorages, have been fully provided for in the work now completed.

Across the dock entrance and in the specially granite lined stop, is now being assembled the steel floating caisson, by which the entrance of the drydock will be closed when emptying the dock. The Dominion Bridge Co., of Montreal, began the erection of this caisson early in September and already has it assembled for half its full height. Shipments of steel for this have been arriving at the rate of about a car a day since September, and now all the required steel is on the ground. It is expected that the caisson will be completed about the end of February, and this will represent the continuous work of some 30 steel workers for six months or more, and the handling of 1,600 tons of steel into place. The pumping equipment for operating the caisson, manufactured by Goldie & McCulloch Co., has been delivered.

Outside the drydock proper and forming the entrance thereto, have been built the concrete substructure of the fitting-out and lay-to berths and caisson berth. These will be ready by March to receive the wooden superstructures which will form the wharves and which will require in excess of 1,000,000 ft. of square timber. Erection of the timber work will be under way in April.

Summarizing the year's progress on the

construction of the drydock since May, 1922, 700 ft. of the 1,150 ft. drydock have been built, representing the handling of about 60,000 yards of gravel and some 300,000 bags of cement, in addition to 100 or more tons of steel; a considerable proportion of the dock equipment has been installed and the floating caisson provided for the dock entrance. An average force of about 250 men was employed throughout the summer and autumn, with employment continuing through the winter of about 100 men on the entrance excavation. The progress made during 1922 indicates that it is reasonably fair to anticipate the completion of the whole drydock by next autumn.

Shops—In addition to the major operations already mentioned, distinct progress has been made with the drydock repair shops. A composite concrete and structural steel machine shop, 80 x 140 ft., has been completed on the north side of the drydock and this building is equipped with electrically operated 15-ton crane, 2 large vertical boring mills, a horizontal boring mill, radial drill, key seating machine, slotting machine, 30-ft. planer, as well as large engine and shafting lathes. This shop will be put in operation during the winter. A second building, to form the joiner shop, store house and mould loft, 100 ft. square, is under construction and will be ready for the reception of its equipment, now on the ground, in Jan., 1923. The balance of the shop buildings will be erected next summer; winter conditions preventing further building construction now, but the bulk of the machinery and equipment for them, consisting of plate rolls, double and single ended punch and shears, angle shears, gate shears, steam hammers, coil furnaces, rivet machines, building slabs, overhead shop cranes and

boilers and turbo-generators for the dock power station, are on the work and will be installed and ready for operation with the completion of the drydock at the end of 1923.

The construction of a 2,000-ton marine drydock, as an adjunct to the main dock, for handling smaller ships, is being negotiated for, and it is anticipated that this dock will be available for use even before the large drydock.

The general direction of these operations has been under the company's Managing Director, D. S. Pratt, of Midland, Ont., with F. M. Ross, Local Manager, assisted by E. G. Cameron, Chief Engineer; V. S. Chestnut, Resident Engineer; B. Allen, Field Engineer; A. F. Foote, Mechanical Superintendent, and Capt. Sullivan, Dredging Superintendent. McGuire & Cameron have been retained by the company as concrete specialists to direct the construction of the drydock.

Most of the work accomplished in 1922 was done by the St. John Drydock and Ship Building Co., direct, except that the Bedford Construction Co. did a small quantity of rock excavation as subcontractors, and J. A. Grant & Co., of Montreal and St. John, erected the two shop buildings. As stated above, C. D. Maguire and N. K. Cameron were retained to manage the concrete operations on the drydock.

Canal Statistics for November, 1922.

The Dominion Bureau of Statistics Transportation Branch has issued the following summary for Nov., 1922:—

Sault Ste. Marie.—Traffic through the Canadian and United States locks for Nov., 1922, was almost three times as

heavy as for Nov., 1921. Wheat shipments increased 21,777,334 bush., and other grains 4,760,487 bush.; the main increase was in iron ore, which jumped from 383,302 tons in Nov., 1921, to 3,660,302; and soft coal, which was 474,441 tons in Nov., 1921, against 2,454,736 tons in Nov., 1922. Anthracite coal shipments also almost doubled.

Welland.—Total traffic increased over 44%, due almost entirely to increases in shipments of wheat, which totalled 231,362 tons, or 7,712,000 bush. Soft coal shipments decreased 28,210 tons for the month, and 471,008 tons for the season, the total to Nov. 30 being 282,979 tons, against 753,987 tons in 1921.

St. Lawrence.—Wheat shipments were more than treble what they were during Nov., 1921. The total for Nov., 1922, was 244,761 tons, or 8,158,700 bush., and for the season, to Nov. 30, 58,411,300 bush., against 2,603,900 bush. and 28,362,500 bush. for the same respective periods in 1921. Anthracite coal increased from 17,864 tons in 1921 to 77,724, and bituminous coal increased from 88,273 tons to 132,038. For the season, bituminous coal shipments aggregated 565,692 tons, against 756,899 tons for the same period in 1921. Total traffic for Nov., 1922, increased from 333,722 tons to 574,741, or 72%.

Tide Tables.—The Marine and Fisheries Tidal and Current Survey, Ottawa, has issued two books of tide tables for 1923, one including the river and gulf of St. Lawrence, the Atlantic coast, Bay of Fundy, Northumberland and Cabot Straits; the other including Fuca Strait, the Strait of Georgia and the northern Pacific coast, with data for slack water in the navigable passes and narrows. Both also contain information on currents.

Ships Registered in Canada in October and November, 1922.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Building of Second Drydock at Esquimalt.

Work on the construction of the new Dominion Government drydock at Esquimalt, B.C., four miles from Victoria, was commenced in March, 1921, and rushed as quickly as possible until the end of March, 1922. The principal work done during that period was the dredging of all the over-lying material on the site of the drydock, entrance channel and landing wharf; the building of a loose rock cofferdam to enclose the inner half of the drydock, the cofferdam being made water-tight by a clay mat on the outer face, protected from wash by a timber breastwork; the excavation of a large portion of the enclosed area; the excavation of site for pumping machinery and machine shops; the reclaiming with waste material of about seven acres of land adjacent to the landing wharf; and the construction of five of the timber and concrete cribs intended for the landing wharf.

As no funds were available for carrying on the work after March 31, 1922, it was suspended until July, when Parliament authorized the resumption of the work and it has been prosecuted steadily since then. The area inside the inner cofferdam has been excavated to line and grade, and a large cavity in the site, reaching to a depth of about 30 ft. below the sub-grade of the dock floor has been filled with concrete; five of the landing stage cribs have been placed in position on the rubble mound built to receive them; the connecting spur track from the Esquimalt & Nanaimo Ry. main line to the dock site has been laid; and the entrance has been built. The unwatering of the area enclosed by the outer cofferdam is now proceeding and on the completion of the pumping the dividing wall between the inner and outer areas will be removed and the grading of the outer area will be proceeded with, preparatory to the commencement of the construction of the walls and floor of the dock.

The completed dock will have a total length of 1,150 ft.; a top width of 135 ft. and a bottom width of 125 ft.; 30 ft. of water on entrance sill at l.w.o.s.t. and 40 ft. on sill at h.w. It will be provided with two intermediate caisson stops respectively 400 ft. from outer and inner ends, and one extra caisson to be used in either of the intermediate stops, as may be required. The dock will be of concrete, with granite sills, altars, copings, etc. The emptying and filling will both be done through a tunnel, on account of the arrangement of the dock into sections. All pumps and machinery will be electrically operated, there being already a line with a capacity of 60,000 volts built to the work, on which 12,000 volts are now carried, to operate the compressors. It is expected that the dock will be ready to receive ships some time in 1925. Its total cost will be between \$6,000,000 and \$7,000,000.

The Dominion Public Works Department invited tenders, for pumping and other machinery for the drydock, to be sent in by January 15, but extended the date first to January 31, and then to February 15.

A Victoria press report of Jan. 3 stated that, during heavy weather, about 200 of the 500 ft. of the outer cofferdam collapsed, and was carried away, and that it was estimated that its rebuilding would cost about \$50,000.

Salvaging the s.s. Guerrero.

The salvaging of the Mexican States Line's s.s. Guerrero, by the Pacific Salvage Co.'s s.s. Algerine, of Victoria, B.C., was mentioned in our last issue. The actual operations were made more interesting, by the fact that other salvage companies had refused to undertake the task, owing to the peculiar conditions obtaining in the neighborhood of Mazatlan, Mexico, where the ship was ashore, and that the contract was placed with a company situated some 2,200 miles from the wreck. The Algerine left Victoria, B.C., Oct. 21, and arrived at Mazatlan Oct. 30. The Guerrero then had a list to port of about 20 deg., and was lying in a bed of sand, with water washing her at both ends, and a sand spit forming at low tides, on the landward side. Gasoline pumps were installed immediately to clear the hull of water and oil, and fresh water for the boilers was obtained from Mazatlan, about 5 miles distant, at \$5 a ton. This difficulty was overcome later by tapping a swamp in the vicinity and pumping water to the ship. Lines were eventually attached to the ship, and at high tides she was gradually hauled off, the first movement being made Nov. 6, and she was floated in 6 fathoms of water Nov. 16, after innumerable difficulties had been overcome. Temporary repairs were made to the hull bottom, rudder, propeller, boilers and engine, and she proceeded to Mazatlan, where she was supplied with fuel oil, obtained by the Algerine from Manzanillo. She later proceeded to San Pedro, accompanied by the Algerine, where arrangements were made for permanent repairs to be done at San Francisco. The Algerine returned to Victoria Dec. 9. The salvage work was in charge of T. W. Allan, Superintendent, Pacific Salvage Co. The Guerrero was formerly H.M.S. Dianthus, one of the mystery ships used in connection with dealing with German submarines during the war, and was owned by the Clan Line, of Scotland, which leased her to the Mexican States Line.

Transfer of U.S. Ships to Canadian Register.—The Dominion Government has taken steps to amend the regulations regarding the transfer of U.S. ships to Canadian register, with the view of restricting the smuggling of liquor into the U.S., and has issued instructions to registrars of shipping regarding cases where an application is made to register a ship in Canada, which has been bought from a U.S. owner, that unless the application is supported by a certificate from the U.S. Shipping Board authorizing such transfer, all particulars must be forwarded to the competent department of the Dominion Government for instructions before any definite steps are taken for the transfer of the ship.

Lusitania Outrage.—A London, Eng., cable dispatch states that Germany is prepared to admit responsibility for the sinking of the Cunard Line's s.s. Lusitania, during the war, with a large loss of life, and will pay United States claims from the proceeds of the sale of confiscated property.

Welland Ship Canal.—A St. Catharines press report of Jan. 10 stated that the Dominion Government was planning for the commencement of work, early in the spring, on section 8, between Humberstone village and St. Catharines. This report has not been confirmed.

Stranding of s.s. Cairndhu.

Held at Quebec, Que., Dec. 12, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. A. Landry and W. Tremblay, into the stranding of the Cairn Line's s.s. Cairndhu, Nov. 21, at Confederation Point, in the St. Lawrence River, near Cap Rouge. W. I. Gear represented the Robert Reford Co., the ship's agents; A. C. M. Thomson appeared for the master and chief officer, and Major Thos. Vien, K.C., M.P., for the pilot. The court commented on the very straightforward evidence, which induced it to accept as a fact that every precaution had been taken. The master had been on the bridge, but had gone down to consult the chart when the speed of the ship was reduced to slow. By the appearance of the land, he assumed that the ship was, if anything, south of mid-channel. On being advised that a heavy snow flurry was enveloping the ship, he returned to the bridge, but before reaching it, the ship grounded. Engines were put full speed astern, and water tanks sounded, it being found that water was entering no. 2 compartment and the engine room. The astern movement was ineffective. Everything was in readiness for an emergency, and the courses had been well steered. The court considered that all those on duty had acted to the best of their ability, and therefore the master and officers were not held in default. The pilot, J. A. Garipey, in his straightforward evidence, stated that owing to the snow, Basile range upper light was not visible, and he thought he had, following his usual custom, reached a gap in the land on the south shore, by the time and distance covered, and altered the course, which would have brought him to the lights at the center of the Quebec bridge, with the idea of anchoring, if the weather continued unpropitious. A flood tide was running, but its unusual rapidity was not determined at the time, and was therefore not accounted for in framing the course. He assumed that he was south of mid-channel, but the unusual strength of the tide, when the course was changed, the ship's starboard side being offered to the strength of the tide, deflected the ship unknowingly toward the north shore. The court expressed the opinion that had it not been for the unusual strength of the tide, the ship would have cleared the point, but it appeared to be a case where the pilot was sure of being in a certain position without any attempt to verify his surmise. It therefore held that he committed an error, but owing to his excellent record of 21 years, and this being his only accident, he was cautioned to be more careful in future.

Marine Public Works Contracts Awarded.—The Public Works Department awarded marine public works contracts during Nov., 1922, as follows:—Nov. 4, improvements to wharf at Berthierville en haut, Que., to Hormisdas Gravel, St. Lambert, Que., at unit prices; Nov. 24, wharf at Ucluelet West, Comox-Alberni, B.C., to McDonald, Watson & Wither, Victoria, B.C., at unit prices.

Lake Steamship Co., Ltd. has been incorporated under the Dominion Companies Act, with \$500,000 authorized capital, and office at Port Arthur, Ont., to build, own and operate ships, and to carry on a general transportation, navigation and trading business. The nominal incorporators include N. E. Strickland, barrister, Toronto.

A. A. Wright on Shipping the Western Wheat Crop.

A. A. Wright, Toronto, Honorary President, Dominion Marine Association, has written as follows:—While the port of Montreal and Canadian ship owners would naturally like to handle all the Canadian crop, it is a commercial impossibility, and the Buffalo gateway is an absolute necessity to the western farmer, in view of the evident desire to market the entire western crop if possible before the close of lake navigation each autumn. With the exception of a small quantity of ore to Point Edward and Sault Ste. Marie, the only business on the Great Lakes for Canadian bulk freight ships is the carriage of Canadian grain to Canadian ports, and coal from U.S. ports to Canadian ports, and occasionally an odd cargo of U.S. grain to Canadian ports. On everything, except grain from one Canadian port to another Canadian port, Canadian ships have to meet U.S. vessel competition. U.S. ships, on the other hand, have ample business in ore and coal at profitable rates, with the result that they have over 500 large steel bulk freight ships, as against possibly 20 similar ships in Canada. Although anyone is at liberty to build and operate Canadian ships, no one is eager, since fool propositions like putting them under the Railway Commission or suspending the present inadequate coasting laws are continually brought forward. The result, therefore, is that, while the few large Canadian ships, with the considerable number of canal-sized ships, could more than handle the entire crop if spread over the year, they could not handle it all in two months, and lie idle the rest of the year even if there were enough of them, so the U.S. fleet, after completing the ore contracts, comes in each autumn, competes with Canadian ships, and carries from 40 to 60% of the grain to Buffalo.

Now for the reasons why so much grain goes by Buffalo, when the water rate, Fort William to Montreal, is always from 1c. to 3c. a bushel less than Fort William to New York. First, Montreal is open only from about May 1 to Nov. 25, so that after Nov. 10 at the latest Montreal ceases to be a factor in the autumn movement of grain, and it then becomes largely a question for shippers to decide between Georgian Bay elevators or Buffalo. Georgian Bay means the rail haul to St. John or Halifax, where they are restricted to foreign ports reached by the regular liners, whereas at Buffalo they have Philadelphia, Baltimore, Newport News, New York and Boston, where there are always tramp ships available to any port where they can sell the grain. It should be clear, therefore, that all intelligent shippers moving grain forward for sale and shipment during winter months will always choose Buffalo for a large proportion of it, as it is useless to fight geography.

The reason you cannot get ocean tramps as readily at St. John, Halifax and Montreal as at U.S. ports is because the ordinary tramp is compelled, when insuring, to give a warranty not to trade to B. N. A. ports north of Boston, or possibly Portland, except at an additional rate of probably 1½%, which virtually confines the business to the liners which are covered for that trade.

As I have several times pointed out, it may pay to develop the waterpowers on the St. Lawrence for the sake of the

power, but it would be simply folly to spend money with the idea that it would increase the value of grain to the western farmer or stop the movement of grain between Nov. 1 and Dec. 12 in volume to Buffalo.

C.P.R. Automobile Ferry Service to Vancouver Island.

As mentioned in Canadian Railway and Marine World for January, the C.P.R. has ordered from Yarrows, Ltd., Victoria, B.C., a high powered motor ferry ship for service between Bellingham, Wash., on the mainland, and Sidney, on Vancouver Island, thus providing additional facilities for reaching the Island by motorists using the Pacific highway. The ship will be 170 ft. long over all, 42 ft. moulded breadth, and 11 ft. moulded depth. There will be capacity for 50 motor cars, with ample height between decks to allow for limousines, California tops, and all classes of cars, with no difficulty in boarding. It will be equipped with twin screws, driven by 2 Diesel engines by McIntosh & Seymour, Auburn, N.Y., of 600 h.p. each, for a speed of about 14 knots an hour. It is intended, during the busy season, to make two round trips a day, leaving Bellingham on the first trip early in the morning, and on the second trip, about 2 p.m. The ship will have ample observation rooms and deck space for full enjoyment of the scenery between San Juan, Orcas, Lopez and other islands, and as the route is completely landlocked, no rough water will be encountered.

The company is arranging to operate

the s.s. Charmer between Vancouver and Nanaimo, to provide increased accommodation for automobiles, especially limousines and other types of closed cars, and a circuit tour will be established from Seattle, via Bellingham, and ferry to Sidney, thence to Victoria and Nanaimo, taking in the Malahat Drive, and thence by ferry to Vancouver, and over the Pacific highway to Bellingham and Seattle, or reversing the route, from Seattle to Vancouver, thence by ferry to Nanaimo, on to Victoria and Sidney, and then by ferry to Bellingham. The services will be inaugurated in May.

United States Shipments via Vancouver.—One of the U.S. Trade Commissioners is reported to have stated in a speech at Milwaukee, Wis., recently that 68% of all the commerce which passed through the port of Vancouver, B.C., during 1921, consisted of goods going from, or destined for, the U.S. This has been taken up in Vancouver, and official records examined, which show that during 1921, 418,263 tons of cargo entered Vancouver, of which 46,106 tons, or 11%, were in transit to U.S. points; and 510,848 tons, including lumber, of which total 39,718 tons, or 7.8%, were in transit from U.S. points. If lumber, of which 209,324 tons were exported, were excluded, the U.S. merchandise exported through Vancouver would have been about 15% of the total.

Great Lakes to Mexican Gulf.—A resolution was introduced in the U.S. Senate, Jan. 16, for the appointment of a committee to investigate the question of constructing a 9 ft. channel in the waterways connecting the Great Lakes with the Gulf of Mexico.

Sault Ste. Marie Canals Traffic.

Summary for 1922.

Articles	Canadian Canal	U.S. Canal	Total
Lumber	3,140	210,972	214,112

Restrictions on United States Ships Transferred to Canadian Register.

Canadian Railway and Marine World for January gave some details of the purchase of the s.s. *Matoa*, from Boston, Mass., parties, by the Great Lakes Transportation Co., Midland, Ont., of which James Playfair is President and General Manager. In the ordinary course, application was made to the U.S. Shipping Board for the necessary permission, under the existing regulations, and a certificate was issued by the Board giving the necessary approval, and the ship was removed from the United States register, preparatory to its transfer to the Canadian register. A clearance was granted to enable the ship to clear from New York, and she proceeded to the St. Lawrence, arriving at Lachine before the close of navigation, where she now is. On application being made for Canadian registry, it transpired that certain conditions had been added to the U.S. Shipping Board's transfer permit, which had never previously been done, and Canadian registry was refused, on the ground that the conditions mentioned amounted to an assertion of continued U.S. control of ships which are no longer United States ships. The conditions mentioned are as follows:

(1) That no liens, encumbrances or other charges are due, or to become due against said vessel.

(2) That the sale and/or transfer of registry hereby authorized shall be effected within 6 months from date hereof.

(3) That the said vessel shall not be used for the importation into, or exportation from, the U.S.A., of any spirituous, vinous, malted, fermented or other intoxicating liquors of any kind, or of any articles, property, goods, wares or merchandise, in violation of the laws of the U.S.A.; that this condition shall run with the title to the said vessel for the further guaranty of the strict performance hereof; that upon any breach of this condition by the purchaser and/or transferee of the said vessel, or his, their or its successors in interest, the permission hereby granted shall be, and become, null and void and without effect, and thereupon said vessel shall be immediately subject to seizure, libel and forfeiture to the U.S.A., wherever and whenever found, without compensation to any parties therefor.

(4) That the bill of sale of said vessel on or subsequent to the date of this order, and under the provisions hereof, shall refer to and make the foregoing application and this order a part of the of the said bill of sale as fully as if copied therein in full.

(5) That the said vessel does not hereafter engage in trade with U.S. ports.

Paragraphs 3, 4 and 5 are new conditions, attached to permits issued by the U.S. Shipping Board for the transfer of U.S. ships to foreign register, and have never previously been attached to any transfer permit. The matter has been taken up with the U.S. Shipping Board, which takes the stand that the conditions must be carried out. It has also been referred to the British Embassy at Washington, D.C., and certain negotiations are proceeding on the point at issue.

The Dominion Marine Department has stated that as the conditions laid down by the U.S. Shipping Board practically

amount to an assertion of control over ships which are no longer U.S. ships, it is not prepared to concede to the U.S. Government the right to in any way exercise jurisdiction over ships that may have come upon the register books of British ships in Canada, beyond such as may, from time to time, be applicable to all ships of foreign registry which use U.S. waters. It has also issued the following instructions to registrars of shipping in Canada, viz.:—"If, on application to register at your port, a vessel purchased from a United States citizen, the order of the U.S. Shipping Board authorizing the sale and transfer of flag, and/or the bill of sale under which title from the American owner was acquired, contains any provisions restricting the use of the vessel: (1) The vessel must not be registered. (2) All papers must be forwarded to this office. Below are given some provisions which have appeared in recent orders. There may be others, and it is important that the Department should know of them." (Then follow paragraphs 3, 4 and 5 of the U.S. Shipping Board conditions quoted above.)

A reading of paragraph 3 indicates clearly that it is the U.S. Shipping Board's aim to prevent the use of any U.S. ship, which may be transferred to a foreign register, for the purpose of carrying intoxicating liquors into, and out of, U.S. ports, and if the matter halted there, there would be little to complain of, as, the importation of intoxicating liquors into the U.S. having been prohibited, any ship engaged in such traffic would be liable to seizure anyway, and could be dealt with under the Customs laws. The crux of the whole matter, however, is in paragraph 5, which prohibits the ship from engaging in trade with U.S. ports. This, on the face of it, is clearly in conflict with paragraph 3, which merely prohibits the importation into, and exportation out of, U.S. ports, of intoxicating liquors, and goods in violation of U.S. laws. As in Canada, the trading of Canadian and U.S. ships between ports of either country is a matter of statutory privilege, therefore, in addition to being in conflict with paragraph 3, paragraph 5 is also in conflict with statutory law.

The Secretary of the U.S. Shipping Board, in expressing his opinion on this point, has stated that paragraph 5 is not in conflict with paragraph 3; that paragraph 3 binds both the purchaser and seller to an agreement that if the ship is used contrary to U.S. laws, it shall be subject to seizure by the U.S., and paragraph 5 stipulates that the ship shall not be used in trade with U.S. ports, which means that the ship after its transfer to Canadian registry may neither be used in trade between two U.S. ports, nor between a Canadian, or other foreign, port and a U.S. port.

Another U.S. opinion on paragraph 5 mentions that the provision as to a foreign ship trading between two U.S. ports is already covered by statutory law, but as to a Canadian ship trading between a Canadian port and a U.S. port, the paragraph is clearly in conflict with the law as it exists, and that this will at once be seen to be an effort on the U.S. Shipping Board's part to further restrict the use to be made of ships transferred from the U.S. flag.

Canadian Government Merchant Marine Operation, Etc.

Grand Trunk Pacific Coast Steamship Service.—The coast steamship service formerly operated by the Grand Trunk Pacific Coast Steamship Co. Ltd., and latterly by the Canadian National Rys. for the G.T.P.R. receiver, with the steamships *Prince Albert*, *Prince George*, *Prince John* and *Prince Rupert*, under the management of C. H. Nicholson, has been brought under the Canadian Government Merchant Marine Ltd., and is in charge of B. C. Keeley, Pacific Coast Manager, who reports to R. B. Teakle, General Manager, C.G.M.M., Montreal.

Officers of Steamships.—The following masters have been appointed or transferred in addition to those mentioned in previous issues: s.s. *Canadian Leader*, Capt. M. Robertson, returned from leave of absence; s.s. *Canadian Observer*, Capt. J. P. Tait, vice Capt. A. O. Cooper, who died of heart disease, Jan. 9; s.s. *Canadian Volunteer*, Capt. E. Randall; s.s. *Canadian Voyager*, Capt. D. M. Dickson. W. Samples has been appointed chief engineer, s.s. *Canadian Forester*.

The s.s. *Canadian Prospector* had her boilers under repair at Kobe, Japan, during December, and sailed from there, Dec. 30.

The s.s. *Canadian Sapper*, which arrived at Halifax, N.S., Jan. 11, went into the Halifax Shipyards' drydock for her annual overhaul.

The s.s. *Canadian Seigneur*, which suffered considerable damage during the recent heavy storms on the Atlantic, and which was towed into St. John's by the s.s. *Canadian Sapper*, as mentioned in our last issue, has had repairs completed by Newfoundland Dockyards Ltd., and was expected to be again in service by the end of January. A new stern frame and rudder were supplied by Canadian Vickers Ltd., Montreal, the builders of the ship.

Advantage Taken of Suspension of Coasting Regulations.

Under the illegal permission given by the Customs Department, on Nov. 24, 1922, as detailed in Canadian Railway and Marine World for January, on pg. 43, the following United States ships loaded grain at the head of the lakes for eastern Canadian ports:—

At Port Arthur, Ont., barge Geo. E. Hartnell, 200,214.40 bush. no. 1 northern wheat, for Midland, Ont.; Dec. 4, steamship John McCartney Kennedy, 193,579.10 bush. no. 1 northern wheat, for Port McNicoll, Ont.; Dec. 6, steamship John W. Ailes, 182,932.40 bush. no. 1 northern wheat, for Port McNicoll, Ont.

At Fort William, Dec. 5, steamship P. W. Sherman, 220,000 bush. no. 1 northern wheat, for Goderich, Ont.

Vancouver Terminal Elevator.—An Ottawa press dispatch of Jan. 19, stated that an order in council had been passed transferring the Vancouver elevator from the Trade and Commerce Department to the Vancouver Harbor Commissioners, for \$550,000. The valuation was originally set at \$900,000. It is stated that the elevator will be operated as a terminal elevator with Board of Grain Commissioners' inspectors and weighers in control, but that the transfer will not take place until Aug. 31, the close of the current grain season.

Important Additions to the Great Lakes Steamship Fleets.

The condition of the shipbuilding trades in Great Britain, which has been considerably subnormal for some time, as in other parts of the world, and the decision of the shipbuilding companies to keep their plants in operation, with the view of providing all possible means of employment, and to keep their organizations intact to be able to do repair work, has resulted in the booking of a number of orders for ships of the lake-canal type for operation on the lake and St. Lawrence route. According to dispatches from Great Britain, builders are taking orders practically at cost, or even less, looking rather to the provision of employment throughout the winter, and the advantages of keeping plants running, than to profits. The tremendous increase in the grain traffic from the Great Lakes to Montreal, during the 1922 season, and the increasing popularity of that route, with the consequent necessity of developing it to its fullest extent, is proving attractive to shipowners, with the result that they are making considerable increases in their fleets, and new ventures are taking shape, which will add largely to the shipping operating on the Great Lakes and St. Lawrence route. A feeling exists that these orders for ships should have been placed with Canadian shipbuilding yards, but from the fact that, for the time being, British shipbuilders are willing to take orders for prompt delivery at practically the cost of material and labor, without regard for overhead expense, it can easily be seen that no Canadian shipbuilding company could possibly compete, and that it would be folly on the part of shipowners to neglect the opportunity.

Eastern Steamship Co.—Canadian Railway and Marine World for January contained preliminary details of the placing of orders in Great Britain by A. B. Mackay, formerly of Hamilton, Ont., for 10 full canal size, bulk grain steamships of 2,500 d.w. tons capacity each, at an approximate total cost of £300,000. We have since been advised that 2 steamships each were ordered from Samuel White & Co., Cowes, Isle of Wight; Earle's Shipbuilding & Engineering Co., Hull; Furness Shipbuilding Co., Haverton Hill-on-Tees; Cammell, Laird & Co., Birkenhead, and Napier & Miller, Glasgow. These ships are required to be ready for delivery by the beginning of May, for the reopening of St. Lawrence navigation. Each ship is to be capable of carrying 90,000 bush. of wheat, and the approximate general dimensions are to be: length 253 ft., breadth 43 ft., depth 20 ft., or full Welland canal size.

Eastern Steamships Co. Ltd. has been incorporated under the Dominion Companies Act, with \$1,000,000 authorized capital and office at Port Colborne, Ont., to own and operate these ships. The officers of the company are: President, Nisbet Grammer, President, Eastern Grain, Mill & Elevator Corporation, Buffalo, N.Y.; Vice President and Treasurer, J. J. Rammacher; Vice President, E. T. Douglass; Secretary, N. B. Macpherson; other directors, G. J. Grammer and J. J. Boland. Boland & Cornelius, Buffalo, N.Y., have been appointed Managers, and H. H. Goode, of the Canadian Furnace Co., will represent the company at Port Colborne. It is anticipated that several Canadians will be associated.

The company's President, Nisbett Grammer, has furnished the following

information: "The ships will carry grain and coal eastbound from Buffalo and Port Colborne to Montreal, and also coal from Lake Erie ports to St. Lawrence ports; also grain and coal on the upper lakes. They may also carry through cargoes from the upper lakes to Europe, but they are intended primarily for use through the Welland and Lachine Canals during the lake season. I consider the construction of this fleet will materially assist in the movement of grain to Montreal and in relieving the congestion that exists at lower lake ports during the season of harvest movement. I am very much in favor of utilizing the facilities that now exist, such as the Welland Canal, rather than wait a great many years in the future for our western agitators to cause what they call the St. Lawrence Canal to be constructed, which I think is entirely impractical. I believe the entire actual effect (outside of giving some agitators a job) of agitation, that has been so general for a St. Lawrence ship canal, has been to retard the use and development of the facilities that are now available to be used. I think the agitation has been a harm to the western farmers, because it has interfered with the full utilization of the facilities that are available, or could be immediately created. I am also confident that Montreal will continue to be an export grain port for an indefinite time in the future, as I think the large volume handled, via Montreal, during the last two years, both via rail and water, has demonstrated that Montreal will be one of the premier export ports of North America for grain, in spite of its short season. I am very much interested in the export movement of grain and control the movement of a large amount of it, and I am very confident that the ships which we are having built will be provided with cargoes so as to make their operation a success."

Great Lakes Transportation Co.—Canadian Railway and Marine World for January mentioned that Swan, Hunter & Wigham Richardson, Newcastle-upon-Tyne, Eng., were building a number of lake bulk freight steamships, 10 of which were being negotiated for by one of the largest Canadian shipowning companies on the Great Lakes. We are advised that these 10 ships are expected to arrive on the Great Lakes. We are advised that these 10 ships are expected to arrive on the Great Lakes early in May, and that a company will be organized to own them, in which the Great Lakes Transportation Co., of which James Playfair, Midland, Ont., is President, will hold a considerable interest, and will operate them. They will have the following dimensions: length over all 259 ft., beam 43 ft., depth 20½ ft. They will be arranged for the carriage of 90,000 bush. of wheat on a 14 ft. draft. The engines will be of the triple expansion type, with cylinders 17, 29, and 47 in. diam. by 36 in. stroke, supplied with steam by 2 boilers, each 12½ ft. diam. by 11 ft. long, at 185 lb. working pressure. They will be of a similar type to the Great Lakes Transportation Co.'s s.s. Glenmavis, but with all latest improvements, and will trade principally from Port Colborne to Montreal, and also to lower St. Lawrence ports for pulpwood, and in fact will take any business that offers.

Keystone Transports, Ltd.—The two steel screw cargo steamships which Key-

stone Transports, Ltd., has ordered in England, as mentioned in our last issue, will be built by Smiths Docks, Ltd., Middlesbrough, to Keystone Transports' own specifications and plan, to Lloyd's highest class for service on the Great Lakes and St. Lawrence River and Gulf. The dimensions will be: length overall 256¾ ft., breadth 42½ ft., depth moulded 19¼ ft., with a d.w. carrying capacity of about 2,330 tons on 14¼ ft. draft. Large hatches will be provided for the company's special trade, with full cargo gear booms and deck winches, should the ship be required at any time to load general cargo. Engines will be of the triple expansion type, with cylinders 16, 22 and 44 in. diam., by 33 in. stroke, and will be supplied with steam by 2 Scotch boilers, 12½ ft. diam. by 10½ ft. long, natural draft, 180 lb. working pressure; heating surface 2,850 sq. ft., patent withdrawable furnaces, patent atmospheric ash hoist, contraflow condenser, steam and hydraulic reversing gear, etc. The circulating and ballast pumps will be so fitted that both, or either, may be used for similar purposes, and will be of extra large proportions. The steering gear will be direct connected to the quadrant. Three watertight bulkheads will be fitted, and the screen bulkheads between holds will be partly watertight, 6 ft. up from the tank tops. Water ballast of about 1,000 tons will be carried in the double bottom and peaks. Wrecking wells will be fitted, to allow entry to double bottom, when ship is loaded with cargo. Accommodation will be provided for the master and deck crew, forward, and for engine room crew and stewards, aft. Refrigerating plant will be provided in the engine room, connected to cooling chamber next the steward's pantry, equal to evaporation of a ton of ice a day. The ship will have three holds and will carry about 85,000 bush. of wheat, or 2,500 tons of coal. The cubic capacity will be 123,000 ft., and bunker capacity 140 tons. Delivery of the first ship is required by April 1, and of the second, by April 15. Their construction is under John Reid & Co.'s supervision.

Ogilvie Flour Mills Co.—We are advised by the Anderson Co. of Canada, Montreal, that the Anderson Overseas Corporation (France) has sold to a Montreal financial group 10 collier steamships owned by the French Government, after they had been inspected for the buyers by Captain H. N. McMaster, of Montreal. Since the sale they have been withdrawn from operation, to undergo slight repairs and alterations before crossing the Atlantic, and will be brought out in the spring, for operation in the grain trade between Port Colborne and Montreal. The ships are said to be about 1,400 tons d.w. and to be capable of carrying about 60,000 bush. of wheat each. The financial group referred to is said to be allied with the Ogilvie Flour Mills Co.

Mathews Steamship Co.—Press dispatches from Great Britain state that other orders for similar ships, in addition to those mentioned in this column, have been given other ship building companies at various points in the country, each builder handling two ships, and it is said that the Mathews Steamship Co., Toronto, has placed some orders there, but no details are available.

J. F. M. Stewart, Toronto, is negotiating with English builders for a full Welland Canal size freight steamship.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

The Davie Shipbuilding & Repairing Co., Lauzon, Que., is repairing the Cairn Line's s.s. Cairndhu, which went aground in the St. Lawrence River, near Cap Rouge, recently. Tenders for the work were received shortly after the accident, and it was the intention to take her out to the seaboard and send her to Brooklyn, N.Y., to have the repairs done, but owing to the early freeze-up of the St. Lawrence, it was impossible to do so.

Halifax Shipyards, Ltd., Halifax, N.S.—Certain repair work on H.M.C.S. Patriot was not completed at the time she was undocked Dec. 1, as mentioned in our last issue, as such work could be done more conveniently while the ship was afloat. This was completed Dec. 5. The Nova Scotia Steel & Coal Co.'s barges Twin Sisters and J. B. Renes were overhauled and painted, and completed Dec. 6. Canadian Government Merchant Marine s.s. Canadian Volunteer was docked Dec. 8, for repairs to hull, rudder, general overhaul and scraping and painting, which was completed Dec. 13; the s.s. Canadian Constructor was docked Dec. 27 for scraping and painting, overhauling sea valves, etc., and was undocked Jan. 2; the s.s. Canadian Gunner, which suffered considerable damage at St. John's, Nfld., from fire in the cargo in holds 1 and 2, arrived at Halifax Dec. 20 for general survey, but before this could be done, it was necessary to clean the ship and open up certain of the damaged work; this was completed Dec. 23, and survey was commenced Dec. 27; it was reported that the damage is extensive. The Royal Mail Steam Packet Co.'s s.s. Chignecto was docked Dec. 13 for general repairs, scraping and painting, and undocked Dec. 16. The Marine Department's steamships Aberdeen and Aranmore were docked Dec. 19 for drawing tail shafts, overhauling sea valves, scraping and painting, and in the case of the Aberdeen, also miscellaneous hull repairs and straightening propeller blades.

Midland Shipbuilding Co., Midland, Ont.—The barge George E. Hartnell, which has been bought from the Valley Camp Coal Co., Cleveland, Ohio, and which is being converted into a bulk freight steamship, by the Midland Shipbuilding Co., as mentioned in our last issue, for the Great Lakes Transportation Co., has the following dimensions: length 352 ft., breadth 42 ft., depth 27 ft. The forecastle is to be altered, the present quarters removed, and the regular lake type of master's quarters, observation room and wheel house fitted. The hatches will all be widened 2 ft., to suit the unloading devices at the various docks. The inner stringer on the spar deck will be removed and a thicker plate put on, one extra keelson will be fitted between main and spar decks, the hold stanchion and main deck beams and shifting boards will be removed, and the hold will be reconstructed on the arch system, all in accordance with Great Lakes Classification requirements. The engine will be built at Hamilton, Ohio, and will be of the triple expansion type, with cylinders 19, 32 and 56 in. diam. by 36 in. stroke, 1,400 h.p., and will be supplied with steam by boilers, each 14 ft. 7 in. diam. by 10 ft. 8 in. long, at 185 lb. working pressure, built at St. Catharines, Ont. The after deck house will be removed and one will be built with

crew's accommodation according to the best lakes practice. Some of the larger work, such as new stern post, tail shaft, stern tube, sea cocks, propeller wheel and all work below water, is being done by Port Arthur Shipbuilding Co., Port Arthur, Ont., and the balance by Midland Shipbuilding Co. The work is to be completed and the ship ready for the reopening of navigation, the cost of the conversion being approximately \$175,000.

Newfoundland Dockyards Ltd., St. John's, Nfld., has repaired the Norwegian s.s. Skaraas, which arrived at St. John's, Jan. 9, with her steering gear out of order and some minor deck damage, due to rough weather.

Prince Rupert Drydock and Shipyard, Prince Rupert, B.C., did the following repair work during Dec., 1922: U.S. light-house tender Fern, docked and fitted with new rudder and false keel; and 27 fishing ships were overhauled generally. The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert was docked for her annual overhaul.

Yarrows, Ltd., Victoria, B.C., did the following repair work during December: British Canadian Steamships' s.s. City of Victoria, 5,698 tons, rivetting bilge keel, drydocked, scaled, cleaned and painted; C.P.R. s.s. Princess Adelaide, 3,061 tons, drydocked, cleaned and painted, and later hauled out on marine railway and propeller blades changed; Consolidated Whaling Corporation's s.s. Gray, 707 tons, replacing propeller, drawing tail shaft and rewooding; P. Kleppes Rederi s.s. Hallgyn, 6,672 tons, engine room, deck and tank repairs, drydocked, cleaned and painted; Producers Rock & Gravel Co. steam tug Mystery, hauled out on marine railway, cleaned and painted, drew tail shaft, repairs to rudder, engine room and hull. In addition, miscellaneous repairs were done to several scows.

Mainly About Marine People.

H. A. Butt, who has been appointed to supervise the construction of the new floating dock at Southampton, Eng., for which Sir W. G. Armstrong Whitworth & Co., Newcastle-upon-Tyne, have the contract, was for some years assistant to the shipyard manager, Cammel Laird & Co., Birkenhead. After leaving there he was for some time an assistant director of the British Government Shipyards at Chepstow, Monmouthshire, Eng., and later acted for the Imperial Munitions Board as inspector of ships building at various yards in Western Canada for the British Government.

Thomas Conlon, a former canal and waterways contractor, and shipowner, died at Thorold, Ont., Jan. 16, aged 78.

G. J. Desbarats, C.M.G., Deputy Minister of the Naval Service, will continue to act in that capacity until Feb. 28. Under the National Defence Act, which went into effect on Jan. 1, the Militia Department, the Naval Service Department, and the Air Board, have been amalgamated as the National Defence Department, of which Mr. Desbarats will be Comptroller. He has also been appointed acting Deputy Minister of the Department, the Deputy Minister, Major-Gen. Sir Eugene Fiset, being on a year's leave of absence.

Capt. E. English, who died at St. John's, Nfld., Jan. 10, aged 76, was one of the best known mariners of the colony. He commenced his sea life at 17, became a master at 23, and studied for his extra master's certificate at Glasgow, Scotland. He retired from active seafaring life about 30 years ago, and subsequently held positions as Assistant Examiner of Masters and Mates, Examiner in Chief of Masters and Mates, and Harbor Master, at St. John's, retiring from the last position in 1919, when he was succeeded by his son, Capt. E. English, Jr. He was honorary agent for the British Mercantile Marine Service Association, and Secretary of the Pilot Commissioners' Board.

J. H. G. Hagarty, formerly director and Secretary-Treasurer, St. Lawrence & Chicago Steam Navigation Co., who died at Toronto, July 26, 1922, left an estate valued at \$184,800, a life interest in which is given to his widow, and on her death, one-seventh is to be paid to each of six children, and the income from the remaining seventh paid to a son, with remainder to his children.

John Hulbert, who has been appointed Representative, Royal Mail Steam Packet Co., Halifax, N.S., was born in London, Eng., April 2, 1879, and entered transportation service in 1895, since when he has been, to 1906, in various positions as clerk, Houlder Line, London, Eng.; 1906 to March, 1919, senior clerk, specializing in audit and foreign agencies, and statistical work, Royal Mail Steam Packet Co., London, Eng.; March, 1919, to May, 1922, accountant and general assistant, same company, Halifax, N.S.; May to December, 1922, acting Representative, same company, Halifax.

J. S. Leitch, Managing Director, Collingwood Ship Building Co., Collingwood, Ont., will be married, early in February, to Mrs. Porter, widow of the late Major J. H. Porter, Toronto. They will spend their honeymoon in Scotland and France.

Capt. J. D. Mackenzie, who has been appointed Commissioner of Pilots for Sydney, N.S., has been a master mariner for about 30 years, and was, for a time, in the Prince Line's service, between Newcastle-upon-Tyne, England, the West Indies and South America. He was subsequently in Nova Scotia Steel & Coal Co.'s service, and in 1919 joined the Canadian Government Merchant Marine, and served at different times on the steamships Canadian Recruit, Canadian Voyageur, Canadian Trapper, Canadian Ranger, Canadian Commander, and Canadian Cruiser.

James Playfair, President, Great Lakes Transportation Co., Midland, Ont., and Mrs. Playfair, left on Jan. 18 for South America, expecting to be away about two months.

Robert B. Teakle, who has been appointed General Manager, Canadian Government Merchant Marine Ltd., Montreal, was born at Quebec, Que., May 19, 1877, and entered transportation service in May, 1893, since when he has been to April, 1904, in various positions, Allan Line Steamship Co., at Quebec, Halifax and Portland, Me.; April, 1904, to Oct., 1914, in various positions at Montreal, and the latter portion of that time, as Manager, same company, St. John, N.B.; Oct., 1914, to Mar., 1918, Manager, same company, Boston, Mass.; Mar., 1918, to April 16, 1919, Northeastern Manager, France and Canada Steamship Corporation, Boston; April 16, 1919, to Jan., 1923, Manager, Canadian Government Merchant Marine Ltd., Montreal.

Enquiry Into Alleged Combine Among Great Lakes Steamship Owners.

The Dominion Government has appointed a royal commission, consisting of S. J. McLean, LL.B., Assistant Chairman, Board of Railway Commissioners, Ottawa; Brig.-Gen. T. L. Tremblay, member and Chief Engineer, Quebec Harbor Commission, and Levi Thomson, barrister, Qu'Appelle, Sask., and formerly an M.P., to investigate the following representations which have been made to the Government on behalf of responsible grain production and trading interests:

That a steamship combine exists composed of Canadian companies having Lakes Superior, Huron and Erie as a base of operations. That grain shipments which emanate from western provinces pass through the main outlet of Fort William and Port Arthur to eastern ports, and are involved in the freight rates controlled by the alleged combine. That the alleged combine is largely effective, through an amalgamation of interests of shipping companies and ship owners trading upon the said Great Lakes. That the alleged combine, or controlling interest, by its management and operation of the bulk of tonnage of Canadian ships plying on the lakes, exercises a dominating influence upon the transportation of grain between the western and eastern ports, and by the further exercise of this authority, creates high and unjustifiable freight rates upon grain. That the alleged combine or amalgamation of shipping interests has absolute authority to charter and allocate cargoes of grain in the great bulk of tonnage traversing the said lakes between Canadian ports, and the alleged combine refuses to charter or allocate space to grain brokers, dealers or traders, with minor exceptions, unless the said brokers, dealers or traders agree to place insurance upon their cargoes effected through and by the said alleged combine or combination of shipping interests. That the premium rates of insurance thus demanded and charged by the alleged combine are in excess of premiums otherwise available to the said brokers, dealers and traders. That the alleged combine, by insisting upon higher rates being paid for transportation of grain to Canadian ports than the combine charges for carrying grain upon identical dates from Fort William and Port Arthur to Buffalo, is discriminating against Canadian ports and harbors on Georgian Bay and Lake Erie in favor of the port of Buffalo, N.Y. That the alleged combine, by the control it exercises upon Canadian tonnage on the Great Lakes, at times demands higher freight charges to eastern lake ports from Fort William and Port Arthur than are charged by U.S. grain from Chicago and Duluth to Buffalo and other U.S. eastern lake ports. That the operations of the combine in controlling freight rates and further demanding that shippers, brokers and dealers in grain should effect insurance upon the excessive premium rates named by the combine, has unfairly and considerably increased the cost of transportation and handling of the natural products of the western provinces. That the aforesaid situation in respect to the transportation of the products of the western provinces adversely affects the great grain producing population of the said provinces by preventing the grain growers from securing rea-

sonable and untrammelled access to the world's markets for their products; and also prevents them receiving fair, just and reasonable prices which would otherwise be available for their products.

The commissioners are directed to investigate fully representations that have been made to the Government, to enquire into the relations and arrangements between the steamship companies and interests amalgamated or combining for the purpose of operating or arranging for the transportation and insurance of grain upon vessels traversing the Great Lakes; to enquire into the alleged combine of shipping interests in its efforts to dominate and control the freight rates and terms under which grain has been carried from Fort William and Port Arthur; and to enquire into the comparative freight rates on grain by ships traversing the Great Lakes between Duluth, Milwaukee and Chicago to eastern lake ports, as compared with prevailing freight rates on grain to eastern lake ports in ships controlled or dominated or fixed by the alleged combination of interests controlling Canadian lake shipping sailing from Port Arthur and Fort William to eastern ports and to make such further inquiry as the Commission may see necessary in the premises.

The order in council states that the existence of a combine or monopoly such as alleged, would be contrary to the public interests, would levy a special burden upon the agricultural life of the western provinces, constitute a menace to their settlement and expansion, and also restrict general trade, with serious consequences to the entire commercial, industrial and financial life of the Dominion.

It appears that some months ago the Dominion Government employed W. T. R. Preston, of Port Hope, Ont., to look into the charges referred to, and that he made a report which led to the passing of the order in council referred to.

Winter Moorings of Canadian Steamships.

Following is a list of Canadian steamships, with the ports at which they are berthed for the winter, of which Canadian Railway and Marine World has been officially advised, in addition to those published in the January number:—

Alberta & Arctic Transportation Co., Edmonton, Alta.—Canadusa, Rallim, Slave River, at Waterways, Alta.; Distributor, Lady Mackworth, at Fort Smith, Northwest Territory.

Algoma Central Steamship Line, Sault Ste. Marie, Ont.—Agawa, J. Frater Taylor, W. C. Franz, at Midland, Ont.; Home Smith, at Goderich, Ont.

Canada Steamship Lines Ltd., Montreal.—Glenellah, Martian, at Collingwood, Ont.; A. E. McKinistry, Beaverton, at Fort William, Ont.; Canadian, Sarnian, Valcartier, at Goderich, Ont.; Atikokan, Kamarima, Manoa, Mapledene, at Halifax, N.S.; White Star, at Hamilton, Ont.; Advance, Belleville, Cataract, City of Ottawa, Cobourg, D. G. Thomson, Edmonton, George T. Davie, Hamilton, Hilda, John C. Mann, Maplebranch, Mapleglen, Maplegorge, Maplegreen, Mapleheath, Maplehill, Melvin S.

Bacon, Nadine, Oatland, R. G. A. Weaver, Ramona, Simla, Vinmount, at Kingston, Ont.; Narragansett (to be renamed Richelieu), at Levis, Que.; Emperor, Glenmount, at Midland, Ont.; Longueuil, at Montreal; Collingwood, E. B. Osler, Kenora, Maplecourt, Mapleton, Midland King, W. D. Matthews, Westmount, Winona, at Port Colborne, Ont.; Arabian, City of Hamilton, H. F. Bronson, J. R. Edwards, Jeremiah Godfrey, Mapleboro, Maplebrook, Maplegrange, Minnie E. Orton, at Port Dalhousie, Ont.; J. H. G. Hagarty, Midland Prince, W. Grant Morden, at Port McNicoll, Ont.; Brighton, at Prescott, Ont.; Cape Diamond, Cape St. Francis, Montreal, Quebec, Saguenay, Susie, Tadousac, Turbinia, at Sorel, Que.; Cape Eternity, Cape Trinity, Rapids King, Rapids Prince, Rapids Queen, Three Rivers, at Three Rivers, Que.; Cayuga, Chippawa, Corona, Kingston, Macassa, Modjeska, Toronto, at Toronto, Ont.; Thunder Bay, at Buffalo, N.Y.; Ivor Heath, at New York, N.Y.

Canadian Towing & Wrecking Co., Port Arthur, Ont.—A. F. Bowman, Coteau, Empire, Gogebic, James Whalen, at Port Arthur, Ont.

Crystal Stream Steamship Co., St. John, N.B.—D. J. Purdy, Majestic, at St. John, N.B., for general overhauling.

Memphremagog Navigation Co., Georgeville, Que.—Anthemis, at Georgeville, Que.

Ontario Transportation & Pulp Co., Thorold, Ont.—Chicago Tribune, Linden, New York News, at Montreal.

Quebec Salvage & Wrecking Co., Levis, Que.—Gopher, at Louise Basin, Quebec, Que.; Lord Strathcona, at drydock, Lauzon, Que.

Sincennes-McNaughton Line, Ltd., Montreal.—Conqueror, Macsineo, Virginia, John Pratt, Rosalie L., Augustus, Lapwing, at Montreal; Hudson, Ethel, Fredmac, Mathilda, Sinnmaco, Myra, Sinnmac, Gerald Morgan, Emma L., C. W. Chamberlain, Melrose, Selkirk, Winnipeg, Henry Witbeck, Isaac Stephenson, Woodlands, at Sorel, Que.; Jeannette R., at St. Ours, Que.; Andree Dupre, Macsin, Muscallonge, Ashland, Nellie Redington, J. I. Case, Dunmore, Menominee, Kingston, Arthur Morgan, at Cardinal, Ont.; Hector, Kildonan, at Cornwall, Ont.; Burma, at Oswego, N.Y.

Transportation & Shipping Co., Montreal.—Earl Bess, Ethel Q., at Montreal; Gedeon L. and barges Andreon L., Bernon L., Jeannon L., at Quebec; Napoleon L. and barges Fredon L., Laureon L., at Hamilton, Ont.

Canada Steamship Lines Ltd.—At a directors' meeting at Montreal, Jan. 10, Sir Walter R. Lawrence, director, Peninsular & Oriental Steam Navigation Co.; Sir Reginald MacLeod, Chairman, Gresham Fire & Accident Insurance Society, and R. B. Phillpotts, were elected members of the London Advisory Committee, in addition to the existing members, Sir A. Trevor Dawson, Viscount Long of Wraxall, and Sir Vincent Caillard. It was announced that the operating results for 1922 were in course of preparation, and that for the period to Nov. 30, the operating profit was \$1,785,453, with interest charges of \$656,439. It was also stated that the s.s. Narragansett, which is being rebuilt and refitted at Levis, Que., and which will be renamed Richelieu, will be ready for operation between Montreal and the Saguenay, about May 10. She will have accommodation for 440 passengers.

Atlantic and Pacific Oceans.

The White Star-Dominion Line's s.s. Doric, sister ship of the s.s. Regina, is rapidly approaching completion at Belfast, Ireland, and it is expected that she will be ready for the St. Lawrence service in May. The only difference between her and the Regina, is that the Doric is equipped for oil fuel, and the Regina burns coal.

The White Star-Dominion Line's Canadian service will be maintained during next season by the steamships Canada, Doric, Megantic and Regina. The first sailing on the new service is scheduled for Apr. 21, from Liverpool, for Montreal, by the s.s. Canada, and the last sailing, by the s.s. Regina, from Montreal, for Liverpool, Nov. 24. Calls will be made at Belfast, Ireland, westbound.

The Union Steamship Co. of New Zealand, which operates the Canadian-Australian Royal Mail Line, is reported to be considering ordering another large motorship from John Brown & Co., Glasgow, Scotland, in addition to the one ordered recently from Fairfield Shipbuilding & Engineering Co., Glasgow. The report is believed in Victoria, B.C., to be a misrepresentation of a talk about the first ship, and it is stated that the company has no plans to extend the passenger service on the Canadian-Australian run, beyond what is at present under construction.

The Anchor-Donaldson Line's s.s. Athenia, which is rapidly approaching completion at Glasgow, for the Glasgow-Montreal service, is considerably overdue, her construction having been delayed by labor troubles. She is scheduled to sail from Glasgow, April 19, on her maiden trip, and to arrive at Montreal, May 4. Her dimensions are, length 520 ft., breadth 66 ft., depth 42 ft., tonnage, 14,000 gross. She is equipped for oil burning, and has accommodation for 516 cabin, and 1,000 third class passengers. Cabin accommodation for 162 passengers is arranged on the shelter deck, which runs almost the full length of the ship. The public rooms and cabins are all heated by steam radiators.

The Royal Mail Steam Packet Co.'s motorship Loch Gail, which has been built at Govan, Scotland, for the Pacific service, underwent her trials on the Clyde, during December, and was handed over to her owners. Her dimensions are: length 502 ft., breadth 62 ft., depth 38½ ft. She is built with poop, bridge and forecastle, 8 watertight bulkheads, 6 cargo holds, one of which can be used as a deep water ballast tank, and with double bottom compartments, with the space between the tunnels arranged for

carrying oil fuel. The steering gear, windlass and 15 cargo winches are all electrically driven, and there are 36 cargo derricks for weights varying from 3 to 7 tons, and two additional derricks for weights up to 40 tons. The propelling machinery consists of two 8-cylinder, 4-cycle Diesel engines, developing 6,000 i.h.p. at 115 r.p.m., for a sea speed under full load of 12½ knots. She will be operated in conjunction with her sister ship, Loch Katrine, and similar ships of the Holland American Line, in the general trade to North American Pacific coast, making regular calls at Vancouver.

Maritime Provinces and Newfoundland.

Grain exported from St. John, N.B., during 1922, was 15,373,048 bush., compared with 10,428,105 bush. in 1921.

The port of Halifax shipping report for Oct., 1922, shows gross shipping tonnage of 207,738, against 171,105 for Oct., 1921. Exports were valued at \$1,473,609, and imports at \$1,111,609, compared with \$1,007,960 and \$971,512, respectively, for Oct., 1921.

John Blue has been appointed by the Dominion Government as harbor master, Belle River, P.E.I., in place of M. F. Riley, whose services have been dispensed with on account of neglect of duty. The remuneration is the amount collected as harbor dues, up to \$200 annually.

The Newfoundland Government s.s. Sebastapol, which replaced the s.s. Portia on the Newfoundland west coast route recently, grounded on a rock at Channel, Dec. 30, and refloated the following day without apparent damage. This was stated to be the second time she had grounded within a week.

The s.s. Bretonia, which sailed from St. Pierre, Miquelon, about Nov. 29, 1922, for Boston, Mass., and New York, which was reported to have sailed from New York, Dec. 10, and which has not since been heard of, has been given up as lost with her crew, in the recent heavy storms.

The tern schooner Gertrude Parsons, owned in Windsor, N.S., was blown ashore at Digby, N.S., early in January, during a heavy northeast storm. She had been moored at the government pier, with two anchors, which she dragged for about half a mile, and went ashore practically in the center of the town, parallel with and only a few feet from one of the streets.

The s.s. Hampton, owned by Capt. P. B. Belyea and J. S. Gregory, St. John, N.B., is reported to have been sold to Capt.

Taylor, for \$7,000. She was built at Hampton, N.B., in 1905, and is paddle wheel driven by engine of 34 h.p. Her dimensions are: length 100.1 ft., breadth 21.3 ft., depth 5.3 ft.; tonnage 183 gross, 115 net. She was operated formerly between St. John and Belle Isle.

The Newfoundland Government has presented Capt. W. Rollerson, master of the White Star-Dominion Line s.s. Welshman, with a pair of binoculars, the chief officer, G. W. Petheram, being recommended for a Lloyd's shipwreck medal, and the lifeboat crew of five seamen, with £3 each, for saving the crew of the schooner Stanley Joseph, which was abandoned off Cape Race a few months ago.

The U.S. Shipping Board's s.s. West Hardaway was towed into Halifax, N.S., at the end of December by the U.S. Shipping Board's s.s. West Haven. She was bound from Grangemouth, Eng., to Norfolk, Va., and encountered heavy storms in crossing the Atlantic. When picked up by the s.s. West Haven, she was about 500 miles off Halifax, and helpless through having exhausted her oil fuel. During the tow, the line broke twice. Both ships took on oil at Imperial, and proceeded on their voyages.

The Newfoundland Government's s.s. Prospero, which ran aground at Small Island, Green Pond, on the east coast of Newfoundland, Dec. 16, was refloated under her own steam, after a quantity of her cargo was jettisoned, and returned to St. John's at the end of December, accompanied by the s.s. Daisy. A large hole had been made in her hull forward, and tank 1, hold 1 and the forepeak were filled with water. All the cargo in the forward hold was damaged. The hole was temporarily covered by a sail patch, and the pumps worked to full capacity, which kept the water in check to some extent while returning to port, when arrangements were made for her to be drydocked.

Province of Quebec.

The Memphremagog Navigation Co.'s s.s. Georgeville has been hauled out at Georgeville, and extensive repairs, including the rebuilding of the hull, are being done at a cost of approximately \$10,000.

The Grain Clearance Board's statistics show that 154,550,000 bush. of grain were handled at Montreal during the past season, compared with 138,453,980 bush. during the 1921 season. During the same period in 1922, 111,071,093 bush. were handled through the port of New York. There were 1,194 ocean steamship arrivals at Montreal during the 1922 season, with a tonnage of 3,931,901, compared with 964 arrivals, with a tonnage of 2,891,956, during the 1921 season. In addition to these, there were 1,374 arrivals at Montreal during 1922, from the Great Lakes.

St. John Drydock & Shipbuilding Co. sold an issue of \$836,000 35-year serial 5½% gold bonds recently, to Aemilius Jarvis & Co., Toronto. The company is subsidized by the Dominion, under the Drydock Subsidy Act, 1910, and the Drydock Amendment Act, 1917, under which the Government provides an irrevocable semi-annual payment for the redemption of interest and principal. The bonds are a first and only mortgage on the drydock and shipbuilding yards which are being built at St. John, N.B.

Ontario and the Great Lakes.

The Detroit & Windsor Ferry Co. has increased its fares across the river, and is now selling 6, instead of 7, tickets for 25c. An additional 5c. is charged for automobiles.

The Northern Navigation Co. has libelled the s.s. Robert L. Fryer, owned by Henderson Freighting & Transfer Co., Fort William, on a claim for \$6,000 to cover damage sustained by the s.s. Hamonic in a collision between the two ships, Sept. 10, 1922.

The James Stewart Grain Co. has given a contract to the Thunder Bay Harbor Improvement Co. for a pile foundation for the elevator which it is building at Port Arthur. The contract price for the foundation work is reported to be approximately \$150,000.

The Port Arthur Chamber of Commerce has requested the Dominion Public Works Minister to consider the inclusion in the estimates of an appropriation to provide for the extension of the breakwater, to protect the north end elevators, etc., at Port Arthur.

The N. Bawlf Grain Co. has given a contract to Barnett-McQueen Co., Fort William, for the construction of trestle work and foundations for a grain elevator to be built on the south end water front at Port Arthur, at a reported approximate cost of \$850,000. The amount of the contract now let, on which work is to be commenced at once, is reported as about \$150,000.

The United States Lake Survey reports the mean stages of the Great Lakes in feet above mean sea level for Dec. 1922 as follows: Superior, 602.08; Michigan and Huron, 579.15; St. Clair, 574.12; Erie, 571.13; Ontario, 244.64. Compared with the average December mean stages for the past 10 years, Superior was 0.34 ft. below; Michigan and Huron, 1.02 ft. below; Erie, 0.70 ft. below; Ontario, 0.89 ft. below.

The Saskatchewan Co-operative Elevator Co. is reported to have decided to build a storage annex of 2,000,000 bush. capacity to its elevator at Fort William, which will make it the third largest at the head of the Great Lakes. It is stated that several contracts in this connection

have been placed, and that work on the whole will be well under way by the spring. The reported estimated expenditure is \$1,500,000.

During the Minister of Public Works recent visit to Toronto, he received a deputation which urged that provision be made in the forthcoming estimates for the completion of the breakwater in the harbor, so that the work already carried out will be adequately protected. It was pointed out that there is an agreement between the Dominion Government and the Toronto Harbor Commissioners for the construction of a breakwater extending for 16,000 ft. along the waterfront, and about 4,000 ft. remains to be built along the waterfront of the Canadian National Exhibition grounds. The estimated cost of building the 4,000 ft. is \$800,000.

British Columbia and Pacific Coast.

The North Vancouver City Council has decided not to order a new ferry steamship, for which it was proposed to enter into a contract with Napier & Miller, Glasgow, Scotland, for £43,000, delivered at Vancouver.

A record loading is claimed at Vancouver, when the s.s. York City recently took aboard and trimmed 8,200 long tons (2,240 lb.) of bulk wheat in 23 hours, and completed the cargo with 800 tons of sacked grain between decks.

The C.P.R. British Columbia Coast Service s.s. Princess Victoria, completed 20 years service in Pacific coast waters recently. During that time, she travelled over 1,500,000 miles, and made 5,197 trips between Vancouver, Victoria and Seattle.

J. W. Troup, Manager, British Columbia Coast Service, C.P.R., Victoria, was given a 40 ft. war canoe by Alert Bay Indians, recently, as an appreciation of the Alert Bay tribes of the important part played by the C.P.R. in the development of Canada.

Evidence of relatives of those who lost their lives in the wreck of the C.P.R. s.s. Princess Sophia, on the Vanderbilt Reef, Portland Canal, in Oct., 1918, was taken at Victoria, Jan. 19, with a view to the assessment of damages. The question of

the company's liability is still before U.S. courts.

The s.s. Alaskan, owned by Capt. J. A. Baillies, Victoria, while bound from Victoria to Barkley Sound, Jan. 4, was wrecked at Pachena Point, the crew of 8 losing their lives. She was built at Onetta, Ore., in 1886, and was screw driven by engine of 13 h.p. Her dimensions were: length 96.5 ft., breadth 19 ft., depth 9.1 ft.; tonnage, 150 gross, 102 net.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, on arrival at Prince Rupert, towards the end of December, was docked for her annual overhaul. The s.s. Prince George commenced her winter service Dec. 31, between Victoria, Seattle, Vancouver and northern ports, including Powell River, Ocean Falls, Swanson Bay, Prince Rupert, Stewart, Anyox, returning to Prince Rupert and thence to Vancouver and Victoria, on a weekly schedule. The s.s. Prince John is maintaining the Vancouver, Prince Rupert service, calling at Queen Charlotte Islands on a fortnightly schedule.

Quarantine Examinations on St. Lawrence River.—On the reopening of St. Lawrence navigation, the routine quarantine examination of passengers and ships' crews, will take place off Father Point, the medical officer boarding the ship with the pilot. Whenever quarantinable cases of sickness are found on board, the sick person and all persons who have been in contact, will be landed at Grosse Isle as heretofore, the medical officer in charge there being notified by wireless that such cases are to be landed. Ships found free from quarantinable diseases will receive their pratique at Father Point, and will thus be saved from calling at Grosse Isle.

Trans-Pacific Traffic Rates.—It is reported from Vancouver, B.C., that the trans-Pacific Conference Lines, at a meeting there, Jan. 8, unanimously adopted and signed the new trans-Pacific Conference agreement drawn along similar lines to that recently adopted by the North Atlantic Conference, under which lines running from the Atlantic coast to the far east are operating, and which provides principally for the maintenance of certain rates. This action places the far east trade on a satisfactory basis from a conference standpoint.

The Belchers Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with authorized capital stock of 2,000 shares of no nominal or par value, provided that it shall carry on business with not less than \$10,000 capital, with head office at Montreal, to own and operate ships and carry on a general transportation business on the high seas and inland waters. The incorporators are: L. Macfarlane, K.C., G. Barclay, W. B. Scott, A. Knatchbull-Hugessen and J. G. Cartwright, Montreal.

Vancouver Grain Shipments.—The amount of grain shipped from Vancouver during 1922, is reported as 11,512,698 bush., of which 7,252,700 were for the United Kingdom, and the balance for Oriental ports. The largest amount shipped in any one month was in December, 3,900,000 bush. It is stated that a larger amount could have been shipped, but for the inadequacy of the elevator facilities. The matter of increasing elevator accommodation is under consideration locally.

Grain Shipped from Fort William and Port Arthur.

The following table, prepared by the Board of Grain Commissioners, shows the quantity of each kind of grain shipped

	Wheat bush.	Oats bush.	Barley bush.	Flaxseed bush.	Rye bush.

In addition to the above, 28,897 lb. of sample mixed grain, and 16,673 tons of elevator screenings were shipped to

Canadian ports, and 270,624 lb. of sample mixed grain and 91,513 tons of elevator screenings to U.S. ports.

Canadian Pacific Railway Ocean Steamship Services.

A Liverpool report states that the company intends placing the s.s. *Montreal* in service again, after having been laid up for some time at Glasgow, Scotland. It is stated to be the intention to have her reconditioned and placed on the route between Glasgow and Montreal.

It is announced that the s.s. *Methven* will be transferred shortly to the West Indies service, and operated in conjunction with the *Mattawa* and *Montezuma*, providing a regular fortnightly service. Each of these ships has accommodation for a limited number of passengers.

Notwithstanding unsupported claims that the blue ribbon of the trans-Pacific steamship service has passed from the C.P.R. steamships to those of the U.S. Shipping Board, the fact rests that the superiority remains with the former. On the run from Victoria to Yokohama in December, the C.P.R. s.s. *Empress of Asia* left Victoria 21 hours after the U.S. Shipping Board's s.s. *President Jefferson*, and arrived at Yokohama 7½ hours ahead of her.

The first of the West Indies cruises from New York, commenced Jan. 20, with the sailing of the s.s. *Empress of Britain*; and a second cruise over the same route is scheduled for Feb. 20. The s.s. *Empress of France* sailed from New York, Jan. 22, under charter for a round the world cruise of about 120 days, the itinerary being: Havana, Panama Canal, San Francisco, Hilo, Honolulu, Japan, China, Manila, Java, Burma, India, Ceylon, Egypt, Naples, Havre, Southampton, Quebec, and rail to Montreal and New York. The s.s. *Empress of Scotland* will sail from New York, Feb. 3, under charter, for a Mediterranean cruise of about 65 days. After this winter, the company will manage its own cruises, instead of chartering any of its ships to other parties for such purposes, and arrangements are being made for one of the Pacific Ocean Empresses to sail from Vancouver, B.C., in Jan., 1924, on a cruise to New York, via the Panama Canal, calling at various ports en route. During the same month another of the Empresses will sail from New York on a Mediterranean cruise of about 10 weeks.

The Canadian Merchant Service Guild, British Columbia section's annual meeting was held at Vancouver recently, when reports were received on the work done in 1922. The officers for this year are: President, W. J. Boyce; Vice Presidents, B.C. Lakes, J. A. Macdonald; Northwest Territories, G. G. Brown; Vancouver, W. W. Best; Victoria, P. H. Brown; Yukon, J. O. Williams; Secretary, A. Goodlad; Treasurer, O. G. Kinnie. The representatives for the different classes of ships are: Ocean going, L. R. W. Beavis; local passenger, John Muir; local freight, C. E. Prince; towboats, J. L. Whyte; government, lighthouse, Public Works Department, G. Evans; fisheries boats, J. Iverson; pilot, H. Shatford; trustees, W. S. Moorehouse, K. E. Lawrey and R. Marshall.

The White Star Line Steamship Co., Ltd., has been organized at Berlin, Germany, to handle the White Star Line's business in that country, in connection with its recently inaugurated steamship service between Bremen and New York. The steamships *Canopic* and *Pittsburgh* are on that route, carrying cabin and third class passengers.

Interlake Navigation Co's Lake Steamships.

The Interlake Navigation Co., Montreal, bought the steamships *Bayersher* and *Bayusona*, from the Bay Steamship Co., London, Eng., recently, and transferred them to the Canadian register, subsequently changing their names to *Claremont* and *Roslyn*, respectively. The *Bayersher* was built at Toledo, Ohio, in 1910, and has steel hull, with hatches spaced 24 ft. centers, her dimensions being: length b.p. 220 ft., breadth moulded 40 ft., depth moulded 17 ft.; tonnage, 1,184 gross, 805 net. She is equipped with triple expansion engines with cylinders 17¼, 27½ and 43 in. diam., by 43 in. stroke; 800 h.p. at 125 r.p.m.; supplied with steam by 2 Scotch boilers, each 11 ft. diam. by 11 ft. long. She was originally named *Erwin L. Fisher*, and was owned by Argo Steamship Co., Cleveland, Ohio; she later passed to French ownership and was named *Port de Caen*, and since the conclusion of the war has been owned by Bay Steamship Co., London, Eng. The *Bayusona* was built at Toledo, Ohio, in 1902, her dimensions being: length 211.7 ft., breadth 40.1 ft., depth 13 ft.; tonnage, 1,367 gross, 795 net. She is screw driven by engine of 88 h.p. She was originally named *Usona*, and also passed to French ownership, when she was renamed *Port de St. Malo*, afterwards being bought by the Bay Steamship Co. The Bay Steamship Co. is a subsidiary of the Hudson's Bay Co., and owned about 20 steamships, all of which have been disposed of, and the company is being wound up.

Canadian Built Ships Offered for Sale by the French Government.—Towards the close of the war, the French Government ordered 20 wooden ships from the Foundation Co., which were built at Victoria, B.C., where that company had operated a wooden ship building plant during the war. These were offered for sale recently. They were operated for some time, and were laid up about two years ago, during which they have been overhauled. They are each about 2,500 tons gross, and are equipped with engines for a speed of about 10 knots an hour. It is stated that two have been sold to U.S. parties.

Compulsory Closing Date for Great Lakes Navigation.—Suggestions have been made recently that a date be fixed each year for the compulsory closing of navigation on the Great Lakes, on account of the risks involved. We are officially advised that no action has been taken by the Dominion Government, but that by next autumn consideration may be given to a proposal to close certain isolated light stations at an earlier date than in recent years, in order to reduce the risks to life and property in removing the keepers from those stations.

White Rock Tug Co., Ltd. has been incorporated under the British Columbia Companies Act, with \$50,000 authorized capital, and office at White Rock, B.C., to carry on a general towing, wrecking and salvaging business, and to own and operate ships for freight and passenger service.

France & Canada Steamship Corporation, Ltd., which prior to the war operated a number of ships between France and Canadian and U.S. ports, but which since the outbreak of war has done little, if any, business, is being wound up, with G. W. Scott, Montreal, as provisional liquidator.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Taylor & Arnold Engineering Co., Ltd., Montreal, has reorganized by admitting to the company some of its staff who have been with it for a considerable period, the organization being now as follows: Thomas Arnold, formerly President, now Chairman of the Board; A. M. Tirbutt, formerly Vice President, now President; J. W. Buckland, formerly Works Manager, now Vice President. James Cooke, Secretary-Treasurer, and Roy George, Western Manager, retain those positions, and have been elected directors.

Franklin Railway Supply Co.—C. J. Burkholder, Supervisor of Service, Franklin Railway Supply Co., New York, died, Dec. 22, 1922, at Kansas City, Mo., following an operation. He was born May 9, 1870, began railway work at Tyrone, Pa., and subsequently was a locomotive fireman and then a locomotive man on the Union Pacific, then going to the Kansas City Southern as a locomotive man, later becoming travelling engineer, trainmaster, general road foreman of locomotive engines and division superintendent. He then became a mechanical representative of the Economy Devices Corporation, which was afterwards merged with the Franklin Railway Supply Co. During the war, he returned to railway work, leaving the Franklin Co., of which he was then Western Sales Manager, on Nov. 1, 1918, to become Master Mechanic of the Kansas City Southern. On Jan. 1, 1921, he returned to the Franklin Co. as special engineer assigned to work in connection with the locomotive booster. On Oct. 1, 1921, he was made supervisor of service, which position he held at the time of his death.

White Patent Oil Burning Co., Newcastle-upon-Tyne, England, has appointed Charles Bishop, consulting engineer, etc., 17 St. John Street, Montreal, as its Canadian and United States representative.

QUEBEC CENTRAL RAILWAY COMPANY

The Quebec Central Railway Company will apply to the Parliament of Canada, at its next session, for an Act:—

(1) Extending the time for completion of the line of railway which it was authorized to construct by Statute of the Province of Quebec, 1906, Chapter 58, namely, a line of railway to be known as the Quebec Central Railway Chaudière Extension, by diverting and re-building that portion of the present line from Beauce Junction to Beauceville, and building a line of road from Beauceville to the river Famine, thence following the river Famine to its watershed near the Village of Langeville, and thence following the watershed of the river St. John through the southern portion of the Counties of Beauce, Dorchester, Bellechasse, Montmagny, L'Islet, Kamouraska and Temiscouata, to or near a point on the Temiscouata Railway at or near Cabano Station, with power to connect with the line of railway of the said Temiscouata Railway Company, in all a distance of about one hundred and seventy-five miles;

(2) Extending the time for commencement and completion of the line of railway which it was authorized to construct by Statute of the said Province, 1912, Chapter 81, namely, from a point on the main line of the Quebec Central Railway in, at or near Leeds Station in the Township of Thetford or the Township of Broughton, through Thetford, Broughton and Leeds and the Counties of Lotbinière and Lévis, such line connecting with the branch of the Quebec Central Railway extending from Scott's Junction to the Quebec Bridge, at a point at or near St. Lambert, in the County of Lévis, a distance of about thirty-five miles;

(3) Increasing the bonding powers of the said company.

Dated at Montreal, this 18th day of December, 1922.

H. C. OSWALD,
Secretary.

Andrew T. Thompson, K.C.,
Ottawa Agent.

MANITOBA & NORTH WESTERN RAILWAY COMPANY OF CANADA

The Manitoba & North Western Railway Company of Canada will apply to the Parliament of Canada, at its next session, for an Act extending the time for commencement and completion of the lines of railway which it was authorized to construct by Statute of Canada, 1921, chapter 65, namely:—

(a) From a point at or near Tuffnell on its line of railway in or about Township thirty, Range ten or eleven, West of the Second Meridian, thence north-westerly, northerly, and westerly to a crossing of the North Saskatchewan River in or about Townships forty-nine, fifty or fifty-one, Range fourteen or fifteen, West of the Second Meridian, thence to the City of Prince Albert;

(b) From a point at or near Theodore in or about Township twenty-eight, Range six or seven, West of the Second Meridian, thence in a generally westerly direction to a point between Govan and Lanigan on the Pheasant Hills Branch of the Canadian Pacific Railway.

Dated at Montreal, this 18th day of December, 1922.

H. C. OSWALD, Secretary.

Andrew T. Thompson, K.C.,
Ottawa Agent.

OTTAWA, NORTHERN & WESTERN RAILWAY COMPANY

The Ottawa, Northern & Western Railway Company will apply to the Parliament of Canada, at its next session, for an Act extending the time for commencement and completion of the line of railway which it was authorized to construct by Statute of Canada, 1919, chapter 91, from the present terminus of its so-called Waltham Branch at Waltham, in the Province of Quebec, thence through the Townships of Waltham, Chichester and Sheen, thence across the Ottawa River to a junction with the Canadian Pacific Railway at or near Chalk River, in the Province of Ontario.

Dated at Montreal, this 18th day of December, 1922.

H. C. OSWALD, Secretary.

Andrew T. Thompson, K.C.,
Ottawa Agent.

Positions Wanted

RESPONSIBLE POSITION wanted. Traffic or Operating Department of marine transportation company, by young married man. Experienced in inland steamships. Holds diploma for Interstate commerce and railway traffic course. Best references. Box A1624, Canadian Railway and Marine World.

Sealed Tenders addressed to the undersigned, and endorsed "Tender for Esquimalt Dry Dock Machinery," will be received at this office until 12 o'clock noon, Thursday, February 15, 1923, for the construction and installation of pumping and other machinery for the Dry Dock, at Esquimalt, B.C.

Plans and forms of contract can be seen and specification and forms of tender obtained at this Department, at the offices of the District Engineer, Post Office Building, Victoria, B.C.; Post Office Building, New Westminster, B.C.; Customs Building, Main Street, Winnipeg, Man.; Equity Building, Toronto, Ont.; and Shaughnessy Building, Montreal, Que.

Tenders will not be considered unless made on printed forms supplied by the Department and in accordance with conditions contained therein.

Each tender must be accompanied by an accepted cheque on a chartered bank, payable to the order of the Minister of Public Works, equal to 5 p.c. of the amount of the tender. War Loan Bonds of the Dominion will also be accepted as security, or war bonds and cheques if required to make up an odd amount.

Note.—Blue prints can be obtained at this Department by depositing an accepted bank cheque for the sum of \$10, payable to the order of the Minister of Public Works, which will be returned if the intending bidder submit a regular bid.

By order,
R. C. DESROCHERS,
Secretary.

Department of Public Works,
Ottawa, November 25, 1922.

HIPOWER

for Continuous Security

HIPOWER Nut Locks protect rail joints and parts immediately after the initial wrenching and subsequently after passage of rolling load. They impart tension to the bolts, protect bolt threads and cushion bolt heads under the blows of rolling impacts. Subsequently they compensate for frictional wear of bolted parts. HIPOWER Nut Locks assure tight joints, the kind which more nearly approach the ideal condition of a continuous rail. HIPOWER Nut Locks afford the highest standard of track maintenance at minimum cost of labor and material.

CLEAN BRUSHES

KILL
LAST AD!

FOREIGN material, such as grease, smut and dirt, must be kept off the commutator.

This is done by brushes that are just abrasive enough to scour it and not rough enough to score it.

COLUMBIA PYRAMID BRUSHES will give you this service.

Our brush Engineer will gladly advise you as to the correct brushes to use to get maximum service.

CARTER'S

WZ-CZMC

A "Carter" Painted Surface is Rust Proof!

Steam pipes, metal and metal work painted with Carter's Genuine Dry Red Lead defy rust. They are proof against this great destroyer and the protection costs but very little.

When mixed with pure Linseed Oil Carter's will cover more space than other Red Lead Paints. It is always uniform in film, easy to apply and extremely economical.

Write for prices on this and the other Carter lines—Genuine Orange Lead, Genuine Dry White Lead and Litharge.

The Value of the Model 2A Signal

in reducing transportation costs has been well demonstrated on the several widely separated Railroads shown opposite.

The Signal Engineers of these Railroads prefer the Model 2A Signal because they are convinced that the world market affords no better signal.

The Model 2A Signal was designed by Signal Engineers of wide experience for Signal Engineers who demand the utmost reliability in signal service.

It is simple in design.

It is rugged in construction.

All parts are accessible.

Furnished in either Top-of-Mast or Base-of-Mast, Alternating or Direct-Current.

Consider the Model 2A Signal in connection with reducing your transportation costs. Our Engineers are at your command.

LACHINE

QUEBEC

For Railroad, Hotel and Steamship Upholstery CHOOSE "CHASE" MATERIALS

The trade mark "Chase" stands for seventy-five years' leadership in manufacturing.

CHASE GOAT BRAND CAR PLUSH: This product, made from the fleece of the Angora Goat, has been the choice of railroads and steamship lines for over thirty years. It is DURABLE—FAST IN COLOR—RICH APPEARING—MOST SANITARY.

Recently there was exhibited a car seat upholstered with our Mohair Plush, and the seat had already been in service twenty-five years.

CHASE LEATHERWOVE: The modern, leather-like upholstery material for use where flexible toughness is the one thought.

For cleaning Plush and other upholstery fabrics choose CHASE PLUSH RENOVATOR—That remarkable liquid cleanser which does not start the dyes or injure the fabric. GUARANTEED effective but NOT HARMFUL. Write for samples.

L. C. CHASE & CO., BOSTON, New York, Detroit, Chicago, San Francisco

The faster handling of materials with O.S. Dependable Locomotive Cranes, Clam Shell and Orange Peel Buckets has proved a great factor in increased production

The simple design and convenient arrangement of the O.S. has made it the favorite in SAVING TIME—REDUCING EXPENSES. Our cranes, buckets and coal crushers are used everywhere.

Write us for catalog No 20.

STERLING HACK SAWS

The most expensive tool used in a machine-shop is a poor Hack Saw Blade. Some buyers purchase them where they are cheapest, but unconsciously they are paying the highest price. The Hack Saw illustrated on this page represents the "STERLING" Blade, which is the last word in a Hack Saw Blade, the makers being back of their entire product. The material and workmanship that go into the manufacture of this blade are of the very highest quality.

RESULT—A blade that has no superior.

Manufactured by

Diamond Saw & Stamping Works Buffalo, N. Y., U.S. A.

YOU can effect a SAVING in Lubrication costs
by using TULC for it will give results not to
be obtained by the use of any other Lubricant.

**T
U
L
C**

Will not splash over commutators.
Will not cause short circuit or burnt armatures.
Will not leak or rot fields.
Will so save in brass and babbitt to pay for itself.
Will only feed sufficient to lubricate properly.
Will save dripping losses.
Will make axles and journals last longer.
Will cut down a lot of pull-ins.
Will eliminate hot boxes and cut axles.
Will be sent for trial on request.

MONCRIEFF'S

Moncrieff's "Unific" is not a cheap glass. But because it outlasts many ordinary glasses, the "Unific" is economical. British made.

JOHN MONCRIEFF LIMITED, PERTH, SCOTLAND.

"UNIFIC" WATER GAUGE

GLASSES

The "Unific" does not readily corrode. It resists extreme changes of temperature and withstands the highest working steam pressure.

No. 2 Anchor Windlass

This windlass handles anchor chains from $\frac{7}{8}$ " to $1\frac{1}{2}$ ". It has triple steel gear reduction, and is fitted with gypsies on the intermediate shaft to secure high speed for warping. Equipped with reversing throttle and heavy brake bands on both wild cats. Same type made for any size of anchor chain.

WHAT SHIP OPER- ATORS BUY

The 116 articles noted in the adjoining columns are, for the most part, mere indexes of groups of things the Steamship Companies have to buy.

And, almost always, they must buy in a hurry, using the best judgment of the moment, based on prior experience and trust to luck, or an overruling providence, that they have not made many mistakes.

The advertisements they read in

Canadian Railway and Marine World

help them in their selection. But, you men who use these columns, can make them vastly more helpful, by telling the story of your goods in detail, frankly, fairly, honestly.

Ship operators are now planning for supplies and equipment for the coming season's operation; so now is the time to give them your sales message, when they are in a buying mood.

G-E Turbine Generator
for headlight*

In one southern clay pit, sets are mounted on steam shovel roofs, furnishing current for G-E floodlights which light the workings.

Over Three Years in Operation Upkeep Only 37 Cents a Month

On one American railroad more than 250 G-E Headlight Turbine Generator Sets have been in operation for over three years. A carefully kept maintenance record shows but 37 cents a month per machine for spare parts. This exceedingly low upkeep, coupled with the dependability of this sturdy lighting set, accounts for its increasing popularity with engineers and executives.

The severe tests of four years' service and the manufacturing experience the General Electric Company has had with turbines great and small, combine to make G-E Headlight sets reliable. They are strong, highly efficient and can be closely regulated.

Where Journal Lubrication is most Difficult

It is a significant fact that Canadian Railway men showed an instant interest in the Stafford Roller Bearing for car trucks.

Knowing the serious effects of frozen packing and oil, the immense increase in train resistance caused by low temperatures, and the difficulty of doing anything to relieve these conditions, the Stafford Roller Bearing made an instant appeal. Several Canadian railways have

equipped cars with Stafford Roller Bearings and many others have placed their orders after having seen the service record these bearings have already made.

We welcome the severity of the tests these Stafford Bearings will undergo. It is in the places where journal lubrication is most difficult that we are most anxious to put Stafford Journal Roller Bearings in service.

Is It The Vanadium *Alone* ?

KILL
LAST AD.

OCCASIONALLY some one asks whether the higher physical properties of Carbon-Vanadium Steel are due entirely to the use of Vanadium. There seems to be some question as to whether there are not other differences in chemical composition which may account in part for the greater strength and toughness of Carbon-Vanadium Steel.*

The greater strength and toughness of Carbon - Vanadium Steel are due entirely to the presence of Vanadium. This is proven conclusively, by actual tests, of similar forgings of normalized plain carbon steel and normalized Carbon-Vanadium Steel, otherwise alike in chemical composition:

	CHEMICAL ANALYSIS					PHYSICAL TEST			
	C.	Mn.	P.	S.	Van.	E.L.	T.S.	Elong.	R.A.
Plain Carbon	.48	.69	.016	.032		46,960	90,170	21.5	37.5
Carbon Van.	.48	.68	.019	.024	.15	66,500	100,000	22.5	41.0
Plain Carbon	.50	.62	.014	.036		49,220	89,900	23.0	36.6
Carbon Van.	.50	.57	.027	.023	.16	63,940	101,900	24.0	43.1

Elastic limit and tensile strength are given in pounds per square inch. Elongation and reduction of area in per cent.

Carbon-Vanadium is as simple and as easy to handle as a plain carbon steel, in fact, it is less likely to be damaged by overheating. It does not require quenching or tempering to bring out its high physical properties. Its strength and toughness are due entirely to the use of Vanadium, the most powerful alloying element.

Write for data on Carbon - Vanadium Steel Forgings for reciprocating and revolving parts of locomotives.

*(See Railway Mechanical Engineer, December, Page 676, letter from "Designer," and table showing the chemical compositions and comparative physical properties of fourteen normalized plain carbon steel forgings and twelve normalized Carbon-Vanadium Steel Forgings.)

Write us for a copy of Bulletin LF-1, descriptive of Carbon-Vanadium, the non-quenched forging steel a railroad shop can handle.

A Complete Service—plus

You profit in two ways by Dominion Service:

First —In buying both oxygen and dissolved acetylene at the lowest prices obtainable;

Second—In securing a complete supply from one source,

- With positive assurance of highest quality,
- In modern improved cylinders, fitted with leak-proof valves,
- And your order is given the prompt, careful attention which it deserves.

Whether you buy oxygen and dissolved acetylene only once in a while, or in large quantities on contract, our plan of doing business promotes friendly relations which create a complete, smooth and satisfactory service.

We shall appreciate the opportunity of talking to you about Dominion Service.

Reduce Store- keeping Costs

At central or local storehouses where oils are drawn almost constantly, speed is an important factor.

Years ago Bowser engineers recognized this and designed the Bowser quick-return pump. The double cog rack assures easy operation whether light or heavy oils are handled. Quick return gears carry the return stroke—one turn being equal to five on the discharge. This cuts the pumping time in half.

A meter built into the pump head assures an accurate check on stock records at all times. The sturdy construction assures dependable service for years.

Write today for Booklet C-14 and let Bowser engineers give you facts and figures from other railroads who have reduced store-keeping costs with Bowser Equipment.

Pratt & Whitney Tap Cuts Full Threaded Hole

So-Called "Easy-Cutting" Tap Cuts Weak, Shallow Thread.

Which is best for the boiler sheet

An easily tapped hole cut to less than full depth or a full threaded hole that insures maximum strength

WHILE ease of cutting has long been a strong talking point in selling some makes of staybolt taps, just a little thought on the subject will show that ease of cutting is at best only an apparent advantage which actually has serious mechanical drawbacks.

One of these easy-cutting staybolt taps is shown in section above. It is claimed that you cannot tell where the taper begins. This statement implies one of two things. Either that you are ignorant of the proper use of thread micrometers or that the tap in question actually had no taper thread. In other words, this tap is tapered only on the outside diameter but is straight in the angle and root diameters.

Such a tap having a straight thread, at the point where the thread begins, the threads are mere tool marks and the lands are very wide. When driven at high air drill speeds, these first threads fail to start cutting, but keep on reaming until the hole is enlarged

beyond the root diameter of a full thread.

The cross section in the circle shows what happens. Such threads cut slightly easier since less work is performed, but the holding qualities of the boiler sheet are proportionately reduced.

In designing P. & W. Staybolt Taps our aim has always been to produce a tap that will cut a full thread, thus ensuring maximum strength in the boiler sheet. P. & W. Staybolt Taps for that reason have both straight and taper threads, the taper section being tapered both on the outside diameter and in the angle and root diameters. The tendency is to stop reaming and start cutting the thread, because threads are relatively deeper and lands are narrower between threads, and as a result a full and smooth thread is produced. The sectional view above shows why this thread is bound to hold stronger than the other.

It's not very hard to figure out which is better for the boiler

Grand Trunk Railway Co. Amalgamated with Canadian National Ry. Co., and Co-ordinated.

Grand Trunk Stocks Vested in Dominion Government.

The following was approved by the Governor General on Jan. 19 and passed as order in council 114:—"The committee of the Privy Council have had before them a report, dated Jan. 18, 1923, from the acting Minister of Railways and Canals, stating that pursuant to the act respecting the acquisition by His Majesty of the Grand Trunk Railway System, Statutes of Canada, 1919 chap. 17 and the agreement therein authorized, which is set out in full and confirmed, with minor amendments, by the Statutes for 1920, chap. 20, the arbitration board constituted for the purpose of determining the value, if any, to the holders thereof of the following capital stocks of the G. T. R. Co. of Canada, viz: namely:—1st preference stock, 5%, £3,420,000; 2nd preference stock, 5%, £2,530,000; 3rd preference stock, 4%, £7,168,055; ordinary or common stock, £23,955,437; total, £37,073,492; hereinafter together referred to as the preference and common stock, on Sept. 7, 1921, made an award wherein the majority of the Arbitrators, Sir Walter Cassels and Sir Thomas White, decided that the stock in question had no value. Hon. W. H. Taft, the arbitrator appointed by the company, dissented. That subsequently an appeal was taken by special leave to the Judicial Committee of the Privy Council, based largely upon the question whether the arbitrators in excluding evidence as to the physical assets of the company were wrong in law. The arbitrators had arrived at the conclusion above mentioned upon the principle that the value of the preferred and common stock was to be ascertained on the basis of the net earning capacity of the company, both actual and potential, which net earning capacity, had any been found, would then be capitalized. The Judicial Committee, after hearing and considering the arguments, dismissed the appeal, stating in their reasons for judgment, which were delivered on Nov. 10, 1922, that any attempt to estimate future profits by reference to selling value or replacement cost was doomed to failure, and accordingly that the arbitrators, to whom the agreement gave a wide discretion as to the admission of evidence, were justified in refusing to embark upon such an enquiry.

"That there being no further or other appeal available to the company, the arbitrators award stands, and accordingly His Majesty the King, in the right of the Dominion of Canada, is now entitled to the whole of the preference and common stock and to the immediate transfer thereof to the Government, or its nominees, without the issue to the holders thereof of any of the new guaranteed stock. The agreement contemplated an issue to the holders of the preference and common stock of what was therein described as the new guaranteed stock, to an amount equal to the value fixed by the award. Since, how-

ever, the arbitrators have found the preference and common stocks to be without value, the holders are not entitled to anything.

"That clause 13 of the arbitration agreement in part provides that 'should any shares or any part of the preference and common stock not be transferred to the Government, the Governor in council may declare such shares to be the property of the Minister of Finance in trust for His Majesty, and upon the making of such declarations the shares or part

Gerard Ruel, K.C.,
Director, Vice President and General Counsel,
Canadian National Railways.

thereof not so transferred shall immediately become the property of His Majesty, and proper entries thereof in the stock registers and other books in that behalf shall be made.'

"That no part of the said shares, or of the preference and common stock, has been transferred to His Majesty, nor to the Government, nor to any person acting in such behalf, or in trust for His Majesty or the Government, and it is accordingly expedient that a declaration shall be made under the provisions of clause 13 of the agreement, vesting the said shares and stocks in His Majesty. The Minister therefore recommends that it be declared by your Excellency in council that the whole of the preference and common stock of the Grand Trunk Ry. Co. of Canada, as described in the arbitration agreement, and as referred to in the award and in the judgment of the Judicial Committee of the Privy Council, is the property of the Minister of Finance, in trust for His Majesty,

and directing that proper entries thereof in the stock registers and other books of the company in that behalf shall forthwith be made. The Committee concur in the foregoing recommendation and submit the same for approval."

Grand Trunk Railway Co. Amalgamated with Canadian National Railway Co.

The following was approved by the Governor General on Jan. 10 and passed as order in council 181:—"The committee of the Privy Council have had before them a report, dated Jan. 30, 1923, from the acting Minister of Railways and Canals, representing that all the voting capital stock of the Grand Trunk Ry. Co. of Canada, amounting to £37,073,492, being now by virtue of the order in council of Jan. 19, the property of the Minister of Finance, in trust for His Majesty in the right of the Dominion of Canada, it is expedient that the said company should be amalgamated with the Canadian National Ry. Co. so as to form one company under the name of the Canadian National Railway Company. Under sec. 21 of chap. 13 of the Statutes of 1919, which is the act under which the Canadian National Ry. Co. is incorporated agreements for the purpose, among others, of amalgamation may, with the approval of the Governor in council, on the recommendation of the Minister of Railways and Canals, be entered into between the Canadian National Ry. Co., and any other railway company approved by the Governor in council. Under sec. 151 of the Railway Act, 1919, every such agreement for amalgamation should first be approved by two-thirds of the votes of the shareholders of each company party thereto. The Minister states that the amalgamation agreement submitted herewith was duly approved by unanimous vote at a meeting of shareholders of the Grand Trunk Ry. Co. of Canada at which all the voting capital stock of the Company was represented by proxy given by the Minister of Finance. Under sec. 9 of the said act, whenever under the provisions of The Railway Act, or any other statute or law, the approval, sanction or confirmation by shareholders is required, such approval, sanction or confirmation may, in respect of the Canadian National Ry. Co., be given by the Governor in council. The directors of the two companies, parties to the said agreement, have also duly approved of the form and terms of the agreement, and authorized its execution by the proper officers of the two companies under their respective corporate seals.

"The Minister, on the advice of the Assistant Deputy Minister of Railways and Canals, accordingly recommends:—That the Grand Trunk Ry. Co. of Canada be approved as a railway company with which the Canadian National Ry. Co. may enter into an agreement for amalgamation, pursuant to sec. 21 of the act. That pursuant also to sec. 21 of the act, the amalgamation agreement herewith submitted be approved as an

agreement providing for the amalgamation of the Canadian National Ry. Co., and the Grand Trunk Railway Co. of Canada. That pursuant to sec. 9 of the act, the agreement be also approved in substitution for the approval of the shareholders of the Canadian National Ry. Co., and that the directors of the Canadian National Ry. Co. be authorized to take all necessary steps to complete the amalgamation and to carry the same into effect. That pursuant to sec. 3 of the act, it be declared that the Canadian National Ry. Co. as constituted by such amalgamation, shall have a capital stock in amount sufficient to accomplish the purposes of the said agreement, that is, a capital stock of \$180,424,327.70, and that one share may be issued for the whole of such amount, such share, however, to be subsequently divisible into any number of shares of lesser denominations of equal or unequal amounts, as may be requested from time to time by the Minister of Finance, with the approval of the Governor in council. That the Minister of Finance shall be registered on the books of the amalgamated company as the holder, in trust for His Majesty, of the share of stock in the amalgamated company issued to him under the provision of clause 6 of the agreement, and upon such registration being made may surrender to the amalgamated company, pursuant to the provisions of clause 6, the shares in the capital stock of the Grand Trunk Ry. Co. of Canada in such clause referred to. The committee concur in the foregoing recommendations and submit the same for your Excellency's approval.

In accordance with the foregoing the amalgamation became effective on Jan. 31.

Montreal Selected as Headquarters.

Following Sir Henry Thornton's return to Ottawa, on Jan. 28, from his inspection trip to the Pacific Coast, the Canadian National Ry. directors met in Ottawa Jan. 30 and 31 and one of the directors, R. P. Gough, on returning to Toronto on Feb. 1, announced that Montreal had been selected as headquarters for the Canadian National Ry. Co., and that the system would be divided into three parts for operating purposes and with local headquarters at Moncton, N. B., Toronto and Winnipeg.

The following was approved by the Governor General on Feb. 5 and passed as order in council 194:—

"The committee of the Privy Council have had before them a report, dated Feb. 2, 1923, from the acting Minister of Railways and Canals, representing that, under sec. 4 of chapter 13 of the Statutes of 1919, which is the act under which the Canadian National Ry. Co., is incorporated, it is provided that the head office of the company shall be at such places in Canada as the Governor in council may from time to time determine. The Minister, accordingly, on the advice of the President, recommends that the head office of the Canadian National Ry. Co. be at the City of Montreal. The committee concur in the foregoing recommendation and submit the same for approval."

Acting Minister of Railways Graham made the first official announcement in the House of Commons on Feb. 5, when he said: "Montreal has been selected as headquarters of the Canadian National system. Under the act of 1919 the government has the right to name the headquarters. That duty is reserved to the government; all else comes within the purview of the board, such, for example, as divisions of districts and all that

sort of thing. The board was asked to advise the Government in regard to the question of headquarters, but that advice need not necessarily have been taken. I am not trying to crawl under the coat of the board at all. Personally, it would have been a great pleasure for me, as an Ontario man, to see the head-

S. J. Hungerford,

Operation, Canadian National Railways.

W. D. Robb,
Vice President in charge of Insurance, Lands,
Express, Telegraphs, Colonization, Develop-
ment and General Matters, Canadian
National Railways.

quarters established in Ontario. But I have always advised that the headquarters should be in Montreal, and this from purely business reasons. What the people of Ontario, and the people

of all Canada besides, need is efficient transportation at reasonable rates, and the fact that the expert who has been engaged to advise on such matters recommended Montreal as headquarters is, to my mind, evidence that that city should have been chosen. More than that, and I am not speaking in any way derogatorily of the C. P. R., when you have to compete in business with another you want to be as near your competitor as you possibly can. The C. P. R. headquarters are in Montreal, and there, I think, is where the Canadian National Ry. system should have its headquarters. Some of my friends say that the Canadian National headquarters have been taken from Toronto. Toronto never had the Canadian National headquarters any more than Montreal had. There were certain railways which were christened the 'Canadian National' by order in council, but there was no Canadian National Co., until Oct. 4, 1922. Toronto was headquarters of the Canadian Northern, and not the Canadian National; and Montreal was the headquarters of the Grand Trunk, and not of the Canadian National Rys. I fully concur with the Chairman of the board, that the headquarters of the Canadian National system ought to be in the same place as the C. P. R. headquarters. Further than that, Montreal, during the summer, is the great distributing center, inward and outward; and where trade originates oceanward, either in or out, is where the Canadian National headquarters should be, if that system is to get its share of that traffic. Many reasons perhaps could be adduced why some other place should have been selected as the headquarters of the system, but from purely a business standpoint I believe Montreal is the right place."

Sir Henry Thornton, in addressing the Canadian Railway Club at Toronto on Feb. 12, said:—"Certain essential problems have been determined. The determination of them has been contentious and there have been some disappointments. We have determined the location of the general headquarters and the headquarters of the various divisions. Irrespective of what differences of opinion may exist, I want to say to you quite earnestly and quite frankly that the decisions which were reached were only arrived at after long and anxious consideration. They were reached without the slightest outside influence or interference from anyone excepting where certain cities quite properly put forward the advantages of their respective locations. But there was no influence of a nefarious character from anyone and I hold myself entirely responsible for the choice that was made of headquarters. I have no desire of shirking the responsibility for that decision. Anyone who doesn't like it will have to blame me and I will accept the blame. I should have liked very much if someone else would have decided this vexed question for me. I did what I thought was best and I ask you to come along and help me and I venture to say that in the last analysis you will not be disappointed."

Division of System into Regions.

For administration purposes, the Canadian National Rys. system, with which the Grand Trunk Ry. has been incorporated, has been divided into three regions as follows:—

Atlantic Region.—All lines in mari-

time provinces, also the portion of the Intercolonial Ry., from the New Brunswick-Quebec boundary to Riviere du Loup, Que., including Riviere du Loup terminal, and the portion of the National Transcontinental Ry., from the New Brunswick-Quebec boundary to Monk, Que., but not including Monk terminal. Headquarters, Moncton, N.B. This includes all the Intercolonial Ry., except the portion between Riviere du Loup and Montreal, also the National Transcontinental Ry. from Moncton to Monk, the Prince Edward Island Ry. and various lines in the maritime provinces which have been acquired from time to time and added to the Canadian Government Rys.

Central Region.—All lines from Riviere du Loup and Monk, Que., on the east to Current Jct., on the Canadian Northern Ry., 2.1 miles east of Port Arthur, and to Superior Jct. on the National Transcontinental Ry., also the following G. T. R. line in the United States:—from the Quebec-Vermont boundary to Portland, Maine, and the lines west of the Detroit and St. Clair rivers. Headquarters, Toronto. This is the most important part of the system, from the point of view of density of traffic and the control of the lines extending into the United States. It is only exceeded in mileage by the Western Region. It embraces the densely populated sections of Quebec and Ontario which contains the larger part of Canada's population and industry.

Western Region.—All lines from Current Jct., and Superior Jct. Ont., to the Pacific coast, including Vancouver Island, and the Duluth, Winnipeg & Pacific Ry. Headquarters, Winnipeg. This region has a larger mileage than either of the others but on some parts the traffic is exceedingly sparse. On it there originates the grain crop, which constitutes the greatest single traffic with which the system is called on to deal. A great agricultural and mineral development will take place in that region.

The Central Vermont Ry., comprising all line and facilities south of Ithaca, Que., will, at least for the present, continue to be operated as a separate entity. Headquarters, St. Albans, Vt.

Each region will be presided over by a general manager, and a traffic manager, assisted by general superintendents, engineers, general freight and passenger agents, etc., and, with due regard for economy, each district will be made self-contained. The General Manager will be charged with the responsibility of maintaining the property and moving the business and will command the distribution of cars, supply of power, construction work, etc. The Traffic Manager will have charge of all matters relating to passenger fares, freight rates freight claims, and, generally speaking, all matters which fall within the functions of the Traffic Department. Each one of these officers will have the widest possible powers consistent with efficient and co-operative management. All details in their respective departments and territories will be left to them; consequently, not only will their functions be a great responsibility, but the location of their headquarters is a matter of more than ordinary moment to the community.

It is the intention that the executive officers located at general head offices will deal largely, if not entirely, with matters of policy and general administration. Their functions will be to supervise the operation of the property, co-ordinate the work of the different

districts and departments; to create in the organization that spirit of teamwork which is so essential to success, and, what is equally important, to develop, as necessity may require, projects to meet the constantly increasing demands upon the transportation machinery of

J. E. Dalrymple,
Vice President of Traffic, Canadian National Railways.

R. C. Vaughan,
Director of Purchases and Stores, Canadian National Railways.

the Dominion. Lastly, but by no means least, in their several capacities the executive officers will have to devote much time to assisting in the commercial, agricultural and mineral development of

the country.

The mileages of the three regions are as follows, the abbreviation C.N.R. being for Canadian National Rys:—

	Miles
Atlantic Region—	
Maritime District, C.N.R., east of Riviere du Loup	2,668.79
Rimouski Subdivision, Levis Division, Quebec District, C.N.R.	83.40
Total Atlantic Region.....	2,752.19
Central Region—	
Remainder of Quebec District, C.N.R.	2,275.70
Ontario District, C.N.R., less from Current Jct. to Port Arthur.....	1,798.50
Part of Buckle Subdivision, Fort William Division, Manitoba District, from Armstrong to Superior Jct., Ont.	132.70
G.T.R. Eastern Lines.....	1,797.42
G.T.R. Ontario Lines.....	1,858.53
Grand Trunk Western Ry.....	946.50
Total steam railways.....	8,809.35
Electric railways.....	181.10
	8,940.45
Western Region—	
Portion of Ontario District, C.N.R., from Current Jct. to Port Arthur.....	2.10
Duluth, Winnipeg and Pacific Ry	168.00
Manitoba District, C.N.R., less from Armstrong to Superior Jct.....	2,851.40
Saskatchewan District, C.N.R.....	3,454.00
Alberta District, C.N.R.....	2,178.10
British Columbia, C.N.R.....	1,623.10
Total, Western Region.....	10,276.70
Grand total, all lines.....	21,969.34

Moncton Protests.—The Moncton, N. B. Board of Trade sent the following telegram on Feb. 5 to members of Parliament from the maritime provinces and to other maritime provinces boards of trade:—"Press reports state Eastern Division Canadian National Rys. will commence at Riviere du Loup. This is not only a retroactive movement, but increases staff of Central Division at the expense of the maritimes. We protest emphatically and demand that Eastern Division extend east from Montreal and Cochrane. We rely upon immediate protest from every maritime member of parliament and boards of trade, and respectfully ask vigorous co-operation from you."

R. W. Grimmer, Conservative, M. P. for Charlotte, N. B., replied:—"Members of Government refuse interview. Say matter wholly in hands of directors. Advise reference Thornton."

T. W. Caldwell, Progressive M. P., for Carleton, N. B., replied:—"If Sir Henry Thornton is big enough to manage the Canadian Government Railways he will not tolerate such interference; and if he is not big enough to successfully handle them, such interference will not add to his efficiency; and if through such interference the Government roads are handicapped, Sir Henry and the directors will bear the blame. Therefore, I say 'Hands off,' and give the directors a chance to demonstrate without political interference what can be done to put the railways on a paying basis."

Sydney, N. S. Board of Trade replied in part:—"Our members fully sympathize in your endeavors to secure all you can for the maritime provinces, but they cannot understand why you should demand that control of the Eastern Division should be extended, not only from Riviere du Loup to Montreal, which would seem to be a reasonable proposition, but beyond Montreal into Ontario to Brockville and Cochrane. Our members are inclined to question the propriety of introducing politics into this matter. Sir Henry Thornton has been guaranteed against any such interference with his railway policy."

Halifax, N. S. Board of Trade replied:—"We would like to see the eastern division extended to the limits you mention, but are afraid you will not only have the Quebec but also Ontario people against you, as the section you ask for

practically extends to Toronto. You must remember Quebec has also urged that its province should be a division in itself, and Sir Henry Thornton has intimated that he would like another Quebec man on his board, so that our feeling is that if we ask too much we will not get the territory between Riviere du Loup and Levis."

Some of the boards of trade in the smaller towns supported Moncton's demand but the majority of the boards and of the members of parliament are evidently not anxious to interfere.

Sir Henry Thornton, in addressing the Ottawa Board of Trade, on Feb. 15, said:—"There has been some apprehension on the part of the Province of Quebec about the effect of the districting of the railway for operating purposes. It would be a great misfortune and a great pity if any large section of the Dominion felt aggrieved and disappointed about anything done relating to our national railway system. We want the good will of all the people. We are too young a baby to indulge in ill-will. I appeal to the people to give the organization and the arrangements made an honest trial, to see whether we have been correct in our conclusions. We must get away with something. We have to start off with our machine, and I want the support of the people wherever we can find it. The reasons which led to the regions decided on are largely technical. One of the great arteries of commerce in Canada is the railway which runs from Montreal through Toronto, and Detroit to Chicago. It constitutes the great link which connects eastern Canada with Chicago, the gateway to the west of the United States. It represents by far the densest traffic operation of our railway. Likewise it is the most profitable part of our railway. It seemed to me it was not in the interests of the system that there should be any division of responsibility in the handling of traffic between Montreal and Chicago. For that reason Toronto was selected as the district headquarters, and for that reason the dividing line between the Atlantic and the Central Regions was placed in the vicinity of Quebec. It is not the intention to affect in any way the interests of Montreal. So far as the head office and shops are concerned, if anything it will be found that the official staff at the general headquarters will exceed those there today. I propose, with the other executive officials to go to Montreal to live and it is not to be supposed that I could live in comfort in a city which is the headquarters of the Canadian National if I felt that the interest of that city and province had suffered. It is not the intention to disturb the present position in regard to the shops at Montreal."

Executive Appointments.

Sir Henry Thornton, President, on Feb. 20, announced the appointments of officials of the Canadian National Ry. Co. as amalgamated, as follows:—

S. J. HUNGERFORD, heretofore Vice President and General Manager, Canadian National Rys., Toronto, appointed Vice President in charge of Maintenance and Operation, reporting to the President. Office, Montreal.

W. D. ROBB, heretofore Vice President and General Manager, G.T.R., Montreal, appointed Vice President in charge of Insurance, Lands, Express, Telegraphs, Colonization, Development and General Matters, reporting to the President. Office, Montreal.

On Feb. 27 Sir Henry Thornton announced that J. E. DALRYMPLE, heretofore Vice President, Traffic, G.T.R., had been appointed Vice President in charge of traffic, reporting to the President.

R. C. VAUGHAN, heretofore Vice President, Purchasing, Supplies and Stores

L. S. Brown,
General Manager, Atlantic Region, Canadian
National Railways.

C. G. Bowker,
General Manager, Central Region, Canadian
National Railways.

Department, Toronto, appointed Director of Purchases and Stores, reporting to the President. Office, Montreal.

Sir Henry Thornton issued the following circular, Feb. 28:—M. H. MACLEOD, Vice President in charge of Construc-

tion, after many years of very different and loyal service, will, at his own request, relinquish his present position on March 1. He is appointed Consulting Officer to the Executive, effective that date. The board of directors and myself desire to express our appreciation of the valuable work he has performed and our satisfaction that the company will continue to enjoy the benefits of his long experience."

Finance and Accounting Department Appointments.

Major Graham A. Bell, Vice President of the company, and Vice President of Finance, on Feb. 20, announced the appointment of officials of the Canadian National Ry. Co. as amalgamated, as follows:—

D. E. BROWN, heretofore Assistant to Vice President, Financial and Accounting Department, Canadian National Rys., Toronto, appointed Chief Assistant to Vice President of Finance. Office, Montreal.

J. M. ROSEVEAR, heretofore Comptroller, G.T.R., Montreal, appointed General Comptroller. Office, Montreal.

C. E. FRIEND, heretofore Comptroller, Canadian Northern Ry. and Grand Trunk Pacific Ry., Toronto, appointed Assistant General Comptroller. Office, Montreal.

C. D. COWIE, heretofore Assistant to Vice President, Financial and Accounting Department, Canadian National Rys., Toronto, appointed Assistant to Vice President of Finance. Office, Montreal.

T. H. COOPER, heretofore Assistant to Comptroller, G.T.R., Montreal, appointed Assistant to Vice President of Finance, and assigned to special duties in office of Chief Assistant to Vice President. Office, Montreal.

W. S. HARRISON, heretofore Auditor of Revenues, G.T.R., Montreal, appointed General Auditor of Revenues. Office, Montreal.

J. A. YATES, heretofore Treasurer, G.T.R., Montreal, appointed General Treasurer. Office, Montreal.

H. G. FOREMAN, heretofore Treasurer, Canadian Northern Ry. and Grand Trunk Pacific Ry., Toronto, appointed Assistant General Treasurer. Office, Montreal.

A. E. PLANT, heretofore Local Auditor, G.T.R., Portland, Me., appointed acting Comptroller, Atlantic Region. Office, Moncton, N.B.

F. E. WHELPLEY, heretofore Assistant Treasurer, Canadian Government Rys., Moncton, N.B., appointed acting Treasurer, Atlantic Region. Office, Moncton, N.B.

J. B. McLAREN, heretofore General Auditor, G.T.R., Montreal, appointed Comptroller, Central Region. Office, Toronto.

F. J. BULLER, heretofore Assistant Treasurer, Canadian Northern Ry. and Grand Trunk Pacific Ry., Toronto, appointed Treasurer, Central Region. Office, Toronto.

A. C. EGAN, heretofore Auditor, Canadian Northern Railway System and Grand Trunk Pacific Ry., Toronto, appointed Comptroller, Western Region. Office, Winnipeg.

W. LeB. ROSS, heretofore Local Treasurer, Canadian Northern Ry. and Grand Trunk Pacific Ry., Winnipeg, appointed Treasurer, Western Region. Office, Winnipeg.

Legal Department Appointments.

Gerard Ruel, Vice President and General Counsel, on Feb. 20, announced the appointment of officials of the Canadian National Ry. Co., as amalgamated, as follows:—

W. C. CHISHOLM, K.C., heretofore General Solicitor, G.T.R., Montreal, appointed Assistant General Counsel. Office, Montreal.

E. E. FAIRWEATHER, heretofore Assistant General Counsel, Canadian National Rys., Ottawa, Ont., appointed Assistant General Counsel. Office, Montreal.

ALISTAIR FRASER, K.C., heretofore General Solicitor, Canadian National Rys., Toronto, appointed Commission Counsel. Office, Montreal.

T. WATERSON, heretofore Solicitor, G.T.R., Montreal, appointed Solicitor at Head Office, Montreal.

H. F. ALWARD, heretofore General Solicitor, Canadian National Rys., Montreal, appointed Counsel, Atlantic Region. Office, Moncton, N.B.

T. J. ALLEN, heretofore General Attorney, Canadian National Rys., Moncton, N.B., appointed Solicitor, Atlantic Region. Office, Moncton, N.B.

A. J. REID, K.C., heretofore General Solicitor, Canadian National Rys., Toronto, appointed Counsel, Central Region. Office, Toronto.

J. P. PRATT, heretofore Assistant General Solicitor, G.T.R., Montreal, appointed Assistant Counsel, Central Region. Office, Toronto.

A. E. BECKETT, K.C., heretofore, Solicitor, Province of Quebec, G.T.R., Montreal, appointed Solicitor, Central Region. Office, Montreal.

C. A. HARWOOD, K.C., heretofore Solicitor, G.T.R., Montreal, appointed Solicitor, Central Region. Office, Montreal.

E. S. FRASER, heretofore Assistant Solicitor, Canadian National Rys., Toronto, appointed Solicitor, Central Region. Office, Toronto.

R. H. M. TEMPLE, heretofore General Solicitor, Canadian National Rys., Winnipeg, appointed Counsel, Western Region. Office, Winnipeg.

J. R. BLACK, G. M. HAIR, D. O. OWENS, and C. M. RUSSELL, heretofore Assistant Solicitors, Canadian National Rys., Winnipeg, appointed Solicitors, Western Region. Office, Winnipeg.

R. W. HANNINGTON, heretofore General Attorney, Canadian National Rys., Vancouver, B.C., appointed Assistant Counsel, Western Region. Office, Vancouver, B.C.

A. R. McLEOD, heretofore Assistant Attorney, Canadian National Rys., Vancouver, B.C., appointed Solicitor, Western Region. Office, Vancouver, B.C.

Operation, Maintenance and Construction Department Appointments.

S. J. Hungerford, Vice President Maintenance and Operation, on Feb. 28, announced the following appointments of officials, who will have jurisdiction over all lines and report to him.

A. J. HILLS, formerly Assistant to President, D. B. Hanna, Canadian National Rys., Toronto, to be Assistant to Vice President, Maintenance and Operation. Office, Montreal.

D. CROMBIE, heretofore Transportation Assistant to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, to be Chief of Transportation. Office, Montreal.

C. B. BROWN, heretofore Engineering Assistant to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, to be Chief Engineer, Operating Department. Office, Montreal.

C. S. GZOWSKI, heretofore Assistant to Vice President, Construction Department, Canadian National Rys., Toronto, to be Chief Engineer, Construction Department.

Office, Montreal.

C. E. BROOKS, heretofore Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance, Canadian National Rys., Toronto, to be Chief of Motive Power. Office, Montreal.

G. E. SMART, heretofore Mechanical Assistant, Car Department, to Vice President, Operation and Maintenance, Canadian National Rys., to be Chief of Car Equipment. Office, Montreal.

COL. J. ALEX HUTCHISON, C.B.E., M.D., heretofore Chief Medical Officer, G. T. R., Montreal, to be Chief Medical Officer. Office, Montreal.

WALTER PRATT, heretofore Manager, Sleeping, Dining and Parlor Cars and Hotels, Canadian National Rys., to be General Manager, Sleeping, Dining, Parlor Cars and Railway Restaurants.

D. B. MULLIGAN, heretofore Superintendent of Hotels, Grand Trunk Pacific Ry., Winnipeg, to be General Manager of Hotels.

Mr. Hungerford also announced the

A. E. Warren,
General Manager, Western Region, Canadian
National Railways.

appointment of the following general managers of the three regions:—

L. S. BROWN, heretofore Assistant General Manager, Eastern Lines, Canadian National Rys., Montreal, to be General Manager, Atlantic Region. Office, Moncton, N. B.

C. G. BOWKER, heretofore Operating Manager, G. T. R., Montreal, to be General Manager, Central Region. Office, Toronto.

A. E. WARREN, heretofore General Manager, Western Lines, Canadian National Rys., Winnipeg, to be General Manager, Western Region. Office, Winnipeg.

Atlantic Region Officials.

General Manager Brown announced the following appointments Feb. 28:—

R. W. SIMPSON, formerly Assistant to General Superintendent, Maritime District, Canadian National Rys., Moncton, to be Assistant to General Manager. Office, Moncton, N. B.

W. U. APPLETON, heretofore General Superintendent of Rolling Stock, Eastern Lines, Moncton, to be General Superintendent. Office, Moncton, N. B.

W. E. BARNES, heretofore Master Mechanic, Maritime District, Canadian National Rys., Moncton, to be Superintendent of Motive Power. Office, Moncton, N. B.

G. E. MCCOY, heretofore Master Car Builder, Maritime District, Canadian National Rys., Moncton, to be Superintendent of Car Equipment. Office, Moncton, N. B.

A. C. BARKER, heretofore Superintendent, Moncton Division, Maritime District, Canadian National Rys., Moncton, to be Superintendent of Transportation. Office, Moncton, N. B.

W. N. RIPPEY, heretofore Superintendent of Transportation, Maritime District, Canadian National Rys., Moncton, to be Superintendent, Moncton Division. Office, Moncton, N. B.

Central Region Officials and Districts.

General Manager Bowker announced the following appointments, Feb. 28:—

W. A. KINGSLAND, heretofore General Manager, Eastern Lines, Canadian National Rys., Montreal, to be Assistant General Manager. Office, Toronto.

G. C. JONES, formerly Assistant to President, G. T. R., Toronto, and latterly attached to Vice President and General Manager's office, G. T. R., Montreal, to be Assistant General Manager. Office, Montreal.

C. F. NEEDHAM, heretofore Assistant to General Superintendent, Motive Power & Car Departments, G. T. R., Montreal, to be Assistant to General Manager. Office, Toronto.

MAJOR F. L. C. BOND, heretofore Chief Engineer, G. T. R., Montreal, to be Regional Chief Engineer. Office, Toronto.

C. R. MOORE, heretofore General Superintendent of Car Service, G. T. R., Montreal, to be General Superintendent of Transportation. Office, Toronto.

J. COLEMAN, heretofore Assistant to General Superintendent, Motive Power and Car Departments, G. T. R., Montreal, to be General Superintendent, Car Equipment. Office, Toronto.

J. C. GARDEN, heretofore General Superintendent Motive Power & Car Departments, G. T. R., Montreal, to be General Superintendent, Motive Power. Office, Toronto.

DR. J. P. MITCHELL, heretofore Chief Medical Officer, Eastern Lines, Canadian Northern Ry. System, Toronto, to be Assistant Chief Medical Officer. Office, Toronto.

C. H. NICHOLSON, heretofore Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B. C., to be Manager, Canada Atlantic Transit Co., and Lake Ontario, Detroit River and Lake Michigan Car Ferries.

The Central Region has been divided into the following districts for operating purposes:—

Quebec District. Comprising all lines and facilities included in the former Canadian National Rys., Quebec District. J. E. MORAZAIN, heretofore General Superintendent, Quebec District, C.N.R., to be General Superintendent. Office, Quebec, Que.

Montreal District. Comprising all lines and facilities included in the former Eastern Lines, G. T. R., W. R. DAVIDSON, heretofore General Superintendent, Eastern Lines, Montreal to be General Superintendent. Office, Montreal.

Northern Ontario District. Comprising

ing all lines and facilities in the former Ontario District, Canadian National Rys. W. R. DEVENISH, heretofore General Superintendent, Ontario District, C. N. R., to be General Superintendent. Office, Toronto.

Southwestern Ontario District. Comprising all lines and facilities included in the former Ontario Lines, G. T. R., R. H. FISH, heretofore General Superintendent, Ontario Lines, G. T. R., to be General Superintendent. Office, Toronto.

Michigan District. Comprising all lines and facilities between the Detroit and St. Clair Rivers on the east, and Chicago on the west. H. E. WHITTENBERGER, heretofore General Manager, lines west of Detroit and St. Clair Rivers, G. T. R., to be Manager. Office, Detroit, Mich.

Co-ordination of Accounting.

A conference of officials of the Canadian Government, Canadian National and Grand Trunk Rys., was held in Toronto early in February, to discuss matters in connection with the co-ordination of the accounting, etc., for all the lines which have been co-ordinated as in the Canadian National Ry. Co., and to make recommendations in connection therewith for the executive's consideration. It was attended by J. A. Yates, Treasurer; G. F. Ancrum, Assistant Treasurer; J. M. Rosevear, Comptroller; J. B. McLaren, General Auditor, G.T.R., and W. S. Harrison, Auditor of Revenues, Montreal; A. E. Plant, Local Auditor, G.T.R., Portland, Me.; W. C. Tomkins, Local Treasurer, G.T.R., Detroit, Mich.; C. D. Cowie, Assistant to Vice President, Finance & Accounting Department; C. E. Friend, Comptroller; A. C. Egan, General Auditor; H. G. Foreman, Treasurer; F. J. Buller, Assistant Treasurer, Canadian National Rys., Toronto; S. L. Shannon, Comptroller and Treasurer; W. H. Estano, Auditor of Traffic; G. N. Palmer, Auditor of Disbursement; F. E. Whelpley, Assistant Treasurer, Canadian Government Rys., Moncton, N.B. The new system which will be decided on will go into effect on May 1.

Hearing on Level Crossings in Toronto.

The City of Toronto applied to the Board of Railway Commissioners at its sitting in Toronto on Feb. 15, for an order directing the Canadian Pacific and Canadian National Rys. to collaborate with the city in the preparation of a joint plan for the separation of grades at the C. P. R. and C. N. R. crossings at Bloor St., Royce Ave., Weston Road, and St. Clair Ave., and at the C. N. R. crossings at Wallace Ave., and Davenport Road, and to fix a time for the submission to the Board of a plan dealing with grade separation at those crossings. The city was represented by G. R. Geary, Corporation Counsel; the G. T. R. by W. C. Chisholm, General Solicitor; and the C. P. R. by E. P. Flintoft, Assistant General Solicitor. Chief Commissioner Carvell was of the opinion that the Board lacked power to direct the railways to collaborate, and had jurisdiction only in the case of definite plans being prepared. Mr. Geary contended that the Board had power to direct the railways to join the city officials in the preparation of plans, and said that the C. P. R. showed some disposition to confer, but that the G. T. R. had not made its position clear. Mr. Chisholm stated that the G. T. R. did

not wish to assume responsibility for large expenditures before complete information was secured. Following the hearing, a conference among the interested parties was held, at which it was agreed that the matter should stand on the understanding that the railways would join the city in the preparation of tentative plans, with every effort to be made to have such plans prepared in three months.

C.P.R. Tuffnell-Prince Albert Branch Authorized.

Commissioner Boyce, of the Board of Railway Commissioners, has given the following ruling on the C.P.R.'s application for approval of route map of general location of a portion of the Manitoba & Northwestern Ry., from near Tuffnell, to Prince Albert, Sask.: By Dominion Statutes 11-12, George V, chap. 65, the lessor of the applicant company is empowered, subject to the usual conditions therein stated, and to the provisions of the Railway Act, to "lay out, construct, maintain, and operate" inter alia, the following line of railway: "From a point at or near Tuffnell, on its line of railway in or about Tp. 30, Range 10 or 11, West 2nd Meridian, thence northwesterly, northly and westerly to a crossing of the North Saskatchewan River in or about Tps. 49, 50 or 51, Range 14 or 15, west of the 2nd Meridian, thence westerly to the City of Prince Albert."

The C.P.R., as lessee of the franchises of the Manitoba & Northwestern Ry. Co. of Canada, applies to the Board, under sec. 167 of the Railway Act, for approval of its route map showing the general location of a portion of the latter company's Tuffnell to Prince Albert Branch from near Tuffnell, in Sec. 35, Tp. 30, Range 10, west 2nd Meridian, at mileage 0 to Sec. 8, Tp. 49, Range 26, west 2nd Meridian, at Prince Albert, Sask., mileage 211.75, as shown on the plans submitted in accordance with sec. 167.

The criticism offered by the Canadian National Rys. as contained in the memorandum of M. H. MacLeod, Vice President, dated Oct. 30, 1922, and repeated in the letter from Mr. Fraser, dated Nov. 20, 1922 (it scarcely takes the form of definite objection), is, I think, fairly well answered by the memorandum of Mr. Simmons of Nov. 10, 1922, by Mr. Flintoft's letter of Nov. 14, 1922, and by Mr. Blair's memorandum of Dec. 18, 1922. The Canadian National route is what may be termed a "paper route" provided by Saskatchewan legislation, 1912, and having been kept alive by Dominion legislation, i.e., the Branch Lines Act, referred to by Mr. Blair. The objection as to paralleling the Canadian National Rys. is not of itself meritorious, nor has it usually prevailed in this country in approving a route map. This is explained by reference to the topography of the country through which the railway is routed (see Mr. Flintoft's letter of Nov. 14, 1922).

The C.P.R. Act authorizes construction from Tuffnell. As pointed out by Mr. Simmons, this Board has no power to change the starting place, and it is to be observed that Mr. Flintoft states that the route now applied for follows a location upon the first 30 miles of which a portion of the grading was done by that company a number of years ago, and actual construction work is, in the circumstances, a factor not to be ignored. The matter of crossing of the Melfort North Easterly line is, I think, disposed of quite satisfactorily by Mr. Simmons' memorandum. I do not see that the situ-

ation can be bettered or cleared by any hearing, and there is no request for such.

The main issue is as to duplication. It does not seem to present more than abstract difficulties. The probabilities are much as summarized in the concluding paragraph of Mr. Simmons' memorandum, and some regard must be had to the interests of the public to be served by the projected C.P.R. line. The Canadian National line is not an immediate probability. The C.P.R. apparently wants to construct, and doubtless the people of the district need the railway. I do not think that there is anything in any of the points raised which forms an objection of substance to the application, and my own view would be to approve the route map submitted.

Chief Commissioner Carvell, Assistant Chief Commissioner McLean, and Commissioners Rutherford and Lawrence concurred.

Hearing on Whitewashing Cattle-Guards and Return Fences.

The railways were required to show cause at the Board of Railway Commissioner's sitting in Ottawa on Feb. 7, why they should not whitewash return fences and cattle guards on their lines. The Railway Association of Canada was represented by C. P. Riddell, General Secretary; the C. P. R. by E. P. Flintoft, Assistant General Solicitor; the Canadian National Rys. by Alistair Fraser, General Solicitor; the Michigan Central Rd. by W. B. Kingsmill, Solicitor; the G. T. R. by J. P. Pratt, Assistant General Solicitor. The railway representatives pointed out that many of the cattle guards and return fences are of metal, a lot of the fencing being of Page wire; that whitewash will not adhere to the metallic surfaces for any length of time; that a large part of the wooden structures are being creosoted, and that if whitewash be applied to the creosoted timber it would at once turn brown. The general opinion among the railways was that the whitewashing of fences and guards should be left to individual choice, as it is purely a matter of improving the appearance of the property, like whitewashed fences, and flower gardens at stations. Mention was made of the utility of the whitewashed fence and guard as a safety measure for motorists using the highways at railway crossings, but attention was called to the fact that there are crossing signs to call attention to the presence of railway tracks and that there would be no color contrast with snow on the ground. Decision was reserved.

Grain Inspected at Western Points.

The Dominion Bureau of Statistics, Internal Trade Branch, reports the number of cars inspected at Winnipeg and other points on the Western Division, for January, and for five months ended Jan. 31, 1923 and 1922, as follows:—

	January	5 mons. to Jan. 31, 1923	5 mons. to Jan. 31, 1922
C. P. R.....	7,793	115,188	78,728
C. N. R.....	8,118	94,789	57,918
G. T. F. R.....	20,679
G. N. R.....	92	1,472	749
Totals.....	15,998	211,449	158,074

H. K. Wicksteed, B.A.Sc., C.E., ex Chief Engineer of Location, Canadian Northern Ry., read a paper on "Radials," before the Engineering Institute of Canada's Toronto branch, on Feb. 15.

Railway Rolling Stock Orders and Deliveries.

Shale Brick Co. Cooksville, Ont., has bought 3 rebuilt flat cars, 80,000 lb. capacity, 40 ft. long, from Canadian Equipment Co., Montreal.

The Timiskaming and Northern Ontario Ry. has received 2 rebuilt locomotives from Canadian Locomotive Co., completing an order for 6 rebuilt locomotives.

Abitibi Transportation & Navigation Co., Iroquois Falls, Ont., has bought, through Canadian Equipment Co., Montreal, a Russell no. 2 snowplough for use on logging railway.

The Quebec Development Co., Quebec Que., has ordered 8 four-wheel locomotives type Q318, and 5 four-wheel locomotives, type Q319, from the Montreal Locomotive Works.

The Esquimalt and Nanaimo Ry. (C. P. R.) is equipping one of its locomotives with Pyle National headlight, and also applying Pyle National lighting equipment to 8 passenger cars.

The C. P. R., between Dec. 17, 1922 and Feb. 10, received 1 single track steel underframe flanger, from its Angus shops, Montreal, and 69 freight refrigerator cars from Montreal Steel Car Corporation.

Sir William Arrol and Co., contractors, St. Catharines, Ont., have bought 15 rebuilt western air dump cars, 12 yd. capacity, with 19 ft. bed, from Canadian Equipment Co., Montreal. They have steel underframes, long cylnder air dump equipment, wood beds, and are of standard western construction.

The prosperity being enjoyed by U. S. locomotive builders is indicated in a report issued recently by the U. S. Commerce Department, Washington, which shows that in Jan. 1923, there were 229 locomotives shipped, compared with 210 in Dec., 1922, and but 74 in Jan., 1922. There were unfilled orders for 1,788 locomotives on hand at the end of Jan. 1923, compared with 1,592 at the end of Dec. 1922, and but 207 at the end of Jan. 1922.

The Timiskaming & Northern Ontario Ry. was reported, in a United States paper of Jan. 20, as contemplating buying 15 Pacific type locomotives, which did not coincide with Canadian Railway and Marine World's information, as we were officially advised on Jan. 15 that the road was not in the market for additional equipment. Enquiry at North Bay has confirmed the previous information, and that such an order as mentioned is not contemplated. The T. & N. O. management has, however, been discussing with manufacturers the design of certain types of equipment which it is anticipated will be required, but has not asked for tenders.

P. Lyall and Sons Construction Co., Welland Canal contractors, Thorold, Ont., have bought 2 six-wheel rebuilt switching locomotives, (0-6-0), and 19 rebuilt air dump cars, 16 cub. yd. capacity, of Kilbourne and Jacobs Manufacturing Co. standard construction, from Canadian Equipment Co., Montreal. The locomotives were built originally by the C. P. R., and have cylinders 18 x 24 in.; extended wagon top boilers, 56 in. diam.; 175 lb. working pressure; Westinghouse automatic and straight top air brakes; 10 ft. wheel base, total weight, engine and tender, 151,000 lb., tractive power, 24,000 lb., tender capacity 3,000 gall. water and 5 tons coal.

The Belgo Paper Co. has ordered a 6-wheel saddle tank oil burning switching locomotive, (0-6-0) from Canadian Locomotive Co. Following are the chief details:—

Gauge	4 ft. 8½ in.
Weight in working order	91,000 lb.
Wheel base	9 ft. 6 in.
Heating surface, firebox	74 sq. ft.
Heating surface, tubes	716.5 sq. ft.
“ “ total	790.5 sq. ft.
Driving wheels, diam.	42 in.
“ “ centers	cast iron
Driving journals, diam. & length	6½ x 8 n.
Cylinders, diam and stroke	15 x 22 in.
Boiler, type	Radial stay
“ working pressure	180 lb.
Tubes, no. and diam.	132-2 in.
Tubes, length	10 ft.
Injectors	No. 6 locomotive inspirators
Safety valves	2 in. locomotive pop
Brakes	Westinghouse Automatic
Packing	Metallic
Capacity, water	1,500 imp. gall.
“ fuel oil	500 imp. gall.

Grant Smith and Co. and McDonnell have bought 2 rebuilt 10-wheel locomotives, (4-6-0) from Canadian Equipment Co. for use on their Timiskaming and Northern Ontario Ry. contract. They have cylinders 18½ x 26 in.; 53 in. driving wheels; 8 x 12 in. journals; extended wagon top boilers, 60 in. diam., 175 lb. working pressure; 24 ft. 7 in. total wheel base, 240,500 lb. total weight, engine and tender, and are equipped with Westinghouse automatic and straight air brakes, Sharon couplers, and with tender capacity for 500 gall. water, 9 tons coal. They have also bought from the same company, 6 box cars, 60,000 lb. capacity, 36 ft. long, and 6 flat cars, 40 ft. long. The box cars are 36 ft. long over end sills, 8½ ft. wide inside and 8 ft. 1½ in. high inside, and have Murphy outside metal roofs, M.C.B. couplers, simplex bolsters, Westinghouse air and hand brakes, etc. The flat cars are 40 ft. long over end sills, 10 ft. wide over all, 6 ft. high to top of brake shaft, and are equipped with Miner tandem coupler, with Sharon yoke, simplex bolsters, McCord journal boxes, etc.

The C.P.R. 16 Pacific type (4-6-2) locomotives which are being built at Montreal Locomotive Works, as mentioned in our last issue, will have the following details:—

Weight on drivers.....	181,500 lb.
“ on engine truck.....	58,500 lb.
“ on trailing truck.....	59,000 lb.
“ total	299,000 lb.
Wheel base, driving.....	13 ft. 2 in.
“ total engine	34 ft. 9 in.
Cylinders, diam. and stroke.....	25 x 30 in.
Driving wheels, diam.	75 in.
Engine truck wheels, diam.	31 in.
Trailing truck wheels, diam.	45 in.
Driving journals, main.....	11½ x 21 in.
“ others	10½ x 14 in.
Engine truck journals.....	7 x 3 in.
Trailing truck journals.....	9 x 14 in.
Boiler, type	Straight top radial stay
“ pressure	200 lb.
Firebox, length and width.....	111½ x 84½ in.
Tubes, no. and diam.....	205-2¼ in.
Flues, no. and diam.....	38-5½ in.
Tubes and flues, length.....	18 ft. 6 in.
Heating surface, tubes and flues.....	3,232 sq. ft.
“ “ firebox	298 sq. ft.
“ “ total	3,530 sq. ft.
Grate area	65 sq. ft.
Tractive power	42,600 lb.
Factor of adhesion.....	4.26
Superheater	Superheater Co.
Reverse gear.....	C.P.R. standard screw
Tender frame	Commonwealth steel
“ truck wheels, type and diam	Steel tire, 86¼ in.
Tender truck journals.....	6 x 11 in.
Water capacity.....	8,000 imp. gall.
Coal capacity.....	12 tons

Canadian National Railways' Orders.

In addition to the orders given by the Canadian National Rys. for locomotives, cars and work equipment, as stated in Canadian Railway and Marine World

for February, 1,000 automobile cars have been ordered, 600 from Canadian Car and Foundry Co., Montreal, and 400 from National Steel Car Corporation, Hamilton. They will have the following general dimensions:—

Length inside	40 ft. 6 in.
Length over striking plates	42 ft. 1½ in.
Width inside	8 ft. 6 in.
Width over eaves	8 ft. 1 3/8 in.
Height inside in clear	9 ft.
Height rail to top of car at eaves.....	12 ft. 8 3/4 in.
Height rail to top of brake mast.....	13 ft. 0½ in.
Height rail to top of running board.....	13 ft. 7½ in.
Height rail to center of coupler.....	2 ft. 10½ in.
Height rail to bottom of center sill.....	2 ft. 4½ in.
Center to center of trucks	31 ft. 1½ in.
Load and tare weight of car	132,000 lb.
Truck wheel base	5 ft. 6 in.
Center to center of arch bars	6 ft. 4 in.
Journals	5 x 9 in.
Wheels	33 in. cast iron, chilled tread.

They will have steel underframes, steel side framing, and 1½ x 5¼ in. pine or fir sheathing, and Hutchins all steel flexible roofs. Equipment will include Laughlin side bearings on 600 cars, and Stuki side bearings on 400; Miner A-2-S draft gear with Farlow attachment; type D couplers with 6 x 8 in. shank; Camel no. 30 automobile car door fixtures; Westinghouse schedule K-C 1012 brake equipment, with braking power 60% light weight at 50 lb. brake cylinder pressure; arch bar trucks; Simplex bolsters on 600 cars, and cast steel bolsters on 400.

Lettering.—We are officially advised that all the rolling stock ordered for construction in Canada and for operation on Canadian National lines in Canada, including the G. T. R., will be lettered “Canadian National” and that the new equipment to be built and operated in the U. S., as specified in Canadian Railway and Marine World for February, will be lettered “Grand Trunk.”

Locomotives.—In the specifications for the 35 Mikado locomotives ordered from Montreal Locomotive Works, and the 10 from Canadian Locomotive Co., given in Canadian Railway and Marine World for February, weights were omitted. We are now advised that approximate weights will be as follows:—on drivers, 230,000 lb.; on engine truck, 27,500 lb.; on trailing truck, 55,500 lb.; total engine, 315,000 lb.; tender, 180,200 lb. In the specifications for the 16 Mountain type locomotives ordered from Canadian Locomotive Co., weights were also omitted. The total weight of engine will be approximately 333,000 lb., with 226,000 lb. on drivers, and weight of tender, loaded, will be 208,000 lb. The Mikado locomotives will have Belpaire fireboxes and the Mountain locomotives will have radial stayed fire boxes.

Car Conversions.—It was stated in Canadian Railway and Marine World for February that authority had been given for the conversion of 1,000 30-ton steel frame box cars into stock cars, and 50 box cars into cabooses, at Moncton shops. We are officially advised that the conversion of the box cars into stock cars will include a rearrangement of inside lining; application of 18 x 30 in. sliding end doors and standard stock car side doors, with Camel stock car door fixtures; provision of continuous feed racks; rearrangement of brake equipment to conform with latest C.N.R. standards; provision for application of double deck should same at any time be considered necessary; repainting standard color of stock cars, and renumbering

ing all lines and facilities in the former in stock car series. The box cars to be converted were built in 1912 and 1913. The 50 cabooses to be converted from box cars will be the C. N. R. standard design, with steel underframe. The trucks will be equipped with elliptic springs; brake equipment will be made standard, windows, doors and cupola applied, and the interior made to conform to the standard layout.

Work Equipment.—Four 1½-yd. clam-shell buckets, and two 3-drum double cylinder hoisting engines, have been ordered from Canadian Mead Morrison Co. through Harvard Turnbull & Co., and two concrete mixers have been ordered from F. H. Hopkins and Co.

Fair Wage Clause.—A recent Montreal press dispatch said that railway shopmen's officers were taking steps to ascertain whether the contracts given by the Canadian National Rys. for rolling stock contain the usual fair wages clause. Canadian Railway and Marine World is advised that they do, the clause being as follows:—"The workmen and laborers employed by the contractor in or about the works shall be paid such wages as may be currently payable to workmen and laborers engaged in similar occupation in the districts in which the said works are being constructed."

Additional Directors for Canadian National Railways.

The Prime Minister said in the House of Commons on Feb. 2, in answer to a question by the leader of the Opposition, Mr. Meighen: "I have discussed with Sir Henry Thornton the advisability of an additional director for the Canadian National Rys., from the Province of Quebec, and he is of opinion, and the Government is also of opinion, that it is desirable to have a director appointed in the City of Quebec, and one will be appointed shortly." A few days later it was announced that Lt. Col. O. E. Talbot of Quebec, Que., had been appointed. Biographical particulars of him are given under "Mainly About Railway People" farther on in this issue.

On Feb. 15, M. MacLaren, St. John, N. B., asked "Is it the Government's intention to add to the new Canadian National Ry. Board a representative from New Brunswick?" Acting Minister of Railways Graham replied:—"After consultation with the President of the Canadian National Rys., it was decided to begin operations with a comparatively small board, representative of districts rather than of provinces. Should experience indicate the necessity for further additions, within the limits of the act, the Government will not hesitate to make these additions."

Canadian Passenger Association, Western Lines.—W. E. Duperow, General Passenger Agent, Canadian National Rys., Winnipeg, has been re-elected Chairman for this year. The committees' chairmen are, executive, R. G. McNeillie, General Passenger Agent, C.P.R.; rules, N.R. Des Brisay, Assistant Passenger Agent, C.P.R.; baggage car traffic, H. M. Spence, Assistant General Baggage Agent, Canadian National Rys.; Secretary, E. J. Stone.

New Brunswick received the following taxes from transportation companies during 1921-2:—Express companies, \$1,145; Telegraph companies, \$1,967.10; Railway companies, \$58,100; Street railway companies, \$3,343.41.

Railway Wages and Working Conditions in Canada and the United States.

February was not marked by any outstanding developments in the wage and working condition situation on Canadian railways, unless the move in Montreal to apply the one big union idea to railway employees of all classes throughout the country could be classed as such. Press reports state that Z. Foster, of steel strike fame, and a newly elected vice president of the Third International at Moscow, addressed a meeting of railwaymen in Montreal on the subject of amalgamation of all unions. He is reported to have stated that the next few years would see the amalgamation of all railway unions in Canada and the U. S. into one big industrial union, and to have severely criticized the leaders of all the rail unions which did not support the railway shopmen in their recent strike.

Delegates from the machinists, boilermakers, pipe fitters, sheet metal workers and blacksmiths employed in Montreal shops attended a conference in that city in February to further the cause of one big unionism, and the general opinion seemed to be that against the united stand of the railways, the individual labor unions were helpless. The following resolution was passed: "whereas, during the past 12 months, the railways of the United States and Canada have attacked the standards of living of the railroad workers and the very existence of the unions themselves, and whereas the existence of 16 individual railway unions splits the forces of the railroad workers and renders their efforts against the railway companies ineffective, be it resolved that this conference of the Montreal shopcrafts favors the amalgamation of the 16 railway unions into one organization covering the entire railroad industry, as outlined in the plan for amalgamation put forward by the Minnesota Railroad Shopcrafts Legislative Committee, and calls upon the general officers to take the necessary steps so that a joint convention of all these organizations or as many of them as possible shall be assembled to put the amalgamation into effect."

Concerning this action, C. Dickie, Secretary, Division 4, American Federation of Labor's Railway Employees' Department, expressed the attitude of the officers of his division as following: "Amalgamation is not necessary at present. We have machinery all ready provided for in the constitution of the American Federation of Labor Railway Employees' Department for the affiliation of all the 16 railway organizations in Canada. Nine of the 16 unions have already entered into affiliation, and in the event of a strike could come out simultaneously, so that affiliation has just the same result of unified action as amalgamation, though the result is obtained through a different road. Let us build on the foundation we have already laid." J. A. McClelland, Vice President in Canada of the Machinists' Union, is reported to have said:—"An industrial union covering the railway industry would smash the unions. Plank 7 of our platform is sufficiently definite on the question of amalgamation, and places our occupation before industry. The only effect that I can see an industrial union would have would be to smash up our trades unions, and I don't feel the workers are prepared for any such move.

The A. F. of L. Railway Department has been organized to achieve the same results as are claimed by this new form of organization."

It does not seem reasonable to suppose that the one big union idea will meet with any more success in the future than it has in the past.

Shopmen to meet railways.—It is reported that arrangements are in progress for a meeting between the shopmen's officers and a Railway Association of Canada wage committee, to discuss several clauses in the present schedule agreement. The meeting is expected to take place early in March.

United States Situation.—By a Labor Board ruling, effective Feb. 1, railway signal department employees will hereafter receive time and a half after the eighth consecutive hour of work. For Sunday and holiday work, time and one half will be paid, except where employees are regularly assigned to such service, when they will be given one day off in seven if possible, and if required to work on such regularly assigned off day will be paid time and a half. The signalmen's application for a wage increase was denied.

Labor Member for U. S. Railroad Labor Board.—The term of Albert Phillips, Labor Member on the U. S. Railroad Labor Board, expires on April 15. In accordance with the law, the labor organizations have chosen six men whose names will be submitted to President Harding from which to make his choice, as follows:—J. H. Sylvester, Vice President, Brotherhood of Railway Clerks; J. J. Farnum, Maintenance of Way Employees; D. W. Helt, President, Order of Railway Signalmen; Thomas Pearson, General Chairman, New Haven Chapter Order of Railway Telegraphers; G. C. Milan, Brotherhood of Railway Clerks, and Albert Phillips, Brotherhood of Locomotive Firemen and Enginemen (re-submitted.)

Track Accessories and Machine Tools for Canadian National Rys.

Track accessories orders have been given by Canadian National Rys. as follows:—187,000 pairs angle bars; 235,000 rail anchors; 1,408,000 tie plates; 1051 tons of track bolts; 1850 tons of track spikes. The orders have been divided between Algoma Steel Corporation; Canada Machinery Corporation; Canadian Tube & Steel Products Co.; Nova Scotia Steel & Coal Co.; P & M Co., and Steel Co. of Canada.

The Canadian National Rys. have asked prices for a large number of machine tools of various kinds for the Western Lines shops and locomotive houses, among which are lathes, shapers, electric hoists, boring machines, grinders, punch and shears, planers, flue cutters, rivet heaters and other machines and appliances.

Railway Lands Patented.—Letters patent were issued during January, for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Alberta and Great Waterways Ry.....	674.76
Central Canada Ry.....	26.26
Canadian Northern Ry.....	670,366.51
Total	671,067.53

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Atlantic Transit Co., Ontario Car Ferry Co. C. H. NICHOLSON, heretofore Manager, Grand Trunk Pacific Coast Steamship Co., Vancouver, B. C., has been appointed Manager, Canada Atlantic Transit Co. and Lake Ontario, Detroit River & Lake Michigan Car Ferries. Office, Montreal.

Canada Steamship Lines Ltd.—C. C. BONTER, heretofore General Passenger Agent, Eastern Lines, has been appointed Assistant Passenger Traffic Manager, all lines. Office, Montreal.

J. R. BECK, heretofore City Passenger Agent, Toronto, has been appointed District Passenger Agent there, vice D. Keddie, transferred. Office, 46 Yonge St.

D. KEDDIE, heretofore District Passenger Agent, Toronto, has been appointed General Agent, Pittsburgh, Pa. Office, Diamond National Bank Building.

N. McALLEN, heretofore ticket agent, Toronto, has been appointed District Passenger Agent, Cincinnati, Ohio. Office, Dixie Terminal Building.

S. J. MURPHY, heretofore excursion agent, Toronto, has been appointed District Passenger Agent, St. Louis, Mo. Office, Boatmen Bank Building.

Canadian Government Merchant Marine.—The Grand Trunk Pacific Coast Steamship Co. has been placed under the Canadian Government Merchant Marine Ltd. for operation, as from Jan. 1.

D. B. CARSWELL, heretofore Senior Assistant Superintendent Engineer, has been appointed Superintendent Engineer, vice I. J. Tait, who has left the service. Office, Montreal.

B. C. KEELEY, heretofore General Agent, Vancouver, B. C., has been appointed Pacific Coast Manager, with jurisdiction also over Grand Trunk Pacific Coast Steamship Co., reporting to the General Manager at Montreal Office, Vancouver, B. C.

A. G. MacLEOD, heretofore in Traffic Department, Vancouver, B. C., has been appointed Contracting Freight Agent there, vice C. C. Kernahan, resigned to enter private business.

R. B. TEAKLE, heretofore Manager, has been appointed General Manager, Canadian Government Merchant Marine and Grand Trunk Pacific Coast Steamship Co. Office, Montreal.

E. E. TEDFORD, heretofore Marine Superintendent, has been appointed General Superintendent. Office, Montreal.

A. WATSON has been appointed Junior Assistant Superintendent Engineer, vice —, Winter, who has left the service. Office, Montreal in summer and Halifax, N.S., and St. John, N.B., in winter.

JOHN YOUNG, heretofore Junior Assistant Superintendent Engineer, has been appointed Senior Assistant Superintendent, vice D. B. Carswell appointed Superintendent Engineer. Office, Montreal in summer, and Halifax, N. S. and St. John, N. B., in winter.

Canadian National Rys. A. BROSTEDT General Traffic Agent for the Orient, has been transferred from Shanghai to Hong Kong, China. Office, Queens Building.

J. J. CROWE has been appointed Signal Supervisor, Saskatchewan District, vice S. J. Stinson, assigned to other duties. Headquarters, Saskatoon.

J. A. LEGERE is reported to have

been appointed Locomotivehouse Foreman, Newcastle, N. B., vice W. S. Smallwood, retired on the provident fund.

T. J. McCABE, heretofore Assistant Treasurer, Canadian Northern Ry. and Grand Trunk Pacific Ry., Toronto, has resigned to become President, Buntin, Reid & Co. wholesale paper merchants, Toronto.

D. E. ROSS, heretofore in Freight Department, Shanghai, China, has been appointed Traffic Agent there. Office, Glen Line Building, The Bund.

ADAM STEWART has been appointed acting agent, Sydney, N. S., vice G. O. Forbes, deceased.

LT.-COL. O. E. TALBOT, has been appointed a director.

T. Kilpatrick,
General Manager and General Superintendent,
Pacific Great Eastern Railway.

Appointments, consequent on the G. T. R.'s co-ordination with Canadian National Rys., are given on another page of this issue.

Canadian Pacific Ry.—DRS. O. DEMUTH and W. K. FEARE have been appointed medical officers at Vancouver, vice Drs. Hunter, MacLachlan, Patterson and Robertson. This corrects an unconfirmed press report mentioned in Canadian Railway and Marine World for February, pg. 63.

G. F. DIEKROEGER, heretofore Assistant District Freight Agent, has been appointed District Freight Agent, C. P. R., Minneapolis, St. Paul and Sault Ste. Marie Ry., Duluth South Shore and Atlantic Ry. and Spokane International Ry., St. Louis, Mo., vice W. M. Porteous, who, at his own request, has been retired, on account of ill health.

W. T. MARLOW, heretofore General Freight Agent, Ocean Traffic, C. P. R., Montreal, has been appointed Foreign Freight Agent, vice C. S. Gowans, resigned to enter private business. Office, Montreal.

W. A. NEELY has been appointed

Roadmaster, St. Thomas, Port Burwell and St. Marys Subdivisions, London Division, Ontario District, vice J. E. Steele on leave of absence. Office, Ingersoll, Ont.

Delaware & Hudson Co.—F. P. GUTELIUS, heretofore Vice President, Operating and Traffic Departments, Albany, N. Y., and formerly General Manager, Canadian Government Rys., Moncton, N.B., is stated, in a New York press dispatch, to have been appointed Resident Vice President, D. & H. Co., at Montreal, succeeding C. S. Sims, resigned.

Dominion Express Co.—H. J. PALMATEER, heretofore Assistant Superintendent, has been appointed Superintendent, Eastern Division, vice Geo. Parker, deceased. Office, Toronto.

Duluth, South Shore and Atlantic Ry.—See Canadian Pacific Ry.

Grand Trunk Pacific Coast Steamship Co.—See Canadian Government Merchant Marine.

Grand Trunk Ry.—T. A. CHAPPELL, heretofore Commercial Agent, has been appointed General Agent, Freight Traffic Department, Philadelphia, Pa. Office, 1105 Finance Building.

G. A. McGUIRE, heretofore Commercial Agent, has been appointed General Agent, Freight Traffic Department, Buffalo, N. Y. Office, 1019 Chamber of Commerce Building.

C. MANNING, heretofore Assistant Operating Manager, lines east of Detroit and St. Clair rivers, G. T. R., Montreal, is reported to have been appointed Assistant to W. D. Robb, Vice President in charge of Insurance, Lands, Express, Telegraphs, Colonization, Development and General Matters, Canadian National Rys., Montreal.

S. G. WAGSTAFF, heretofore Commercial Agent, has been appointed General Agent, Freight Traffic Department, Toledo, Ohio. Office, 501 Commerce Guardian Building.

Appointments consequent on the G. T. R.'s co-ordination with Canadian National Rys. are given on another page of this issue.

Minneapolis, St. Paul and Sault Ste. Marie Ry.—See Canadian Pacific Ry.

Ontario Car Ferry Co.—See Canada Atlantic Transit Co.

Pacific Great Eastern Ry.—T. KILPATRICK heretofore Inspector of Bridges, British Columbia Public Works Department, Victoria, and formerly Superintendent, District 1, British Columbia Division, C. P. R., Revelstoke, has been appointed General Manager and General Superintendent, P. G. E. R., vice A. B. Buckworth, General Manager, who has been appointed Deputy Minister of Railways for British Columbia.

Toronto, Hamilton and Buffalo Ry.—J. A. VIRTUE heretofore chief clerk, local freight office, Hamilton, Ont., has been appointed Freight Agent, there, vice C. M. Sinclair, deceased. He will also represent the C. P. R. as the T. H. and B. Ry. handles its Hamilton Business.

The Great Eastern Railway Shareholders, at their final meeting in London on Feb. 20, prior to the company being merged in the London and North-eastern Ry. Co., made complimentary references to Sir Henry Thornton's services to the company previous to his acceptance of the Canadian National Ry.'s presidency.

Grand Trunk Railway Grade Separation in Detroit.

The Grand Trunk Railway grade separation was the first specified problem to receive attention after the establishment by the City of Detroit, Mich., of the Division of Grade Separation in Jan., 1917. The G.T.R., which was built prior to 1850, enters the city on Dequindre St., one mile east of, and parallel with, Woodward Ave., the chief retail business street. It runs through a section of the city having a population of from 36,000 to 50,000 a square mile. The streets are narrow and close together. About one third of the entire population reside east of this line. Belle Isle Park, the waterworks, many large industries and some of the finest residential districts lie east of the line, so that the total number of individual movements per day over the tracks runs into the millions. There are 44 streets involved between the Detroit River and Ferry Ave., many of which are heavy traffic streets, two of them, Jefferson and Gratiot Avenues, carry from 8,000 to 15,000 vehicles a day, in addition to street cars, while there are street car movements of 1,280 and 2,800 per day, respectively. Some of the worst crossing accidents in recent years have occurred on these streets, and from every point of view the grade elimination project is the most urgent in the city.

The project has been under discussion for about 18 years. The common council and the railway company had been unable to agree, therefore in 1914 the council petitioned the Michigan Railroad Commission for an order to compel grade separation. Various plans had been made and modified, by both the railway and the city. In 1917, when the Division of Grade Separation assumed charge, the plan before the Railroad Commission, known as Grand Trunk Railroad, Plan N, provided for 6 to 8 ft. elevation of the railway and 8 to 18 ft. depression of the streets. It was the city's contention that this plan was wholly improper. New plans were immediately prepared, which provided for depression of the G.T.R. tracks over part of the district. The present railway yard, from the passenger and freight stations, is on a substantially level grade, about 4 ft. above high water. This grade, carried under Jefferson Ave., permits ample drainage. A rising grade of four-tenths of a foot per 100 ft. to Macomb St., and a grade of 1 ft. per 100 to Alexandrine Ave., provides perfect drainage, the same alignment as proposed by the railway, the same maximum grade as the road now operates, and puts the tracks some 20 to 22 ft. below the correct grades of all streets. This plan was submitted to council Feb. 28, 1917, with a full report setting forth the comparison of this plan with plan N. This plan was approved by the council, and became known as the City of Detroit Plan.

At a hearing before the Michigan Railroad Commission on March 8, 1917, the city plan was offered as a substitute for plan N, and on the strength of the showing made, the railway withdrew plan N and offered in its stead plan O, which provides for a 3 ft. elevation at Brush St. station, a maximum elevation of 22 ft. between Riopelle and Gratiot Sts., and which comes to the city plan grades at Alexandrine Ave. and conforms with the city plan to Ferry Ave. Plan O eliminated nearly all of the

objectionable features of plan N, but placed the maximum grades in the railway yards along the river front. The city, therefore, still contended for the adoption of the city plan.

With the United States entry into the Great War, and the subsequent taking over of railway operation by the U.S. Government, the matter of grade separation was necessarily dormant, this being the case until after the relinquishment of control in Jan., 1920, although application was made to the Michigan Public Utilities Commission, by the Grade Separation Engineer, in Dec., 1919, asking for a decision of the G.T.R. case then pending. On July 30, 1920, the Michigan Public Utilities Commission made an order determining the necessity for grade separation along the Dequindre St. line of the G.T.R. between Brush St. station and Milwaukee Jct., and approved the city's plan, providing for the depression of the railway tracks under and below intersecting streets, from and including Jefferson Ave., on the south, to and including a point a short distance southerly of Hale St., on the north, and the elevation of the tracks, beginning a short distance southerly of Hale St., and extending northerly to beyond Ferry Ave. The order also directed that the city and the railway prepare final detailed plans, specifications, and estimates of costs, to be presented before grade separation was to be finally ordered.

Acting in co-operation, the G.T.R. Western Lines Engineering Department and the City of Detroit's Grade Separation Division set about preparing detailed plans and estimates as required, and weekly conferences were held in the G.T.R. Western Lines Chief Engineer's office during the spring and summer of 1921. On Sept. 16, 1921, John W. Reid, Grade Separation Engineer for the city, wrote the Chief Engineer, G.T.R. Western Lines, suggesting that an apportionment of the expense of the proposed Dequindre St. grade separation project be made, obligating the city to pay 25% and the railway 75%, stating that he was prepared to make a recommendation to the common council on that basis, to effect a settlement of the controversy between the parties in the pending proceeding. On Dec. 6, 1921, the G.T.R.'s Chief Engineer, Western Lines, received a reply from Mr. Irving, intimating that the proposition was under active consideration. On March 28, 1922, the Chief Engineer wrote that the G.T.R. was willing to enter into an agreement with the city to separate grades on Dequindre St. as far north as Hale St., in accordance with the city's offer as to division of expense. This proposition was accepted by the common council and an agreement was prepared acceptable to the city and was signed by the G.T.R. officials in Jan., 1923. Construction under this agreement will be started early in the spring. There are 24 streets involved in the work.

Acting Minister of Railways & Canals G. P. Graham, stated in the House of Commons, recently, in answer to questions by T. L. Church, North Toronto, that the grade separation in Detroit will involve an expenditure of \$4,600,000, spread over a 10-year period; that the G.T.R. will be responsible for approximately \$3,000,000, and the City of Detroit will be responsible for the remaining \$1,600,000.

Toronto Viaduct Question in Parliament.

The following questions were asked in the House of Commons recently, by T. L. Church, North Toronto, and answered by acting Minister of Railways and Canals G. P. Graham:

Q. "Is it the Government's intention to carry out the Grand Trunk Ry's. commitments, as set out in the agreement for the erection of a viaduct in Toronto, dated 1913, towards which the city, the C. P. R. and the G. T. R., were to contribute one-third each of the capital cost?" A. The Canadian National Ry's. directors will deal with any commitments of previous managements."

Q. "Did a deputation wait on the Government, in the spring of 1922, urging the carrying out of this agreement and the opening of the new union station in Toronto, and what will be done by the Government to give effect to the viaduct agreement?" A. "Yes."

Q. "Will the Government, as requested by the deputation, use its best efforts to get a settlement of this long standing dispute, in the public interest?" A. "It is hoped that negotiations with respect to terminal arrangements at Toronto, the possible use of the new union station there, and related matters, will shortly be inaugurated by the Canadian National Ry's. management."

The following questions were asked by J. H. Harris, York East, Ont., and answered by the acting Minister of Railways and Canals:—

Q. "Is it the Government's intention to demand that the viaduct order of 1909, as amended and consented to in 1913, by the City of Toronto, the Toronto Harbor Commission, the Canadian Pacific and the Grand Trunk Ry's., and validated by a Board of Railway Commissioners' order be proceeded with, and when, or if not, why?" A. "Terminal arrangements at Toronto are not dealt with by the Government, but by the parties immediately concerned, and the Board of Railway Commissioners."

Q. "Has the Government had any representations made to it by the C.P.R. C., with a view of releasing that company from its obligations regarding this order, and if so, when, and on what promises were these representations made?" A. "No."

Q. "Does the Government consider this work is necessary?" A. "It is not a matter for the consideration of the Government, but of the Canadian National Ry's., the management of which hopes shortly to deal with the questions at issue."

Q. "If not, why?" A. "Answered by no. 6."

Q. "Has the Government under consideration any alternative scheme in this connection, and if so, what is it?" A. "No."

Malicious Railway Damages in Ireland.

—The Great Southern & Western Ry., which is the largest railway in Ireland, connecting Dublin and many important places in the south, and west, and north-east, and which operates 1,130 miles, has issued a map showing the location of malicious damages done to the system from June 28, 1922, to Jan. 5, 1923, which are summarized as follows: Permanent way damaged, 375; over bridges damaged, 51; under bridges damaged, 207; signal cabins damaged, 83; buildings damaged, 13; locomotives derailed, 42.

Hearing on Electric Classification Lamps for Locomotives.

The Board of Railway Commissioners sitting at Ottawa, Feb. 7, heard an application, by the Brotherhood of Locomotive Firemen and Enginemen and the Brotherhood of Locomotive Engineers, for an order directing Canadian railways to equip their road and assisting locomotives with electric classification and marker lamps. The C. P. R. was represented by E. P. Flintoft, Assistant General Solicitor; W. A. Newman, Mechanical Engineer; and J. A. Shaw, General Electrical Engineer; the Railway Association of Canada by C. P. Riddell, General Secretary; the Michigan Central Rd., by W. B. Kingsmill, Solicitor; and D. J. Donahue, Division Superintendent; and the locomotive men's brotherhoods by W. L. Best, Legislative Representative, B. of L. F. and E., and H. H. Lynch, General Chairman B. of L. F. and E. for C. P. lines. In the discussion, it was stated that all Canadian railways except the C. P. R. were equipping their locomotives with electric classification and marker lamps. Mr. Flintoft stated the C. P. R. was opposed to the order, on the ground that electric lamps are unnecessary, that they add nothing to safety, that they would be an additional source of expense, and that they would be to a certain extent unreliable. He said the C. P. R. had 1,884 locomotives equipped with electric headlights, and that it would cost \$95 a locomotive to equip them with electric classification and marker lamps, or a total of \$188,000. Mr. Best, in supporting the application, showed in a practical manner how oil lights are unreliable, blow out easily, corrode and waste oil, and introduce an element of extreme danger, because of the necessity of locomotive men going out on the running board to light them under all sorts of conditions. Messrs. Shaw and Newman stated why they considered electric lamps unreliable.

Steel Rail Order.—Canadian Railway and Marine World for February, in announcing orders given by the Canadian National Rys., for 85 lb. steel rails, standard C. N. R. section, mentioned that 40,000 tons had been ordered from Algoma Steel Corporation for Western Lines, delivery to commence March 1, and that 25,000 tons had been ordered from the British Empire Steel Corporation for delivery either at Sydney, N. S., or Montreal, commencing early in the spring; also that a further order for 15,000 tons from that company was under negotiation. We have since been officially advised that the B. E. S. Co., exercised the option it had, and that delivery of the 15,000 tons will be made immediately after the opening of navigation.

Bank Directors as Canadian National Railways' Directors.—Acting Minister of Railways and Canals G. P. Graham, stated in the House of Commons recently, in answer to questions by J. H. Harris, East York, Ont., that James Stewart, of Winnipeg, is a Canadian National Rys' director, having been appointed Oct. 4, 1922. The Railways and Canals Department had no information as to whether he is the same James Stewart, who is a director of the Bank of Montreal, nor has it any information as to whether there are any other bank directors who are Canadian National Rys' directors.

Freight and Passenger Traffic Notes.

The C.P.R. is reported to have handled 3,074 cars of grain from the prairie provinces to Winnipeg in the two weeks ended Jan. 14.

The Reid Newfoundland Ry.'s branch lines to Trepassay, Bay ve Verde, and Bonavista, were closed for traffic for the winter in January, in continuation of the policy inaugurated last winter, on the recommendation made by Sir George Bury in 1920.

The Canadian National Rys. are reported to have carried 302 cars of grain into Winnipeg, on Jan. 13, making a total of 90,022 cars, containing 116,156,000 bush. for the 1922-23 season, compared with 76,530 cars and 100,277,000 bush. for the 1921-22 season.

A New York fur trader, is reported to have stated in Calgary, Alta., recently that it cost him 50c a pound or \$100 a ton for freighting furs from Fort Chippewyan to the Alberta and Great Waterways Ry. railhead near McMurray, about 200 miles.

The Interstate Commerce Commission is reported to have directed that U. S. railways issue non-transferable, interchangeable tickets in the denomination of \$90 at a reduction of 20% of the face value. These tickets were asked for by commercial travellers.

The Canadian National Rys., are reported to have hauled 94,471 cars containing 122,530,000 bush. of grain from the prairie provinces, from Sept. 1, 1922, to the end of January, against 81,074 cars, containing 106,727,000 bush., for the same period of 1921-22.

The Regina, Sask., Board of Trade discussed recently the possibility of securing a through passenger train service from Minneapolis and St. Paul. The suggestion is for a train over the Great Northern Ry. to Northgate, and thence over the Grand Trunk Pacific Ry. to Regina.

At Newfoundland Board of Trade's annual meeting at St. John's Nfld., recently, the President in moving the adoption of the report of the council said, that during the past year the railway service has given very good satisfaction, under the management of R. C. Morgan.

The C.P.R. and the G.T.R. removed their representatives from the King's warehouse in Toronto after Dec. 31, 1922, making it necessary for all freight and storage charges on goods which have been put into the warehouse to be paid at the railways' respective offices on Simcoe Street.

The London & Port Stanley Ry. is reported to have handled 12,000 tons of coal on its line from Port Stanley to London, Ont., during the first week of the year. The coal was brought by car ferry from Conneaut, Ohio, five round trips being made. The car ferry will be operated as long as Lake Erie remains open.

The C. P. R. is reported to have hauled 7,000 cars of grain, totalling 10,234,000 bush., from the prairie provinces to Vancouver, B. C., for ocean shipment between Sept. 1, 1922 and Jan. 31. At Jan. 31 there were reported to be 900,000 bush. of grain from C. P. R. points awaiting shipment in the Vancouver elevator, and 500 cars in transit.

Timiskaming & Northern Ontario Ry. put in operation in January, through the fire swept district, a special relief train consisting of 4 freight cars and an office

car. The center of the train's operations is at Liskeard, Ont., and all supplies are being distributed from the relief train, which stops at all stations. It carries a staff of five, including two nurses.

The Canadian National Rys. District Passenger Agent's office at Vancouver, is reported to have received an application recently from Los Angeles, Cal., for a refund on a ticket bearing the signature of Jos. Hickson, General Manager, G.T.R., and issued Aug. 12, 1876. The ticket was issued in connection with a centennial tour and was the return portion available between Detroit and Philadelphia. It will be retained as a souvenir.

The Pacific Great Eastern Ry., with the approval of the British Columbia Minister of Railways, has inserted a condition in bills of lading or any contract for receiving, forwarding or delivery of goods, to the effect that all perishable goods conveyed or shipped over its line shall be subject to the owner's risk, as to damages from frost, detention or weather conditions, and that the company shall not be liable for damages to such goods arising from such causes.

The Canadian National Rys. recently reduced the night train service between Halifax, N.S., and St. John, N.B., from daily in either direction to tri-weekly one in either direction. Train 9 leaves Halifax at 8 p.m., daily except Sunday, for Truro, and from there to St. John on Tuesday, Thursday and Saturday, arriving in St. John at 7.40 a.m. on Wednesday, Friday and Sunday. Train 10 leaves St. John at 10.45 p.m., Monday, Wednesday and Friday, for Truro, where it runs daily, except Sundays, to Halifax.

Canadian National Rys.' western passenger officials had a conference with the Regina Board of Trade, Feb. 1, in reference to train service between Regina and Yorkton, Sask., over the Grand Trunk Pacific Ry. branch. At present there is a train service three days a week between these points. A daily train was asked for, and as an alternative it was suggested that a railway motor car might be operated alternately with the present train service, and utilized for the other three days of the week on the Regina-Weyburn line.

Transportation Companies Assessment in Toronto.—The Toronto Assessment Commissioner's annual report for 1922, contains the following details of the assessment of the various transportation companies' properties for city taxation:—Grand Trunk Ry., \$14,395,563; Canadian Pacific Ry. and Ontario and Quebec Ry., \$10,150,594; Canadian National Rys., \$1,964,926; Toronto and York Radial Ry., \$384,322; Toronto Suburban Ry., \$57,514; C. P. R. Telegraph Co., \$313,189; Canadian National Telegraphs, \$281,436.

Government Grain Elevator at Vancouver.—T. Sales, Saltcoats, Sask., asked in the House of Commons, Feb. 22: "In view of the fact that a bill has been passed providing for the erection of an extension to the terminal elevator at Vancouver, have plans and specifications been received by the Government; have any contracts been let in connection with the construction, and if so, who to, and for what amount." Minister of Marine Lapointe replied "No."

Hearing on Air Brakes for Self Propelled Cars.

At the Board of Railway Commissioners sitting at Ottawa, Feb. 7, railways were called upon to show cause why all cars propelled by other than steam power should not be equipped with air brakes. The C. P. R. was represented by E. P. Flintoft, Assistant General Solicitor, and W. A. Newman, Mechanical Engineer; the Canadian National Rys. by C. E. Brooks, Mechanical Assistant, Locomotive Department, to Vice President, operation and maintenance; the G. T. R. by J. P. Pratt, Assistant General Solicitor; the Michigan Central Rd. by W. B. Kingsmill, Solicitor; the Canadian Electric Railway Association by L. Burpee; the Railway Association of Canada by C. P. Riddell, General Secretary; the Brantford Municipal Railway, by W. T. Henderson, K. C.; and the Quebec, Montreal and Southern Ry., by A. L. Currie, Superintendent.

Mr. Riddell stated that the Railway Association's rolling stock committee, after study, had concluded that there was no necessity for equipping self propelled cars weighing less than 35,000 lb. with air brakes, as hand brakes were quite efficient. Mr. Brooks described the Canadian National Rys.' experiences with self propelled cars, and emphasized the efficiency of hand brakes on light cars. He pointed out that the installation of air brakes on light cars serving remote points on branch lines, where there would be no expert men to maintain the brake system, would result in delay and needless expense. Mr. Newman described tests made with a light gasoline car on the C. P. R. La-Salle Loop Subdivision, which demonstrated the hand brake to be efficient and reliable. Mr. Crombie emphasized the necessity for low first cost, and low operating cost, for self propelled cars serving branch lines of low traffic density, and pointed out how the installation of air brakes would increase costs. Mr. Currie reviewed the Q. M. and S. Ry. experience with a light car, which showed hand brakes to be safe and satisfactory. The Chief Commissioner said that while he duly appreciated the railways' desire to keep down costs, it was his duty to the public to see that railway travel be made as safe as possible, and hence the necessity for the investigation.

The electric railway representatives were interested in ascertaining if there would be any likelihood of change in general order 56, issued in May, 1910, which requires all electric cars over 37 ft. long, or weighing over 37,000 lb., to be equipped with power brakes. The proceedings indicated that as this order had brought forth no complaints since its issuance, further regulation of the situation in connection with cars on electric railways would be unlikely. Judgment was reserved.

Lt. Col. T. A. Hiam, Railway Expert to the Permanent Commission on Communication and Transit, under the League of Nations, Geneva, Switzerland, formerly private secretary to Sir Donald Mann, then Vice President, Canadian Northern Ry., in ordering Canadian Railway and Marine World for the League's Library, recently, wrote: "I prize the information which it contains very highly."

Grand Trunk Railway Commitments in Detroit and Chicago.

The following questions were asked in the House of Commons recently, by T. L. Church, North Toronto, the answers being given by acting Minister of Railways and Canals G. P. Graham:—

Q. "Is it the Government's intention to carry out the capital commitments of the Grand Trunk Railway in various parts of Canada for new terminals and capital expenditures in various places, as provided by agreements made by this railway before it was absorbed into the National Railway System?" A. "Such matters will be dealt with by the board and management of Canadian National Rys."

Q. "Is it the Government's intention to expend \$4,000,000 on the Grand Trunk Railway for grade separation at Detroit, and is the following dispatch substantially correct to the Toronto Globe? 'Detroit, Jan. 12.—Negotiations of 20 years standing between the city and the G. T. R. were completed today when the council gave tentative approval to a \$4,000,000 grade separation programme presented by J. W. Reid, City Engineer.' If so what amount of money will Canada be asked to provide for that work?" A. "Grade separation at Detroit will involve an expenditure of \$4,600,000, spread over a 10-year period. The G. T. R. will be responsible for approximately \$3,000,000 and the City of Detroit for the remaining \$1,600,000."

Q. "What amount of money will Canada have to furnish for the use of the Grand Trunk System for the new \$100,000,000 passenger terminal at Chicago to replace the Dearborn St. structure recently destroyed by fire?" A. "The terminal in question is used by the G. T. R. which, with four other railways, own the holding company—the Chicago and Western Indiana Rd. Co. No definite action in regard to a new station is expected for several years. Meanwhile, published estimates of possible cost are mere guesses. Should a new structure finally be decided on, it should be financially self-sustaining."

Special Trains for Canadian National Railways' Directors' Inspection Trips.

The following questions were asked in the House of Commons recently, by J. H. Harris, York East, Ont., and answered by acting Minister of Railways Graham.

Q. "Was a special train provided for the inspection of the new Canadian National directors in January 1923?" A. "Yes."

Q. "If so, how many private cars were attached to such special train, and how many cars in all composed such train?" A. "There were no private cars so-called attached to the train. There were, however, 7 business cars, these being the cars which were used by officers in the performance of their work. In addition to these cars, there were a baggage car for the train crew and an observation car in which delegations were met and received."

Q. "How many directors took part in such trip and between what points, and at what times did such directors take part in the trip?" A. "Three."

Q. "What was the cost of such trip to the National Ry. Co.?" A. "It is not possible, without a great deal of accounting work, to develop the cost of the

trip. There was no unnecessary cost, since the trip was an essential part of the directors' duties."

Q. "What practical results were obtained by such trip?" A. "The President and directors saw the lines and terminals, and became acquainted with the character of the traffic, its volume, the needs of the property, and, what is more important, the qualifications of the various officers, but the trip was primarily for the benefit of the President, in order that he might collect sufficient information to intelligently develop an organization for the administration of the property and decide the personnel of the railway system. It would be impossible to administer such a property without information of this character."

Mr. Harris asked precisely similar questions in regard to the directors' inspection trip made in Oct. 1922, and received similar answers, except to two questions, viz., no. 3, as to the number of directors on the trip, which were stated to be 6, and no. 5, as to practical results obtained, which was answered as follows: "Directors saw lines and terminals covered on trip, and discussed various railway matters with the general and territorial officers, who travelled on train from time to time over their respective territories. The directors obtained a comprehensive view of the properties, and the various important questions at issue."

Water Supply Improvements, Canadian National Railways, Western Lines.

During 1922, the policy of improving existing water supplies and the construction of new supplies where needed on the Canadian National Rys. Western Lines was continued, to reduce operating costs and improve traffic movement. The following is a list of the main points where such works were done: At Raymore, Pope, Hubbard, Rama, Maryfield, Paskewegon, Wiseton and Conquest, reservoirs were formed by damming a ravine and excavating a reservoir to give additional depth and storage. At Tilney, Ethelbert, Gravelbourg, Radville and Mecheche, ravines or creeks were dammed. In all cases earth dams, riprapped with rock against wave action, with puddle core walls carried down to an impervious stratum, have been used in reservoir work. The original reservoir at Edson, formed by damming a creek valley, was deepened. Ample supplies have been obtained by these means, the total water impounded amounting to 350,000,000 gall., and pumping facilities, pipe lines and tanks were constructed at each water supply. Cast iron water mains 6 in. in diameter were laid in connection with the Lloydminster and Kindersley water supplies, aggregating 26,200 ft. long, and 8 in. cast iron mains at North Battleford and Neebing of a total length of 19,000 ft.

Besides projects of the above character, smaller supplies were constructed and improvements to existing supplies made at 38 points. The undertakings involved among other work the construction of 11.8 miles of pipe line; 19 tanks, including 2 of 150,000 gall. capacity; 16 pumphouses with equipment, and 620,000 cu. yd. of excavation in dams.

John P. Watters, Locomotive Foreman, Canadian National Rys., Mirror, Alta., writes: "Canadian Railway and Marine World is very interesting and instructive, and I take great pleasure from it."

Canadian Railway
AND
Marine World

Founded in 1896 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transporta-
tion Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

Exemption of Government Railway from Sales Tax.

On another page of this issue are details concerning the exemption of certain Dominion and Provincial government owned railway lines from the payment of sales tax on their purchases. The position is that purchases for the Canadian Government Rys, including the Intercolonial and subsidiary lines, and the National Transcontinental Ry., also the Timiskaming & Northern Ontario Ry. owned by the Ontario Government, are exempt from the sales tax, and that the exemption of the Hydro Electric Rys. operated by the Hydro Electric Power Commission of Ontario is under consideration. It appears probable that when the co-ordination of the various lines to be operated as the Canadian National Rys., are complete, the present Canadian Northern and Grand Trunk lines to be taken in will enjoy similar privileges, while the C. P. R. and other privately owned lines will have to pay sales tax on their different purchases. In this matter, the stand may very easily be taken that in the final analysis it does not matter whether a sales tax is charged on the goods supplied government owned utilities, or not, for the reason that the Government, which would collect the taxes if paid, is financially responsible for the railways. It may be argued that to charge the tax would be merely taking money out of one pocket to place it in another, or another case of robbing Peter to pay Paul. With this view, however, we cannot agree, for reasons which present themselves on considering the question.

In the first place, these government owned railways are operating in competition with, and in the same field as, privately owned railways. It is to the advantage of the community at large that knowledge be had of the comparative operating results secured by the government owned roads and privately owned roads, for by no other gauge, with all prior conditions given due consideration, can operating efficiency and economy be judged. It must be evident that if one road is able to buy goods on which no tax has been levied, while a competing road, operating on the same scale of rates, is compelled to use materials on which a tax has been collected, there can be no reliable standard on which to base a comparison of the operating results secured.

Not only is the community's opportunity to judge operating efficiency and economy unduly restricted by this removal of an even basis of comparison, but in addition the situation becomes one of manifest unfairness to the railway which must use materials on which a tax is levied. This is so obvious as to require no argument, in view of the fact that the railways against which the discrimination is directed have no opportunity to balance the situation, by increasing their unit revenues, or decreasing their unit costs, which the favored railways have not got to an equal degree. All that remains for the railways to which the aid is not extended is to play the game with the cards stacked against them so far as material costs are concerned.

It must be evident that if railway results are not going to be based fairly and squarely on the interrelation of railway operating revenues and expenses alone, but are going to be influenced by totally extraneous considerations and factors, of which this sales tax exemption is a fine example, there will not be

the same necessity for railway officers to have the relation as between revenues and expenses as favorable as possible, for the reason that that relation will not be a clean cut expression of the results being obtained, but will be a doubtful and obscure measure of them, influenced by unknown factors.

Another objection which may be taken to this sales tax exemption ruling, and perhaps the most important, is to be found in the fact that experience has demonstrated that in any community where railways have not been operated as purely commercial undertakings, the expenses of operation have been unduly high. A railway is, or should be, a purely commercial undertaking, like any other business, and it should be operated with such efficiency and economy that with commercially and economically possible rates it would look after itself financially, or be regarded as economically unjustified. Unfortunately, in Canada much of the railway mileage is economically unjustified, and the situation is one wherein government assistance is necessary in regard to capital expenditures, and in regard to the payment of deficits after meeting of operating expenses, but that should be no reason why government assistance should intrude itself into actual operation, particularly when competing lines must get along without such assistance. The aim should be to have government railways operated as railways, and as purely commercial propositions, and not as government enterprises to be granted government aid in actual operation, merely because they are such. With special privileges, of which this tax exemption is a good example, extended to government roads, people are forced to regard them collectively as purely an arm of the government owning them and therefore not free from the suspicion of being a political instrument. But with such privileges withdrawn, and with operation carried on so that the operating results obtained, good or bad, are obtained by the railways themselves and by nothing or nobody else, people will come to regard government roads primarily as railways, as they should be regarded, and will cease to think of them primarily as government undertakings, surrounded by that semi-commercial and semi-political atmosphere which envelopes all government undertakings. The success of the Canadian National Rys. enterprises will depend largely on the manner in which they are regarded by the public.

U. S. Railroad Administration
Losses.

A Washington press report of Feb. 4 states that losses sustained by the United States people through wartime operation of railways by the U.S. Railroad Administration, and its aftermath of earnings, guarantees and damage settlements, will total approximately \$1,800,000,000, according to data given in a report by J. C. Davis, Director General of Railroads, to President Harding. Figures received by Canadian Railway and Marine World indicate, on analysis, that the sum mentioned in the press report is correct. The loss on the 26 months of Government operation of the U.S. railways was \$1,141,000,000, this including, in addition to the direct operating loss suffered, some payments for undermaintenance of pro-

erty and also payments to various short lines in connection with Federal control matters. To this must be added some \$536,000,000 on account of the 6 months guarantee period immediately following the period of Federal control, and it is probable that when all railways debts are discharged by the U.S. Government the \$1,800,000,000 figure will be reached

The Railway Rolling Stock and Equipment Outlook.

Since the completion of large rolling stock orders for Canadian railways in the latter part of 1920 and the early part of 1921, manufacturers and dealers supplying railway equipment of various kinds have felt the pinch of economic depression as much as, and in a good many cases, more than, other lines of industry. In the last two or three months, however, largely consequent on the placing of large orders by the Canadian National Railways, and of others by the C.P.R., as detailed in Canadian Railway and Marine World for February, business conditions for car and locomotive builders and the railway supply industry generally have brightened considerably, and the immediate future seems full of promise. In the United States 1922 was a year in which car and locomotive builders received orders which it will take them many months to complete, and recent orders and enquiries by many roads

and exceeded. It will readily be seen, therefore, that the U.S. Railroad Administration experiment was an expensive one for the U.S. people, the large deficit noted being in addition, of course, to the direct transportation charges paid, at rates equal to or in excess of those prevailing in Canada during and following the period of Federal control.

the future. In this connection the accompanying chart, showing railway traffic trends in the U.S. in relation to population changes, will be of value. Based on a report issued recently by the Interstate Commerce Commission, it shows that while population in the U.S. increased by 20.73% between 1890 and 1900, freight traffic increased 85.81% and passenger traffic 35.38% in the same period. Between 1900 and 1910, population increased 21.02%, or 46.11% over that of 1890, while freight traffic increased by 81.10%, or 234.64% over 1890, and passenger traffic increased 101.62%, or 172.95% over that of 1890. Between 1910 and 1920, while population increased 14.94% or to 67.93% greater than in 1890, freight traffic increased 62.22% or to 442.86% greater than 1890, and passenger traffic increased 46.48% or to 299.82% greater than in 1890.

Bearing in mind that activity in the

Percentage Increases in United States Population, Freight Traffic and Passenger Traffic by Decades, 1890-1920.

indicate that the demand for railway equipment is still far from being even temporarily met. As business conditions in Canada generally follow along the lines taken by those in the U.S., the condition mentioned in the latter country must be regarded as distinctly encouraging for the Canadian railway supply industry.

Of course, with no equipment orders of consequence having been placed for some time, with car shortage having been present last autumn in more or less degree throughout the whole of North America, and with business since time immemorial marked by booms and depressions succeeding one another, one of the latter having been present for over two years, at the end of 1922 some change for the better in the railway supply industry could logically have been expected. The mere fact of there having been logical grounds for the entertainment of such an expectation, however, should not form the occasion for viewing with decreased encouragement the upturn which has set in, any more than the fact that the railway supply industry experienced depressed conditions for an extended period should, while the depression existed, have made the future seem altogether discouraging.

The past is always of interest and the future is of importance, but the past may also be of importance in indicating

car and locomotive building and railway supply industries must depend primarily on railway traffic, if the U.S. experience can be taken as any indication of what developments in Canada will be like, some idea of the future in store for railway supply people in Canada may be arrived at. There is no reason to suppose that this country, with its vast agricultural, mineral, timber and other resources, will be restricted for long to its present population, and with increasing population, railway traffic, increasing so much faster than population, should come to the railways in volume hitherto undreamed of. Big traffic means the need for additional equipment of all kinds, for both replacements and additions, and the need for more equipment means more and better business for those who manufacture and supply it. The outlook, then, should not be so bad as it was almost universally painted in 1921 and the earlier part of 1922. Of course, there will be ups and downs in the future, as in the past, but the main trend is unmistakably in the direction of bigger and better business than the past has ever seen.

The Canadian National Rys. is reported to have completed the installation of a telephone dispatching circuit from Red Pass Jet., to Vancouver B. C., and to be abandoning telegraph dispatching over that distance.

Grain in Store at Elevators.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that for the week ended Feb. 9, the quantity of grain in store decreased, as follows,—wheat, 148,694; oats, 239,341; barley, 248,497, and flax, 40,864 bush.

In western country elevators there were increases, wheat 142,047; oats 211,731; barley 22,249; and rye 729 bush., and a decrease in flax of 9,006 bush. Receipts for the week ended Feb. 2, were 4,477,012 bush., and shipments, 4,105,832. Interior terminal elevators showed decreases, wheat 3,693; barley 4,554, and flax 2,095 bush., and increases, oats 75,387; rye, 1,555 bush.

Public and private terminal elevators at Fort William and Port Arthur showed increases, wheat 588,918; oats 55,598; barley 101,016, and rye 70,114 bush., while there was a decrease of 26,788 bush. in flax. The total receipts at Fort William and Port Arthur, from Sept. 1, 1922 to Feb. 9, 1923, were 241,603,231 bush., and at Vancouver, B. C., 10,987,260 bush.

Winnipeg private terminal elevators showed decreases in all grains, wheat 5,517; oats 30,361; barley 1,810; and flax 975 bush.

In eastern public elevators there were decreases in all grains, wheat 1,694,477; oats, 188,014; barley 56,183, and flax 2,000 bush. The receipts of all grains were, by rail, 1,061,498 bush., and the shipments, by rail, 543,546 bush., and by ship 2,403,522 bush.

The quantity of U. S. grain in store at eastern public elevators was 1,967,789 bush., compared with 4,119,494 bush. at the same period in 1922.

U. S. lake ports showed decreases in oats 144,857; barley 140,525, and rye 67,158 bush., while there was an increase of 1,113,987 bush. in wheat.

U. S. Atlantic seaboard ports showed decreases in all grains, wheat 289,959; oats 218,533; barley 168,690; and rye 4,406 bush.

The United States Railways' Financial Results.

In Dec. 1922, the U. S. class 1 railways had a better month than in November, and a much better month than in Dec. 1921. Net operating income for December was \$79,155,000, representative of an annual return of 5.15% on the tentative valuation, compared with a return of 4.46% in November, and but 3.23% in Dec. 1921. Operating revenues in Dec. 1922, were \$513,575,800, or 20.8% greater than in Dec. 1921, but operating expenses, \$404,898,000, were but 15.2% greater.

For the complete year 1922, the total net operating income was \$776,421,400, so that U. S. class 1 roads earned at the rate of 4.14% on their tentative valuation throughout the year. In 1921, the total net operating income was \$615,945,600, representative of a return of 3.28%. Operating revenues for 1922 were \$5,616,284,800, an increase of 0.8% over 1921, and operating expenses for the year, \$4,454,939,700, were 3.2% less than in 1921. The operating ratio for the class 1 roads as a whole was 79.32 in 1922, compared with 82.61 in 1921. The effect of freight rate reductions on the roads' revenues is to be seen in the fact that while gross earnings increased by only eight tenths of 1%, about 9% more freight traffic was carried in 1922 than in 1921.

Removal of Canadian National Railways' Audit Office Staff from Moncton.

R. B. Hanson, York-Sunbury, N. B., said in the House of Commons on Feb. 23: "I desire to put the question to the acting Minister of Railways with respect to a notice which I am informed was posted in the Government Rys' office at Moncton yesterday as follows:—'To audit office staff. I have been instructed to notify you that the revenue accounts of the entire Canadian National Ry. system are to be handled at Montreal, commencing May 1. It is intended that the auditing of the Canadian Government Rys. revenue accounts for April will be completed at Moncton, and that as soon as practicable after May 1, our staff will be moved to Montreal. Any clerk who does not desire to go to Montreal, but prefers to sever his or her connection with railways, will please advise the chief clerk accordingly.' (Signed) W. H. Estano, Auditor of Traffic.' I am instructed that this affects 180 employes at the very outset of whom 110 are married men, for the most part owning their homes at Moncton. Is this notification correct?" Mr. GRAHAM, acting Minister of Railways and Canals: "The organization and distribution of the staff is entirely in the hands of the Canadian National Ry. I have no knowledge whatever of that notice."—Mr. MEIGHEN, Leader of the Opposition: "Will the minister find out and let Parliament know? I know how earnest a devotee he is of the principle that parliament should know all the details of operation."—Mr. JACOBS: "I thought we were taking the railways out of politics."—SIR HENRY DRAYTON: "At the same time I would like to ask the Minister if he would also advise us whether all the staff which has been looking after the auditing of the Canadian National Rys. will be moved from Toronto."—Mr. GRAHAM: "The Canadian National Ry. board and its offices are open to my hon. friend just as they are to me. A few days ago he moved for a copy of all letters that had been sent by any member of the government to the Canadian National Ry. board. This would add to that one or two letters, and it might be brought up in the House that we were trying to influence the railway board. The board has a difficult task to perform. Any information that is required, for which hon. gentlemen will ask in the regular way, I will endeavor to get through the board."—Mr. MEIGHEN: "This is asked for in the regular way. If the Minister takes the ground that he will not disclose such information in Parliament, I can understand that position. If he does not take that ground, I take it, of course, that he will have to reverse himself. We want the information."—Mr. GRAHAM: "I am, of course, out of order just as my right hon. friend was. But I did not take any such ground; I did not hint at any such ground, rather the contrary. I said that the information could be secured from the board by any member; I also informed him that they could communicate with that board. But I added that if it was so desired, I would try to secure the information."—Mr. FIELDING: "Is my right hon. friend not reversing his position when he asks for such information?"—Mr. MEIGHEN: "I am not at all. If the Government say that they do not feel it is in the public interest that these details should

be given, I will abide by that decision."—Mr. FIELDING: "The government is not supposed to possess such information."—Mr. MEIGHEN: "But we are asking them to get it."—Mr. FIELDING: "I am not sure that they have the right to get it under the rules."—Mr.

MEIGHEN: "That is different from the position taken a year ago. If my hon. friend would take the position that was then taken we would not complain."—Mr. FIELDING: "The right hon. gentleman should stand by his own position."—Mr. MEIGHEN: "I do, precisely."

Canadian National Railways Electrification Plans for Toronto District.

Canadian Railway and Marine World gave in January on pg. 27 and in February on pg. 83 particulars of the developments in connection with provision of an electric railway service by the Canadian National Rys. in the Niagara Peninsula and east and west of Toronto. As stated, reports had been presented to the management on the situation east of Toronto, where the proposition is to use a portion of the original Canadian Northern line between Toronto and Trenton, together with the projected Toronto Eastern Ry., and also concerning the Niagara, St. Catharines and Toronto Ry. situation.

Sir Henry Thornton, in speaking at the Toronto Canadian Club's luncheon on Feb. 12 said:—"This community, that is to say, the territory lying between Coburg, Toronto, Hamilton and Niagara Falls, has been seeking better and more satisfactory means of transport. The C. N. R. system recognizes its obligation to the people who live in that territory and in the territory contiguous to the cities which I have named. We recognize that to retain traffic we must give service. I propose to have the whole situation thoroughly and fully investigated to find in what degree our service fails to meet the requirements of the public and what is necessary to meet those requirements. A committee of appropriate officers of our system already has the subject under investigation, and we hope to collaborate and co-operate with the various municipalities that are interested and with any other interests which in co-operation with us may find it possible to give to the public that service which they require. Let me assure you, that the interests of the C. N. R. system are only selfish to the extent that it will not willingly part with any of its traffic if it can retain that traffic by giving to the public the service which it desires. We are prepared to co-operate and work with any interests which will enable us to best serve the interests of the people of this section of Ontario."

The committee mentioned above consists of R. A. C. Henry, B.A., B.Sc., of the Railways and Canals Department, who is attached to Sir Henry Thornton's personal staff, and who is chairman of the committee; C. A. Hayes, Vice President, Traffic Department, Canadian National Rys., Toronto, and C. G. Bowker, Operating Manager, G. T. R., Montreal. The following questions were asked in the House of Commons Feb. 15 by T. L. Church, North Toronto, the answer being given by acting Minister of Railways Graham:—

Q. "Has the Government's attention been called to a telegram sent to the Hamilton Board of Trade by Sir Henry Thornton, President, National Railways dated Dec. 1922, stating that the Grand Trunk would be immediately electrified between Toronto, Hamilton and Niagara Falls and the border?" A. "The President of the Canadian National Ry. system has given no assurance to the effect

that the Grand Trunk would be immediately electrified within the territory contemplated by the question. An assurance was given, however, that the Canadian National Rys. would at once undertake an investigation of the whole position, to see to what extent it was necessary to improve transportation facilities to meet the requirements of the public; and that as soon as such investigation was completed the public might anticipate immediate relief."

Q. "Have plans been prepared, what will the cost of this work be, and what amount will be required to be furnished by Parliament for this project, and why were the Government and Parliament not consulted before such a declaration of policy involving an expenditure of millions?" A. "The investigation referred to is under way, but has not been completed."

Q. "Is it the Government's intention to electrify the National System in other parts of Canada as well?" A. "The Canadian National management will consider the electrification, from time to time, of such parts of the system as can be electrified economically and in the interests of the public."

Longlac-Nakina Cut-off Construction, Canadian National Railways.

As stated in Canadian Railway and Marine World previously the Division Engineer in charge of construction is Capt. K. G. Polyblank, four resident engineers have been appointed as follows:—C. H. N. Spafford, formerly Assistant Engineer, Nipigon Division, mile 1 to 7; H. L. Benson, formerly Assistant Engineer, Nipigon Division, mile 8 to 16; W. B. Redman, formerly Concrete Inspector, Montreal Division, mile 17 to 23; Hector MacNeil, formerly Assistant Engineer, Chief Engineer's office, mile 24 to 30, including Nakina yards. Their respective headquarters will be about the middle of each section. The line has been revised and retraced. The clearing is well under way and two rock cuts on the south end of the line are open.

O. W. Swenson is in charge of the work for the contractors, Foley Bros., and Hervey, and R. J. Gjerdi is foreman. Four contractors' camps have been built at miles 0, 3, 11 and 18. The contractors are concentrating on supply and material delivery during the winter, on clearing practically the whole line, opening up rock work and building two of the permanent concrete structures at miles 14 and 29. They have sublet the teaming of supplies and materials and all the work opened.

P. H. Fox, Assistant Superintendent, Canadian National Rys., Trenton, Ont., in remitting his renewal subscription for Canadian Railway and Marine World, says: "A well spent two dollars."

The Hudson Bay Railway's Position and Future.

The question of what is to be done in connection with the partially completed Hudson Bay Ry., from Pas to Port Nelson, Man., continues to attract attention from legislatures, assemblies, public bodies of various kinds and a number of the general public.

Under the order-in-council published in Canadian Railway and Marine World for February, pg. 51, a train of boarding cars and gangs of men are reported to have been dispatched to the end of track at Kettle Rapids, mile 334, to put the track into such a condition as would enable the 120 miles of rails referred to in the order to be brought out. This train and the men are reported to have arrived back at Pas, after an absence of about three months, having failed to get beyond mile 285. The track is stated to have been found in very bad condition, and nothing was done to take up any of the track, or haul out any of the surplus of construction materials along the line.

The leader of the Opposition, Mr. Meighen, asked in the House of Commons on Feb. 12: "Has an order, or other instruction, been issued by the Government or by the Canadian National Rys., for the taking up of rails from the Hudson Bay Ry., and if so, by whom, and for how much mileage, and where." Acting Minister of Railways G. P. Graham replied: "Lifting of rails on unused portion of line, mile 214 to end of steel at mile 334 for use elsewhere in west, was recommended by Vice President and General Manager, Canadian National Rys., approved by the directors, and authorized by order in council Nov. 24, 1922." In answer to other questions, Mr. Graham stated that the rails weighed 80 lb. a yard, and as a result of representations made to Sir Henry Thornton when in the west recently, it was decided to let the matter stand pending further consideration.

On Mr. Meighen's motion, the House of Commons passed an order, on Feb. 12, for a copy of all correspondence, writings, telegrams and other documents passing from the Government or the Canadian National Rys., since Aug. 1922, having to do with the taking up of rails on the Hudson Bay Ry.

The Lieut.-Governor's speech at the opening of the Manitoba Legislative Assembly recently referred to the position of construction on the line and said:—"In view of the fact that provision was made years ago by the Dominion Government for defraying the whole cost of construction out of the sale of western land, a resolution will be submitted to you declaring that the completion of the H. B. Ry. should be proceeded with as a matter of vital importance to Western Canada, without further delay." During the discussion on the address in reply, W. C. Kinnell, the Government whip, is reported to have stated he would advocate handing over the railway as it stands to Manitoba and Saskatchewan, so that immediate action could be taken to have it completed and bring relief to the farmers in the West in the matter of freight rates and faster shipment of grain to Europe.

The Saskatchewan Grain Growers passed a resolution at Saskatoon, Jan. 27, calling upon the Dominion Government to complete the line at the earliest possible date. One of the speakers is reported to have stated that while it takes at present practically a month to

deliver grain in Montreal from Saskatoon, it could be delivered in Nelson within ten days. The Manitoba agricultural societies passed a similar resolution Feb. 2.

A private person in discussing the matter advocates the abandonment of the idea of developing Port Nelson, and the diversion of the line to Fort Churchill, which he claims is an excellent port, and he advocates the building of a railway from Fort Churchill to Lake Athabaska.

An Alberta view of the matter favors proving the possibility of regular communication from Hudson Bay to the ocean before any further expenditure is incurred on the railway.

Questions About Sir Henry Thornton's Appointment.

The following questions were asked in the House of Commons recently by the leader of the Opposition, Mr. Meighen, and answered by acting Minister of Railways Graham.

Q. "Did the Government in Oct. 1922, enter into a contract with Sir Henry Thornton by which it agreed that he would be appointed President and General Manager of the Canadian National Ry. Co., and by which contract Sir Henry's salary was fixed, and other terms and conditions imposed?" A. "Yes."

Q. "If so, did the Government have any authority from Parliament for making such contract, and in what section of what statute is that authority?" A. "No."

Q. "What authority in law exists or existed for the Government to enter into any such contract for a fixed term?" A. "None."

Q. "If the Government had no authority from Parliament for the contract made, why did the Government make it?" A. "It was deemed in the public interest to definitely secure Sir Henry's services, and, as the board of directors had not been previously appointed, the Government decided to make an arrangement with him and rely on the board ratifying it, as has been done."

Q. "If the Government was of opinion that a contract of the nature made with Sir Henry Thornton was necessary, and if there was not authority in law to make it, why was Parliament not asked at last session to grant such authority by statute in the usual way?" A. "The circumstances under which it became advisable to execute this contract were not contemplated during last session of Parliament."

Mr. Meighen, moved in the House of Commons, on Feb. 21, for a return of all correspondence between the Government and Sir Henry Thornton, leading or in any way relating to the contract made with Sir Henry for the management of the Canadian National Rys., and for a copy of the contract. The following discussion ensued:—Hon. G. P. GRAHAM, acting Minister of Railways:—"I have no objection to the motion, but there was no correspondence."—Mr. MEIGHEN: "It may be that I am relying too much on the press, but I understood that an application was filed. Would that not come within the terms of this motion?"—Mr. GRAHAM: "It would if there were an application, but there is not."—Mr. MEIGHEN: "The press is wrong again. It is frequently doing the government cruel injustice."—Mr. GRAHAM: "I will not say until

I see what the press says."—Motion agreed to.

A copy of the contract was submitted in the House of Commons, on Feb. 24, by the acting Minister of Railways. A press report says that it provides for Sir Henry's engagement for 3 years at \$50,000 a year; that either party may terminate the agreement on 6 months notice, under a compensation provision; and that the remuneration may be changed by mutual agreement.

Pensions for Canadian National Railways' Employees.

J. T. Shaw, Calgary, West, Alta., asked in the House of Commons recently if the Government had under consideration any pension scheme to be applied to the Canadian National Ry's employees and if not does it contemplate taking the matter under advisement shortly?

Acting Minister of Railways Graham replied:—"That is a pretty large question to answer without any notice having been given. The Grand Trunk has a superannuation scheme. The Intercolonial has what is called a provident fund, which is a similar scheme. Just what the Canadian Northern had I am not able to say, perhaps nothing. But the question of having some kind of fund established is under consideration. I cannot give any particulars with regard to it."

The Railways and Canals Portfolio.

The leader of the Opposition, Mr. Meighen, asked in the House of Commons recently: "Would the Prime Minister tell the House when he expects the vacant portfolio of Railways and Canals filled. I may remind him that it is not long since he was very impatient of 'make-shift' arrangements about portfolios, and that the present acting Minister of Railways is administering three departments."—PRIME MINISTER KING replied: "The present acting Minister is doing so well that I think I may as well take my time to consider the matter."—MR. MEIGHEN asked: "Is it the intention to have the portfolio filled?"—MR. KING replied: "Yes, at some time, but just when I cannot say."

Signals for Railway Grade Crossings.

—The Board of Railway Commissioners' general order 370, passed Sept. 6, 1922, contained the following sentence:—"Where gates are provided, a red light, hooded so as to show on the highway only, must be displayed by night." The Board passed general order 374, Jan. 16, striking out the sentence quoted, and substituting the words, "Where gates are provided, a red light must be displayed by night. In both cases such light shall be hooded so as to show along the highway only."

C. P. R. Emigration Campaign in Great Britain.—The C. P. R. is carrying on an extensive campaign for the promotion of emigration from Great Britain to Canada. Ten men and one woman lecturer, dealing with a variety of subjects, have made several successful tours during the last few months. Most of the lectures have been illustrated with moving pictures.

Grade Crossing Accidents.—The Automobile Underwriters' Association has suggested to the Ontario Motor League the passing in Ontario of a law similar to one in force in Virginia, which compels automobile drivers to come to a full stop when reaching a level railway crossing, or be liable to a heavy penalty.

Railway Operating Revenues, Expenses and other Statistics for November.

The following comparative table for November, 1922 and 1921, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics, Transportation Branch. The figures in the column headed "All railways" include all steam railways with an annual operating revenue of \$500,000 and over. There is a slight increase in the number of roads included under this heading, so that the data for 1922 and 1921 is not directly comparable with previous reports.

As the Canadian Government, Canadian Northern and Grand Trunk Pacific Railways are under one management, and operated as one system, the monthly operating reports for 1922 contain a consolidated report for these railways, under the heading "Canadian National Rys.," which includes the old Canadian Government Rys., viz., Intercolonial, Prince Edward Island, National Transcontinental and various local lines in

the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.; the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government; and the Grand Trunk Pacific Ry., but does not include electric lines.

The column headed "Canadian Pacific" includes also the Montreal and Atlantic and Esquimalt and Nanaimo Rys.

The column headed "Grand Trunk" includes all the G.T.R. Co. of Canada lines, including 36.16 miles in the U.S.A., viz.: Champlain & St. Lawrence Ry., 1.21 miles; United States & Canada Ry., 22.18 miles; Vermont & Provincial Line Ry., 9.77 miles, and Black Rock terminal. It does not include other lines in New England, or lines west of the Detroit and St. Clair Rivers.

Items 1 to 6 in the table include rail

lines revenues only. Previous to this year they included water lines. Operating income items have been added. Freight and passenger train miles contain a proportion of mixed train miles, divided on the basis of freight and passenger car miles in mixed train service. In former years the total of mixed train miles was added to both freight and passenger train miles when computing averages. Total train miles include freight; passenger, with their proportions of mixed train miles; special train and non revenue train miles. The average freight revenue per freight train mile includes only rail line revenue. Average passenger train revenue per passenger train mile includes revenue from passenger, mail, express, excess baggage, parlor cars, etc., whereas previous reports gave an average per train mile of passenger receipts only. The number of employees is also a new feature of this year's reports.

The Railways' Operating Results for November, 1922.

As Canadian railway results in Oct., 1922, were very much better than in Oct., 1921, so were the Nov., 1922, results, published on the preceding page, much more favorable than those in Nov., 1921. The most outstanding features of the railways' business in November were the amount of traffic handled, and the economy with which it was handled, and it was due to this heavy traffic, and the opportunity of efficient and economical handling which it presented automatically, that the effect of large rate decreases was more than counterbalanced, thus affording additional demonstration, if such were needed, that transportation costs to the public are and will be influenced very largely by the amount of traffic afforded by the public to the railways.

To just what extent the rate reductions referred to have cut into the railways' gross earnings is evident on an examination of freight earnings in relation to the amount of traffic handled. In Nov., 1922, the railways as a whole carried 4,193,802,058 ton miles of freight, a 43% increase over that handled in Nov., 1921, but earnings from freight service in Nov., 1922, were not quite 12% greater than in Nov., 1921. To arrive at an approximation of the rate reductions' effects in another and perhaps more conclusive way, the average receipt per revenue ton mile of 0.860c in Nov., 1922, may be compared with the figure 1.1c per revenue ton mile in Nov., 1921, which shows that the decrease is 21.9%, which is certainly representative of a substantial reduction in unit revenues in a period when average wages did not decline by half as great a percentage, and during which railway material prices showed practically no decline at all.

Passenger earnings, and earnings from auxiliary services, did not vary materially from those in Nov., 1921, so that the total gross earnings for the roads as a whole bore about the same relation to the total earnings for Nov., 1921, as did the freight earnings in the respective months. Although it would naturally have been expected that the reductions made in the pay of the maintenance and other forces in 1922 would result in some saving in operating expenses, it would also naturally have been expected that the handling of a freight traffic 43% greater than in Nov., 1921, would mean much greater operating expenses, and so much greater as to make the savings to be effected through wage reductions (which applied to only certain employes, among whom were not locomotive men and trainmen) comparatively negligible. It is with gratification, therefore, that the facts must be regarded. To keep the increase in operating expenses in Nov., 1922, as compared with Nov., 1921, to but \$1,106,836, on the vastly greater amount of traffic handled, must be looked upon as an outstanding railway achievement. The result of this comparatively small increase in operating expenses, combined with the more extensive increase in gross revenues, was to increase net earnings for the roads as a whole by \$2,889,677, with a corresponding benefit in operating income, and to decrease the operating ratio from 84.91 to 80. Although this ratio was not as favorable as in October, when it was 76.26 for the roads collectively, it must be regarded as distinctly encouraging, in view of the high operating ratio figures which have been characterizing Canadian

railway operation during the past three years.

Analysis of the figures commonly taken as an indication of operating efficiency shows that in Nov., 1922, while ton mileage increased by over 43%, over Nov., 1921, freight train mileage increased by only 32%. Attention was called in Canadian Railway and Marine World for February to the large increase in ton mileage in Oct., 1922, compared with Oct., 1921—26.5%—which was accompanied by an increase in freight train mileage of but 17.1%. The record in November in this respect is worthy of equally favorable notice. Attention may also well be called to the increase in train loading in Nov., 1922, compared with Nov., 1921, and in the increase in the number of cars per average freight train, which two factors, taken together, were able to wipe out the effect of the slightly decreased average car loading, and to produce the good relationship as between train mileage and ton mileage above remarked upon.

As the financial results secured by the Canadian National, Canadian Pacific, and Grand Trunk Railways in November were reviewed at length in Canadian Railway and Marine World for February, pg. 73, their operations for that month will be referred to here but briefly. Attention may, however, be called to the effect which rate reductions had on Canadian National Rys' freight earnings, despite the increased traffic handled, and the situation may best be expressed by stating that although freight traffic increased by 38.8% over Nov., 1921, freight traffic revenue decreased by 1.1%. The C.P.R. had the same experience, as while its freight traffic increased as between Nov., 1921, and Nov., 1922, by 56.5%, freight traffic revenue increased by only 18.6%. The G.T.R., not participating in the heavy movement of grain from the western provinces, was not affected by rate reductions as were the Canadian National and C.P.R.; in fact, due to that road handling a preponderance of high class freight, the situation was that while freight traffic increased 18%, freight traffic revenue increased by 21% over Nov., 1921.

Taken on the whole, the Canadian railways' results in Nov., 1922, as in October, when a large traffic was handled at low rates, with much better results to the railways than when a smaller traffic was handled at higher rates, demonstrates, as indicated in the introductory paragraph, in a most convincing manner, that Canada's fundamental need, so far as railway transportation is concerned, is increased traffic. Canadian Railway and Marine World has been preaching that doctrine consistently, and taking pains to point out just why it is the correct one, but more convincing than anything we, or anyone else, can say on the matter, are the practical demonstrations furnished in Oct. and Nov., 1922. The fundamental fact is that the greatest agency in reducing transportation costs to the public will be an increase in population and traffic, and the practical demonstrations of that proposition's correctness as given by the railways in October and November should be carefully observed.

Eugene Pilon, an Ottawa barber, was sentenced to 10 days imprisonment there recently, for using bad language in the presence of women on a train.

The Bad Order Car Situation.

The Railway Association of Canada's statement on the car situation shows that at Feb. 1 the total number of freight cars on Canadian lines was 190,878. The A.R. A. allowance for bad order cars, on the 7% basis, would make the normal number as stated in this and the preceding number of bad orders 13,361, but the actual number on Feb. 1 was 10,952, representative of a bad order percentage of 5.73. The car shortage is given as 3,542. At Jan. 1 there was no car shortage reported, but on the contrary a car surplus of 244, so it is evident that railway traffic during January did not show any falling off, but on the contrary must have experienced some increase. It is also evident that, when a car shortage is present in the month of February, and when the railways have their bad order equipment restricted to the above noted small percentage of the total, a large car shortage can logically be expected next autumn if crop conditions are good and if general traffic remains good, unless the railways make substantial additions to their equipment. Orders have been given for quite a number of freight cars, as stated in this and the preceding number of Canadian Railway and Marine World, but with present economic conditions continuing or becoming better it is likely that the number of cars ordered will not be great enough to influence the situation in large measure.

The American Railway Association's Car Service Division reports that on Jan. 15 the total number of freight cars on U.S. class 1 roads was 2,268,126, of which 217,200 or 9.6% were in bad order. Out of 1,032,455 box cars, 93,184 or 9% were in bad order; out of 58,997 refrigerator cars, 6,740 or 11.4% were in bad order; out of 958,402 gondola cars, 98,004 or 10.2% were in bad order; out of 82,437 stock cars, 7,541 or 9.1% were in bad order, and out of 93,764 flat cars, 9,007 or 9.6% were in bad order. On Jan. 1, the U.S. bad order car percentage was 9.5.

Orders, etc., re Train Movements.—The Board of Railway Commissioners' Secretary, A. D. Cartwright, has issued the following circular to railway companies:—"I am directed to inform you that the Board has before it a memo from the Brotherhood of Locomotive Engineers' Dominion Legislative Board requesting that all orders, circulars or rules of the Board, affecting the movement of trains, be placed in bulletin books, and to ask for your company's views in regard thereto. I am further directed to state that, without in any way making any suggestion by way of limiting the liability of the railway in respect of having such information brought to the attention of its employes, the Board understands that a system having a book provided for the bulletin itself to be pasted, and provision for the signature of the employes, and for the hour and date of reading being noted as a matter of receipt and record, has worked satisfactorily."

Regulations for Freight Trains Passing Through Tunnels.—The Board of Railway Commissioners issued a circular, Feb. 2, directing that on trains passing through tunnels, more than 500 ft. long, cars loaded with wood, lumber, poles, etc., shall not be placed next to the locomotive, and, if sufficient box cars are available, at least three of them shall be placed between the locomotive and the loaded timber cars.

Birthdays of Transportation Men in February.

Many happy returns of the day to:—
W. G. Annable, Assistant Passenger Traffic Manager, Ocean Traffic, C.P.R., Montreal, born at Ottawa, March 3, 1875.

John Archibald, Locomotive Foreman, C.P.R., Coquitlam, B.C., born at Edinburgh, Scotland, March 13, 1872.

G. M. Baillie, Assistant Superintendent, London Division, Ontario District, C.P.R., Windsor, Ont., born at West St. John, N.B., March 31, 1879.

A. B. Buckworth, Deputy Minister of Railways for British Columbia, Victoria, B.C., born at Birmingham, Eng., March 2, 1876.

Allan Cameron, Oriental Manager, C. P.R. and Canadian Pacific Steamships Ltd., Hong Kong, China, born near Owen Sound, Ont., March 14, 1864.

H. S. Carmichael, Passenger Manager, Holland-American Line, London, Eng., born at Glasgow, Scotland, March 7, 1874.

A. V. Clark, Managing Director, Canadian Pacific Ry. Co. (France), Paris, France, born at Burwell, Cambridgeshire, England, March 8, 1877.

P. W. Clarkin, Division Freight Agent, Island Division, and District Passenger Agent, Canadian National Rys., Charlottetown, P.E.I., born at North Wiltshire, P.E.I., March 22, 1876.

F. G. J. Comeau, General Freight and Passenger Agent, Dominion Atlantic Ry., Halifax, N.S., born at Meteghan River, N.S., March 10, 1859.

W. A. Cooper, Manager, Sleeping, Dining and Parlor Cars and News Service, C.P.R., Montreal, born there, March 22, 1871.

A. E. Cox, General Storekeeper, Western Lines, Canadian National Rys., Winnipeg, born at Huddersfield, Eng., March 12, 1863.

Senator N. Curry, Chairman, Canadian Car & Foundry Co., Montreal, born in King's County, N.S., March 26, 1851.

C. C. Curtis, Manager, Cape Breton Electric Co., Sydney, N.S., born at Battle Creek, Mich., March 27, 1883.

H. G. Dring, European Passenger Manager, Canadian Pacific Ry., London, Eng., born at Easton, Northamptonshire, Eng., March 8, 1881.

Patrick Dubee, Secretary - Treasurer, Montreal Tramways Co., Montreal, born there, March 4, 1876.

W. B. Elsworth, Manager, Marine Department, Imperial Oil Ltd., Toronto, born at Bayonne, N.J., March 3, 1869.

M. P. Fennell, Jr., Secretary-Treasurer and Comptroller, Montreal Harbor Commissioners, Montreal, born there, March 13, 1885.

W. R. Fitzmaurice, Superintendent, New Glasgow Division, Maritime District, Canadian National Rys., New Glasgow, N.S., born at Bedford, N.S., March 19, 1870.

Hon. G. P. Graham, M.P., acting Minister of Railways and Canals, and Minister of National Defence, Ottawa, Ont., born at Eganville, Ont., March 31, 1859.

H. C. Grout, General Superintendent, Ontario District, C.P.R., Toronto, born at Wausau, Wis., March 14, 1881.

J. Halstead, Division Freight Agent, C.P.R., Winnipeg, born at Bracebridge, Ont., March 2, 1877.

R. M. Hannaford, Assistant Chief Engineer, Montreal Tramways Co., Montreal, born there, March 22, 1865.

C. A. Hayes, Vice President, Traffic, Canadian National Rys., Toronto, born at West Springfield, Mass., March 10, 1865.

H. T. Hazen, Chief Engineer, Canadian

Northern Ry. lines east of Port Arthur, Ont., Toronto, born at Truro, N.S., March 14, 1870.

J. I. Hobson, Treasurer, Canada Steamship Lines, Montreal, born at Guelph, Ont., March 30, 1872.

N. J. Holden, President, The Holden Co., Montreal, born at Nobleton, Ont., March 22, 1866.

J. H. Holley, Travelling Passenger Agent, Ocean Traffic, C.P.R., Winnipeg, born at Holyoke, Mass., March 17, 1894.

A. R. Holtby, Master of Bridges and Buildings, Mountain Division, Grand Trunk Pacific Ry., Smithers, B.C., born at Rawdon, Que., March 23, 1859.

Frank Lee, Engineer, Maintenance of Way, Western Lines, C.P.R., Winnipeg, born at Chicago, Ill., March 7, 1873.

J. M. McKay, Superintendent, Saskatoon Division, Saskatchewan District, C.P.R., Saskatoon, born at Tiverton, Ont., March 13, 1868.

J. B. McLaren, General Auditor, G.T. R., Montreal, born at Perth, Ont., March 5, 1878.

M. Magiff, Superintendent of Car Service and Telegraphs, Central Vermont Ry., St. Albans, Vt., born at Planks Point, N.Y., March 24, 1852.

H. H. Melanson, Passenger Traffic Manager, Canadian National - Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., Toronto, born at Scadouc, N.B., March 9, 1872.

W. T. Moodie, Superintendent, Division 3, Central District, Canadian National Rys., Port Arthur, Ont., born at Glasgow, Scotland, March 10, 1882.

L. F. Muncey, Superintendent, Canadian National Rys., Kamloops, B.C., born at Kensington, P.E.I., March 15, 1876.

D. B. Niblock, Special Ticket Auditor, Canadian National Rys., Toronto, born at Point Edward, Ont., March 1, 1875.

Peter Paton, ex Purchasing Agent, Canada Steamship Lines, Ltd., Montreal, now President, Mackenzie, Milne & Co., Ltd., Sarnia, Ont., born at New Lovell, Ont., March 13, 1869.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, born at St. John, N.B., March 25, 1860.

J. W. Pugsley, Secretary, Department of Railways and Canals, Ottawa, Ont., born at Amherst, N.S., March 12, 1861.

E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co., and Honorary President, Canadian Electric Railway Association, Montreal, born at Beauharnois, Que., March 3, 1864.

L. G. Roblin, Master Mechanic, Prairie District, Canadian National Rys., Saskatoon, Sask., born in Prince Edward Island, March 24, 1864.

C. J. Smith, Manager and Secretary, Montreal Warehousing Company, Montreal, born at Hamilton, Ont., March 10, 1862.

G. L. Snelling, Secretary - Treasurer, Ottawa Electric Ry., Ottawa, Ont., born there, March 8, 1880.

W. Y. Soper, Vice President, Ottawa Electric Ry. Co., Ottawa, Ont., born at Oldtown, Me., March 9, 1854.

E. F. L. Sturdee, General Agent, Rail and Ocean Traffic, C.P.R., Seattle, Wash., born at St. John, N.B., March 29, 1876.

G. W. Vaux, General Agent, Passenger Department, Union Pacific Rd., Toronto, born at Montreal, March 21, 1866.

A. Watt, Assistant Master Mechanic, Canadian National-Grand Trunk Pacific Rys., Smithers, B.C., born at St. Louis,

Que., March 5, 1874.

A. T. Weldon, Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., Montreal, born at Dorchester, N.B., March 6, 1876.

D. O. Wood, General Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, born at Kleinburg, Ont., March 16, 1864.

Railway Finance. Meetings. Etc.

Atlantic & Northwest Ry.—There has been deposited with the Secretary of State at Ottawa, an indenture appointing the Royal Trust Co., Montreal, as trustee under a mortgage, dated July 25, 1894, securing the bonds of the Atlantic & Northwest Ry., extending from Renfrew to Eganville, Ont., in succession to R. B. Angus and G. M. Clark, deceased. This railway is now a portion of the Canadian Pacific Ry.

Canadian Pacific Ry.—The directors on Feb. 12, declared dividends of 2% for the half year ended Dec. 31, 1922, on preference stock, and 2-1/2% for the quarter ended Dec. 31, 1922, on common stock, the latter being at the rate of 7% per annum from revenue, and 3% per annum from special income account.

Interprovincial & James Bay Ry.—There has been deposited with the Secretary of State at Ottawa a mortgage deed dated May 5, 1922, mortgaging the railway and property to the Royal Trust Co. to secure an issue of bonds authorized by the company's acts. There has also been deposited with the Secretary of State, a duplicate original of an agreement between the Interprovincial & James Bay Ry. Co. and the C.P.R. Co., dated May 4, 1922, and sanctioned by the Governor-in-Council, Dec. 15, 1922, leasing to the C.P.R., the Interprovincial & James Bay Ry. Co.'s undertaking for 99 years from July 1, 1922.

Timiskaming & Northern Ontario Ry.—Following are the results of operation for the fiscal year ended Oct. 31, 1922, compared with the year ended Oct. 31, 1921:—

	1921-1922	1920-1921
Gross Earnings	\$4,318,590.55	\$4,680,615.42
Operating Expenses	3,429,047.25	4,165,422.38
Net Earnings	712,505.23	181,778.89

Provisions for \$100,000 for repairs and replacements, and for \$50,000 for the employees' pension fund, was made out of the gross earnings for the year ended Oct. 31, 1922, before the net earnings were reckoned.

The Minneapolis, St. Paul & Sault Ste. Marie Ry., a C.P.R. subsidiary, reports a marked improvement in earnings for Dec., 1922, compared with the corresponding month of the past two or three years. December gross at \$4,204,891 compares with \$2,915,642 for Dec., 1921, and \$3,849,697 for 1920. The balance, after taxation, amounting to \$814,160, compared with a deficit of \$458,416 for Dec., 1921. Net operating income was \$817,671, compared with net operating deficit of \$518,719 for Dec., 1921. Similar improvement is shown in the earnings statement for the year of 1922, with gross at \$47,107,105, comparing with gross of \$42,745,440 for 1921. Balance, after taxes, \$7,595,372, compares with \$154,821 in 1921; \$763,346 for 1920, and \$5,780,041 for 1919. Net operating income was \$7,178,971, compared with a deficit of \$696,584 for 1921.

Canadian Pacific Railway Betterments, Etc., for 1923.

D. C. Coleman, Vice President, Western Lines, on returning recently to Winnipeg, from Montreal, where he had been in consultation with the President and other members of the executive said:—"The company's endeavor in 1923 will be to maintain the property generally at its present standard; to improve on that standard where possible, and to make due provision for the increased traffic resulting from a gradual return to prosperity, which has now passed the stage of prediction." He gave considerable information as to the various works to be undertaken, particulars of which are given below, supplemented by additional official information with which Canadian Railway and Marine World has been supplied:—

Eastern Lines.

Roadways.—Tile drainage works on all districts. Rock ballasting as follows:—25 miles on Three Rivers Subdivision, Quebec District; 150 miles on Trenton Division, between Smiths Falls and Toronto, Ontario District; and 25 miles on the Parry Sound and Cartier Subdivisions, Algoma District. This work will complete the rock ballasting between Montreal and Three Rivers; and will carry the work between Montreal and Toronto to Bowmanville, on the lake shore line. There will also be gravel ballasting on the New Brunswick, Ontario and Algoma Districts.

Bridges.—Replacement of 14 bridges on Lachute Subdivision, Quebec District, to permit of use of heaviest power. It is stated that this will complete the work of bridge reconstruction on this subdivision.

Extension of Passing Tracks on lines in the following districts.—New Brunswick district:—Lakeview, Enniskillen, Canterbury and Deer Lake. Quebec District:—Adamsville, Berthier Jct., and Three Rivers, Bedell, Petewawa, Colden and Meath. Algoma District:—Dalton, Gutelius, Pick and Otter.

Water Tanks.—New Brunswick District, 100,000 gall steel tank at McAdam Jct.; Quebec District, 60,000 gall steel tank at St. Johns. Ontario District, 60,000 gall steel tank at Guelph Jct; renewal of 40,000 gall. wooden tanks at Linwood and Elmira. Algoma District, 60,000 gall. steel tanks at Markstey, Nemegos, and Grasset.

Locomotive House.—Extension to 6 stalls of locomotive house, North Bay, Ont.

Turntable.—A 90 ft. turntable at MacTier, Ontario District.

Coaling Plants.—A 300-ton plant at Megantic, Quebec District, and a 150-ton one at Jackfish, Algoma District.

Additional mechanical and car department equipment will be provided at Hochelaga, Glen Yard, Place Viger, Smiths Falls, Toronto and North Bay.

An electric locker will be installed at Westmount, Que., to control traffic in and out of Glen yard, which will place all movement under the control of an operator in a tower.

Station Improvements.—At Westmount, Que. station a subway will be built so that passengers who disembark there from trains bound for Windsor St. terminal, may leave the station without having to wait for the standing train to draw out, and without having to cross the westbound track. This subway will permit of egress at the side of the present station. A further improvement

will be the construction of umbrella roofs over both platforms, these at present being exposed to the elements. At Montreal West an umbrella shelter will be built over the westbound platform, which is at present exposed. Extensions to station facilities will be built at East London, Maine, and at Mattawa, Hager, Cutler and Dean Lake, Ont.

Relaying Rails.—No decision has been arrived at as to what will be done in the way of rail renewals.

Western Lines.

Track Work. The usual allowance has been made for ballasting and for replacement of rails in the main track and crossing sidings by others of greater weight, to accommodate the heavier type of rolling stock.

Additional Tracks will be provided in Port Arthur yards to accommodate grain consigned to the terminal elevators at Current River. Additional tracks will also be laid to meet increased traffic needs, at the following points:—Manitoba District, Upsala, Dymont, Dryden, Rennie, Ont.; Weston shops, St. Claude, Burnside, Aincer, Murray Park, Springstein, Fannystella, and Tramp, Man. Saskatchewan District:—At Killaly, Frys, Falcon, Dingley, Regina Beach, and Lemberg. Alberta District:—At Coaldale, Coutts, Stirling, Magrath, Raymond, Glenbow, Bankhead, Eldon, Lake Louise, Red Deer, Lacombe, Ponoka, and Strathcona. British Columbia District:—At Mara, Ruby Creek and Yale.

The bridge reconstruction will consist mainly of rebuilding small pile trestles or replacing them with culverts and then filling them. Six bridges on the Shuswap Subdivision will be strengthened to permit operation by heavier power. Most of this work will be done by the company's forces.

Grade Revision.—To provide for the better movement of traffic certain grade revision will be done near Golden, B. C. to reduce the westbound gradient at Leancoil, on the Mountain Subdivision, British Columbia District. The present maximum gradient is 1.4 p. c., which will be reduced to 0.4 p. c., with a maximum curvature of 10 degrees. Surveys for this new piece of line are being made. It will start a few miles east of Leancoil and end immediately west of that point.

Coaling Plants.—The coaling plant at Fort William, which is being extended, will be completed during the year. Plants of the latest type will be built at the following points:—Manitoba District:—Replacement of present 90 ton plant at Ignace, Ont., by a 280 ton mechanical plant; replacement of present ramp docks at Kenora, Ont., by a 280-ton mechanical plant; replacement of present ramp docks at Winnipeg, by one 280-ton and one 100-ton mechanical plant. Saskatchewan District:—Replacement of present ramp plant at Estevan by a 280-ton mechanical plant. Alberta District:—Replacement of present ramp plant at Red Deer by a 280-ton mechanical plant.

Water Supply.—Improvements will be made to the water supply at Birtle and Newdale. Manitoba District:—Frys, Lynch, Wanola, Oxboro, Hirsch, Weyburn, and Sutherland. Saskatchewan District:—Coronation and Kirriemuir, Alberta District:—Steel water tanks will

be erected at Moose Jaw, Outlook and Parkbeg, Saskatchewan District.

Automatic signals for station protection are to be installed at MacGregor, Man., and Petain, B. C., the junction point with the Kettle Valley Ry. Through the Rocking Horse Canyon between Field and Golden, B. C., a system of continuous absolute permissive block signalling for single track, will be installed.

Shops and Locomotive Houses.—Extensive improvements will be made to the mechanical plants at Weston shops, Winnipeg, at Minnedosa and Reston, Manitoba District; Neudorf, Broadview, and Regina, Saskatchewan District; and Calgary and Alyth, Alberta District. These will consist mainly of changes to heating plants, such as renewing and covering steam pipes.

A 3-stall extension will be built to the locomotive house at Hardisty, Alberta District.

Stations will be built at Arden, Darlingford and Carnduff, Manitoba District; Congress, Saskatchewan District, and Lake Windermere, British Columbia District. Luncheon rooms will be built at Ignace, Ont., and Swift Current, Sask. Extensions will be made to station buildings and freight sheds at a number of places on the several districts.

Freight Sheds.—Two freight sheds will be built at Fort William, Ont., to replace those destroyed by fire in 1922. The new No. 3 freight shed will be 80 by 400 ft., one story high; built on pile foundations with concrete caps. The superstructure will be of timber, with corrugated galvanized iron sheeting; continuous sliding doors on both sides; tar and gravel roof; with concrete dock 400 ft. long on the Kaministiquia River. The new No. 5 freight sheds will be 60 by 800 ft., and will be 2 stories, on pile foundations with concrete pedestals. The superstructure will be of timber, with corrugated galvanized iron sheeting, with tar and gravel or other built up roof with concrete dock 800 ft. long, and passenger dock 60 ft. at the west end, on Kaministiquia River. The contract for the pile foundation has been let to Stuart McKenzie, Fort William; and that for the building and dock has been let to the Carter-Halls-Aldinger, Winnipeg.

Stockyards will be provided at Broomhill, Manitoba District; Frobisher, Ambassador, Revenue, Broadacres, and Wolfe, Saskatchewan District; Nightingale, Spring Coulee and Carstairs, Alberta District.

The icing facilities at Winnipeg and Brandon, Man., and Sutherland, Sask., will be changed and extended, to provide for the increased perishable traffic, particularly fruit.

Winnipeg Beach pier will be renewed and enlarged and other improvements will be made there.

Tunnel Lining.—Approximately about 3 miles of the double track Connaught tunnel have been relined but the work is not continuous. There are 2 miles of lining to be done, and this work will be continued during the year by the Sydney E. Junkins Co. At the loop tunnel, mile 4.8, Fernie Subdivision, British Columbia District; the present timber lining is to be renewed.

The new ocean pier at Vancouver, for which a contract has been let, will be rushed to completion.

The steam ferry boat for automobile traffic between Bellingham, Wash., and Sidney, B. C., full description of which has already been given in Canadian Railway and Marine World, and which is being built at Victoria will be completed at quickly as possible.

Victoria Terminal Office Building.—The construction of a terminal office building at Victoria, for the British Columbia Coast Steamship Service is under consideration and a decision will be made as soon as plans have been made and considered.

Branch Lines.—An announcement respecting branch line construction was deferred until March 1, to afford time for the consideration of all aspects of the situation. In preparing the programme, consideration will be given both to the opening up of new territory for settlement, and to the provision of facilities for producers who are located so far from existing lines that they find haulage costs to the railway stations a heavy burden. All data in connection with projected lines have been prepared and is undergoing exhaustive analysis.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, now Canadian Railway and Marine World, for March, 1898.

March 1.—Railway and Shipping World, afterwards changed to Canadian Railway and Marine World, first published.

C. W. McMullen appointed City Freight Agent, C.P.R., Toronto.

C.P.R. gross earnings for 1897 were \$24,049,534.65, and net \$10,303,775.89.

C.P.R. completes installation of electric block signals between Windsor Street station and Montreal Jct.

J. E. Mulhfeld appointed General Foreman, Machinery & Car Department, Wabash Rd., St. Thomas, Ont.

Intercolonial Ry. General Freight and Passenger Agents' jurisdiction, extended over Prince Edward Island Ry., by A. H. Harris, General Traffic Manager.

The G.T.R. Jubilee Bridge, at Montreal, stated as having masonry of abutments, and 18 piers out of 24, completed, and one span of superstructure erected.

Canadian Pacific Navigation Co. arranged for shipment of goods direct to Dawson, Yukon, without touching at a U.S. port, by running from Port Simpson up the Stikine River.

Contract made between Dominion Government and Wm. Mackenzie and Donald D. Mann, of Toronto, for building railway from Stikine River to Teslin Lake, B.C. The Senate subsequently refused to sanction this.

Crownest Pass Branch, C.P.R., located from Lethbridge, Alta., to upper end of Kootenay Lake, 287 miles, and preliminary surveys made to Nelson, B.C. H. D. Lumsden was Chief Engineer, and M. J. Haney, Manager of Construction.

G.T.R. Appointments: M. C. Sturtevant, Car Service Agent, Montreal; L. J. Ferritor, Assistant Superintendent, London; A. S. Begg, Trainmaster, Stratford; H. E. Whittenberger, Trainmaster, Stratford; C. S. Cunningham, Trainmaster, London.

Canadian Government Rys. appointments: Jas. Hardwell, Division Freight Agent and Foreign Freight Agent, at Montreal; Owen Cameron, Freight Claims Agent, at Moncton, N.B.; H. H. Schaeffer,

Weighing Inspector, and J. F. Nelles, Assistant Weighing Inspector, at Moncton.

Wabash Rd. secures trackage rights over G.T.R. from Windsor, Ont., to Black Rock, N.Y., via Glencoe Jct., St. Thomas, Welland Jct., and Fort Erie; also from Welland Jct. via Allanburg Jct. to Suspension Bridge, the line to be called the Southern Division, and used jointly by both companies. G. C. Jones appointed Joint Superintendent at St. Thomas.

Canadian Government Railways Exempt From Sales Tax.

The act to amend the Special War Revenue Act, 1915, passed by the Dominion Parliament in 1922, as chap. 27, provides in sec. 13 and 14 for certain taxes to be paid on sales of certain goods, and sec. 15 provides that the taxes imposed by sec. 13 and 14 "shall apply to sales or imputations by His Majesty, whether in the right of His Majesty's Government of Canada, or His Majesty's Government of any province of Canada, for the purpose of resale." As it is hardly to be expected that the Dominion or Provincial Governments would buy or import goods for the purpose of resale, except probably intoxicating liquors, which are imported by certain provinces, the exception practically applies to all other Dominion or provincial government purchases.

In this connection, it was contended some little time ago that goods bought for the Canadian National Rys. should not be subject to sales tax, and the Customs and Excise Department, which had been appealed to, gave a ruling on Dec. 2, 1922, that purchases for the Canadian Government Rys. group, as indicated below, for their own use, and not for resale, are exempt from the payment of the sales tax, as from May 24, 1922. The group embraces the following lines: Intercolonial Railway of Canada, including New Brunswick & Prince Edward Island Ry., International Ry. of New Brunswick and Vale Railway. The following railways are also included in the group: Prince Edward Island Ry., Elgin & Havelock Ry., Caraquet and Gulf Shore Ry., Cape Breton Ry., Moncton & Buctouche Ry., St. Martins Ry., Salisbury & Albert Ry., York & Carleton Ry., Lotbiniere & Megantic Ry., Quebec & Saguenay Ry., National Transcontinental Ry., including Lake Superior Branch, Grand Trunk Pacific Ry., Hudson Bay Ry., and St. John & Quebec Ry.

In order to obtain exemption on purchases, orders for goods must be endorsed with a statement setting forth the name of the line for the use of which they are intended and that they are not for resale. The result of the foregoing is that the only portions of the Canadian National Rys. which pay the sales tax are Canadian Northern Rys., Grand Trunk Ry., and Grand Trunk Pacific Ry., except Lake Superior Branch.

We are officially advised that the Timiskaming & Northern Ontario Ry., owned by the Ontario Government, is also exempt from sales tax. The Pacific Great Eastern Ry., not being entirely owned by the British Columbia Government, is subject to the tax. We were further advised recently that the Customs & Excise Department had under consideration whether the hydro electric railways, operated by the Hydro Electric Power Commission of Ontario, should be exempt from sales tax.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System (steam lines only), Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue	Expenses	Net deficits	
			1922	1921
Jan.	\$8,210,401	\$10,433,564	\$2,223,163	\$2,863,058
Feb.	7,650,743	10,026,572	2,375,829	2,986,998
March	9,418,100	10,397,547	979,447	2,532,959
April	7,804,222	9,153,738	1,349,516	2,636,639
May	9,678,965	9,726,020	47,055	2,554,540
June	8,235,603	10,199,592	1,963,989	2,595,257
July	8,877,776	10,510,778	1,633,002	1,334,569
Aug.	9,569,780	10,399,617	829,837	17,105
Sept.	11,726,459	11,123,750	*602,709	*467,685
Oct.	14,074,025	11,917,281	*2,156,744	*1,033,321
Nov.	12,737,758	11,983,938	*753,820	*720,515
Dec.	10,626,610	12,735,699	2,109,089	1,116,653

\$118,610,442	\$128,608,096	\$9,997,654	\$16,417,257
Dec'se	\$6,706,090	\$13,125,592	\$6,418,602

*Net revenue.

Approximate gross earnings for Jan., 1923, \$9,214,540; and for two weeks ended Feb. 14, \$3,637,071, against \$3,300,099 for January, and \$3,709,713 for two weeks ended Feb. 14, 1922.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1922, compared with those for 1921. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross	Expenses	Net	Decreases
Jan.	\$11,337,975	\$10,854,498	\$483,477	\$157,948
Feb.	11,303,693	10,649,205	654,488	158,904
March	13,847,627	11,427,120	2,420,507	30,402

Dec.	17,365,640	13,900,835	3,464,805	*1,547,023

\$186,675,036	\$150,373,345	\$36,301,691	*\$2,099,951
Increase		\$2,099,951	
Dec'se	\$6,346,818	\$8,446,769	

*Increase.

Approximate gross earnings for Jan., 1923, \$12,848,000; and for two weeks ended Feb. 14, \$5,230,000; against \$11,066,000 for January, and \$5,379,000 for two weeks ended Feb. 1922.

Grand Trunk Railway.

Following are the total operating revenues, total operating expenses and net operating earnings, or deficits, for 1922 and 1921, of the G.T.R. Co. of Canada lines, including the Champlain & St. Lawrence Ry., United States & Canada Ry., Vermont & Provincial Line Ry., and the Black Rock terminal, in the U.S., but not including other lines in New England, nor lines west of St. Clair and Detroit Rivers.

	Revenue	Expenses	Net revenue

Decrease		\$861,480	

*Deficit.

Approximate gross earnings for the system for Jan., 1923, \$8,613,348, and for two weeks ended Feb. 14, \$3,823,148; against \$7,339,605 for January, and \$3,847,404 for two weeks ended Feb. 14, 1922.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Abitibi Transportation & Navigation Co.—We are advised that the railway built by this company from the terminus of a Timiskaming & Northern Ontario Ry. branch at Iroquois Falls to Hughes, Ont., on the National Transcontinental Ry., is 15.76 miles long, and was opened for traffic Dec. 23, 1922. A spur line from mile 8, which extends for some 5 miles into the bush, is probably of a temporary character, and will be extended or moved from time to time as logging operations demand. (Jan., pg. 8.)

Alma & Jonquiere Ry.—The railway portion of the Quebec Development Co.'s water power development plans at the Grande Discharge of Lake St. John, Que., is being built under the Alma & Jonquiere Ry.'s charter. This company was incorporated by the Quebec Legislature in 1913, to build a railway from Lebarre or St. Gideon on the old Quebec & Lake St. John Ry., to Little Discharge, the Isle of Alma, the Grande Discharge, and one to Jonquiere, about 30 miles, with branch lines as required. Extensions of time for construction were granted in 1915, 1918 and 1921. The section of the line now under construction will extend from Hebertville station, midway between Lebarre and St. Gideon, to Ile Maligie. The railway will be of standard gauge, with a maximum gradient of $1\frac{1}{2}\%$, and a maximum curvature of 8 degrees. We are officially advised that a contract has been let to Gagnon, Gagnon & Gagne for the excavations, and to the W. T. Bishop Co., for the masonry work. F. H. Cothran, St. Joseph d'Alma, is Resident Manager.

The plans in connection with the power development works are stated to include the erection of a dam across the Little Discharge of Lake St. John, so as to divert the entire flow of water through the Grand Discharge. The railway will be carried across the Little Discharge to Isle d'Alma, and across to Ile Maligne in the Grand Discharge. The first power development plant will be located there, and is estimated to produce 350,000 h. p. The second power development plant will be some miles lower down, near the mouth of the Shipshaw River. It was reported recently that 500 men were engaged on the works. (Feb. 1921, pg. 82. See also Quebec Development Co., Jan. pg. 9.)

Burrard Inlet Tunnel & Bridge Co.—Bylaws were submitted to a vote of the ratepayers of the City of North Vancouver, and North Vancouver Municipal District, Dec. 20, 1922, in connection with the proposal to build a bridge over the Second Narrows of Burrard Inlet, at North Vancouver. Four separate bylaws were submitted in the city, these being necessary for the purpose of carrying out the proposal, and the present proposals with former ones. The first bylaw authorized the city to enter into an agreement with the bridge company, to guarantee debentures; the second provided for the purchase of shares in the company; the third authorized the issue of \$120,222 of city debentures, for purchasing shares, and the fourth authorized the issue of \$100,000 of city debentures for purchasing shares. Only one bylaw was necessary in the case of the North Vancouver Municipal District, viz., authorizing the guarantee of debentures. The authority to purchase shares is contained in the Municipal Act governing the division of the district and

the incorporation of West Vancouver. The bylaws are reported to have been carried practically unanimously, the total vote in the two municipalities, it is stated, being 2,441 in favor, and 83 against.

The tentative construction contract entered into between the company and the Northern Construction Co. provides for the erection of the bridge for \$1,250,000, payable in city, district and bridge company bonds at par. The bridge company is to put up \$630,000 of bonds guaranteed by North Vancouver City and District, and the three municipalities of Vancouver and North Vancouver Cities and North Vancouver District are to provide the balance.

Sketch plans of the proposed bridge have been sent to Ottawa for approval by the Government. It is stated that the foundation work may be widened so that additional tracks may be carried at some future date as traffic develops, and that if this is done, the extra cost will be borne by the Dominion Government.

The officers of the company are Reeve Loutet, North Vancouver District, President; Mayor Donaghy, North Vancouver City, Vice President, and P. Ward, Assistant Secretary. (Jan. pg. 8.)

Calgary and Southwestern Ry. Co.—The Alberta Legislature has been asked to grant a two years extension of time within which the Calgary and Southwestern Ry. Co. may build its projected railway from Calgary to Sheep Creek coal fields district. P. Burns, Calgary, Alta., is the principle promoter. (May 1921, pg. 241.)

Canadian-American Collieries Limited, a company incorporated under the Alberta Companies Act, with office at Edmonton, has applied to the Alberta Legislature, for authority to build a standard gauge railway from its collieries in Sec. 20, Tp. 52, Range 4, west of 4th Meridian, to connect with the Canadian National Rys. at mile 835, from Winnipeg; and to enter into an agreement with the C.N.R. or any other railway for the operation of the line. It is stated that the colliery is just south of Lake Waubamun, and that the junction with the C.N.R. would be near Duffield, on the Grand Trunk Pacific Ry., 37 miles westerly of Edmonton.

Canadian Niagara Bridge Co.—The Dominion Parliament is to be asked to extend the time for the construction of the projected railway and general traffic bridge across the Niagara River, from not less than two miles upstream from Chippawa Creek and Fort Erie, Welland County, Ont., to the opposite side of the Niagara River, New York State. (Aug., 1921, pg. 419.)

Canadian Terminal Ry.—We are officially advised that the project referred to in the first paragraph under Canadian Pacific Ry. Construction, etc., in Canadian Railway and Marine World for January, pg. 24, is for the construction of a railway to link up the four harbors of Blacks, Deadman's, Beaver and L'Etang with the C.P.R., and incidentally give transportation and freight facilities to the various islands along the Charlotte County coast of New Brunswick. The Canadian Terminal Co. was incorporated by the New Brunswick Legislature in 1907, and was given extensions of time on subsequent occasions. In 1915, it was reported that surveys had

been made for the line over a route from Pennfold, on the C.P.R., to Beaver Harbour, L'Etang and Blacks Harbour, 8 miles, and it was stated that construction would not be expensive. The promoters had an interview with the New Brunswick Government in 1921, and received an assurance of support whenever affairs should reach the stage when construction would be possible. Lewis Connors, Blacks Harbor, N.B., is the principal promoter. (Feb., 1915, pg. 49, and Jan., 1922, pg. 22.)

Edmonton, Dunvegan and British Columbia Ry.—Central Canada Ry.—The C. P. R. Co. operates these railways under an agreement with the Alberta Government, to which J. D. McArthur and his associates are parties, the Union Bank being interested as a creditor. The Alberta Government provides funds for the extension of the lines and in 1921, an extension of 25 miles was built from the Peace River to Berwin. In 1922, an appropriation was made for a further extension of 12 or 15 miles from Berwin, and for a 12 mile extension of the branch line now ending at Grande Prairie. The Union Bank intervened, raising some difficulties in connection with the security for its claims, and no construction was put in hand. Negotiations have been carried on between the Government and the Union Bank, and we are advised that these have not been completed. Should a satisfactory arrangement be arrived at the Alberta Legislature will have to authorize any further construction. When Grant Hall, Vice President, Montreal, and D. C. Coleman, Vice President Western Lines, Winnipeg, were in Edmonton on Feb. 5, they had a conference with the Government, and a further conference was expected to take place later, after which an announcement as to whether construction will be gone on with will probably be made.

The lines which the settlers desire to have built are the completion of the Edmonton, Dunvegan and British Columbia Ry., from Spiri River to the Alberta-British Columbia boundary, 50 miles to which point grading was completed in 1916; the construction of a 45 mile extension of the Grande Prairie Branch; and a 35 mile extension of the Central Canada Ry., from Berwin westward. (May, 1922, pg. 236.)

Esquimalt & Nanaimo Ry.—The Mayor of Victoria, B.C., in his report for 1922, stated that the outstanding feature of the engineering department was the completion of one unit of the Johnson St. bridge. The work had been done in a very satisfactory manner. The total cost of the bridge to the city, when the bridge is fully completed, will be \$1,130,130. The City Engineer expected that the further work to be done by the city in connection with the railway part of the work would be completed Feb. 28, and that the Canadian Bridge Co. would then start the erection of the superstructure of the railway span.

D. C. Coleman, President, on returning to Winnipeg, at the end of January, after conferring with the President and other members of the C. P. R. executive said that the programme of bridge replacement on the E. and N. R. will be continued, that additional tracks will be furnished to provide for the constantly growing timber traffic and that provision will be made for improvements to passenger train equipment.

Mr. Coleman visited Vancouver Island with Grant Hall, Vice President C.P.R., shortly afterward and is reported to have stated there that the relaying of the line with heavier steel, 12 miles of which were put in during 1922, will be continued; that additional trackage will be provided at Qualicum, Hayward Jct., and Cowichan Lake; that the bridge over the Englishman River will be replaced that five other bridge structures will be rebuilt; that new water tanks will be built at Duncans and Nanoose Bay; that considerable new machinery will be installed in the Victoria shops, and that experiments will be made on one train with a new storage system of electric light, which, if successful, will be adopted for all trains. Certain additional work, including a start on terminal rearrangements at Victoria is under consideration and a decision as to what will be done will be reached later on. (Jan. pg. 8.)

The Essex Terminal Ry. is applying to the Dominion Parliament for an extension of time for completing the line from the Detroit River, near Ojibway, to Pelton, Ont., authorized to be built by the statutes of 1917, chap. 51. (May, 1921, pg. 241.)

Fecunis Limited, which was incorporated by the Ontario Legislature in 1921, to carry on an exploration and mining business and to build a tramway, to be operated by steam or electric power, from the C.P.R. in Dowling Tp., Sudbury District, to the Canadian National Rys. in Wisner Tp. has applied to the Ontario Legislature for an extension of time for construction. Young and McEvoy, Toronto, are the solicitors. (June 1921, pg. 305.)

Kettle Valley Ry.—We are officially advised that track laying has been completed on the southerly section of the line from Penticton to the B.C. Government Experimental Farm at Olivia, and that it will be completed and put in operation this year. This section runs from Okanagan Falls, at the south end of Dog Lake, to the farm, 16.6 miles. The first section, from Penticton to the north end of Dog Lake, 2.4 miles, was completed in 1921. A car-barge is used to connect the two sections. Surveys are, we are advised, being made for the extension of the line from the Experimental Farm to the International Boundary, 12.3 miles but it is not intended to do any construction on it at present.

The betterments proposed to be done this year consist of improvements to the facilities at Princeton and Penticton, and the reconstruction of the following bridges:—Mile, 28.4; Merritt Subdivision, the present 150 ft. Howe truss bridge will be replaced by steel spans, the dimensions of which have not been decided; mile 21.4, Merritt Subdivision, the present 150 ft. Howe truss span will be replaced by one 106 ft. pony through span and one 50 ft. half deck plate girder span; mile 30.8, Merritt Subdivision the present 100 ft. Howe truss span will be replaced by a 106 ft. steel span; mile 39, Merritt Subdivision, the present 84 ft. Howe truss span will be replaced by an 84 ft. half deck plate girder span, removed from another place, mile 33.7, the present 100 ft. Howe truss span will be replaced by a 106 ft. second hand steel span. (Aug. 1922, pg. 409.)

Manitoulin Island.—A large body of residents on Manitoulin Island, Lake Huron, have signed a petition to the Ontario Government asking for the construction of a colonization railway from

Little Current to some central point on the island. The petition is reported to have been approved of by the Sault Ste. Marie City Council and Board of Trade. Little Current is the second most populous place on the island and is the terminus of the Algoma Eastern Ry.

Michigan Central Rd.—A letter from the company's Toronto solicitors was read at a St. Thomas City Council meeting, Feb. 6, asking for the city's approval of plans for yard extension there and stating that the company desired to proceed with the work in the spring. The plans for the extension have already been submitted to the Board of Railway Commissioners, and have been discussed by Yarmouth Tp. Council, which objects to the closing of Park Ave., and desires to have a general traffic bridge erected instead of the foot bridge offered by the company. The matter was referred by the St. Thomas City Council to the finance committee. (Jan. pg. 8.)

The Montreal Central Terminal Co. will apply to the Dominion Parliament this session for a revival and extension of the powers granted by its act of incorporation. The company was incorporated as the Montreal Bridge Co. in 1890, to build a bridge across, or a tunnel, under the St. Lawrence River, from Montreal to the south shore in Longueuil. In 1907, the title was changed to Montreal Bridge and Terminal Co.; in 1909 the title was further changed to Montreal Terminal Ry. Co., and in 1912, an extension of time for construction was granted and the title changed to Montreal Central Terminal Co. In 1917 it was granted a five year extension of time for construction, and in 1921, a further application for an extension of time fell through. Application was made to the Board of Railway Commissioners, July 6, 1921, for approval of a route map showing the general location of the proposed tunnel and railway. The C.P.R., the G.T.R., the Montreal City Council, and the Montreal Harbor Commission opposed the application, which was refused. (Aug., 1921, pg. 420.)

The Montreal, Joliette and Transcontinental Junction Ry. Co. has asked the Dominion Parliament to extend the time for the construction of its projected railway from Montreal to a junction with the National Transcontinental Ry. at Parent, Que. G. D. Kelly, Ottawa, is solicitor for applicants.

Pacific Great Eastern Ry.—Nothing definite was settled as to future construction by the British Columbia Legislature prior to prorogation, but it is said that Government supporters expressed themselves as being in favor of the completion of the line into Prince George. The Minister and the Deputy Minister of Railways for British Columbia, and T. Kilpatrick, the newly appointed General Manager, completed a trip of inspection over the line from Squamish to Quesnel, Feb. 3. The Minister is reported to have stated at Vancouver, that as soon as possible in the spring an extensive survey of the resources and possibilities for business of the country between Quesnel and Fort George will be made, and if the reports justify it, the Government will proceed with the completion of the line between these points. (Aug. 1922, pg. 410.)

Quebec Central Ry.—The Dominion Parliament is to be asked to extend the time for construction of the line authorized in 1906, to be known as the Quebec Central Ry. Chaudiere Extension, by diverting and rebuilding the portion of the present line from Beauce Jct. to

Beauceville, and building a line from Beauceville to the Famine River, and along that river to Langeville; thence along the St. John River watershed, through the southern portions of Beauce, Dorchester, Bellechasse, Montmagny, L'Islet, Kamouraska and Temiscouata counties to connect with the Temiscouata Ry. near Cabano, Que., about 175 miles. An extension of time is also to be asked for the construction of a line from Leeds to a connection with the branch from Scotts, at near St. Lambert, Levis County, about 35 miles. (Oct., 1922, pg. 516.)

Quebec, Montreal & Southern Ry.—The station building at Contrecoeur, Que., was burnt recently, but the freight shed was saved.

Reid Newfoundland Co.'s Ry.—We are officially advised, in reference to the reported building of a branch line from Junction Brook to Grand Lake station, that it is really a diversion of the present main line, rendered necessary by the putting in of a permanent dam at Grand Lake. This dam will raise the level of the lake and flood the present main line track. (Jan., pg. 8.)

Rouge River Ry.—The Quebec Legislature has extended for one year the time within which the company may build the part of its projected railway from Huberdeau, to the Canadian-China Clay mines, and from its immediate prolongation to St. Remi d'Amherst, Labelle county.

Rutland & Noyan Ry.—The Dominion Parliament is to be asked to authorize the company to lease its railway and undertaking to the Rutland Rd. Co., or any corporate successor thereof, and to authorize the lessee to operate the line. The Rutland & Noyan Ry. is 3.39 miles long, and connects the Rutland Ry. at the International Boundary with the G.T.R. at Rouses Point, N.Y.

Sydney and Louisburg Ry.—A press report stated that the station at Victoria Jct., N. S., is to be moved several hundred yards from its present location, in order to meet the requirements of the increasing passenger traffic between Sydney, Glace Bay and New Waterford. (Jan. pg. 9.)

Timiskaming & Northern Ontario Ry.—The contract for the construction of the extension from Cochrane to opposite New Post on the Abitibi River, 70 miles, which was let in Jan., 1922, to Grant Smith & Co. and McDonnell, Ltd., called for the completion of the line from Cochrane to the second crossing of the Abitibi River by Dec. 31, 1922. We are officially advised that track was laid to the second crossing, 44.40 miles, before Dec. 31. The Lieut.-Governor's speech at the opening of the Ontario Legislature recently referred to the Act mentioned above, and said that it is the Commission's intention to have the work in hand on this extension completed during this year. The Premier, in answer to a question in the Legislature on Feb. 7, stated that the general contractors for the extension, Grant Smith and Co. and MacDonald Ltd., had let subcontracts to McDonnell Ltd., had let subcontracts to Nochem and Mannix, Calgary, Alta., C. nan and Egan, Montreal.

With reference to the proposed extension of the line from near New Post, on the Abitibi River, to James Bay, the Lieut.-Governor in his speech at the opening of the Legislature said: "A survey is being carried on with a view to extending the railway to a suitable port on tidal waters, which will open

up a vast undeveloped area, and give the province a new outlet." We are officially advised that two engineering parties are working, from the end of the extension now under construction, toward Moose Factory. The parties are in charge of A. A. Fraser and J. A. Toy, assistant locating engineers and are working under the direction of W. R. Maner, Chief Location Engineer.

We are officially advised that a member of the Commission's engineering staff spent some days in the Kirkland Lake mining area recently in connection with a projected branch from Swastika, which a press report states will extend to the Argonaut mine. No instrumental survey for this branch, has been made. (Jan. pg. 9.)

The Vancouver, Victoria and Eastern Ry. and Navigation Co. has been authorized by the Board of Railway Commissioners to appeal against the Board's order of Oct. 15, 1922, granting the Vancouver Harbor Commissioners the right to operate trains over the V., V. and E. Ry. tracks at Burrard Inlet, Vancouver.

Victoria Lumber & Manufacturing Co.—We are officially advised that this company, which has its headquarters at Chemainus, B.C., is building 26 miles of logging railways up the Chemainus River; 10 miles from Oyster Bay to Haslam Creek, and has located about 8 miles from branch lines at Robertson River, Cowichan Lake. The lines will be built to standard gauge, and the track will be laid with 50 or 60 lb. rails. On Dec. 31, 1922, grading on the Haslam Creek line had been completed and 3 miles of track had been laid. On the Chemainus River line, 5 miles of grading had been completed, and 3 miles of track laid. When the construction of the lines mentioned above is completed, if conditions are favorable, the company can put in the necessary equipment to log 1,000,000 ft. of timber a day. (Jan., pg. 9.)

Canadian Railway Club Dinner and Meeting.

The Canadian Railway Club dinner was held at the Windsor Hotel, Montreal, Jan. 27, the President, G. M. Wilson, Superintendent Motive Power, G. T. R., being in the chair. The principal guest, Hon. Charles Stewart, Minister of the Interior, in reply to the toast of the railways, said that he had started his career as an employee of the old Nickel Plate Rd. The Government is determined to give Sir Henry Thornton a fair chance to make good as President of the Canadian National Rys., and to give public ownership of these lines a fair show. He had every hope that Sir Henry would make the railways a success, and if he did it would mean not only the success of the national railways but also of the C. P. R. He felt vitally interested in the success of both lines and would do everything he could to work to that end. In order to increase the flow of immigrants to Canada he was trying to co-ordinate the best efforts of all the transportation companies not only to bring people to Canada, but to keep them in the country. He was astonished to find that these railways required more money to finance them than the Dominion Government spent during the war.

At the club's monthly meeting in Montreal, Feb. 13, W. S. Cookson, General Passenger Agent, G. T. R. dealt with the preparation of railway tickets, their printing and handling.

British Columbia and Alberta's Appeal of Freight Rates Decision.

As stated in Canadian Railway and Marine World for February, pg. 51, the Province of British Columbia gave notice of appeal to the Dominion Government from that part of the Board of Railway Commissioners' decision in the equalization of rates case which affected the western rate scale, which was given in full in Canadian Railway and Marine World for Aug. 1922, pg. 398. We also stated in our February issue that the Province of Alberta had become convinced that its interests were identical with those of B. C. in this matter, and that its Government was taking action to join the B. C. Government in its appeal. The Alberta Legislature on Feb. 5, after a debate lasting intermittently from Jan. 31, passed a resolution reading in part as follows: "That this Legislature approves and endorses the action already taken by the Government in joining with the British Columbia Government in its petition to the Governor General in council by way of appeal from the Board of Railway Commissioners for Canada, the petition having for its purpose removal of the present differential in freight tolls on transportation of commodities eastward and the tolls for transportation on the same or similar commodities westward."

Previous to this resolution being passed, A. Chard, freight rate and tariff officer for the Alberta Government, had left for Ottawa to join Premier Oliver of British Columbia and G. G. McGeer, counsel for the latter province, in presenting the appeal to the cabinet, and on Feb. 3, a preliminary presentation of the western provinces' case was made before Premier King, Finance Minister Fielding, and seven other cabinet members. In his argument for removal of the differential as between mountain and prairie rates, Premier Oliver traced the history of the case from as far back as 1869, and claimed that B. C. was entitled to as favorable rates as any other part of Canada. He met the argument as to higher operating costs in the mountains by stating that the Dominion Government built the C. P. R. from Port Moody to Kamloops, and that the value of the land grants given the C. P. R. by B. C. more than offset high operating costs in the mountains. He also stated that the C. P. R. abandoned the Yellowhead Pass, through which it had contracted to build and which would have given more favorable grades and lower operating costs, in favor of the Kicking Horse Pass, and claimed that the province had guaranteed Canadian Northern Ry. bonds for the express purpose of getting control of rates in the province, but had been legislated out of control of the rates. Mr. McGeer replied to questions put by cabinet members, and in answer to his request that a general hearing be held on the matter in the near future, received assurance that such would be done.

Following this preliminary hearing, Messrs. McGeer and Chard had a conference with Sir Henry Thornton, and C. A. Hayes, President and Traffic Vice President, Canadian National Rys., and are reported as having expressed great satisfaction with the progress they and Premier Oliver were making in their fight to remove what they allege to be undue and unjust discrimination against both British Columbia and the Alberta grain shippers.

Two notices of motion were placed on

order paper on Feb. 15, in the House of Commons in connection with these rate matters, one by J. A. Clark, Conservative, Burrard, B. C., and the other by D. M. Kennedy, Progressive, Edmonton West, Alta. Mr. Clarke's resolution was as follows: "That in the opinion of this House, railway rates westward from the prairie provinces should be reduced to an equality with railway rates eastward from said provinces for similar goods and distances." Mr. Kennedy's resolution after a lengthy preamble was in part as follows: "That action should be taken by the Government, with a view to rescinding and varying the Board of Railway Commissioners' order to the extent that the rates charged in Alberta and British Columbia shall be no higher than for the same or similar distances elsewhere in Canada, and so that the excessive charges now being exacted by the railway companies under the Mountain Scale may be removed, unless the said differences are justified upon the ground of actual water competition. That the Government should establish a scale of rates in western Canada that shall provide for the movement of grain and grain products from points in prairie territory to Pacific coast and British Columbia points upon the same basis as fixed in the Crows Nest Act, for movement of grain and grain products east-bound. And that the Government should establish a scale of rates in western Canada that shall provide for the movement of all commodities from Pacific coast and British Columbia points to prairie points, for the same or similar distances, on the same basis that the said commodities are moved for the same or similar distances from eastern Canadian points to points in prairie territory."

U.S. Rates on Grain to Lake Ports for Forwarding.—Tariffs were filed with the U.S. Interstate Commerce Commission, to be effective Jan. 12, by the Chicago, St. Paul, Minneapolis & Omaha Ry., Great Northern Ry., Minneapolis, St. Paul & Sault Ste. Marie Ry. and Northern Pacific Ry., for carrying grain and flaxseed from St. Paul and Minneapolis, and adjacent territory, to Lake Superior ports for ship movement beyond. The schedules made certain reductions in existing rates. The Commission, on Jan. 11, ordered that the schedules in the tariffs filed be inoperative until May 12, that a hearing be held in Chicago on Feb. 10, and that the tariff schedules in force prior to the issuance of the new tariffs remain in application until the period of suspension or any extension thereof expires, and until the enquiry has been concluded, unless authority to change them be granted specially by the Commission.

Railway Accidents Throughout Canada.—The total number of accidents on railways throughout Canada, reported to the Board of Railway Commissioners, for Nov. and Dec., 1922, was 620, in which 2 passengers, 16 employees and 18 others were killed, and 90 passengers, 526 employees, and 84 others were injured. Included in "others" are 9 persons killed and 46 injured in 43 highway crossing accidents, the crossings being unprotected in 36 cases, and protected in 3 cases by gates, 1 by a watchman, and 1 by a flagman. Automobiles and trucks were concerned in 24 of the accidents, other vehicles in 10, and pedestrians in 8.

Mainly About Railway People Throughout Canada.

W. R. Baker, C. V. O., ex-Secretary, C. P. R., and Mrs. Baker, expect to leave Montreal in March for Europe.

E. W. Beatty, K. C.,—President, C. P. R., has been elected a governor of the Royal Victoria Hospital, Montreal, vice the late R. B. Angus, who was also a C. P. R. director.

G. N. Beatty, who died at Toronto, Jan. 29, aged 43, was a brother of E. W. Beatty, K.C., President, C.P.R., and Dr. H. A. Beatty, Chief Medical Officer, Eastern Lines, C.P.R., Toronto.

Arthur Bernard Buckworth, who has been appointed Deputy Minister of Railways for British Columbia, Victoria, was born at Birmingham, Eng., Mar. 2, 1876, entered transportation service in 1896, and was to 1897, engaged in loading freight cars for C.P.R. at Vancouver, B. Gowans, who has resigned as Foreign Freight Agent, C.P.R., Montreal, to join the firm of Thomson & Earle, grain brokers, Montreal, entered C.P.R. service, March 25, 1901, since when he has been, to Sept., 1906, in Auditor of Agencies' office; Sept., 1906, to Sept., 1908, stenographer to Vice President; Sept., 1908, to Sept., 1911, Contracting Import Freight Agent; Sept., 1911, to Oct., 1918, chief clerk, Import Freight Department; Oct., 1918, to March, 1919, acting Import Freight Agent; March to Nov., 1919, Import Freight Agent; Nov., 1919, to Jan. 1923, Foreign Freight Agent, all at Montreal.

Hon. G. P. Graham, Minister of National Defence, who has been acting as Minister of Railways and Canals since the late Hon. W. C. Kennedy had to give

up the duties, has also been appointed acting Postmaster General, during the Hon. C. Murphy's absence on account of illness.

Mrs. G. P. Graham, wife of the Minister of National Defence, and acting Minister of Railways and Canals, and Lady Thornton and Miss Thornton, wife and

W. S. Harrison,
General Auditor of Revenues, Canadian National Railways.

J. B. McLaren,
Comptroller, Central Region, Canadian National Railways.

daughter of the President of the Canadian National Rys., attended the drawing room given by the Governor General and Lady Byng in Ottawa, Feb. 4.

Casimir S. Gzowski, who died in Tor-

onto, Dec. 16, was a son of the late Colonel Casimir S. Gzowski, C.E., who had important construction contracts in the early days of Canadian railroading especially on the G.T.R. He left an estate valued at \$483,386, which is to be divided into 100 shares, 22 of which are left to his son Casimir S. Gzowski, Assistant to Vice President, Construction Department, Canadian National Rys.

Robert Wetmore Hannington, who has been appointed Assistant Regional Counsel, Western Region, Canadian National Rys., Vancouver, B. C., was born at Dorchester, N. B., graduated from Dalhousie University in law, and was called to the bar in 1892. He is a son of the late Hon. D. L. H. Hannington, a former Premier of New Brunswick, and at the time of his death, Senior Judge of the New Brunswick Supreme Court. He went to Nelson, B. C. in 1897 and commenced practice there. In 1908 he moved to Vancouver, B. C., and in 1915, was appointed City Solicitor of Victoria, B. C., which position he held until Oct. 1919, when he was appointed Solicitor for British Columbia, Canadian National Rys., Vancouver.

Samuel J. Hungerford, who has been appointed Vice President in charge of Operation and Maintenance, Canadian National Rys., Montreal, was born near Bedford, Que., July 16, 1872, and entered railway service in May, 1886, since when he has been, to Feb. 1891, machinist apprentice, South Eastern Ry. and C. P. R., Farnham, Que.; May, 1891, to Aug. 1894, machinist at various points in Quebec, Ontario and Vermont; Sept. 1894, to Aug. 1897, charge man, C.P.R., Windsor St., Montreal; Aug. 1897, to April 1900, Assistant Foreman, C. P. R., Farnham, Que.; April 1900, to Feb. 1901, Locomotive Foreman, C. P. R., Megantic, Que.; Feb. to Sept. 1901, General Foreman, C. P. R.; Sept. 1901, to Feb. 1903, Locomotive Foreman, C. P. R., Cranbrook, B. C.; Feb. 1903, to Jan. 1904, Master Mechanic, Western Division, C. P. R., Calgary, Alta.; Jan. 1904, to Dec. 1907, Superintendent, Locomotive Shops, C. P. R., Winnipeg; Jan. 1908, to Feb. 1910, Superintendent of Shops, C. P. R., Winnipeg, Man.; Mar. 1910, to April 1915, Superintendent of Rolling Stock, Canadian Northern Ry., Winnipeg; May 1915, to Nov. 1, 1917, Superintendent of Rolling Stock, C.N.R., Toronto; Nov. 1, 1917, to Dec. 1, 1918, General Manager, Eastern Lines, C.N.R.,

Toronto; Dec. 1918, to Sept. 1920, Assistant Vice President, Operation, Construction and Maintenance, Canadian National Rys., Toronto; Sept. 1920, to Oct. 10, 1922, Vice President, Operation and Maintenance, Canadian National Rys., Toronto; Oct. 10, 1922 to Feb. 19, 1923, Vice President and General Manager, Canadian National Rys., Toronto.

L. Stewart Irvine, whose appointment as Soliciting Freight Agent, Canadian National Rys., Calgary, Alta., was announced in our last issue, was born at Glengarnoch, Scotland, April, 14, 1878, and entered railway service in July, 1887, since when he has been, to Sept. 1893, telegraph operator, ticket clerk and chief clerk, Glasgow and Southwestern Ry., Elderslie, Johnstone and Glengarnoch, Scotland; April 1896 to Oct. 1899, Inspector, Joint Rate Inspection Bureau, Chicago, Ill.; Oct. 1899 to March 1904, rate clerk, Claims Department, Chicago and Northwestern Ry., Chicago, Ill.; during the winters from 1904 to 1906, chief clerk, yard office, C.P.R., Moose Jaw, Sask.; Jan. 1908 to April 1911, rate clerk, Claims Department, Chicago and Northwestern Ry., Chicago, Ill.; April 1911 to Jan. 1916, train agent, Freight Traffic Department, Grand Trunk Pacific Ry., Biggar and Regina, Sask.; Feb. 1916 to Oct. 1920, Soliciting Freight Agent, G.T.P.Ry., Regina, Sask.; Oct. 1920 to Dec. 31, 1922, Soliciting Freight Agent, Canadian National-Grand Trunk Pacific Rys., Regina, Sask.

Thomas Kilpatrick, who has been appointed General Manager and General Superintendent, Pacific Great Eastern Ry., Vancouver, B. C., was born at Simcoe, Ont., April 27, 1857, and entered railway service in May 1884, since when he has been, to May 1885, on C. P. R. construction along the north shore of Lake Superior; June to Dec. 1885, on C. P. R. construction, Mountain Section, B. C.; April 1886, to April 1887, bridge-man, Mountain section, C. P. R.; April 1887 to Aug. 1893, bridge foreman, Mountain section, C. P. R.; Aug. 1893 to May 1901, Bridge and Building Master Mountain Section, C. P. R.; May 1901 to Dec. 1912, Superintendent, District 1, British Columbia Division, C. P. R., Revelstoke; Dec. 1912 to Aug. 1915, in private business; Aug. 1915 to Jan. 31, 1923, Inspector and Superintendent of highway bridges for B. C. Government.

W. B. Lanigan, General Freight Traffic Manager, C.P.R., was reported in a recent press dispatch, as quoted in Canadian Railway and Marine World for February, to have stated at Regina that he would retire from the service in the near future. Enquiry shows that the report was not justified, and there does not seem to be any probability of Mr. Lanigan's retirement shortly, owing to the railway traffic situation. Should he continue until 1924, he will have reached his 40th year of service.

T. J. Macabe, Assistant Treasurer, Canadian National Rys., Toronto, has resigned to become President of the Buntin Reid Co., wholesale paper dealers, etc., Toronto.

George E. MacDonald, at one time a partner in MacDonald-Marpole Co., coal merchants, Vancouver, B.C., and from April, 1919, to March, 1920, General Manager, Pacific Great Eastern Ry., there, died at Ottawa, Ont., Feb. 7, of pneumonia, after an illness of three days. On resigning as General Manager, Pacific Great Eastern Ry., he joined the Blackstone Coal Co., of Edmonton, Alta.

He entered transportation service in 1876, and during that year was clerk, Audit Department, Ogdensburg & Lake Champlain Ry., Ogdensburg, N.Y.; 1876 to June 1, 1877, clerk, Freight Department, same company, Malone, N.Y.; June 1 to Dec. 1, 1877, clerk, Accounting Department,

same company, Ogdensburg, N.Y.; Dec. 1, 1877, to July 1, 1878, agent, same company, Bangor, N.Y.; July 1, 1878, to Oct. 31, 1880, agent, same company, Lawrence, N.Y.; Nov. 1, 1880, to Oct. 31, 1883, ticket agent, same company, Ogdensburg, N.Y.; Nov. 1, 1883, to Dec. 31, 1884, Car Accountant and ticket agent, same company, Ogdensburg, N.Y.; Jan. 1, 1885 to Jan. 31, 1886, City Passenger Agent, West Shore Ry., Auburn, N.Y.; Feb. 1, 1886, to Dec. 31, 1888, accountant, Central Vermont Ry. and Ogdensburg Transit Co., Ogdensburg, N.Y.; Jan. 1, 1889, to May 31, 1892, chief clerk to Agent and accountant, same companies, Ogdensburg, N.Y.; June 1, 1892, to March 15, 1898, accountant, same companies, St. Albans, Vt.; March 19 to Dec. 31, 1898, General Agent and accountant, Canada Atlantic Ry. and Canada Atlantic Transit Co., Depot Harbor, Ont.; Jan. 1, 1899 to Dec. 31, 1904, General Agent, Canada Atlantic Ry., Canada Atlantic Transit Co., Ottawa, Ont.; Jan. 1, to Oct. 31, 1905, Auditor, same companies, Ottawa, Ont.; and from Nov. 1, 1905, to Oct. 31, 1907, Manager, Canada Atlantic Transit Co. and from Nov. 1, 1907, until his death, also manager, Ontario Car Ferry Co., Montreal. He left Montreal, Jan. 30, to attend a meeting of G.T.R. officials at Detroit and was, apparently, in the best of health, when he retired to his hotel the next evening. The body was removed to Montreal, Feb. 1, and the funeral took place at Malone, N.Y., Feb. 3.

Lt.-Col. Onesiphore Ernest Talbot, who has been appointed a director, Canadian National Rys., was born at St. Arsene, Temiscouata County, Que., and while young, his family moved to St. Michel, Bellechasse County, where he has lived since. Later in life, he was associated with a brother, on surveys for the Mississippi and Ouachita Ry. and Little Rock, Pine Bluff and New Orleans Ry., in Arkansas, and a few years later represented Quebec interests in a tour of the territory between Winnipeg and Victoria, B. C., to report on the possibilities of a trans-Canada railway, the information gained being used to a considerable extent during the construction of the Grand Trunk Pacific Ry. He was also engaged for some time in the location of some 60,000 square miles of coal area in the Brazeau district. He was, for some time a commercial traveller, and took an interest in agricultural and military affairs, was Colonel of the 17th Battalion of Levis and Bellechasse, and conducted a successful recruiting campaign in the province, during the war. He was Adjutant of the 1906 Bisley team, and also President of the Quebec Civil Employes Association, of which he is now honorary President. A few years ago he was appointed Collector of Provincial Revenue, at Quebec, which position he still holds.

R. C. Vaughan, who has been appointed Director of Stores and Purchases, Canadian National Rys., Montreal, was born at Toronto, Dec. 1, 1883, and entered railway service Oct. 3, 1898, since when he has been, to Mar. 1902, office boy, clerk and stenographer, General Freight Agent's office, C. P. R., Toronto; July to Dec. 1902, in Freight Department, G. T. R., Toronto; Jan. 1903, to July 1, 1910, clerk, secretary to Third Vice President and General Manager, and chief clerk to Third Vice President, Canadian Northern Ry., Toronto; July 1, 1910, to Oct. 1918, Assistant to Third Vice President, C.N.R., Toronto; Oct.

1918 to Nov. 1920, Assistant to President, Canadian National Rys., Toronto; Nov. 1920, to Feb. 1923, Vice President in charge of Purchases, Supplies and Stores, Canadian National Rys., Toronto.

Mrs. Vaughan, wife of H. H. Vaughan, formerly Assistant to Vice President, C. P.R., Montreal, is spending part of the winter in Florida with her son and mother.

James A. Virtue, who has been appointed local freight agent, Toronto, Hamilton & Buffalo Ry., and C.P.R., Hamilton, Ont., was born at Beechburg, Ont., in 1875 and entered railway service in 1892, since when he has been, to 1898, in local freight office, C.P.R., Montreal; 1898 to 1905, in Freight Claim Agent's office, Montreal; 1905, to April, 1914, Freight Claim Agent's office, C.P.R., Toronto; April, 1914, to Jan. 31, 1923, chief clerk, local freight office, Toronto, Hamilton & Buffalo Ry., Hamilton, Ont.

Paul Wadsworth, who died at Albany, N. Y., Feb. 13, was well known to Canadian railway traffic men. He was born at Auburn, N. Y., June 13, 1854, was from 1869 to 1871, with the Atlantic and Pacific Telegraph Co., entered transportation service in 1871, and was from that time to 1889, consecutively, telegraph operator, ticket agent and operator, Binghamton, N. Y.; cashier, Freight Department, and operator, Oneonta, N. Y.; local freight agent, train dispatcher, Albany, N. Y.; for Delaware and Hudson Canal Co., West Shore Rd., and Line agent, West Shore and Hoosac Tunnel Lines; 1889 to 1896, Assistant General Freight Agent, Delaware and Hudson Canal Co.; 1896 to 1918, consecutively, General Freight Agent, and Freight Traffic Manager, Delaware and Hudson Co., Albany, N. Y. He was retired on superannuation in 1918.

Edward Wanklyn, a general agent in Mexico City, who died there, Feb. 5, aged 61, was a brother of F. L. Wanklyn, General Executive Assistant, C. P. R., Montreal.

Miss Gyneth Wanklyn, only daughter of F. L. Wanklyn, General Executive Assistant, C. P. R., Montreal, was married there Feb. 21 to W. D. McLennan, of that city.

Frederick Ernest Whelpley, who has been appointed acting Treasurer, Atlantic Region, Canadian National Rys., Moncton, N.B., was born at St. John, N. B., Aug. 20, 1861, and entered transportation service May 1, 1893, since when he has been, to Dec. 1, 1893, clerk, Hamburg-American Steamship Co., Montreal; Dec. 1, 1893, to May 1, 1903, outward freight clerk, Dock Department, same company, Hoboken, N.J.; May 1, 1903, to June 1, 1915, cashier, Canadian Government Railways, Moncton, N.B.; June 1, 1915, to Feb. 19, 1923, Assistant Treasurer, Canadian Government Rys., Moncton, N.B.

James A. Yates, who has been appointed General Treasurer, Canadian National Rys., Montreal, was born there, Nov. 30, 1876, and entered G.T.R. service in Feb., 1891, since when he has been, to Dec., 1906, clerk, Treasurer's office, Montreal; Jan., 1907, to Dec., 1911, chief clerk, Treasurer's office, Grand Trunk Pacific Ry., Montreal; Jan. 1912, to July, 31, 1914, chief clerk, Treasurer's office, G.T.R., and G.T.P.R.; July 31, 1914, to Aug. 31, 1922, Assistant Treasurer, G.T.R., and Secretary, Montreal and Southern Counties Ry.; Aug. 31, 1922, to Feb. 19, 1923, Treasurer, G.T.R., Montreal.

Canadian Pacific, Canadian National and Grand Trunk Railways' Earnings.

The railway operating results in Dec. 1922, were not equally favorable for the larger Canadian systems. The C. P. R. net earnings were larger than in Dec. 1921. The Canadian National Rys. incurred a much larger operating deficit than in Dec. 1921. The Grand Trunk Railway System, all lines, had an operating deficit in December which was nearly as large as that in Dec. 1921, and the G. T. R. Canadian lines had an operating deficit in Dec. 1922, compared with an operating surplus in Dec. 1921.

Figures for the individual roads show that in Dec. 1922 the C. P. R. gross earnings were \$17,365,639, an increase of \$1,608,716 over Dec. 1921. Operating expenses, \$13,900,835, were but \$61,692 greater than in Dec. 1921, so that the net earnings, \$3,464,805, were \$1,547,023 more than in Dec. 1921. The result on the complete year's operations was that gross earnings were \$186,675,036, a decrease of \$6,346,819 from 1921; operating expenses, \$150,373,345, were \$8,446,769 less than in 1921, and, on account of the greater decrease in expenses than in gross earnings, the net revenue for the year, \$36,301,691, was \$2,099,951 more than in 1921. Up to the end of October, as stated in preceding issues of Canadian Railway and Marine World, the company suffered a decrease in net, compared with the same period in 1921, and it was only due to the very large gross and net earnings consequent on the heavy traffic in the last three months of the year, that it was able to show better results for 1922 as a whole than for 1921. The net earnings for 1922 are the most favorable since 1917.

While the C. P. R. was able to turn December operations to such good account in increasing its lead in net earnings over those of 1921, the Canadian National Rys., including the Canadian Northern, Canadian Government, and Grand Trunk Pacific Rys., steam lines only, were not so fortunate. For December, Canadian National Rys. gross earnings were \$10,626,610, compared with \$11,573,140 in Dec. 1921; and operating expenses were \$12,735,699, compared with \$12,689,793 in Dec. 1921, which made the Dec. 1922 operating deficit \$2,109,090, compared with \$1,116,653 in Dec. 1921, an increase of \$992,437. For the year, Canadian National Rys. operating revenues were \$118,610,442, compared with \$125,317,431 in 1921; and operating expenses were \$128,608,096, compared with \$141,733,688 in 1921, resulting in an operating deficit of \$9,997,655 compared with \$16,416,257 in 1921. While the results for December were discouraging, it is evident that for the year as a whole the 1922 results were a great improvement over those of 1921.

On the G. T. R., all lines, December gross earnings were \$9,358,856, compared with \$7,170,541 in Dec. 1921; and operating expenses were \$10,494,074, compared with \$8,333,468 in Dec. 1921, which left a deficit of \$1,135,217 in Dec. 1922 as compared with \$1,162,927 in Dec. 1921. For the Canadian lines, gross earnings for the month were \$6,721,776, compared with \$5,668,995 in Dec. 1921; and operating expenses were \$8,446,758 compared with \$4,827,245 in Dec. 1921, leaving an operating deficit of \$1,724,981 in Dec. 1922 compared with

an operating surplus of \$841,750 in Dec. 1921. For the year 1922, the G. T. R., all lines, gross earnings were \$106,348,507, compared with \$101,961,805 in 1921; operating expenses were \$93,525,166, compared with \$97,412,480, leaving net earnings of \$12,823,341, compared with \$4,549,324 in 1921. For the Canadian lines only, gross earnings for 1922 were \$77,700,019, compared with \$76,858,032 in 1921; operating expenses were \$70,317,813, compared with \$71,179,293, leaving net earnings of \$7,382,206 in 1922, compared with \$5,678,739 in 1921.

As the Canadian National Rys. operating deficit in 1922 was \$9,997,655, and the G. T. R.'s net earnings were \$12,823,341, it is evident that the Government owned roads as a whole got through the year with an operating surplus of almost \$3,000,000. Since this represents such an improvement over the results in 1921, when the operating deficit for the Government lines as a whole was in the neighborhood of \$12,000,000, and since the C. P. R. was able to secure net earnings greater than in 1921 by over \$2,000,000, it is evident that in 1922 Canadian railway industry as a whole made some progress in getting the railway business in Canada on a financially self supporting basis.

The mere fact of results in 1922 having been as above indicated, however, does not constitute any reason for supposing that the progress made will be the forerunner for still greater progress, nor that the ground gained will not be lost, for the reason that the railway industry is still faced with conditions which make the future seem very uncertain. In view of the fact that the C. P. R. was behind in its net, as compared with 1921, until the end of Oct. 1922, and as the Canadian National Rys. owe a large part of their deficit reduction to the heavy autumn traffic, it must be evident that if the railways are to continue to enjoy some degree of financial prosperity, they must have heavy traffic, for with the greatly reduced rates now in effect, any net earnings without large traffic would be next to impossible. Not only must they continue to have heavy traffic, but in addition they must be protected from the agitation for rate reductions which is all too prevalent, and which threatens to disregard the Board of Railway Commissioners and go direct to Parliament to get results. The preliminary January figures, show that the railways had somewhat greater earnings than in Jan. 1922, but preliminary statements for the first two weeks in February show a falling off tendency. Since the average rates are much lower now than in Jan. and Feb. 1922, it stands to reason that the railways must be moving more traffic now than they did then, to derive the same gross earnings, and as operating expenses were not reduced to the same extent as rates, it is also a reasonable proposition that net earnings will not be so good now as in Jan. and Feb. 1922. It may be argued, and is, that any deficit the Canadian National Rys. make may be paid from the proceeds of taxation, but it must be remembered that the national debt, bearing interest, is swelled by every deficit which these railways are responsible for, and this condition is not good for the country. The privately owned roads must have

adequate earnings if efficient transportation in the future is to be provided for, so that when all conditions are taken into consideration, agitation for rate reductions at present seems badly out of place.

Maritime Provinces Railway Traffic Demoralized.

Owing to heavy snowstorms at the end of January, and again early in February, railway traffic in the maritime provinces was badly disorganized for a considerable period on the Kent Northern between Kent Jct. and Richibucto, N.B., the first train to get through from Richibucto for nine days reached Kent Jct., Feb. 6; the Prince Edward Island car ferry, on Feb. 6, was unable to get nearer to Borden, than three miles owing to ice, and had to put back to Tormentine, N. B., while trains all over were hours late in reaching their destinations. On Prince Edward Island, railway traffic generally was suspended, and on Feb. 11, the Associated Boards of Trade telegraphed the Dominion Government asking that an aeroplane service be operated between the mainland and Charlottetown until ice conditions in Northumberland Strait improved. The Reid Newfoundland Co's regular steamship service between North Sydney, N.S., and Port aux Basques, Nfld., has been suspended for some time owing to the Newfoundland Ry. being practically closed down consequent upon the weather. A temporary service was put in operation between St. John's, Nfld., and Louisburg, N. S., and during the stormy weather early in February the s. s. Kyle which left St. John's, Feb. 3, was forced to lie to in the vicinity of the St. Pierre and Miquelon Islands for several days, and only reached Port aux Basques, the first port on Feb. 8. Train service on the Newfoundland Ry. from St. John's to Millartown Jct., 309.57 miles was resumed Feb. 18.

Grant Hall's Western Inspection Trip.

Grant Hall, Vice President, C. P. R. left Montreal, Jan. 20, on a trip over the company's lines to the Pacific coast, accompanied by D. C. Coleman, Vice President, Western Lines, who had been in Montreal discussing appropriations for betterments and by F. H. Anson, President, Abitibi Power and Paper Co. From Winnipeg he was also accompanied by J. W. Allan, K. C., ex-M. P. for Winnipeg South; Andrew Kelly, President, Western Canada Flour Mills, and R. R. Dobell, Western Manager, Ogilvie Flour Mills. The general superintendents accompanied him over their respective districts and the superintendents over their respective divisions.

Mr. Hall's principal stops were at Fort William, Winnipeg, Regina, Calgary, Vancouver and Victoria and he went over the recently completed Weyburn-Lethbridge line, during which, while near Manyberries, Sask., he shot from the standing train killing a coyote at 350 yards. He returned to Montreal early in February.

The Transportation Club of Toronto held its monthly luncheon at the Queen's Hotel, Toronto, Feb. 26, about 100 members attending. W. T. Jackman, Professor of Political Economy, Toronto University, spoke on the economics of transportation.

Freight Car Locations on Canadian Railways.

The Railway Association of Canada has issued a report on the location of freight cars on Canadian railways on Feb. 1, 1923, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada; Central Vermont, in Canada; Michigan Central, in Canada; and Pere Marquette, in Canada, as follows: cars owned by reporting railways, 220,369; home cars on Canadian foreign lines, 17,325; home cars on U.S. lines, 59,235; home cars on home roads, 143,809; Canadian owned foreign cars on home lines, 16,362; U.S. owned foreign cars on home lines, 30,707; total cars on lines, 190,873; per cent on lines to total owned, 86.6; deficiency on lines to total owned, 29,491; home cars in bad order, 10,434; foreign cars in bad order, 518; total cars in bad order, 10,952; per cent in bad order 5.7; privately owned U.S. cars on lines, 1,837; privately owned Canadian cars on lines, 919.

Traffic Orders by Board of Railway Commissioners.

Interswitching Rates to Armstrong, Whitworth of Canada, Ltd.

33,311. Jan. 19.—Re application of Armstrong, Whitworth of Canada, Ltd., for an order, under sec. 3, 4 and 317 of the Railway Act, 1919, declaring the legal rates from and to their siding at Longueuil, Que., under existing tariffs, effective from Jan. 1, 1917, to date; and for a ruling affecting all other lines under the Board's jurisdiction, connecting with the Quebec, Montreal & Southern Ry. at St. Lambert, Que. Upon hearing the application at Montreal, Oct. 2, 1922, the applicants, the Quebec, Montreal & Southern, and the Grand Trunk Railways, being represented, and what was alleged, the Board declares that its general order 252, Oct. 26, 1918, prescribed interswitching rates for distances not exceeding 4 miles, which, when added to the line carrier's rates to or from the interchange point, fixed the legal maximum joint rates in respect of the traffic covered by the said order.

Paper Rates from Sturgeon Falls and Espanola.

33,344. Jan. 31.—Re complaint of Spanish River Pulp & Paper Mills, Ltd., that the rates on group A descriptions of paper from Sturgeon Falls and Espanola, Ont., to Toronto and other destinations in Ontario, are higher, distances considered, than from Montreal, Lachute and other origin stations named in tariffs of Canadian Pacific Ry. (C.R.C. no. E-3807) and Canadian National Rys. (C.R.C. no. E-326). Upon hearing the complaint in Sault Ste. Marie, July 27, 1922, the complainants and the C.P.R. being represented at the hearing, and what was alleged; and upon reading the further written submissions filed, and the report of its Chief Traffic Officer, the Board orders that the complaint be dismissed.

Building Sand, Gravel and Crushed Stone Rates.

33,355. Feb. 1.—Re application of Great West Sand & Gravel Co. and Braid &

McCurdy, of Winnipeg, for a reduction in rates on building sand, gravel and crushed stone from Birds Hill to Winnipeg. Upon hearing the application at Winnipeg, Oct. 2, 1922, the applicants, the C.P.R. Co. and the Building Products & Coal Co. being represented, and what was alleged; and upon the report and recommendation of its Chief Traffic Officer, the Board orders that the application be refused.

Galvanized Sheets Rates.

33,362. Feb. 7.—Re complaint of Dominion Sheet Metal Corporation, of Hamilton, Ont., against rate on galvanized sheets to Winnipeg. Upon hearing the complaint at Ottawa, Nov. 21, 1922, the complainant and the Grand Trunk and Canadian Pacific Railways being represented, and what was alleged; and upon the report and recommendation of its Chief Traffic Officer, the Board orders that the complaint be dismissed.

Telegraph, Telephone and Cable Matters.

At a meeting of Commercial Telegraphers' Union of America, at Montreal, Jan. 12, it was charged that the C.P.R. and the Canadian National Telegraphs managements had violated agreements made as to working conditions, but press reports do not give any details of the alleged violations.

The Canadian National Telegraphs branch office opened in the new Mount Royal Hotel, Montreal, recently, is equipped with a teletype for handling messages between the branch and main offices. It is said to be the first instrument of this type installed in a public telegraph office in Canada.

Canadian National Telegraphs has completed its new automatic department at its Toronto office, with a 4-channel mux to Montreal, 2-channel muxes to Winnipeg, Chicago, Buffalo and New York, and single channels to Quebec, Ottawa, Hamilton and Detroit. It is also installing a pin jack switchboard and high speed repeater equipment for the main office at Toronto.

The Marconi Wireless Telegraph Co. is reported to have decided to erect a radiotelegraph station at Vancouver, B.C., at an approximate cost of \$2,000,000. It is stated that it is intended to make it the most powerful station in the world, for a direct service to England and Australia. The company will also, it is reported, erect another station at Montreal, for direct communication to England and other European points.

R. Lavoie, Moncton, N.B., who retired on pension recently, after 52 years service, entered the Montreal Telegraph Co's employ at the age of 17, and continued when that company's property was taken over by the Great Northwestern Telegraph Co., and again when the latter company's property was taken over by Canadian National Telegraphs. He was employed on the first pole line built from Riviere du Loup to Halifax, and also on the erection of G.T.R. telegraph lines between Montreal and Toronto, Toronto and Buffalo, and Detroit and Chicago. He was presented with a club bag by a number of his associates.

Dominion Government Telegraphs in Saskatchewan.

Minister of Public Works King gave the following information in the House of Commons recently, in answer to questions by T. Sales, Saltoats, Sask. Be-

tween Qu'Appelle, and Fort Qu'Appelle, there is pole line 17 miles and wire 17 miles; between Fort Qu'Appelle and South Humboldt, there is pole line 162 miles, and wires 163 miles; between South Humboldt and Battleford there is pole line 127 miles, wire 171½ miles; east of Battleford there are 7 offices, Qu'Appelle, Fort Qu'Appelle, Lipton, South Humboldt, Saskatoon, Henrietta and Baljennie. The proportion of general average of outlay, aside from salaries, for all lines and offices in Saskatchewan is \$18 a mile (wire). For the section embracing the 7 offices mentioned above, the cost of maintenance, exclusive of salaries, is \$6,327. There are 7 agent-operators and 1 lineman employed on these lines, the total salaries being \$10,980. Two linemen are employed, 1 at Fort Qu'Appelle, salary \$1,476 a year, and one at Saskatoon, salary \$1,620 a year. The outlay for keep of horses is included in the general average given above, and the cost of material used in maintaining the line is also included in the general average. During the last year, 5,762 messages were sent over these lines. With the exception of Baljennie, the Canadian Pacific Telegraphs and the Canadian National Telegraphs lines serve all the points in the territory covered by the Government lines mentioned above, in consequence of which the latter lines and offices east of Baljennie, along with some other sections farther west in Saskatchewan and in Alberta, are to be discontinued by March 31.

Among the Express Companies.

George Parker, Superintendent, Dominion Ex. Co., Toronto, died there, Feb. 25, aged 47.

A. F. Schimnoski, President, Dominion Ticket and Financial Corporation, Winnipeg, was arrested there, Feb. 8, on the failure of his company, and charged with the theft of \$11,000 from the Dominion Ex. Co.

Canadian National Ex. Co's Eastern Division officials met at Moncton, N.B., Feb. 5, and were addressed by F. C. Salter, Manager, Foreign Department. Events of the past year were reviewed, and the future outlook discussed.

W. L. Purvis, alias D. L. Curtis, was sentenced at Regina, Sask., Feb. 3, to 8 years in the penitentiary for holding up Canadian National Rys. train 6, Feb. 1, near Regina, and stealing papers and \$1,334.50 in cash from the Canadian National Express Co's safe, after gagging and binding the express messenger.

The Canadian National and Dominion Ex. Cos. have extended the delivery limits into the Moore Park district, Toronto, in compliance with the conditions as to express delivery limits set out in the Board of Railway Commissioners' judgment of July 17, 1919, on express rates, a summary of which was given in Canadian Railway and Marine World for Aug., 1919, page 441.

The Independent Cariboo Stage & Express Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Ashcroft, B.C., to take over as a going concern, the business operated by A. W. Jervis and L. H. Schamerhorn, at Ashcroft, as the Independent Cariboo Stage & Express Co., and to carry on bus, stage and express service between Ashcroft, Williams Lake and Quesnel, and elsewhere in the province.

Electric Railway Department

The Toronto Railway Arbitration Award.

The arbitration as to the amount to be paid by the City of Toronto for the Toronto Ry. Co's properties, etc., taken over by the city on Sept. 21, 1921, which commenced June 28, 1921, and the taking of evidence and counsel's arguments in which ended Nov. 28, 1921, after 168 sessions, was concluded, as far as the arbitrators are concerned, on Jan. 31, when the chairman, Hume Cronyn, and the company's arbitrator, Sir Thomas White, awarded the company \$11,188,500 with interest at 5 p. c. from Aug. 31, 1921, from which the city's arbitrator, Sir Adam Beck dissented.

The majority award gave particulars of the acquisition of the Toronto St. Ry. Co's system by the city in 1891, and of its subsequent transfer, first to Kieley, Mackenzie, Everett and Woodworth, and then by them to the Toronto Ry. Co. One clause of the agreement which was to be in force for 30 years from Sep. 1, 1921, was as follows:—

"At the termination of this contract the city may, in the event of the council so determining, take over all the real and personal property necessary to be used in connection with the working of the said railways, at a value to be determined by one or more arbitrators (not exceeding three) to be appointed as provided in the Municipal Act and the acts respecting arbitrations and references, and to have all the powers of arbitrators appointed under such acts, and each party shall bear one-half of the cost of the necessary arbitration at conclusion of term of lease, but the city shall only pay for the land conveyed by them to the purchaser, what it is worth, without reference to its value for the purpose of operating a street railway or railways."

Another clause provided that: "In arriving at such value the arbitrators are to consider and award only the value of the said several particulars to the city at the time of the arbitration, having regard to the requirements of a railway of the best kind and system then in operation and applicable to the said city."

On June 21, 1920, the city passed a bylaw, reciting the provisions of the agreement and statute and the intention to take over all the real and personal property necessary to be used in connection with the working of the railway under the terms of the agreement, conditions and statute, and authorizing the mayor and city treasurer to give the company notice that it was the city's intention at the termination of 30 years from Sept. 1, 1921 to take over all the real and personal property necessary to be used in connection with the working of the railway.

The two arbitrators, Hume Cronyn and Sir Thomas White made the following majority award:—"We adjudge that the following parcels of property, namely:—(1) That portion of the power house property on Front St. East which the city claims to be entitled to reject, consisting of land, building, plant, tools, equipment, and furniture; (2) The storage battery properties, viz:—(a) Battery and garage property on corner of Front and Frederick Sts., (including

land, buildings, structures, storage battery, and equipment), together with battery booster and equipment; (b) Harrison St. storage battery property (including land, building, structures, storage battery, and equipment), together with battery booster and equipment situate in the Harrison St. substation; (c) Storage battery in the Yonge St. substation with motor generator set and exciter motor generator set. (3) Sherbourne St. storage yard and carpenter shop parcel situate at the northwest corner of Front and Frederick Sts.; All as more particularly

Canadian Electric Railway Association.

Honorary President, E. A. Robert, President, Montreal Tramways Co., and Quebec Ry., Light, Heat & Power Co.

Honorary Vice President, Wm. C. Hawkins, Managing Director and Secretary, Dominion Power & Transmission Co.

Honorary Council: Thos. Ahearn, President, Ottawa Electric Ry.; Acton Burrows, Proprietor, Canadian Railway and Marine World; Geo. Kidd, General Manager, British Columbia Electric Ry.; Lt.-Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and director, Quebec Ry., Light, Heat & Power Co.

President, Major F. D. Burpee, Manager and director, Ottawa Electric Ry.

Vice President, H. H. Couzens, General Manager, Toronto Transportation Commission.

Executive Committee: The President, the Vice President, the immediate past President (G. Gordon Gale, Vice President and General Manager, Hull Electric Co.) and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; E. P. Coleman, General Manager, Dominion Power & Transmission Co.; A. Eastman, Vice President and General Manager, Windsor, Essex & Lake Shore Rapid Ry.; D. W. Houston, Superintendent, Regina Municipal Ry.; A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry.; R. Mayne-Reade, Superintendent, Quebec Railway, Light & Power Co.; W. R. Robertson, General Superintendent of Railways, Hydro-Electric Power Commission of Ontario; W. L. Weston, Manager, Nova Scotia Tramways & Power Co.; H. E. Weyman, Manager, Levis County Ry.; C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Treasurer, W. S. Hart, Managing Director, Three Rivers Traction Co.

Auditor, Lt.-Col. G. C. Rovee, General Manager, Toronto Suburban Ry.

Secretary, D. N. Gill, Comptroller, Ottawa Electric Ry., Ottawa, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

described in Schedule B to this award are necessary to be used in connection with the working of the railway within the meaning of the agreement.

All as more particularly described in Schedule B to this award are necessary to be used in connection with the working of the railway within the meaning of the agreement.

"We adjudge that the remainder of the property real and personal set out in said Schedule B is not necessary to be used in connection with the working of the railway and that the city is not obliged to take it over from the company under the terms of the agreement and statute." This included main office buildings, Scarboro Beach Park and King St. and St. Lawrence St. property, certain rolling stock valued at \$10,000; patterns, \$5,000; and materials in store and rolling stock supplies out of stores \$50,000.

"We award, adjudge the value of the real and personal property set out in Schedule A, together with the parcels of property included in Schedule B which, herein we find to be necessary to be used in connection with the working of the railway to be \$11,188,500. And we further adjudge that the city pay the company interest upon the \$11,188,500, at 5 p. c. per annum from Aug. 31, 1921, to the date of this award."

Sir Adam Beck presented the following brief minority report:—"I have had the opportunity of considering the award and reasons for award, of my colleagues and am unable to concur in their conclusions as to the method which should be adopted in ascertaining the value of the railway, plant, and equipment and in the valuation which they have placed upon it. I also dissent from their views as to the necessity of certain of the property which the company claimed should be valued as property required for the operation of the railway."

"With regard to the matter of depreciation I would follow all that the city has contended for by reason of obsolescence. Much of the track is antiquated and required to be replaced when the railway was taken over. Much of the rolling stock is out of date and costly to operate as compared with modern cars. I agree entirely with the contention of the city that the question of economy in operation is of vital importance in estimating obsolescence. The statute expressly provides that the arbitrators shall award only the value to the city, having regard to the requirements of a railway of the best kind and system in operation and applicable to the city, and in my opinion, the basis of valuation as fixed by the agreement between the city and the company, does not admit of any allowances being made for cars and equipment which are useless for the purpose of such a railway and should be valued only at what they can be sold for. For these and other reasons I am unable to agree with the majority finding as to a fair valuation, of the property, and under the circumstances it does not appear to me that any useful purpose can be served by the fixing of values by me."

Mr. Cronyn and Sir Thomas White gave the reasons for their award at great length. Following are extracts:—"At the outset the question arises as to the method or principle to be adopted in making the valuation of all these properties. Clause 7 of the conditions declare that the city may take over 'all the real and personal property necessary to be used in connection with the working of the railways' at a value to be determined by arbitration. There is a qualification to the effect that 'the city shall only pay for the land conveyed by it to the purchaser, what it is worth, without reference to its value for the purpose of operating a street railway or railways.' This proviso refers to land which the city had acquired from the Toronto St. Ry. Co., and was used in connection with the operation of the railway at the time the agreement was entered into.

"The statute and clause 7 of the conditions contain important provisions

already quoted relating to the arbitration and the method of valuation to be adopted. These provisions lay down the following definite qualifications which have been kept prominently in view in making the valuation:—(1) As to the land actually taken over from the city under the agreement the city is to pay only what it is worth, without reference to its value for the purpose of operating a street railway or railways. (2) In determining the value the franchise and earnings, present and future of the railway are not to be taken into consideration, but the arbitrators are to consider only the actual value of the actual and tangible property, plant, equipments, and works. (3) The arbitrators are to consider and award only the value of the several particulars (property, plant, equipments, and works) to the city at the time of the arbitration, having regard to the requirements of a railway of the best kind and system then in operation and applicable to the city.

"The question as to the time as of which the valuation is to be made is important because of the decline which has taken place in prices of commodities and in rates of wages since 1920. Clause 7 of the conditions makes no explicit reference to this although it might be inferred from its language that the valuation would be as of about the date at which the railway was taken over by the city. Sec. 4 of the statute, however, while it provides that the award of the arbitrators shall be made, if possible, not later than the time named by the city for taking over the property, provides also that the arbitrators shall consider only the value to the city at the time of the arbitration. It appears to us that the express language of the statute must govern, and therefore that the time as of which the valuation is to be made is the time of the arbitration.

"Counsel for the company laid stress upon the words 'value to the city' appearing in subsec. 4 of sec. 4 of the statute, and contended that by reason of them the arbitrators should take into account the advantage which the city enjoyed through being in a position to take over a running system and to continue to operate it without interruption of service to citizens as contrasted with the position in which it would have been had it been obliged to construct a new railway and create an operating organization. We think this is a mistaken view of the construction to be given to the words 'value to the city.' It appears to us that they must be related to the last words of the subsection in which they appear, viz.: 'having regard to the requirements of a railway of the best kind of system then in operation and applicable to the said city.'

"There was considerable controversy during the proceedings as to the meaning to be attached to the expression 'best kind and system' appearing in this subsection. It was established in evidence that the system under which the company was operating up to Sept. 1, 1921, viz., the electric overhead-trolley system, is the best system in use for the operation of surface street railways and that it is applicable to the city. We are, therefore, in our valuation, to have regard to the requirements of an electric overhead-trolley railway of the best kind now in operation and applicable to the city.

"The principal question, it seems to us, is, what is the actual value as of

the time of the arbitration of the actual and tangible property, plant, equipments, and works connected with and necessary to the operation of the railways. The several qualifications referred to above must be kept constantly in mind in making the valuation. There was considerable discussion by counsel as to the meaning of 'actual' in the expression 'actual values.' Webster's International Dictionary defines 'actual' as the equivalent of 'real' and opposed to such words as potential, possible, speculative, conceivable, theoretical, or hypothetical. From this the meaning of the word in its plain sense seems sufficiently clear. How are we to arrive at such actual value? The property in question is, as already stated, of varied character. A considerable portion is in structures such as the tracks overhead and underground system—property in situ, as it is called, available for use in the operation of the railway. One method by which property of this kind may be valued is approved in judicial decisions of our own courts, by the judicial committee of the privy council, and by the House of Lords. A considerable number of these cases were quoted.

"As to all plant in situ, such as track with substructures, overhead and underground distribution system, machinery and equipment fixed in place for use in the operation of the railway, it seems clear from the foregoing decisions and judicial utterances that an approved method of determining their value is cost of reproduction at the time as of which the valuation is to be made less a proper allowance for depreciation. Counsel for the company contended that the word 'depreciation' as used in these decisions means only physical wear and that obsolescence, unless so complete as to require or justify immediate removal of the item of plant under consideration, is not to be considered. We do not concur in this view. We understand the word 'depreciation' occurring in the decisions cited to include obsolescence and deterioration from whatever cause, and not as confined to physical wear and tear and to what might be called obsolescence as distinguished from obsolescence at the time of valuation. The fact and degree of obsolescence must be determined from the evidence upon the point having regard to good practice in railway administration and to the qualification of the above-recited subsec. 4 of sec. 4 of the statute.

"With respect to immovable plant in situ, this method of valuation seems the most practicable and convenient. In applying it, however, care must be taken to make full deduction for depreciation as defined. Take the case of a section of track which has become so worn that it should, having regard to good practice, be taken up and replaced by new construction. The cost of reproduction of the section in question might be quite large, but there would have to be deducted an amount for depreciation which would leave only scrap value remaining. In cases of parts or articles connected with plant in situ, which, although useful are not now being manufactured, value may be estimated by reference to prices of parts and articles which can be bought today, taking into account, of course, comparative utility, depreciation, and all other relevant considerations.

"The same method (reproduction cost less depreciation) may, we think, be useful also in valuing the rolling stock

as was done by the arbitrator in the Melbourne tramway case. In the case before the board, where so many of the cars taken over are of older type, it would, however, be most difficult to make the valuation solely by reference to cost of reproduction now, less depreciation. We have had placed before us, however, a great deal of evidence as to the character of this rolling stock, its original cost of construction, reproduction cost, physical deterioration, degrees of obsolescence, and as to alleged defects and advantages from the operating standpoint. All this evidence has been given its due weight in reaching conclusions as to the value of the rolling stock.

"The principle of reproduction cost, less depreciation, is also of service in valuing buildings, such as car-barns, car constructions and repair shops, substations and the plant and machinery which they contain. Care must be taken here also to make full deduction for depreciation (including obsolescence) and to take into account the evidence adduced bearing upon the question of the suitability of such buildings, plant, and machinery for the purposes for which they are being used, and generally, all factors bearing upon the matter of their usefulness and fair value, subject to the qualifications of the agreement and statute.

"With regard to tools, stores, and small chattels (fixed or unfixed) generally, it is not necessary to go to the trouble of considering what it would cost to reproduce them new and then deduct an amount for depreciation. We have had evidence as to the market value of such chattels or of others which would serve as well or better, and from such market value and comparison and other evidence relating to use, condition and extent of depreciation a conclusion as to value may be reached.

"As to land (other than land acquired from and now retaken by the city) it seems to us that it should be valued at its fair values as of the time of the arbitration. In estimating its fair value, we are, we think, entitled to consider, in addition to other relevant factors of value of individual parcels, their suitability (having regard to size and location) for street railway purposes. As to the land (including buildings) acquired from the city by the purchasers and particularly referred to in clause 7 of the conditions, the question is, what is its fair value without reference to its value for the purpose of operating a street railway. With regard to the former class of land, counsel for the company adduced evidence not only as to its present value for commercial purposes, but also as to its value for street railway purposes. To establish the combined value they brought forward testimony as to what it would cost to obtain property as suitable if the land in question had not been acquired and was not available for the city's use in the operation of the system. This testimony showed that in some instances a price two or three times the commercial market value of the land in question (considered without special reference to its suitability for railway purposes) would have to be paid in obtaining parcels of equal size and suitability. It does not appear to us that this is the true method of valuing this land. The land has been acquired by the company and the city is entitled to take it over as it is.

The real question is, what is its fair value having regard to all proper factors, including the factor of suitability for railway purposes.

"Speaking generally, we have had before us an immense amount of evidence dealing with the suitability, physical condition, depreciation, original cost of construction or purchase price, cost of reproduction and overhead costs connected with reproduction, of all the properties real and personal taken over by the city. All this evidence has been considered in its bearing upon the question of value. In this connection we have kept before us the language of the judgment of Chief Justice Meredith delivered Dec. 16, 1921, upon a case stated by the board for the opinion of the court upon a point as to the relevancy of certain evidence. He says: 'There is no law which limits arbitrators to one method of determining value; any and every method that may be helpful may be applied. Actual cost, reproduction cost and market value—direct or indirect—or actual value, may each and all give assistance; or only one may be useful, according to the nature and circumstances of the particular enquiry.' All evidence adduced by both sides has been carefully considered and given its due weight in its bearing upon the question of actual value at the time of the arbitration, having regard to the provisos and qualifications of the agreement and statute. The board has also had the advantage of an inspection of the land and buildings, railway, plant, and equipment of the company.

"With respect to the question of value 'to the city at the time of the arbitration' two special lines of evidence were adduced by counsel for the parties respectively which it is desirable should be dealt with. Counsel for the company placed in evidence figures showing what it would cost to reproduce the railway property over a period of three years prior to Sept. 1, 1921. This evidence was offered on the assumption that if the city had been obliged to construct a railway system it would have had to begin three years before to be in as good position as it was on Sept. 1, 1921, when it took over the railway without interruption of operation. As the cost of construction was higher on the average of this three-year period, the adoption of this theory would have materially added to the valuation of the board. We are unable to conclude that this would be a sound principle of valuation, nor do we know of any judicial decision in a purchase case which sustains it. It seems to us that, so far as the principle of reproduction cost, less depreciation is availed of, it must be reproduction cost as of 'the time of the arbitration.' We have therefore rejected this intention of the company. If we had adopted this method our valuation in respect of the property real and personal actually taken over by the city, and as to which there is no dispute as to right or liability to take would amount to \$11,088,000.

"In addition to adducing evidence to show reproduction cost less depreciation as of the time of taking over the property, counsel for the city introduced testimony of a theoretical character based upon comparative statistics as to prices of material and rates of wages prevailing before the war, and designed to show what it would have cost to reproduce the system had there been no

war, and had the trend of prices and wages in progress before the war continued down to the present time. This basis was called the 'Trend Basis.' The method is particularly described and referred to in Mr. Tilley's argument. With respect to new construction and replacements during and since the war, actual cost is taken into account and land is valued as of Sept. 1, 1921. It was contended that, under the terms of the agreement, value should be determined upon this 'trend basis' rather than by reference to the cost of reproduction (less depreciation) as of the time of the arbitration, because of the rise which, owing to the war and post-war conditions, has taken place in prices of material and in wages as compared with those of the pre-war period. In this connection the board has had before it statistical charts as to wages and prices covering periods before and after Sept. 1, 1921. We are unable to give weight to this contention, which, in effect, disregards entirely current prices and rates of wages. Value means value in lawful money of Canada at the time at which the valuation is made, not in lawful money of Canada as of an imaginary period. We are unable to find anything in the agreement or in judicial decisions sustaining this view. In our opinion it would be impossible to determine the 'actual value at the time of the arbitration' upon such a hypothetical basis, which has no reality in fact, and consequently seems opposed to the meaning 'actual' in the expression 'actual value.' We do not conceive that the valuation as of the time of the arbitration should have precise regard to the prices of labor or of material as of a specific date such as Sept. 1, 1921. Where the method of reproduction cost less depreciation is used or market prices are considered, regard should be had to the evidence as to construction cost and prices generally as of the time of the arbitration. In view of the stress laid by counsel for the city upon wartime costs and speculative prices, it may be pointed out that the war has been over for more than four years, and that since the date of taking over the railway prices of commodities and cost of labor have, according to the evidence, become fairly stabilized. If we had adopted the trend basis theory of valuation put forward by the city and made the deduction for depreciation which we think proper from reproduction cost estimated upon this basis, the amount of our valuation for the property actually taken over by the city would be \$7,180,000.

"An important question which arose during the hearing of evidence and on the argument, related to the items of overhead expenditure which might properly be included in estimating the cost of reproduction of the railway, and as to whether interest upon capital during construction should be taken into account. Counsel for the company contended for a very wide range of overhead expenditure, including engineering fees, legal expenses, expenses of organizing a company to construct and operate the railway, cost of raising capital, and other items under the general classification 'Construction contingencies.' They also claimed that a substantial by reason of the property and plant having been in running condition with a completely organized staff, which

immediately entered the service of the city or its agent, the Toronto Transportation Commission, with the result that no interruption occurred in street railway service upon the taking over of the railway. As to this latter item, while it was no doubt a great advantage to the city to be enabled to take over a well-trained organization, the benefit it derived in this regard does not, in our view, come within the meaning of the expression 'actual and tangible property,' which alone forms the subject matter of this arbitration.

"With respect, however, to the items of overhead expenditure in connection with the method of reproduction cost valuation, it seems clear under the decisions that allowance of certain items should be made, subject to proper abatement, having regard to the age and degree of depreciation of the property and plant to which they severally relate. The Oldham case deals specially with items of this character. It was held by the divisional court in that case that there must be allowed (1) remuneration of the engineer who constructed the tramway, subject to depreciation, and (2) interest on capital during construction, subject or not to depreciation, according as the capital was spent on depreciating items, for example, rails, or non-depreciating, for example, excavation, but that (3) the cost of raising capital must be disallowed. In view of the evidence and the decisions, we have felt justified (in considering reproduction cost) in taking into account engineers' remuneration (where it is applicable), subject of course to proper depreciation. The amount which we have taken into account under this head is \$375,000. We have thought it also proper to make a reasonable allowance for interest during construction of the several parts of the system subject also to proper depreciation. The amount which we have allowed for this item is \$525,000.

"We have allowed nothing for the preliminary expenses of organizing a company for the purpose of constructing and operating a railway, nor for the cost of raising capital, that is for brokerage, discount, and other charges connected with the issue of securities to provide capital to construct the railway. Witnesses for the company placed discount as high as 10% which (on an assumed financing of \$27,000,000 or \$30,000,000) ran up to the very high figure of \$2,673,000 (Mr. Morrow) and \$3,000,000 (Mr. Mackenzie) representing the discount upon 7% bonds issued upon an 8% basis. While the testimony of these witnesses is entirely reliable as to the cost of raising capital (discount and underwriting), such cost is not, in our view, legally allowable in this case. Securities may be sold at a discount, at par, or at a premium, depending upon the rate of interest, which they bear as compared with the current yield-rates upon securities of like character. The evidence of these witnesses and of Mr. Ross for the city as to interest rates prevailing about the time of the taking-over of the railway is of value in its bearing upon the question of allowance for interest during construction.

"We have also excluded from consideration such items as contingencies and omissions, administration, organization and legal expenses, and cost of placing the physical property in operation appearing in Mr. Drum's appraisal

and like items in that of other witnesses for the railway company. These embrace allowances for organization built up over a series of years, for business system, for going plant value, etc. While items of this character are frequently taken into account for rate-making purposes they must be regarded as so-called intangibles and as not capable of being included within the meaning of the words 'actual and tangible property' in the agreement and statute. In arriving at fair cost of construction all ordinary construction contingencies have received such consideration, as seemed to us proper.

"Among the items which counsel for the company contended should be included in the valuation of the track were payments made by the company towards the cost of construction of a subway on Avenue Road under the C.P.R. tracks, and of a bridge over the steam railways on Queen Street East. These payments were made by the company in pursuance of orders of the Board of Railway Commissioners, the object being the elimination of dangerous level crossings and consequent protection and convenience of the public. It does not appear to us that these payments constitute actual and tangible property within the meaning of the statute, and we have been unable to agree with the argument put forward by counsel for the company that these payments became, so to speak, attached to or inherent in the cost of construction of the tracks of the company carried through the subway and over the bridge, respectively. By mandatory orders the Board of Railway Commissioners assessed these payments against the company and we cannot see that they may be taken into consideration by the board in estimating the cost of reproduction of the railway track. If we had taken them into account in connection with such cost of reproduction, then our valuation of the property described in schedule A to the award would have been increased by \$125,000 representing these payments properly depreciated.

"The question as to whether it is within the power of the board to allow interest at the legal rate upon the amount of the award from the time the railway was taken over by the city until the date of the award was argued at length by counsel for the parties. While we are not free of doubt as to the jurisdiction of the board in this respect we are of opinion that we should allow such interest, as the city has had possession of the railway since Aug. 31, 1921, and the company has not received payment. If we are mistaken as to our jurisdiction to deal with this item the court will be able to make such order as may be just.

"Having regard to all the considerations hereinbefore mentioned, we find the value of the property, plant, equipment, and works actually taken over by the city on Sept. 1st, 1921, for which as to the liability of the city to pay there is no dispute between the parties.

"With respect to the various items of property and plant about which there is a dispute between the parties as to the liability of the city to take them over under the terms of the agreement and the statute relating thereto, and which are set out in detail in schedule B to the award, we make the following preliminary observations:—The liability of the city to take over any one of these disputed items of property depends upon

the question whether it is necessary to be used in connection with the working of the railway. It was admitted by counsel for the city and is clear, upon the authorities cited, that the word 'necessary' is not of equivalent meaning with indispensable. Counsel for the company argued that it was, under legal decisions, the equivalent of useful or convenient. It seems to us that if property, plant, or equipment was, in accordance with good railway practice in use in the operation of the railway, and if such use promoted efficiency or economy of operation, we may regard such property, plant, or equipment as 'necessary to be used in connection with the 'working of the railway' within meaning of the agreement.

"The city bylaw, passed on June 1, 1920, and notified to the railway company on June 26, 1920, covered all the real and personal property of the Toronto Railway Company necessary to be used in connection with the working of the railways which the corporation is entitled to take over, under the provisions of the act of incorporation, agreement and conditions therein mentioned. After serving this notice of intention, the city became entitled, and in our opinion bound, to take over, and the company became compellable to deliver, all the real and personal property necessary to be used in connection with the working of the railway. The obligations to take and deliver were reciprocal and the quantity of property involved must depend, as stated above, upon the question of fact as to necessity for the purpose of working the railway.

Appeal From the Award.

The city having decided to appeal against the award filed its reasons as follows:—"It is excessive in amount; it is contrary to law and evidence and the weight of evidence; it includes matters not within the arbitrators' jurisdiction; it is erroneous for mistakes of fact appearing on the face of the award and in the reasons for award delivered therewith. It is erroneous for mistakes in the principles of valuation adopted by the arbitrators appearing on the face of the award and in the reason for award. It is erroneous on the ground of irregularity appearing in the evidence and proceedings and on the face of the award and in the reasons for award delivered herewith. It is erroneous because property is included which is not necessary to be used in connection with the working of the railway. It is erroneous because the arbitrators took into account evidence of certain elements of value which should not have been considered, particularly with regard to current prices of labor and material and government taxes and exchange."

Mainly About Electric Railway People.

W. J. Curle, General Superintendent, Chatham, Wallaceburg and Lake Erie Ry., Chatham, Ont., has resigned.

James Grace, Secretary, Toronto Ry. Co., and Mrs. Grace, are spending a month in Florida.

W. F. Graves, Chief Engineer, Montreal Tramways Co., having resigned, R. M. Hannaford, Assistant Chief Engineer, is acting as Chief Engineer.

Lt. Col. J. E. Hutcheson, General Manager Montreal Tramways Co., left Montreal at the end of January for a trip,

expecting to return about the end of February.

R. Keemle, heretofore Assistant to President, Chatham, Wallaceburg and Lake Erie Ry., Chatham, Ont., has also been appointed Manager.

A. W. McLimont, Vice President, Winnipeg Electric Ry., was to have addressed the Brandon, Man., Board of Trade's annual meeting on power development matters, Jan. 30, but the meeting was postponed owing to his inability to be present.

Walter R. McRae, Superintendent of Rolling Stock and Shops, Toronto Transportation Commission, has been elected President of the Engineer's Club, Toronto.

D. M. Morrison, engineer, London & Port Stanley Ry., London, Ont., is reported to have resigned, and it is said that the London Railway Commission will not appoint a successor.

E. B. Reesor, of New York, President, Moncton Tramways, Electricity & Gas Co., was in Moncton, N.B., Feb. 7, to discuss matters affecting the company's interests with the city council.

W. G. Ross, formerly General Manager, and still a director, Montreal Tramways Co., and Mrs. Ross, left Montreal Feb. 25 for a visit to Augusta, Georgia.

M. C. Smith, heretofore Superintendent Lighting Department, Nova Scotia Tramways and Power Co., Halifax, N.S., has been appointed Superintendent of Tramway and Power Departments, and in addition to his former duties, will perform those heretofore done by Ira P. McNab, Superintendent, Tramways Department, whose resignation was announced in our last issue.

G. H. Smithers, formerly a Toronto Ry. director, has been elected a Detroit United Rys. director.

M. W. Wales has been appointed Engineer of Way and Structures, Winnipeg Electric Ry., vice S. Wilkins.

Suit for Royalties on Toronto Transportation Commission Cars.—Canadian Railway and Marine World for Nov. 1922, gave particulars of an action against Canadian Brill Co., by Peter Witt, of Cleveland, Ohio, and C. S. Wright of Toronto, claiming \$2,500 royalties on 50 Toronto Transportation Commission cars built by defendants. Plaintiffs secured an order giving them possession of Canadian Brill Co.'s plant at Preston, Ont., and the Canadian Brill Co. then paid the claim into court. A hearing of the matter was fixed for the latter part of January or early in February, but we are advised that Canadian Brill Co. has paid plaintiffs the money claimed, both parties paying their own costs. Before the Brill Co. decided on this action, it had applied to the Master in Chambers for permission to enter a suit for \$5,000 damages against Witt and Wright on account of their action in taking measures against it in the bankruptcy court, and such permission was granted. This however, was reversed by Mr. Justice Middleton, and consequent on this the settlement mentioned above was arrived at.

Two-thirds of the mileage of all electric railway extensions laid in Canada last year was the work of Toronto's Transportation Commission within the City of Toronto. Probably nowhere else in the world has a street railway been rehabilitated and extended with the same speed and skill which have marked the achievements of the T.T.C. — Toronto Star.

The Toronto Suburban Railway's Proposed Sale.

The following questions were asked in the House of Commons Feb. 13, by T. L. Church, North Toronto, the answers being given by acting Minister of Railways G. P. Graham.

Q. 1. "What legal agreements and options have been made by the Government from time to time to date for the sale in whole or part of the Toronto Suburban Ry. between Guelph and Toronto to the Hydro Electric Power Commission of Ontario, and why were these agreements for the whole road not carried out and acted on in view of this road being an inactive asset of the Canadian National?" Q. 2. "No legal agreement or option was given."

Q. 2. "Is it the Government's intention to enable the City of Toronto to acquire the part in the city limits in accordance with an agreement made between the city and the Toronto Suburban Co. validated by the Ontario Legislature many years ago, by which the city, at the expiration of the company's franchise, which expired over a year ago, could acquire this road within the city limits by arbitration?" A. "The question is not one for the Government, but for the management of the Toronto Suburban Ry."

Q. 3. "Was any agreement prepared for sale of the part within the city limits and on what terms, and is the announcement correct of Gerard Ruel, Vice President of the National Railways, in a letter to the Toronto Board of Control in January last that such an agreement existed for sale of part? If so, with whom was it made?" A. "No agreement has been prepared for the sale of the lines within the city. The agreement which Mr. Ruel referred to was an operating agreement."

Q. 4. "Under what terms and conditions of purchase of this road by the Government a few years ago, and its absorption by the National Railways System, can the Government sell part and not all of this railway without the consent of the bond holders?" A. "The Government has not purchased this road. The stock was merely acquired by the Canadian Northern Realities Ltd. The question of sale is one for the management of the railways."

Q. 5. "Why was the agreement and options legally given for the sale of the whole road to the Hydro Electric Power Commission of Ontario not carried out, and has the policy of the old board of directors of the National Railways to dispose of this whole road which never paid, been abandoned by the present directors, in view of a favorable vote of the ratepayers of Toronto to sanction such purchase agreement for the whole road?" A. "See answer to question 1."

The Toronto City Council on Feb. 5, appointed a special committee to negotiate with the Dominion Government, and the Canadian National Rys. management, for the purchase of the Toronto Suburban Ry.'s lines within the city. The company's predecessors in title, built certain electric railway lines in the old Town of Toronto Jct., and York Tp., under franchise agreements. These areas have been incorporated in the City of Toronto for some years, with the exception of a strip in the York Tp., through which the Dundas St. line runs to Lambton. The City Council gave the necessary notice of its intention to take over these lines under the

terms of the agreement, prior to their expiration in Sept. 1921. Since that time the matter has been complicated by the plans discussed for the purchase by the city of all the lines owned by the Toronto Suburban Ry., and the operation of those outside the city by the Hydro-Electric Power Commission of Ontario. A bylaw providing for this purchase was voted upon by the ratepayers Jan. 2, 1922, and carried by a 16,087 to 13,580. The agreement provided for the purchase of the lines by taking over \$2,628,000 of outstanding bonds; paying \$202,000 in cash for the lines in the city, and raising \$150,000 for betterments within the city. No definite action was taken upon this vote by the city council, in fact the bylaw was only read a third time towards the end of 1922. Shortly afterwards the matter was taken up with Sir Henry Thornton, President, Canadian National Rys., who declined to sign an agreement for the sale of the lines, until he had looked thoroughly into the whole situation and had ascertained whether they should be retained or not. This question is being looked into by a committee which Sir Henry has appointed to look into the whole question of electrification in the Toronto district, and which consists of R. A. C. Henry, C. E., of the Railways and Canals Department; C. A. Hayes, Vice President, Traffic, Canadian National Rys., and C. G. Bowker, Operating Manager, Grand Trunk Ry. Mr. Henry met the city council's special committee in Toronto on Feb. 21, to discuss the question of the sale of the lines within the city.

Dominion Power & Transmission Co.—The report for the calendar year 1922 shows gross earnings, \$3,830,558.60; operating expenses, \$2,810,923.86; bond and other interest, \$442,883.22; New York exchange, \$24,600.45; leaving surplus earnings of \$552,151.07. Profit and loss account stands at \$1,624,073.70. At the annual meeting in Hamilton, Feb. 19, the old directors were re-elected as follows:—J. R. Moodie, President; C. A. Birge, Vice President; James Dixon, Treasurer; W. C. Hawkins, Managing Director and Secretary; John Dickenson, Sir John Gibson, Lloyd Harris, Robert Hobson, C. E. Neill, and W. E. Phin. E. P. Coleman is General Manager.

Hamilton St. Ry.—The City Treasurer is reported to have received from the company \$23,226.09 for percentage and mileage for the three months ended Dec. 31, 1922, making a total of \$87,974.06

for the year against \$87,929.70 for 1921.

Montreal Tramways Co.—A press report states that the company has paid the City Treasurer on account of rental and arrears up to Dec. 31, 1922, \$1,158,126.49, of which \$500,000 was the rental for 1922.

Regina Municipal Ry.—Passenger receipts for January, \$34,470; passengers carried 561,999; against \$32,306 passenger receipts, and 537,870 passengers carried in Jan. 1922. Operating profit for January approximated \$2,500, against approximately \$1,900 for Jan. 1922. During 1922, there was a monthly operating surplus in January, February, November and December, deficits being shown in the other months.

Winnipeg Electric Ry.—An issue of \$3,250,000 20-year 6% general mortgage and collateral trust gold bonds was placed on the market towards the end of February, at 95. The proceeds of this issue are to be used to retire current indebtedness created for capital expenditures, and for general corporate purposes.

Winnipeg Electric Ry. Co. paid the city \$174,954.20 Feb. 9, being 5% on the company's railway lines revenues within the city; and the tax of \$20 a car or motor bus in service during 1922. Since 1902, when these taxes were first levied, the company has paid the city \$1,904,905.14.

	Dec. 1922	Dec. 1921	12 mos. to Dec. 31, 1922	12 mos. to Dec. 31, 1921

Winnipeg Electric Railway Franchise.

The Winnipeg Electric Ry. Co.'s franchise agreement, which was negotiated by the Winnipeg City Council's public safety committee last year, but which did not reach the final reading stage, has been discussed in city council circles since the election of S. J. Farmer, independent labor candidate, as mayor, on a platform for submitting the agreement to a vote of the people. Several meetings were held, and a new bylaw was prepared to approve the agreement. This was read a first time, Feb. 12, and notice was given of an amendment to provide for its submission to a vote of qualified ratepayers.

A press report states that on Feb. 13, the Winnipeg Electric Ry. Co. wrote the City Clerk, stating that, on the advice of its bankers, and due to conditions, it did not wish to deal with the extension of the franchise beyond 1927, and that it would arrange to settle amounts outstanding and due to the city. It is stated that company owes the city approximately \$912,000, including taxes, paving charges, property taxes, percentages and penalties.

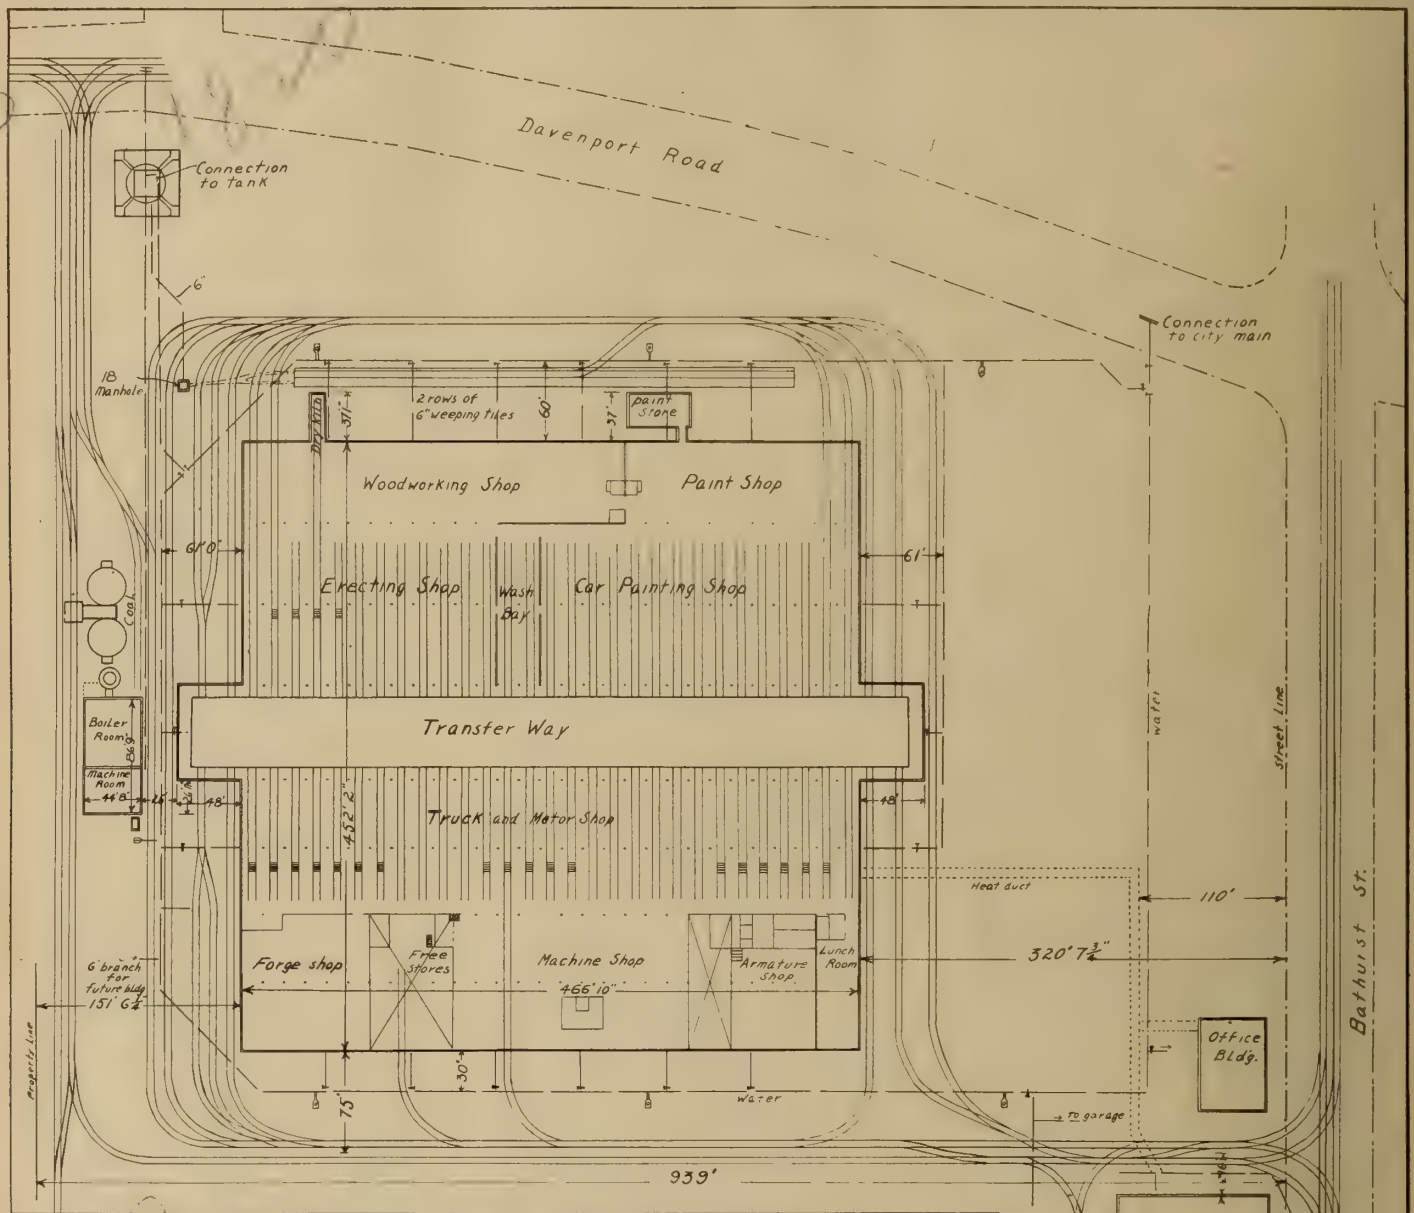

Toronto Transportation Commission Cars.—As stated in Canadian Railway and Marine World for February, pg. 85, the Canadian Car and Foundry Co. had delivered the 50 motor cars ordered by the Commission. We were advised on Feb. 21, 20 trailers, out of the 100 ordered at the same time as the motor cars, had been delivered, and that delivery of the remaining 80 trailers was expected during the next three weeks. Detailed descriptions of both motor cars and trailers were given in Canadian Railway and Marine World for Sept., 1922.

Repair Shops and Stores Building, Toronto Transportation Commission.

As stated in Canadian Railway and Marine World for February, the Toronto Transportation Commission awarded contracts for the construction of large repair shops, together with auxiliary build-

cast, and will be equipped with sawtooth monitors, with fixed sash on one side, arranged to give north light. This arrangement, together with ample window space on all sides, will afford good natural

each group of tracks with pits, the tracks being elevated on structural steel columns, and the floor at track level being of reinforced concrete, supported on structural steel sections. The pits will be

Repair Shops and Stores Building, Toronto Transportation Commission.

ings, for a large stores building, and for some of the chief equipment for the repair shop and auxiliary buildings. The buildings will be erected near the intersection of Bathurst St. and Davenport Road, on property obtained for the purpose some time ago, and construction has been started. The accompanying plan shows the location of the building in relation to Bathurst St. and Davenport Road, the arrangement of the buildings in relation to each other, the track layout, the distribution of water mains for the fire protective system, and the division of the main shop building into machine shop, truck and motor shop, forge shop, and woodworking, paint and other shops.

The main repair shop will be 466 ft. 10 in. x 452 ft. 2 in., and will be a one story brick building, with structural steel frame, steel sash and concrete foundations. It will have a gypsum roof, pre-

lighting conditions. Mastic flooring will be provided in the erecting shop, truck and motor shop, lunch room and locker room, and wood block flooring in the machine shop, armature shop and free stores room, the remainder of the flooring to be of cement finish, with the exception of the woodworking shop, where maple flooring will be installed. A transfer table will extend all the way across the shop, and will be connected to the outside trackage system by two through tracks at each end. The repair tracks will be arranged transversely to the transfer table runway, the repair tracks to be equipped with pits being indicated on the plan by the groups of short horizontal lines drawn across each track having a pit. The pits will be arranged in the same manner as at the Commission's new Eglinton carhouse, described in a recent number of Canadian Railway and Marine World, i.e., they will be continuous across

finished in concrete. All machinery and equipment to be installed will be of thoroughly modern design.

The boiler house, 86 3/4 ft. x 44 ft. 8 in., will be of the same type of construction as the main shop building, and will be

equipped with 4 large boilers. It will be divided into boiler room and machine room, in which the boiler feed pumps, air compressors and similar equipment will be located. The boilers will be fired by automatic stokers, and the coal supply will be handled by an overhead conveyor into a bunker feeding the stokers. Heat will be supplied from the boiler house to the entire plant; the main shop building, with the exception of the paint shop, will be heated by hot air, the paint shop to be heated by radiators. Fans will be located at strategic points throughout the main shop building, forcing air through vento-radiator coils located in the fan-rooms, and the steam to supply these coils will be piped from the boiler house through ducts located to give the greatest economy consistent with the best results. The boiler house stack will be of brick, radial type, 150 ft. high and 6 ft. inside diameter at the top.

The coal and ash handling plant, adjacent to the boiler house, and served by both a standard gauge steam railway spur, and the Commission's 4 ft. 10% in. gauge tracks, will have as the chief units 2 cylindrical concrete tanks, each of 500 ton capacity. The coal will be unloaded from steam railway cars into a pit below the tracks and elevated by bucket conveyors, electrically driven, and a belt conveyor will serve the boiler house from storage. In addition to the supply for the boiler house, coal for the street cars will be stored here, and the coaling plant will be fitted with hoppers, so that the flat cars for distributing coal to the various car houses throughout the city will be supplied by gravity. Ash handling equipment will be of the most modern type, the ashes being elevated from a pit by bucket hoist and discharged through a chute to a cinder car outside the building.

The fire protective system will be a feature. As shown on the plan, a system of piping, with 2 connections to the city water mains, will encircle the main shop building, and will have branches to all other buildings, supplying the hydrants and sprinkler system. In addition, a 100,000 gall. steel tank, set on a 100 ft. steel tower, will be built to provide for an emergency water supply in case of failure of the supply from the city mains. The 6 in. pipe from the tower will be tied in with the system, so that the tower may supply water to any point desired, while the sprinkler system in the shop and stores building, the strategic location of hydrants, and a comprehensive system of control valves will, it is felt, provide an entirely adequate protection against fire loss.

The stores building will be 117 x 302 ft., and present plans call for the construction of a 3 story and basement building, although provision is to be made to increase the height to 8 stories when necessary. It will have brick walls, on concrete foundations, and will be equipped with steel sash. The roof will be of concrete, reinforced and arranged so that it may become the floor of the fourth story without material alteration. On the Bathurst St. side, the building will have Queenston limestone to the first floor windows, and the trim above that will be of artificial stone. The basement will be the full size of the building. One passenger and 2 freight elevators will be installed. In addition to being the central stores depot for the Transportation Commission, the new stores building will also serve the Toronto Hydro Electric Commission. The building will be heated by steam, piped from the boiler house

through the shop building and thence through the duct shown.

The office building, for which designs are not completed, will be occupied by the Commission's Superintendent of Rolling Stock and Shops and his staff, and will also house the employment office staff. A complete first aid room will also be fitted up therein.

In a bulletin addressed to Toronto citizens, recently, the Commission said: "The Commission decided to build these shops only after experience had clearly shown it was absolutely necessary to abandon the old shops, and construct new ones, to secure efficient and economical car repair facilities. Facilities in the existing shops are totally inadequate for efficient handling of the repair work of the present day street car system. The old shops are fire traps. There is danger of the system being paralyzed, through fire destroying a number of cars, and removing the only available repair facilities. The old shops afford no facilities for repairs to steel car bodies, which have been adopted as standard equipment. Work can be done in the old shops only in a most inefficient manner, due to ill planned layout and lack of centralization, the buildings not being all in one place or even one story structures. The new shops will be located in almost the exact geographical center of the city, saving much time and expense in the moving of cars from barns to shops. This means a great reduction each year in the length of time cars are out of revenue service. Finally, the economies effected by means of the new shops, through more efficient handling of repairs, will more than provide for all carrying charges, making the new shops an asset instead of a liability."

Contracts have been awarded as follows: Construction of repair shop building, stores building and boiler house, John V. Gray Construction Co., Toronto; boilers, Engineering & Machine Works, St. Catharines, Ont.; boiler settings, J.H. Wenting, Toronto; feed pumps, J.T. Hepburn, Toronto; fans and fan motors, Canadian Blower & Forge Co., Toronto; stokers, Jones Underfeed Stoker Co. The total amount involved in all contracts is about \$1,335,000.

The buildings have been designed by the Commission's building department, under the general supervision of W. E. P. Duncan, Engineer of Structures, with J. B. Carswell, Consulting Engineer, and with A. T. Spencer, Engineer of Way in charge of track layout, and W. R. McRae, Superintendent of Rolling Stock and Shops, in charge of repair shop layout. Designs for the plumbing, heating and lighting installations were made by Ewart, Jacob, Armer & Byam, consulting engineers, Toronto.

Interference with Street Car Traffic.—The Toronto Transportation Commission has issued an advertisement, stating that it "earnestly seeks the co-operation of all vehicle drivers in preventing street car delays and accidents. Analysis of one week's street car delays showed 75% were due to interference by vehicles—mainly from vehicles stalled or broken down while on the track allowance. In addition to the actual delays, the whole service was slowed up by vehicles on the tracks. Drivers who 'camp' on the track allowance not only hinder the proper operation of street cars, but run grave risks. Greasy rail conditions often make it almost impossible to bring street cars to an instantaneous stop. Remember! In an emergency a street car cannot dodge."

Electric Railway Passenger Fares.

Calgary Municipal Ry.—The Calgary Alta., City Council authorized the putting on sale on and after Feb. 10 of 5 tickets for 25c. and 21 tickets for \$1.

Hamilton St. Ry.—At the Dominion Power and Transmission Co.'s annual meeting in Hamilton, Ont., recently, President J. R. Moodie said:—"In March, with the city council's permission the Hamilton St. Ry. began charging a straight 5c fare. The effect of this change was no doubt beneficial, as compared with what might have taken place. This rate, under present conditions, apparently will not suffice. This is only saying again what has been decided for many street railways in this region, indeed for the whole continent. Our neighboring cities are mostly at 6 or 7 cents, and it would be surprising to find any peculiarities in Hamilton that would enable us to furnish cheaper transportation than most other cities in its class, and it is unreasonable to look for it."

Hamilton and Dundas St. Ry.—We are officially advised that as a result of negotiations between the Dominion Power and Transmission Co.'s officials and Dundas Town Council, the company decided not to discontinue operating the line after Jan. 31. The fares in force up to that date, as authorized by bylaw, were as follows:—Between Hamilton and Dundas, 15c single, 25c return; 20 single trip books, unlimited, \$2; workmen's 12 trip tickets, limited to 2 weeks, 75c. Between Hamilton and West Hamilton, 10c single, 15c return; 20 single trip books, unlimited, \$1; workmen's 12 trip tickets limited to 2 weeks, 50c; local cash fare 5c, for any distance not exceeding 3 miles; city tickets, within Hamilton limits, 6 for 25c. The workmen's tickets between Hamilton and Dundas were provided for in the original bylaw under which the line was electrified in 1897, and the issue of workmen's tickets between Hamilton and West Hamilton at a proportionate rate was a voluntary act by the company. The 5c cash fare within the 3 mile limit is in accordance with the Railway Act; and the sale of 6 tickets for 25c within the City of Hamilton was provided for in the city bylaw when the line was electrified.

The new arrangement entered into between the company and the Dundas Council is in fact a cancellation of all the workmen's tickets, and a provision for a 10 trip ticket between Hamilton and Dundas, unlimited, for \$1. The arrangement is to be in force for 6 months, at the end of which the company will decide whether or not it will be wise to continue operating the line.

Sarnia St. Ry.—Arrangements are reported to have been made with the company, under which pupils from Point Edward, Ont., attending the Sarnia Collegiate, will be enabled to use their school tickets on the cars at the noon hour, instead of only in the morning and evening when going to and from school.

St. Thomas Municipal Ry.—St. Thomas, Ont., City Council committee has recommended recently that the council authorize a return to the sale of 5 street car tickets for 25c, in order to endeavor to increase the traffic. Some months ago the fare was increased to 7c cash, with 4 tickets for 25c. This change is reported to have resulted in a decrease of patronage, although it is said that the operat-

ing deficit for 1922 was \$8,352 against \$20,425 for 1921.

Toronto Transportation Commission.—The Toronto Star says: "Detroit's municipal car lines, with their 5c fare, are in bad shape financially. Toronto's, with a fare averaging only a little over 6c, are on a sound financial basis. Toronto would like a 5c fare, but not at the expense of the system's financial soundness."

What Will Toronto Railway Company Shareholders Get?

Sir William Mackenzie, President, issued the following circular to shareholders on Feb. 6:—"Your directors by circular sent to shareholders on Sept. 22, 1921, outlined the proposals for the acquisition by The Hydro-Electric Power Commission of Ontario, of the company's power and radial interests. These proposals, which were approved in principle by the shareholders on Sept. 30, 1922, were subsequently embodied in an agreement, the terms of which have been carried out. The circular referred to, stated that, after making provision, so far as could then be foreseen, for all of the liabilities of the railway company proper and of its subsidiary companies, there would be a balance of \$1,008,823, which, added to the amount of the arbitrators' award fixing the price to be paid by the city for the company's street railway system, would represent approximately the capital value of the company's outstanding shares. At the time the prediction was made, your directors could not foresee the future difficulties to be overcome, which resulted in over a year's further negotiation with The Hydro-Electric Power Commission, involving heavy additional expense in connection with the sale of the power and radial interests, and, in order to bring about a successful termination, the abandonment of certain claims which it had been hoped might have been established. These unforeseen contingencies, together with the very prolonged arbitration in connection with the taking over by the city of your company's street railway system, extending over the past 17 months, entailing heavy additional expense which no one could reasonably anticipate, have caused the estimated surplus mentioned above to be seriously diminished. Notwithstanding this your directors are glad to be able to state that there will still be an available surplus of about \$1,000,000 to be added to the amount of the street railway award, as the sale of property owned by the company other than that taken over by the city under the award will make good the shrinkage in the estimate referred to.

The arbitrators have delivered their award for \$11,188,500, with interest at 5% from Sept. 1, 1921. It must be borne in mind, however, that the award is not necessarily final; an appeal may be taken from it by one or the other of the interested parties, or by both, and in the result it might be either increased or decreased. Your directors cannot, therefore, advise what the value of the company's capital stock will be until the award is finally determined and the company's remaining properties disposed of, but if the award stands, and no further unforeseen contingencies arise, it should be worth par and perhaps better. While, as indicated in the circular of Sept. 22, 1921, a cash distribution by way of return of capital to as large an amount as possible will be made to the shareholders immediate-

ly after payment of the award, they should remember that \$4,000,000 or roughly \$33 for each \$100 share, represented by bonds of the city, must remain deposited in the hands of a trustee until after July 1, 1924, by reason of the outstanding guarantee by your company of \$4,103,200 of bonds of the Toronto Power Co., due on that date. Payment of these bonds was assumed by the Hydro Commission as part of the sale agreement, but until they are actually paid the deposit referred to must remain, after which final distribution to the shareholders will be made as quickly as possible. As soon as there is any additional information available, it will be communicated to the shareholders."

Hydro Electric Railways, Toronto & York District, Improvements.

As stated in Canadian Railway and Marine World for February, the Toronto Board of Control has authorized the raising of \$600,000 to be paid to the Hydro Electric Power Commission of Ontario for expenditures on improvements on the Metropolitan, Scarborough and Mimico Divisions of the Hydro Electric Railways, Toronto and York District, formerly corresponding divisions of the Toronto and York Radial Ry. Of this sum, approximately \$250,000 will be required for the new terminal at the north city limits, details of which were given in Canadian Railway and Marine World for February pg. 85. The remainder will be for additions to power house equipment, trackage facilities, and possibly cars, for the three divisions, but at the time of writing (Feb. 20) details are not available.

As stated in our February issue, a press report credited Sir Adam Beck with saying that the following improvements were under consideration for the Metropolitan Division, which runs along Yonge St. from the North Toronto city limits to Mulock's Corners; a 100 ft. highway from Toronto to Mulock's Corners; double track railway line with safety zones for passengers and parcel freight; two-way traffic road surface; sidewalks for pedestrians; high level steel viaduct at York Mills; large cars of modern type to be run on limited schedule during rush hours; commutation fares; mail boxes on through cars. We are officially advised that this ambitious programme was initiated by the Yonge St. Improvement Association, made up of several ratepayers' associations having in their membership people living along Yonge St. from Toronto to Newmarket. A deputation from the association waited on the Ontario Minister of Highways, on Feb. 7, when the plans were laid before him and consideration was promised. Sir Adam Beck has stated that if the plans for north and southbound vehicular traffic are adopted, with a double track railway line between them, he would be favorable to having the Metropolitan Division's line rebuilt in accordance with these plans. In view of the fact that the Ontario Highways Department has invited tenders for the surfacing of several miles of Yonge St., it would appear that some action on the improvement association's plans must be taken soon, for it would be very inadvisable to surface the road as a single two-way one with the radial track at one side, and then tear it up after to make two roadways

with a double track railway line between. The improvements to be undertaken on the Metropolitan Division must depend on the disposition made of the plans concerning Yonge St.

Electric Railway Projects, Construction, Betterments, Etc.

British Columbia Electric Ry.—A press report states that the B. C. Government is negotiating with the company for the construction of a line to the B. C. University, Vancouver.

The Chairman of the Victoria City Council works committee and the City Engineer had a conference with A. T. Goward, local Manager, B. C. E. R. Co., Victoria, recently to ascertain the company's plans with regard to laying tracks over the new Johnson St. bridge. The city is anxious to have the tracks laid at once in order that the paving can be fully completed, but Mr. Goward was unable to give any assurance that the work will be done this year. It is stated that in the event of the company operating a line over the bridge, it will have to pay the city \$50,000 towards the cost of the bridge. (Jan. page 36.)

Chatham, Wallaceburg and Lake Erie Ry.—We are officially advised that the company has bought 5,000 ties from C. and J. Hadley.

Edmonton Radial Ry.—We are officially advised that while the Edmonton, Alta., City Council has made large provision in this year's estimates for maintenance of track and equipment, it is not intended to buy any new rails or equipment, or to make any further extensions of track. The existing track is not in very good condition and the greater part of the appropriation will be expended on new ties and ballast. (Feb., pg. 81.)

Fort William Municipal Ry.—The Board of Railway Commissioners has authorized the city to built its line across the Grand Trunk Pacific Ry. tracks on Montreal St., Fort William, Ont.

Hamilton Radial Ry.—The Board of Railway Commissioners was reported on Feb. 14, to have reserved their decision on the City of Hamilton's application for the removal of the company's tracks from Birch Ave. (July, 1922, pg. 375.)

Hamilton St. Ry.—The city council works committee has approved the proposal to build an extension to the junction of Sterling and King streets, in connection with the opening up of the McKittrick building estates. The matter is under consideration by the special street railway committee in connection with some other proposals for improving the lines in the west end. (Feb., page 81.)

New Brunswick Power Co.—A press report states that the company proposes to rebuild its electric railway lines on Dock, Mill and Main Streets, St. John. (Nov., 1922, pg. 581.)

Quebec Ry., Light & Power Co.—The Board of Railway Commissioners has authorized the installation of safety appliances at the crossing of the Canadian National Rys., on Canardiere Road, Quebec, to enable the Q. R., L. & P. Co's cars to cross the tracks and run over the Beauport Road extension. (Jan., pg. 36.)

Three Rivers Traction Co.—A press report, states that the company intends making a \$75,000 extension of its electric railway in Three Rivers, Que. This probably refers to the extension of the line on Norman Boulevard, Bellefeuille and St. Phillippe Streets, the construc-

tion of which Canadian Railway and Marine World, was advised in Sept. 1922, would likely be undertaken in 1923. (Oct. 1922, pg. 534.)

Toronto Suburban Ry.—Sir Henry Thornton, President, Canadian National Rys. is reported to have advised the Guelph Chamber of Commerce that he will be glad to confer with the Chamber's executive on his first visit to Guelph regarding the extension of the Toronto Suburban line from Guelph to Hespeler.

Toronto Transportation Commission.—The new cross town line to be provided, by building an extension of the Dundas St. line from Bay St. east across Yonge St. to Victoria St., will be gone ahead with early in spring. The right of way has been prepared by the city by the acquisition of property east of Yonge St., and north of Dundas St. East, and the removal of buildings therefrom. The new connection will give a through line from the west to the east end of the city, on Dundas St.

Electric Railway Employees' Wages, Working Conditions, Etc.

London St. Ry. Co.—An agreement is reported to have been made between the company and its motormen and conductors under which men chosen to operate one-man cars will be paid 5c an hour extra, which will give them a maximum rate of 51c an hour.

Toronto Transportation Commission.—P. W. Ellis, Chairman, is reported to have stated in an interview as to the possibility of a reduction of fares to 5c; that the only method to obtain them would be by reducing employees' wages, and that was the last thing the Commission had in mind.

British Columbia Electric Railway's Vancouver Bus Service.

By Sec. 11 of the franchise agreement entered into between the British Columbia Electric Ry. Co., and the City of Vancouver, Nov. 8, 1922, the company agreed to provide a bus service in any given outlying section of the city, which is not adequately served by street car service, when requested to do so by the city council. The company agreed to provide all vehicles necessary, and to charge the same fares as on the street railway lines, with transfers to and from the latter. One-half of the fares collected, a transfer being counted as a fare, it to be allocated to meet the cost of operating and maintaining the service; the company to absorb half of any deficit in the operation of the service up to \$5,000, and the balance to be deducted from the percentages of gross annual street car receipts payable by the company to the city. The company is to assume all liabilities in connection with the operation of such services and is not relieved of any liability to build extensions to its street car lines in such areas, if called upon to do so under the Vancouver Incorporation Act of 1921. The schedule of service and timetable of operation, and the territory to be covered by such services, are to be subject to the council's reasonable satisfaction.

Under this arrangement a motor bus service is to be operated to serve the Grandview-Hastings townsite area. The route starts from Commercial Drive, and extends east along Grandview Highway

to Renfrew St., along that street to 22nd Avenue, and along that avenue to the terminus at Rupert St. An order has been given for two buses for the route, each having a seating capacity for 21 passengers, and standing room for 14 more. They will be 16 ft. 1 in. long with 6 ft. 2 in. headroom, with folding door and step at the front similar to the street cars, and an emergency door at the rear. They will be fitted with 30 h.p. engines capable of making 25 miles an hour, and will be provided with tanks capable of carrying sufficient gas for one day's operation.

Electric Railway Notes.

Saskatoon Municipal Ry., has ordered 2 G. E. 80 motors, complete with gears and pinions, from Canadian General Electric Co.

The New Brunswick Power Co. is stated in a press report as intending to place 10 or more new cars on its electric railway in St. John.

The Toronto Transportation Commission is contemplating adding 60 more motor cars, of its original pattern, and 65 trailers to its rolling stock.

Winnipeg Electric Ry. is in the market for 300 tons of steel rails, 15,000 ties, 50 tons of tie plates, 50 tons of joint plates, bolts, spikes, etc., and probably some miscellaneous maintenance equipment.

The Toronto Transportation Commission has given the following orders recently:—70 gross tons 7 in. T. rail; 30,000 lb. Cadmium copper trolley wire; 20,000 lb. weather proof cable; 50,000 lb. bare copper cable and 1,800,000 granite blocks.

Windsor, Ont. City Council refused recently to pass motions expressing confidence in the principle of municipal ownership, and condemning the Ontario Government for sending a commission to enquire into the operation of the Hydro Electric Railways, Essex Division.

The Manitoba Government is said to have finally settled on a policy with regard to the Public Utilities Commissioner and that it will be placed directly under the Provincial Secretary, who will decide as to what matters are to be dealt with by its head, who, however, will not have the status of a commissioner.

The Seattle, Wash., City Council is considering an ordinance providing for the lease of not less than 100 nor more than 200 new 58 seat passenger cars, with option of purchase, at the end of any 12 months period. This plan of providing additional rolling stock, urgently required, has been devised as the management has not accumulated a replacement fund sufficient to buy the cars needed.

The Brantford, Ont., Municipal Railway Commission has complained to the police commission relative to the operation of private bus lines in the city, and along the route served by the Brantford Municipal Ry., which, it is stated, are cutting heavily into the railway receipts. The matter is being looked into by the City Solicitor to see what can be done to protect the railway interests.

Montreal City Council special committee, which is studying the transportation question with a view of securing an improved electric car service, has held several meetings, at which a number of plans were suggested and discussed. One plan suggested is for high speed lines, either elevated or underground, radiating north, east and west from the centre of the city, and

another suggestion is that the electric lines be linked up with the Mount Royal tunnel.

London, Ont., City Council has been giving some consideration to a plan for the establishment of a motor bus service in the city, to relieve the transportation situation. The suggestion is that 62 buses, with capacity for 25 passengers each, be provided at a cost of \$800,000; and it is claimed that with a 5c. fare the service would pay for itself in four years. The matter will be further considered and it is expected that a bylaw will be submitted to the people during the summer.

The Montreal Tramways Co. was the defendant in three separate suits brought in the Quebec Superior Court, at Montreal, recently by J. McClary, to recover damages totalling \$14,810 for deterioration in value of his house on Notre Dame St., Maisonneuve, assigned to have been caused by vibration from the company's cars. The court dismissed the three actions holding that the company was operating under a charter and was not liable for damages done in carrying out its privilege unless negligence was shown. This had not been proved and it was shown that the building was an old one, having been built in 1883, and of poor materials.

The London St. Ry. began the operation of one-man safety cars in London, Ont., Feb. 10, on the Rideout line. Last year's City Council authorized the company to place five of these in service. It is claimed by some aldermen that the Rideout line is not one of those on which it was intended to permit one-man cars to be operated, but the company's officials state that they are unaware of any limitation having been placed upon the lines to be operated over. At an informal meeting of the Council Feb. 7, it was stated that a decision had been reached to ask the company to sell 6 tickets for 25c, in return for the privilege of operating one-man cars.

Hydro-Electric Railway Propaganda.

In the investigation being held at Toronto, by a commission appointed by the Ontario Government, and headed by W. D. Gregory, K. C., it was shown in evidence recently that the Hydro-Electric Power Commission of Ontario took \$1,119,000 out of the Commission's general funds and spent it on right-of-way and materials for a radial railway between Toronto and St. Catharines, the Commission's Auditor, G. T. Clarkson, stating that there was no legal authority for the expenditure. It was also elicited that \$11,000 was incurred illegally in connection with the recent hydro-electric railway campaign in Hamilton, and that the Commission has been paying T. J. Hannigan, of Guelph, Secretary of the Ontario Hydro-Electric Railway Association, \$4,000 a year, to carry on campaigns.

Trackless Trolleys for Stratford.—Last autumn the Stratford City Council asked the Hydro Electric Power Commission of Ontario to send an engineer there to look over the city and advise as to the possibility of establishing a trackless trolley service. As the council was informed that it would have to bear the expense of an investigation, it decided not to have one made, but sent representatives to Windsor to see the trackless trolleys in operation there, the report made by the delegation being that it would be premature to establish trackless trolleys in Stratford.

Marine Department

Shipping Federation of Canada's Annual Report and Meeting.

At the Shipping Federation of Canada's annual meeting in Montreal, Feb. 14, the President, R. W. Reford, presented the following report for the calendar year 1922:—

Navigation at Montreal opened with the arrival of the s.s. Bilbster on April 24. The last departure for the sea was the s.s. Mapledawn on Dec. 6. During the season 1,194 ships visited the port from overseas ports and maritime provinces with a total tonnage of 3,932,637 compared with 964 ships of 2,891,956 tons for the previous season.

The total grain shipped exceeded the 1921 record, totalling 147,775,593 bush., of which 91,557,117 were carried by ships consigned to regular line agents, and 56,218,476 by tramps. Exports of agricultural products showed up well compared with 1921. Cheese shipments were 1,166,147 boxes, compared with 1,441,779 for 1921; eggs, 208,700 cases compared with 214,203; flour, 4,605,793 sacks compared with 3,326,806; butter, 318,144 boxes compared with 70,369. Owing to the heavy shipments of grain, and the large imports of coal from European ports, a certain amount of congestion occurred at times during the season.

World Shipping Condition.—I have no hesitation in saying that 1922 was one of the worst years experienced in shipping annals. It is true that traffic was a little more brisk than in 1921, but the low and unprofitable freights, together with the strong competition for the trade offering, brought about by the supply of tonnage exceeding the demand, made no improvement. The depression which has existed in the shipping industry for the past two years is not an ordinary one. It is a slump brought about by the over-production of ships, many of them built under the new policy of government ownership adopted by several countries, and the under-production of commodities to be carried. Both these factors are attributable to the war. The quantity of laid-up tonnage, while less than in the early part of the year, still amounts to a considerable figure. A great deal of this consists of ships of 3,000 to 4,000 tons d.w. for the account of the different governments which will be difficult to place profitably in any trade. It is hard to foresee any permanent prospects of revival in either the passenger or freight carrying trade until the European countries become more stabilized. The high cost of shipbuilding and the surplus unemployed tonnage are having their effect on the shipbuilding industry, which for some months has been in a stagnant condition. Shipbuilders are now quoting an average of £9 a ton for new tonnage, but until some trade improvement appears on the horizon shipowners will hold off before placing orders.

Operating costs are still very much above pre-war figures. On the other hand, ocean freights have steadily fallen during the year, and at times it was impossible to obtain cargoes to fill the ships, owing to the congestion of grain at the terminal ports and in transit, thus entailing heavy cost to steamers on the voyage. This, combined with the heavy costs of tonnage built since the war, made it imperative that a reduction should be

made in wages of dock labor at this port, and I am pleased to say that, after somewhat prolonged negotiations, satisfactory agreements were concluded with our shipliners on Aug. 13, and with the long-shoremen on Sept. 6, both agreements continuing until Dec. 31, 1923.

Wireless Telegraph Stations on the St. Lawrence.—Last year I had occasion to mention in our last report the action taken by the authorities in closing down certain wireless stations in the River and Gulf of St. Lawrence. Much to the regret of all concerned, the Government during 1922 closed down the stations at Harrington and Point Riche, which they claimed was necessary in the interests of economy. I think I am voicing the opinion of all shipmasters trading to the St.

It has made the approach to Halifax possible, when, without it, ships would have suffered long delays, awaiting improvement in weather conditions. In addition to Halifax, stations have been erected at Canso, Red Head (St. John harbor) have also given excellent results.

For the past three years, your executive has repeatedly impressed on the Government the necessity of providing direction finders at Belle Isle, Point Amour, Heath Point, Cape Ray, Fame Point, Grand Manan and Cape Sable, and I understand the Government now has the matter under consideration. I would again urge the immediate necessity for the installation of same. We cannot afford to take any chances with ships trading to the St. Lawrence.

Hours of Labor on Shipboard.—The second session of the International Maritime Commission, appointed by the Genoa Conference in 1920 to act in an advisory capacity to the International Labor Office in all matters appertaining to the shipping industry, was held in Paris on March 7 and 8 last, when questions were discussed dealing with the carriage of deck loads; International Seamen's Code; unemployment insurance for seamen; protection of health of seamen; and lastly, but most important of all, hours of labor on shipboard. Ever since this last item was voted down at the Genoa Conference in 1920, the seafarers' delegates have been endeavoring to have it resuscitated. The Maritime commission at the last session took the position that, in view of the present impoverished conditions, world freight charges could not be increased, and, therefore, the 8-hour day question would have to be shelved indefinitely. Perhaps in the future it may be opportune to reopen this controversial question, but the time has not yet arrived.

Smoke fumes conditions on the St. Lawrence river in the vicinity of Three Rivers, arising from the pulp and paper mills, were very bad throughout the season, and two accidents were reported from this cause. The number of pulp and paper mills in this vicinity has been increasing rapidly during the past few years, and the nuisance today constitutes a grave menace to navigation. The Government is fully cognizant of the danger that exists and I understand is planning some definite action to abate the nuisance. In the interest of life and property, I feel that steps should be taken immediately to end this nuisance once and for all, and any action the authorities may take in this direction will have the unanimous support of all those who are interested in the welfare of the St. Lawrence route.

Federation Tonnage.—Both the liner and tramp tonnage entered in the Federation during the season showed a considerable increase over 1921. The combined tonnage from liners and tramps was 1,321,329 gross tons, compared with 1,043,313 for 1921. The liner tonnage entered was 804,437 tons, an increase of 142,625 over 1921, and tramp tonnage was 516,892, an increase of 135,651. Canadian registered tonnage also showed an increase, amounting to 186,898 tons, compared with 135,740, an increase of 51,158. The following table

Dominion Marine Association.

Honorary President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

First Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Second Vice President, G. J. Madden, George Hall Coal Co. of Canada, Ogdensburg, N.Y.

Executive Committee, The President, First and Second Vice Presidents, and W. E. Burke, Canada Steamship Lines, Montreal; Yvon Dupre, Sincennes-McNaughton Line, Montreal; M. J. Haney, Canada Steamship Lines, Toronto; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transports, Montreal; Honorary members, L. L. Henderson and A. A. Wright, Montreal.

Counsel, Francis King, K.C., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

Lawrence when I say that such action on the part of our authorities was retrogressive. The improvements which have been made to aids to navigation in the Gulf and River St. Lawrence during the last two decades have resulted in a very general decrease in marine insurance rates, and as a consequence there has been a very great increase in tonnage seeking the Canadian trade. We cannot afford to call a halt in improvements of this kind. Cheap transportation of our farm products and manufactures is essential for the building up and development of Canada. Science is producing, and will continue to produce, new aids to navigation. Once their merit has been proved, the Government must be prepared to spare neither time nor money in installing them.

Direction Finder Stations.—Halifax has been equipped with a direction finder station which has well proved its worth. Shipmasters report it as more satisfactory than similar stations, both on the British and United States coasts.

shows the tonnage entered during 1922 and 1921:

	1922	1921
Regular liners	804,437	662,072
Transient ships	516,892	381,241
	1,321,329	1,043,313

The regular line, as well as tramp tonnage, entered with the Federation has been steadily growing since incorporation. In 1904, the regular line tonnage entered was 438,076 tons, in 1922 it was 804,437. Tramp tonnage, which rarely exceeded 100,000 tons a year between 1904 and 1912, in 1922 had increased to 516,892 tons, the highest on record.

Death of J. R. Binning.—It would not be fitting for me to close without making a kindly reference to the sad loss sustained during the year through the death of our esteemed colleague, J. R. Binning, who passed away on Sept. 30. He was one of the incorporators of the Federation, and since incorporation acted as its Treasurer. He always took a keen and energetic interest in its affairs as well as in the development of the trade and commerce of the St. Lawrence route, and his passing away leaves a vacancy hard to fill.

Departmental Relations.—As in the past, our relations with the various Government departments continue to be most amicable, and our thanks are again due to the respective officials, all of whom gave courteous attention to the many matters which we have had occasion to draw to their attention.

The following officers etc., were elected:—President, R. W. Reford; Treasurer, E. W. Foulds; other members of executive committee, D. W. Campbell; A. E. Cook; P. A. Curry; W. R. Ekin; A. M. Irvine; A. Mackenzie; J. W. Nicoll; R. B. Teakle. Sub-committees on bills of lading, and on harbor equipment, P. A. Curry and W. I. Gear.

Damage to Esquimalt Drydock Cofferdam.

As mentioned in Canadian Railway and Marine World for February, a portion of the outer cofferdam at the additional drydock being built at Esquimalt, B.C., collapsed and was carried away early in January. About 300 ft. of the cofferdam, which consists of a loose rubble mound, with a watertight core of interlocking steel sheet piling, subsided, owing to a blowout of the soft material between the bottom of the rock mound and the rock bed of the harbor, when unwatering of the enclosed area had proceeded to a depth sufficient to give a head of approximately 33 ft. on the dam. No loss of life or injury to workmen occurred, as the work inside the enclosed area had not been commenced. The only plant within the enclosed area consisted of pumping equipment, which was all on floats, and was uninjured.

Two dredges were put to work towards the end of January preliminary to undertaking repairs, and the repair work commenced early in February, after arrangements had been made by A. D. Swan, Consulting Engineer, and H. M. Scott, Construction Manager, P. Lyall & Sons Construction Co., the general contractors. The cost of repairing the damage will be at least \$50,000.

J. B. Williams, Traffic Agent, J. Spencer Turner Co. Canadian, Ltd., Hamilton, Ont., writes: "Having subscribed for Canadian Railway and Marine World for a couple of years, I have come to count considerably upon the information it contains."

The Eastern Steamship Co's Lake Ships.

Canadian Railway and Marine World for February mentioned the incorporation of the Eastern Steamship Co., and its order for 10 full Welland Canal size steamships, for operation between Buffalo, Port Colborne and Montreal. The order as stated was divided amongst 5 builders in Great Britain, as follows, Samuel White and Co., Cowes, Isle of Wight; Earle's Shipbuilding and Engineering Co. Hull; Furness Shipbuilding Co., Haverhill-on-Tees; Cammell Laird and Co., Birkenhead; and Napier and Miller, Glasgow, each company building two. The details and specifications of all the ships will be practically the same, there being however, some slight variations in machinery and layout. The names selected for the ships, are;—Judge Hart, Frank S. Baird, Norman P. Clemont, William H. Daniels, Edwin T. Douglass, Albert C. Field, Nisbet Grammer, Watkins F. Nisbet, Robert W. Pomeroy and John J. Rammacher.

Following are details of the two ships being built by Earle's Shipbuilding and Engineering Co.,—Length overall 258 ft., length b.p. 253 ft., breadth overall 44 ft., breadth moulded 43 ft. 1 in., depth moulded 20 ft.; cargo capacity of 130,000 cub. ft., or equal to a dead weight carrying capacity of 2,400 tons. The ships will have a forecastle for the officers and men forward, with the captain's accommodation and pilot house on the deck above. A large deck house will be fitted aft, covering the machinery casings, with accommodation for engineers, stewards, firemen, etc. Powerful winches will be fitted at each end of the ship for manoeuvring purposes, with steam warping capstan aft and steam windlass on the forecastle deck. The hold will be free from all obstructions, and the hatches arranged for the rapid loading and unloading of cargo. The propelling machinery will consist of triple expansion engines, with cylinders 16, 27 and 44 in. diam., by 33 in. stroke, supplied with steam by 2 main boilers, each 12 ft. internal diam., by 11 ft. long, at a working pressure of 180 lb. and capable of driving the ship at a speed of 10 knots. The machinery is to be placed as far aft as possible, so as to obtain the maximum length of holds. Water ballasts will be provided for in the cellular double bottom fitted all fore and aft, and the two peaks will be arranged for water ballast. Electric lighting will be provided throughout. The ships are being built in accordance with the British Corporation Society's rules and requirements for steamships on the Great Lakes and St. Lawrence River.

Nisbet Grammer, President, Eastern Steamship Co., Buffalo, N.Y., and J. J. Boland of Boland & Cornelius, of Buffalo, who will be the managers of the line, are in England, in connection with the building of the ships.

Marine Public Works Contracts Awarded.—The Dominion Public Works Department has awarded contracts for marine public works as follows,—Dec. 20, 1922, training wall, Woodward Channel, Fraser River, Steveston, B.C., to Pacific Construction Co., Vancouver, B.C., at unit prices; Jan. 8, extension to wharf and freight shed, Stewart, B.C., to G. B. Lawrence and E. R. Workman, Stewart, at unit prices; Jan. 8, reconstruction of outer end of wharf, St. Omer, Que., to T. P. Charleson, Ottawa, at \$2.85 a cub. yd., of crib work completed and ballasted.

Canal Statistics for December 1922.

The Dominion Bureau of Statistics Transportation branch has issued the following:—

Sault Ste. Marie.—Total traffic through the Canadian and United States locks, which closed Dec. 24 and 20 respectively, was 1,837,221 tons, an increase of 55% over Dec. 1921. For the season the total traffic aggregated 66,064,219 tons, an increase over 1921 of 37%. The chief factors in this increase were heavy shipments of wheat, 275,444,071 bush.; other grain 118,506,576 bush., and iron ore 42,227,338 tons. Although iron ore shipments were 87% above 1921 they were 25% below 1920. Wheat and other grain shipments were records. Both bituminous and anthracite coal shipments during September to December inclusive were above the same period of 1921, but for the season bituminous coal was 3,716,456 tons, or 30%, and anthracite coal, 1,585,681 tons, or 70% below the 1921 shipments.

Welland Canal closed Dec. 12 with a total traffic for the month of 25,091 tons, and for the season of 3,391,419 tons. This latter was surpassed only in 1913 and 1914, when the total cargoes for the season were 3,570,714 and 3,860,969 tons respectively. Wheat shipments for the season aggregated 1,752,458 tons or 58,415,300 bush., which was a record. Shipments of U.S. corn fell off 323,503 tons, or 11,553,680 bush., from 1921, and oats also showed decrease of 11,453 tons or 673,706 bush. Coal shipments also were light compared with 1921, bituminous coal decreasing 468,508 tons, or 61% and anthracite coal shipments dropped from 13,130 tons to 45.

St. Lawrence Canals closed Dec. 13, with a total traffic for the month of 55,238 tons against 19,648 in 1921. For the season the total traffic was 4,319,919 tons compared with 3,734,065 in 1921. Wheat shipments for the season were 58,901,500 bush. an increase of 30,475,500 over 1921, and a record. Corn and oats decreased, but barley and rye substantially increased. Iron and steel, sugar, merchandise, pulpwood and lumber increased over 1921 but coal shipments were 54,522 tons for anthracite and 184,874 for bituminous below 1921.

Pilotage in British Columbia.—The impression has prevailed from an announcement made recently, that the Dominion Government had given the British Columbia Pilotage Association the privilege of conducting examinations for pilots, and dealing with pilots' licenses. A local pilot, who had been given notice by the Association that his license had been cancelled, communicated with the Director of Pilotage at Ottawa, and was informed that neither the British Columbia Pilotage Association nor any other association has authority to either issue or cancel licenses. Pilotage in British Columbia waters is not compulsory, and ship owners are at liberty to employ a pilot of their own choice, or none at all, and at such rates as they may determine.

Naval Appointments for Atlantic Stations.—Lieut. D. St. G. Lindsay has been appointed to H.M.C.S. Guelph, additional for war staff duties (Intelligence), at Ottawa. Lieut. R. W. Wood has been appointed to H.M.C.S. Guelph for war staff duties (Intelligence), at Halifax, N.S. Lieut. H. W. S. Soulsby has been appointed to H.M.C.S. Guelph for R.C.N. Barracks, Halifax, N.S.

Trans-Pacific Ocean Steamship Records.

A recent press dispatch from Seattle, Wash. stated that the Admiral Line's s.s. President Grant had established a new trans-Pacific record, making the voyage from Yokohama, Japan, to the Race Rock quarantine station near Victoria, B.C., in 8 days, 10 hr., and 44 min., the best previous record being given as 8 days, 18 hr. and 31 min., by the C.P.R. s.s. Empress of Russia. It was also stated that the President Grant's master, Capt. M. M. Jensen, had been notified by wireless that the limitation of speed of 17.5 knots an hour had been removed, and he was free to see exactly what his ship would do on the run. A later dispatch stated that Capt. Jensen had announced that the reports that his ship had made a new record, were incorrect, the time taken on the voyage being 9 days, 10 hr. and 41 min., after making allowance for the meridian day. The trans-Pacific record still remains with the C.P.R. s.s. Empress of Russia, for 8 days, 18 hr. and 31 min. Both the C.P.R. steamships Empress of Canada and Empress of Asia have made the passage in less than 9 days.

Provision for Vancouver Harbor Improvements.

The Minister of Marine introduced a bill into the House of Commons, Feb. 13, authorizing further advances to the Vancouver Harbor Commissioners, and providing that the Government, may from time to time, advance not exceeding in the whole, \$5,000,000, to enable them to build such terminal facilities as are necessary to properly equip the port; that during the construction period the interest payable on the debentures, receivable by the Finance Minister in exchange for such advances, shall be deemed to be money required to build, and to be part of the cost, and such interest may be paid out of the total sum advanced; that the commissioners shall submit to the Minister of Marine for approval, monthly applications for such advances, with statements showing total expenditures on different items in detail, and that on advances being made, they shall deposit with the Finance Minister, debentures equal in par value to the advances made, repayable within 25 years, and bearing interest at 5% a year payable half yearly; and that the principal and interest shall be payable by the commissioners out of all their property, assets, tolls, rates, dues, penalties, and other sources of revenue, and shall rank as a charge thereon.

The Minister pointed out that the Commission was organized in 1913, and in 1919, advances were authorized to the extent of \$5,000,000, and of this amount, \$300,000 was paid to redeem bonds which had been issued by the commissioners. They then secured property for the site of the Ballantyne pier for \$672,900. Other expenditures included repairing foundations and dredging, berthing and turning basin for the main pier, \$512,095; construction on pier and sheds, to Dec. 31, 1922, \$2,814,871; engineering and contingencies, \$121,583; development of other harbor property, etc., \$35,319; interest charged to capital account, \$136,064, making a total expenditure of \$4,524,800, and leaving a balance of \$475,200, available for future expenditures. The Ballantyne pier is not completed, and a further \$1,760,765

will be required in addition to the balance remaining of the last loan. The commissioners have engaged an elevator expert from the John S. Metcalf Co., Montreal, to advise as to the best course for handling grain, and it is proposed to enlarge the existing grain elevator by 500,000 bush. capacity, making a total capacity of 1,750,000 bush. at a cost of about \$400,000. It is also proposed to build a second grain elevator with capacity of 2,000,000 bush. on the Ballantyne pier, at a cost of about \$2,000,000. Other works in contemplation include a log booming ground, \$171,000; marine ferry terminal \$155,375; Ballantyne stage yards \$76,000; railway equipment \$81,000; land adjacent to present elevator \$50,000; lumber assembling wharf \$190,000; Granville Island Harbor \$27,000; overhead approach to Ballantyne pier \$65,000; and contingencies \$23,860. The harbor's financial condition is excellent, and it is believed that in a short time it will be self sustaining. The receipts for 1922 were \$423,307.98 and the expenditures \$131,240.75. The bill was read a second and third time on Feb. 16.

The Steamship Monte Grappa Disaster.

Canadian Railway and Marine World for January contained the following item, in its Marine Department:—"The Italian s.s. Monte Grappa, which sailed from Montreal, Nov. 5, after having had some repairs made by Canadian Vickers, Ltd., was reported, Dec. 4, to have been abandoned at sea in a sinking condition, about Nov. 14, while en route to Venice, having encountered a severe storm. The crew of 45 were rescued by the White Star Line's s.s. Pittsburgh and landed at Southampton, Eng."

The item was compiled from a press report, its writer, knowing that something in the way of work had been done on the ship by Canadian Vickers, Ltd., adding the words, "after having some repairs made by Canadian Vickers, Ltd." It is incomprehensible to us how any reader of the paragraph could have had any idea that the repairs referred to had anything to do with the disaster, but some persons appear to have interpreted in that way, and we therefore wish to make it plain that they are entirely mistaken. The only thing Canadian Vickers, Ltd., did was to supply a few small piston rings for one of the auxiliary pumps in the engine room. The cause of the disaster, as stated in press reports at the time, was believed to be the shifting of the grain cargo. As far as Canadian Railway and Marine World is aware, the ship was carefully loaded, was of course passed by the Montreal Port Warden, and accepted by the underwriters as properly stowed and ready for sea.

Avery, Kernahan Ltd. is being organized in Vancouver, B.C., to carry on a general shipping and trading business. Maylor Avery was formerly with the Vancouver Milling & Grain Co., and C. C. Kernahan was formerly contracting freight agent for Canadian Government Merchant Marine Ltd.

The British Columbia Mills Timber & Trading Co. Ltd. has had its charter enlarged under the British Columbia Companies Act, and is authorized, among other things, to carry on business as ship owners and general carriers by land and water.

Transfer of Dominion Government Grain Elevator at Vancouver.

The following was approved by the Governor General on Jan. 19, and passed as an order in council:—"The committee of the Privy Council have had before them a report, dated Jan. 19, 1923, from the acting Minister of Trade and Commerce, stating that the Vancouver Harbor Commissioners have made an offer to purchase, upon the terms and conditions hereinafter stated, the Canadian Government elevator at Vancouver, which was constructed pursuant to the Canada Grain Act of 1912, sec. 13, as amended, and to pay therefor \$550,000, the purchase price to be secured by the Vancouver Harbor Commissioners' bonds for \$550,000 bearing interest at 5% per year. The Minister recommends that the offer be accepted and that the sale and conveyance of the elevator to the Vancouver Harbor Commissioners be authorized upon the following terms and conditions: 1.—They shall deliver to His Majesty, concurrently with the issue of the letters patent, bonds of the Corporation of the Vancouver Harbor Commissioners for \$550,000 bearing interest at 5% per year and acceptable to the Minister of Finance. 2.—The Commissioners shall, concurrently with the issue of the letters patent enter into an agreement with the Board of Grain Commissioners whereby the Harbor Commissioners shall be bound to operate the elevator as a public terminal elevator within the meaning of the Canada Grain Act. The agreement shall be dated Feb. 1, 1923, and the Harbor Commissioners shall thereby agree to permit the Board of Grain Commissioners to operate the elevator until the close of the present crop year, and to account to the Board of Grain Commissioners for all storage charges and other revenue arising out of the operation of the elevator by the Board and received by the Harbor Commissioners after the conclusion of the present crop year, and for all advances made by the Board, and similarly collected by the Harbor Commissioners, after the conclusion of the present crop year. The committee concur in the foregoing recommendations and submit the same for approval."

George Hall Coal and Shipping Corporation Ltd. has been incorporated under the Quebec Companies Act, with \$2,400,000 authorized capital, and office at Montreal, to acquire all or any part of the goodwill and rights of the George Hall Coal Co. of Canada Ltd., the Blanche River Pulpwood Co. Ltd., and the Black River Shipping Co., with power to carry on a wholesale coal and fuel business, also a transportation business, and the right to acquire and develop electric and other powers in Lake St. John, Charlevoix, Saguenay and Chicoutimi Counties, Que.

The Lower St. Lawrence Navigation Co. Ltd. (La Cie. de Navigation du Bas-St. Laurent Ltée.) has been incorporated under the Quebec Companies Act, with 8,000 shares of no nominal or par value, but to begin operations with \$40,000, and office at Rimouski, Que., to own and operate ships and to carry on a general coasting and navigation business, more particularly between Montreal, Quebec, Gaspe and Magdalen Islands. The incorporators are: J. A. Brillant, Rimouski, Que.; Lt. Col. J. E. Pinault, J. A. Ross, Mont Joli, Que.; and Dr. J. E. Bernier, Quebec, Que.

Enquiry Into Alleged Combine Among Great Lakes Steamship Owners.

The royal commission, consisting of S. J. McLean, LL.B., Assistant Chairman, Board of Railway Commissioners, Chairman; Brig.-Gen. T. L. Tremblay, member and Chief Engineer, Quebec Harbor Commission, and Levi Thomson, barrister, Qu'Appelle, Sask., appointed to investigate representations alleging the existence of a combine of Canadian companies operating ships on Lakes Superior, Huron, Erie and Ontario, their connecting waters, and the St. Lawrence River, contrary to the public interest, held its first sitting at Winnipeg, Feb. 12. H. J. Symington, K. C., Winnipeg, is counsel for the commission and W. T. R. Preston, of Port Hope, Ont., who has made a preliminary "investigation" for the Government, as secretary. In this connection it may be mentioned Minister of Trade and Commerce Robb stated in the House of Commons recently, in answer to questions by Hon. J. B. M. Baxter, St. John, N. B., that Preston was requested by the Government to investigate the case of lake transport, and subjects connected with transport of freight on the Great Lakes; that he was paid \$15 for each day employed, and a daily allowance of \$15 in addition to his actual transportation expenses; that his report was not made public, because the preliminary enquete was for the Government's information and that the investigation is being continued by a royal commission, and when it is completed, the report will be submitted to Parliament. Mr. Robb, however, was hardly frank in stating that the report was not made public, as portions of it were given to at least all Government newspapers and were published simultaneously with the order-in-council appointing the commission.

Companies interested are represented by counsel as follows:—Canada Steamship Lines, Aime Geoffrion, K.C., Montreal, and R. I. Towers, K. C., Toronto; Mathews Steamship Co., H. W. Shapley, Toronto; Port Arthur Shipbuilding Co., Collingwood Shipbuilding Co., and Halifax Shipyards Ltd., F. H. Markey, K. C., Montreal; Great Lakes Shipping Co., H. Phillips, K. C., Winnipeg; Standard Shipping Co., I. Pitblado, K. C., and E. H. Crawford, Winnipeg. T. R. Enderby, Operating Manager, Canada Steamship Lines, and President, Dominion Marine Association, attended on the Association's behalf, the Association's Counsel having advised the chairman of the commission previously, that its members welcomed the opportunity to provide authoritative information, which the commission would doubtless be glad to receive.

The commission has power as stated in Canadian Railway and Marine World for February to enquire into the relations and arrangements between the steamship companies and interests amalgamated or combining for the purpose of operating or arranging for the transportation and insurance of grain in ships traversing the Great Lakes; into the alleged combine of shipping interests in its efforts to dominate and control the freight rates and terms under which grain has been carried from Fort William and Port Arthur, and into the comparative freight rates on grain by ships traversing the Great Lakes between Duluth, Milwaukee and Chicago to eastern lake ports, as compared with the prevailing freight rates on grain

to eastern lake ports in ships controlled or dominated or fixed by the alleged combination of interests controlling Canadian lake shipping sailing from Port Arthur and Fort William to eastern ports, and to make such further enquiry as the commission may see necessary in the premises. The following summary of the proceedings is compiled from press reports.

H. J. Symington, K. C., announced at the opening sitting that the evidence it was intended to produce would be largely of documentary nature, containing statements of companies' operations, and on the suggestion of I. Pitblado, K. C., who said that the demands made on the companies were of such a sweeping nature that they would require practically the entire office records, it was decided to confer and settle exactly what documents should be produced. F. H. Markey, K. C., representing shipbuilding interests, stated that his clients were only interested in questions which might arise in connection with a suspension or abrogation of the coasting regulations.

J. A. Speers, General Manager, Lake Shippers Clearance Association, the first witness gave details of grain shipped from Fort William and Port Arthur during the navigation season from its opening to Aug. 31, the end of the crop year, to various ports. He stated that at the end of July, the association had 63 members, and there was a constant charge of 30c. per 1,000 bush., and in addition, a charge varying from 10c. to 40c. per 1,000 bush., according to the time taken in loading a ship, made by shippers.

James Stewart, President, James Stewart Grain Corporation, New York; Maple Leaf Milling Co., Toronto; Vice-President, State Elevator Co., Managing Director, James Stewart and Co. Ltd., Winnipeg, and Federal Grain Co., and director, Western Elevator Co., Western Grain Co., Western Terminal Elevators Ltd., and Canadian National Rys., in evidence and cross examination extending over parts of four days, stated that there was discrimination against Port Colborne, compared with Buffalo, and as a result, the Maple Leaf Milling Co.'s mill at Port Colborne had to close down last summer, as it could not compete in the European market with U. S. millers. In consequence he lodged a complaint with the Minister of Trade and Commerce, and requested that the coasting regulations be suspended. He said that only two Canadian brokers handled the business of all Canadian shipping companies, and he had been informed that the higher rates charged by these two concerns to Port Colborne, had been decided on at a conference of Canadian lake shipowners at Toronto in May 1922. The brokerage companies stipulated that they should get the insurance on grain cargoes, and charged 30c. per \$100 in the summer, when the same insurance could be obtained from private companies at 18c. per \$100. He favored the suspension of the coasting laws until such time as Canadian shipowners are disciplined by competitive rates, and said that this statement was based on rates which prevailed for the greater part of last season from Fort William to Buffalo, as compared with rates from Fort William to Port Colborne. He had of-

fered to have grain unloaded at Port Colborne in 24 hours, but no impression was made on the shipowners. During the evidence, it developed that by marketing future contracts, his companies, during last autumn, were paying 4c. a bush. for carrying grain, when the current rate was 10c. or 11c.

S. L. Smith, of Smith, Murphy and Co., Winnipeg, stated that his firm was one of the largest wheat exporters on the Winnipeg market, and that he was satisfied that the present system of handling the business through brokers and maritime insurance does not affect the ultimate price received by the producer, or paid by the consumer. In Oct. 1922, he had made representations to the Dominion Government protesting against the removal of the coasting regulations, which, if carried out, would cause congestion at Port Colborne and Georgian Bay ports, and would increase steamship rates. He also pointed out that there was, at the time, a sufficiency of Canadian tonnage available, and he did not consider Canadian rates were exorbitant, compared with rates charged to U. S. ports. He claimed that there was worse congestion at Buffalo toward the end of September, than at any Canadian port, and longer unloading delays had been experienced there, he having been called upon to pay demurrage varying from \$500 to \$1,500 a cargo at Buffalo, with no demurrage charges at Canadian ports, where the steamship rates took care of all such charges.

D. Stocking, President, Tomlinson Shipping Co., Duluth, Minn., stated that, in the slack season, Canadian ships were excluded to a very large extent, by U. S. coastal laws, from carrying ore and limestone, and in carrying coal, Canadian ships were also at a disadvantage, because coal shippers preferred to give their business to U. S. lines. At the same time, Canadian shipowners had to face international traffic on equal terms. Shipbrokers receive a chartering fee, in addition to their commission on cargo insurance, on contracts for space in U. S. ships, but in Canadian ships they only received commission on insurance.

H. E. Sellers, Manager, Gooderham, Melady and Co., Winnipeg, stated that there was no competition in rates, to his knowledge, in the autumn. The three shipping brokers operating in Winnipeg, did not usually underbid each other. He had chartered space on a Canadian Government Merchant Marine ship at 4-1/2c. for October, and at 5c. for November, and had chartered space, through the Standard Shipping Co., for the same months, at 4c., but was unable to get additional space through the same company at that figure, due, it was stated, to the uncertainty as to congestion at Canadian ports. Under examination by I. Pitblado, for the Standard Shipping Co., when shown that Mr. Stewart had chartered space, through the Standard Shipping Co., at 4c., a week after Mr. Seller had endeavored to obtain increased space at that rate, the latter stated that that would indicate some kind of competition in rates. He had objected to paying a 4c. rate to Georgian Bay ports, when the rate to Buffalo was only 3c. When using space on Canadian Government Merchant Marine ships he paid 20c.

per \$100 insurance, the rate to brokers on other ships being 30c. per \$100. He would prefer to place his own insurance, if he could get the necessary space.

T. R. Enderby, Operating Manager, Canada Steamship Lines, and President, Dominion Marine Association, stated that he was present at a meeting in Toronto, in May 1922, of steamship owners and shippers to discuss rates on the Great Lakes.

L. H. Wolvin, Standard Shipping Co., charter agents for Canada Steamship Lines Ltd., also mentioned the Toronto meeting, and stated that subsequently he received instructions from Mr. Enderby regarding the rates to be charged. He outlined in general, the method of carrying out business as between shippers and shipowners, and stated that he had never discriminated between shippers. The fact that he was unable to provide some shippers with cargo space last October, was explained by the statement that the normal carrying capacity of Canada Steamship Lines' ships in one month, was from 14,000,000 to 14,500,000 bush., but owing to congestion at ports they had been able to carry only about 9,000,000 bush.

While under examination regarding an effort to get Winnipeg brokers to sign an agreement not to let cargo space to shippers who refused to allow brokers to place the insurance, he stated that several had signed such an agreement, but he had never intimated to any of them that he would put them out of business unless they signed. He stated that he could not recall taking the matter up with Duluth brokers, but it had been a topic of conversation all over the lakes, and he thought there was a time when Nye Jenks, grain exporters, Chicago, had tried to charter space without allowing the brokers to write the insurance, and he produced a copy of a telegram he had sent to the Standard Shipping Co.'s manager there, which read as follows:—"Nye Jenks working for another cargo Chicago-Buffalo, trying to write their own insurance. I am getting very tired of trying to uphold the situation of the vessel broker. We are in a wonderful position to break every vessel agent on the Lakes, and I want you to notify all Winnipeg agents that if one of them produces a boat to load at Chicago, that I am absolutely through, and will do business for nothing until everyone of them are out of the game, which you know I can do, and will do. Solicit them all. Show them this telegram and tell them I mean every word I say."

It has been stated that the Standard Shipping Co. has the exclusive brokerage rights for traffic carried by Canada Steamship Lines' ships, until 1940, and also contracts with other owners.

P. D. Sullivan, of D. Sullivan and Co., shipowners and brokers, Chicago, stated that under normal conditions there should be a difference in the rate from Chicago in favor of Bay ports as compared with Buffalo, of 1/2c. a bush., and stated that the Canadian route was popular because rates to Bay ports on U. S. ships were less than to Buffalo. He gave out of pocket expenses on a ship of about 350,000 bush. capacity, as \$600 a day, not including investment on capital or overhead. He stated that if the coasting laws were removed on both sides, he believed that it would be a disadvantage to U. S. ships and an advantage to Canadian ships; if the U. S. coasting laws were removed and the

Canadian laws maintained, it would be a decided disadvantage to U. S. ships, and if the Canadian coasting laws were removed and the U. S. laws maintained, it would be to the decided disadvantage of Canadian ships. If the Canadian coasting laws were suspended in the spring and autumn when U. S. ships were not busy, it would greatly advantage U. S. traffic.

Among others to give evidence were, T. J. Anderson, Manager, British Empire Grain Co.; D. L. Smith, Manager, Grain Growers' Export Co.; T. F. Carscadden, Winnipeg Manager, James Caruthers and Co.; W. R. Bawlf, Bawlf Grain Co.; N. Heimbecker, grain shipper; A. Christie, Canadian Elevator Co.; H. N. Baird, Baird and Botterell; and W. J. T. Kerr, K. B. Stoddart Co.

The Winnipeg sittings concluded Feb. 23, after which it was expected that the commissioners would visit Fort William, Buffalo and Chicago. At Fort William, evidence of Board of Grain Commissioners would visit Fort William, no public sittings will be held at Buffalo or Chicago. The commissioners will then go to Montreal, where public sittings will be resumed.

The Winnipeg sittings have dealt almost entirely with the matter from the shippers' viewpoint, and that of the shipowners will be heard at Montreal. A cursory reading of the evidence, as reported from day to day, leaves the impression that there is a community of interests of those concerned with the transportation of grain from the head of the lakes to the seaboard, with the view of handling the business in the most methodical manner, and the trend of the evidence was that the system is, in the main, satisfactory to the shippers and does not add to the ultimate cost. The system followed in the allotment of tonnage, as between shippers and shipowners, is an outcome of the co-operative arrangement adopted for handling Great Lakes shipping during the war period, and which had its present chief antagonist's approval. The alleged discrimination in rates appears to resolve itself into one of competition. That there was competition was shown when it was stated that when certain rates were quoted as 10c. and 11c. cargoes were booked over the same route at 4c., 4-1/2c. and 5c. Congestion at various ports last year was a well known fact, and evidence was given that, due to port congestion, the steamship capacity of Canada Steamship Lines, was reduced from 14,500,000 to 9,000,000 bush. a month. Notwithstanding this congestion at Canadian ports, a worse condition was shown at U. S. ports, and in the latter cases, shippers had to pay large demurrage dues, which were absorbed by Canadian shipowners, without reference to the rate on the cargo. Opinion was also expressed on the effects of a suspension of the coasting laws, and it must be admitted that while a suspension of the Canadian laws, while the U. S. laws were maintained, would be disastrous to Canadian shipping, its effect on the rate question, or on alleged discrimination between ports, would, at least, be problematical.

Coast Navigation Co. Ltd. has been incorporated under the British Columbia Companies Act, with \$10,000 authorized capital, and office at Vancouver, to carry on a ship owning and shipping business, and to own and operate ships for passengers, mails and merchandise.

Wheat Shipments to Montreal and Their Handling.

Minister of Marine Lapointe gave the following answers in the House of Commons recently, to questions asked by H. Deslauriers, St. Mary, Montreal:—"In Aug. 1921 there were at different times in the Montreal terminals and Port of Montreal from 1,000 to 2,000 cars waiting to be unloaded, but the peak of from 1,800 to 2,000 cars did not exist for longer than 6 or 7 days. The cost of transportation of wheat from Port Arthur to Montreal at present by rail is 34½c per 100 lb. or 20.70c a bush. The charge for elevation of wheat from vessels to commissionaires' grain elevators is four-tenths of 1c. a bushel, including storage in the elevator up to 10 days free, and free fire and explosion insurance. In addition there is a charge of \$2.75 per 1,000 bushels for shovelling the grain to the elevator buckets in the ships hold. The charge for elevation of wheat ex railway cars is six-tenths of 1c. a bushel, including storage in elevator up to 10 days free, and free fire and explosion insurance. The shovelling in this case is absorbed in the elevation charge. The charge for delivery of grain to ocean steamships over the grain conveyer system or otherwise is four-tenths of 1c. a bushel."

Vancouver Harbor Commissioners.—The House of Commons passed a motion recently by Hon. H. H. Stevens, Vancouver Center, B. C., for a return showing all correspondence, letters, documents, petitions, etc., passed between the Government or any member of the Government, or officials of the department and persons in Vancouver, relating to retirement of certain members of the Vancouver Harbor Board and the appointment of successors; also copies of the orders in council appointing members of the Board since its inception; also orders in council that have passed since Jan. 1, 1922, authorizing the expenditure of moneys by the commissioners in harbor improvements.

Bay Line Steamships Ltd., has been incorporated under the Dominion Companies Act, with authorized capital stock of 10,000 preference shares of \$100 each, and 20,000 common shares without nominal or par value, provided that it shall carry on business with a capital of \$1,100,000, and office at Montreal, to own and operate ships and facilities for handling and forwarding of passenger and freight traffic. It is reported that this company will operate the 10 steamships bought from the French Government, by Montreal interests, with which the Ogilvie Flour Mills Co. is associated, as mentioned in Canadian Railway and Marine World for February, page 91.

Vancouver Grain Shipments.—From Nov. 29 to Dec. 31, 1922, inclusive, 3,377,690 bush. of wheat were shipped out of Vancouver in 24 ocean going ships. Of these shipments, 19 were for United Kingdom ports, and 5 for Japan. During January, 23 shipments were made, totalling 2,886,260 bush., of which, 16 shipments of 2,639,221 bush. were to United Kingdom ports, 6 shipments of 230,472 bush. to Japanese ports, and one shipment of 16,567 bush. to China.

John Allsop, Assistant Manager, Royal Mail Steam Packet Co., London, Eng., formerly General Agent for Canada, at Halifax, N.S., writes: "I have always perused Canadian Railway and Marine World with the greatest possible interest."

Atlantic and Pacific Oceans.

The Canadian Robert Dollar Co's s.s. M. S. Dollar was towed into Boston, Mass., Jan. 31, en route from the Orient, her engines having become disabled, about 400 miles from port, during a storm.

Albert Sarrant, Minister of the French Colonies, who visited St. Pierre and Miquelon Islands recently, is reported to have stated, on his return to France, that there was no intention of selling the islands, and that the port of St. Pierre would be improved by the installation of a lighthouse and a cold storage plant for fish.

The Canadian Robert Dollar Co. is reported to have bought the steamships Warzawa and Wayfarer, the former from the Polish-American Line, and the latter from the Harrison Line. The Warzawa is about 9,000 tons d.w., and was built in the U.S., and the Wayfarer, 14,000 tons d.w., is British built, and will be operated on the round the world service, and renamed Virginia Dollar.

The Mexican States Line is reported to have decided to extend its coast steamship service between Mexican Pacific ports, Central American ports and San Francisco, to include Vancouver, B.C., in the near future. The ships will operate under the British flag, the company being subsidiary to the Clan Line, Glasgow, Scotland. It has 3 passenger and freight steamships of 4,000 tons, and 6 smaller coasting ships, one of which, Guerrero, was salvaged at Mazatlan, Mexico, recently, by Pacific Salvage Co., Victoria, B.C.

Furness Withy & Co. will put four additional steamships in trans-Atlantic service shortly. The first one, named London Importer, which was launched in Nov. 1922, is approaching completion; the London Commerce was launched in January, and the London Merchant and the London Shipper were expected to be launched in February and March. They average about 7,900 tons gross each, and are equipped with geared turbines of about 5,400 shaft h.p. They were built by Furness Shipbuilding Co., Haverton Hill-on-Tees, England.

The Canadian Manufacturers' Association sent a questionnaire to its members recently to ascertain the probable requirements of shippers and manufacturers, in the event of a possible inauguration of an intercoastal steamship service between the Canadian Atlantic and Pacific coasts, via the Panama Canal. It is stated that the answers from seaports have not been satisfactory, i.e., that there is not, at present, sufficient prospect in sight of enough westbound freight to make such a proposal profitable from the start.

The s.s. Leviathan has been assigned to the United States Line, by the U.S. Shipping Board, for operation in the trans-Atlantic passenger service. She will run between New York and Southampton, calling at Cherbourg, France, en route, and will thus be in direct competition with the White Star Line's s.s. Majestic, and the Cunard Line's s.s. Berengaria. Each of these ships is German built, and they were intended for the Hamburg-America Line's service between Bremen and New York. These three ships are the largest passenger ones in the world, in the following order: Majestic, formerly Bismarck; Leviathan, formerly Vaterland; and Berengaria, formerly Imperator.

The Cairn Line, of which Robert Reford

Co., Montreal, are Canadian Agents, is adding another ship to its fleet, for the St. Lawrence service. She will be named Cairntor, and will run between Newcastle-upon-Tyne, Eng., Leith, Scotland, and Montreal. She has been built at Sunderland, Eng., and is a sister ship of the s.s. Cairnross, which made her maiden voyage to Montreal last year. Her dimensions are: Length 425 ft., breadth 55 ft., depth 29 ft., d.w. tonnage 8,710. She is of the shelter deck type, and equipped with geared turbine engines, arranged to burn either oil or coal. She made her maiden voyage to Portland, Me., during February, and on the re-opening of the St. Lawrence, will run to Montreal.

The Union Steamship Co. of New Zealand has ordered a large motorship for its passenger and mail service, on the Canadian-Australasian Line, between Vancouver and Australasian ports. The press reports, which stated that a second ship of similar type to the foregoing was to be ordered, and that the C.P.R. had ordered a motorship for the Canadian-Australasian route, are incorrect. The ship, which will be built by the Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland, will be 600 ft. long, 73 ft. broad and of about 20,000 net tons, and will be equipped with internal combustion engines for a speed of 18 knots. She will be practically a duplicate of the C.P.R. s.s. Empress of Canada, by the same builders, with the exception of her propelling machinery, which will be Diesel engines of the Sulzer type, of about 13,000 shaft h.p. The passenger accommodation will be spacious, with 8 cabins de luxe, and there will be only 30 first class cabins arranged for more than 2 berths. Other accommodation will include a gymnasium, cafe, soda fountain, etc.

Maritime Provinces and Newfoundland.

Furness Withy & Co's steam tug Neptune was badly damaged by fire at St. John, N.B., Jan. 29, while assisting in towing the s.s. Manchester Brigade up the harbor.

The Norwegian s.s. Capto was towed into St. John's, Nfld., Jan. 28, by the Furness Line's s.s. Sachem. She lost her rudder while en route from Wabana, Nfld., to Germany with iron ore, and was picked up by the Sachem, Jan. 18, about 500 miles east of St. John's.

The C.G.S. Stanley, which was caught in the ice off the Cape Breton coast, about the middle of January, arrived at Louisburg, N.S., Feb. 4. The master, Capt. I. C. Rhude, stated that ice conditions in the Cabot Strait, particularly off Cape North, were the worst he had ever experienced.

The U. S. Federal Court, at Boston, Mass., has awarded \$78,000 to the owners of the Lunenburg, N. S. schooner John M. Wood, being half the value of the cargo of the schooner, which was sunk by the U. S. Shipping Board's s. s. Lake Elsie, in collision, near Little Hope Island, N. S., May 22, 1920. The schooner was insured. It was held that both ships were equally to blame; but the steamship suffered no damage.

The Newfoundland Board of Trade's recent annual report stated that many complaints of inefficient steamship service on the west coast had come before its council, the s.s. Glencoe, plying between Port aux Basques and Argentia, seeming to be inadequate for the service.

Investigation had shown that there is not sufficient traffic on the west coast for the two services, the s.s. Glencoe of the railway service, and the s.s. Portia of the coastal service.

A London, Eng., press dispatch of Feb. 8, stated that a whistling buoy marked "made in Ottawa," had drifted ashore at the Scilly Isles, off the coast of Cornwall. It is supposed to have drifted from the Gulf of St. Lawrence, or the Atlantic Coast, but as the number has not been given, it is impossible to establish its identity. The buoy is valued at \$4,000 and will probably be brought back to Canada by one of the Canadian Government Merchant Marine ships.

The s.s. Manchester Shipper arrived at Halifax, N.S., Jan. 30, with the barquentine Maid of England, which had been abandoned at sea, in tow. The barquentine had lost her foretopmast and all head sail, and was leaking considerably. She sailed from Baltimore, Md., early in January, for Halifax, and ran into a storm. One of the crew fell overboard and was lost, and the other members of the crew abandoned the ship, which the master claims was necessary, as they had become restless and refused to work.

The C.P.R. s.s. Empress of Scotland, which returned to New York at the end of January, after completing one of her winter cruises, brought the crew of the schooner Clintonia, of Lunenburg, N.S., which had been abandoned in a sinking condition after three days fight with heavy seas. The men were rescued with great difficulty, as the lifeboat could not get near to the schooner. All the men had to take to the water, from which they were picked up by the lifeboat crew. The schooner's captain set fire to it before leaving to prevent danger to navigation.

The Reid Newfoundland Co's s. s. Kyle, put into Port aux Basques, Nfld., Feb. 8, disabled, with both hand and steam steering gear out of business, steering having been accomplished by an improvised rig. She had sailed from St. John's, Feb. 3, for Louisburg, N. S., her normal run between these ports taking from 24 to 30 hours, and had encountered heavy storms and high seas, and for a while hove off St. Pierre and Miquelon. On Feb. 6, the second officer was washed overboard and drowned, and one of the seamen had a leg broken.

The Bras d'Or Steamship Co. which is reported to have bought a steamship named Princess, in New York, to replace the s. s. Marion, which was burnt at Whycomagh in Oct. 1922, in the Brass d'Or lakes service, has run against the difficulty of not being able to obtain Canadian registry for the ship, owing to the restrictions placed by the U. S. Shipping Board on the transfer of U. S. ships to other countries' registers. A press report from Sydney, N. S., states that on representation being made to Ottawa, that her temporary certificate had been promised before the new order came into effect, registration papers were issued, and she cleared from New York for Sydney, N. S., but we were officially advised, Feb. 15, that the ship, had not been registered in Canada.

A joint meeting of the St. John, N. B., City Council and a citizens' committee, was held Feb. 5, for the discussion of port development. A. J. Gray, a Dominion Public Works Department engineer outlined the character of wharves required to suit the local tidal condi-

tions, and suggested the extension of Partridge Island breakwater as necessary before proceeding with any further dock construction along the Carleton shore. He stated that the Courtenay Bay work, would be finished this year. The construction of wharves is not included in this, but a comprehensive plan for the development is in course of preparation. He also stated that the Courtenay Bay facilities must be linked up with those at West St. John, with the view of an ultimate joint railway terminal. The matter of grain conveyors to three berths, at present unconnected, involving an expenditure of \$140,000, was also discussed.

Province of Quebec.

The name of the s. s. Polana, owned by the Dominion Government, has been changed to Jalobert.

The name of the steam tug Sinmaco, owned by Sincennes-McNaughton Line, Montreal, has been changed to Pierre Racine.

Revillon Freres Trading Co. Ltd., which bought a 100 b.h.p. Densil oil engine from the Crude Oil Engine Co. of Canada, Montreal, last year, has bought a 210 one for installation in a schooner.

A new contract for ferry service between Quebec and Levis has been under consideration by the two city councils. It is stated that tenders will be invited, each party tendering to deposit \$10,000, which will be forfeited if the party declines to enter into a contract according to his tender. The present contract is held by the Levis Ferry Ltd. It is proposed to increase the service required during winters, and to increase the rates for motor vehicles, by 5c, and for automobiles and trucks, a general increase of 5c, according to weight, the rates running from 25c to \$1 each.

Ontario and the Great Lakes.

The Saskatchewan Co-operative Elevator Co's plant, which, it is reported, will be increased by a storage annex of 2,000,000 bush. capacity, is at Port Arthur, and not Fort William, as wrongly stated in our last issue.

The Toronto, Hamilton & Buffalo Navigation Co. notified shippers, etc., Feb. 6, that its car ferry Maitland No. 1, ordinarily running between Port Maitland and Ashtabula, Ohio, had been laid up owing to ice in the latter harbor. Cars usually routed by the ferry are entering Canada via Black Rock and Bridgeburg.

The Hamilton Harbor Commissioners have given notice of a bylaw, providing that it shall be unlawful to build a dock, pier, wharf or other structure, within the harbor limits, until plans and specifications have been filed with the commissioners, and, on their recommendation, approved by the Minister of Marine.

The Hamilton Harbor Commissioner's statement for 1922, shows assets of \$328,604, and no liabilities. The receipts were \$12,042, and disbursements \$7,164.39. The expenditures included repairs to dock \$1,261, waterfront development \$576, patrol boat \$1,589, patrol boat maintenance \$375, salaries \$1,212, travelling expenses \$303.

The Northern Navigation Co. has appointed the following captains and chief engineers for its steamships on the Great Lakes for this year,—Hamonic, W. H. Montgomery, captain; J. McLeod, chief engineer; Huronic, A. M. Wright,

captain; H. Moore, chief engineer; Noronic, H. K. Aitkens, captain; S. Brisbin, chief engineer.

The Port Huron & Sarnia Ferry Co. has bought a steamboat 120 ft. long, 46 ft. wide, with capacity for 35 automobiles on the lower deck and 750 passengers on the upper deck, to replace the s.s. Omar D. Conger, which was practically destroyed in an explosion last year. She is expected to be ready for service between Sarnia and Port Huron by April 1.

The Dominion Towing and Wrecking Co's s. s. Strathcona ran from Port Arthur to Silver Islet, about 21 miles, Feb. 27, cutting a channel through the ice for 7 or 8 miles beyond the harbor breakwater. It is stated that the heavy ice this year does not extend for more than 10 miles from shore, and that it has been known to extend two or three times that distance.

The Peterborough Chamber of Commerce and local motor clubs are asking Canadian National Rys. to establish a motor car ferry service between Cobourg, Ont., and Charlotte, N.Y. The Ontario Car Ferry Co. operates a car ferry service between these points. Fifty per cent. of its capital stock was owned by the G.T.R., and has now passed to Canadian National Rys.

The United States Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for January, as follows: Superior, 601.86; Michigan and Huron, 579.02; St. Clair, 573.70; Erie, 571.17; Ontario, 244.50. Compared with average January levels for the past 10 years, Superior was 0.26 ft. below; Michigan and Huron, 0.99 ft. below; Erie, 0.58 ft. below, and Ontario, 0.99 ft. below.

The C. P. R. has made the following appointments of captains and chief engineers for its Great Lakes steamship service, for this year,—Alberta, John McIntyre, captain; W. S. Struthers, chief engineer; Assiniboia, James McCannel, captain; A. A. Cameron, chief engineer; Athabasca, M. McKay, captain; G. S. Rae, chief engineer; Kewatin, M. McPhee, captain; C. Butterworth, chief engineer; Manitoba, F. J. Davis, captain; G. D. Adam, chief engineer.

Judgment was given in the Admiralty Court at Montreal, Feb. 6, in favor of the George Hall Coal Co. of Canada, against the s.s. Parks Foster, owned in Chicago, Ill., for damages caused to the s.s. Senator Derbyshire, by collision in the Cornwall Canal, May 27, 1922. It was held that the Parks Foster had broken a rule of the Canal Regulations, and two provisions of the Rules of the Road, and was alone responsible for the casualty. The Deputy District Registrar will assess damages.

The Atlantic Transit Co. is reported to have decided to operate two electrically driven ships, named Twin Cities and Twin Ports, from Duluth, Fort William and Port Arthur, via the Welland Canal, to Oswego, N. Y., where they will lighter cargo to Erie Canal draft, and proceed through the Erie Canal and the Hudson River, to New York, and thence to the West Indies. It is stated that the ships are under construction by the Great Lakes Engineering Works, Detroit, Mich., and that they will be launched early in May.

The Interlake Navigation Co's s. s. Bayersher, which is stated to have been renamed Claremont, is reported to have been sold to Capt. Scott Misner, Sarnia, Ont. She was built at Toledo, Ohio,

in 1910, and was originally named Erwin L. Fisher. During the war she was sold to French interests, and her name changed to Port de Caen, and on the conclusion of the war, was bought by the Bay Steamship Co., London, England, a Hudson's Bay Co.'s subsidiary, and renamed Bayersher, and toward the end of 1922 was bought by the Interlake Navigation Co., Montreal, and transferred to the Canadian register.

During 1922 dredging was done in the St. Mary River, opposite Sault Ste. Marie, to clean up the bottom on the Canadian side, to the same depth as the U. S. channel, so as to create a larger turning basin for ships approaching or leaving the U. S. canal. Heretofore the bottom of the Canadian side has been 1½ ft. less in depth than in the U. S. channel, on the line of the Bayfield ranges. A considerable portion is now available for deeper draft ships, and, at the reopening of navigation, will be marked by two red-spar buoys, one placed 400 ft. south of the Government wharf and the other 400 ft. south of the ferry wharf, near the intersection of the line of the north pier of the U. S. canal with the Canadian canal lower entrance range. The last mentioned buoy will be moved northward 100 ft. shortly after the reopening of navigation. The area southward of the buoys and a line from them to the Bayfield Shoal rock pile, has been swept to full U. S. channel depth.

A Montreal press report stated recently that the Great Lakes Transportation Co. Midland, which bought the s. s. Matoa from U. S. owners, had given a contract for cutting her in two, in order to pass through the canals to the Great Lakes, to Montreal Drydock and Ship Repairing Co. We were officially advised Feb. 12, that no arrangements had been made to cut the ship in two. The press report referred to, also stated that it would be the first time that such an operation has been performed, on a ship bound from the seaboard to the Great Lakes. This is not correct, as such work on westbound ships has been done several times, notably on the C. P. R. steamships Assiniboia and Kewatin, built in Great Britain in 1907 for the company's great lakes steamship service, which were cut in two at Levis, Que., and rejoined at Buffalo, N. Y., in 1907, and again Canada Steamship Lines' s. s. Maplecourt, which was cut in two by Canadian Vickers Ltd., Nov. 4, 1922, and rejoined at Buffalo, N. Y., Dec. 15.

Manitoba, Saskatchewan, Alberta and the Northwest Territories.

The distances between various important points on the northern rivers and lakes quoted at different times are merely estimates, and therefore mostly incorrect. During last summer Dominion surveyors took certain measurements over some of the routes, and the following figures, based on measurements and estimates, have been given as more nearly approximating the correct distances than hitherto: From Fort Nelson to the junction of the Nelson and Liard Rivers, 110 miles; from mouth of the Nelson River to Fort Liard, 65 miles; from Fort Liard to mouth of the South Nahanni River, 95 miles; from mouth of the South Nahanni River to Fort Simpson, 120 miles.

The Alberta and Arctic Transportation Co. will open its services on north-

ern waters, about May 10, when the s. s. Slave River will leave Waterways for Fitzgerald and intermediate points, running on a weekly schedule. Connections will be made with the Alberta and Great Waterways Ry. at Waterways. The motorboat Canadusa, which pushes a 76 ft. covered barge, fitted with sleeping and dining accommodation will make two round trips to Fond du Lac, at the eastern end of Lake Athabasca, during the season, leaving Chipewyan about June 15. At other times she will be open for charter or any special work. The s. s. Distributor will leave Fort Smith about June 16, for Aklavik, about 50 miles from the Arctic Ocean, where connection will be made with Eskimo traders from along the Arctic Ocean. Special round trip rates for tourists will be made between Edmonton, Alta., and Aklavik, at \$240, with meals and berths extra. The total mileage covered is 3,332, and the trip occupies a month. The motorboat Lady Mackworth, which pushes a covered barge with sleeping and dining accommodation, will leave Fort Smith about June 1, for Resolution, on Great Slave Lake, and proceed to Rae, as soon as the lake is clear of ice. She will return to Resolution and take up her Liard River service, leaving Simpson about July 2, making one trip to Liard and return, and one trip to Nelson and return, when she will be available for any work on the navigable waters north of Fort Smith, including Great Bear Lake.

British Columbia and Pacific Coast.

The name of the s.s. Sir J. J. Ltd. No. 10, owned formerly by Sir John Jackson (Canada) Ltd., and now by A. O. Bay, Port Alberni, has been changed to Patsco.

The C.P.R. s.s. Princess Royal, which was laid up during the early winter, was replaced in the British Columbia coast service during January on the night schedule between Vancouver and Victoria.

It has been suggested that a wireless direction finding station be equipped near the entrance to the Juan de Fuca Strait, which it is claimed would be of great value to ships entering the strait in time of fog. At present, bearings are given by the U.S. station at Tatoosh. Pachena Point and Carmanah are mentioned as suitable points, with possibly a second station inside the strait at Sheringham Point, so that cross bearing might be obtained.

The C.P.R. s.s. Princess Beatrice, and the Union Steamship Co. of British Columbia's s.s. Camosun, collided in McKay Reach, north of Princess Royal Island, towards the end of January. The damage to the Princess Beatrice was heavier than to the Camosun, the former being beached at Prince Rupert for temporary repairs after all her cargo had been removed, and she subsequently proceeded to Esquimalt for final repairs.

North Vancouver City Council has decided to reopen the ordering of a new ferry steamship from Napier and Miller, Glasgow, Scotland, provided the original offer is still open. The terms submitted by Napier and Miller were for building a ship to certain specification, for \$43,000, delivered at Vancouver, the offer to hold good until Jan. 15. One of the last acts of last year's city council was to decide against the proposal.

Pilotage on the British Columbia coast is, according to newspaper reports, in

a chaotic condition. Three local organizations are competing for the work and it is said that there is intense competition between them, and apparently a race is made immediately a ship appears on the horizon, and the winner gets the job. It is said that nothing short of a disaster seems likely to bring about a union of the different organizations. The B. C. Pilotage Association, the Vancouver Pilots Ltd., and the third organization headed by Capt. R. A. Batchelor, are each competing for the pilotage work on the coast.

The s.s. Margaret Coughlan, owned by Canadian Western Steamships Ltd., Vancouver, was sold by auction at Vancouver, Feb. 1, following an action by the bondholders, to Alfred Bull, representing John A. Kent, insurance broker, Toronto, on behalf of the bondholders, for \$175,000. The sale was conducted by J. F. Mather, Court Registrar, Vancouver, under an order made by Mr. Justice MacDonald, recently. We are advised that it is the intention to incorporate a company to own the ship, with nominal headquarters at Toronto, but it has not been decided as to what service she will be operated in. She was built by J. Coughlan & Sons, Vancouver, in 1920, is screw driven by engine of 267 h.p., and equipped with wireless. Her dimensions are: Length 411.5 ft., breadth 54.1 ft., depth 27.5 ft.; tonnage, 5,704 gross, 3,531 net. Her construction cost is said to have been \$1,250,000.

Mainly About Marine People.

Capt. F. P. Armstrong, who died at Vancouver, B.C., Jan. 26, aged 64, was, more or less, connected with transportation nearly all his life. He was born at Montreal and commenced business life as assistant secretary in the Montreal Harbor Commissioners' office. His great-grandfather had been one of the commissioners about a century ago, when the appointments were made from England. He went west about 1880, and was a member of the C.P.R. survey party under Major Rogers, which is alleged to have discovered the Rogers Pass, and also the Eagle Pass, in 1881. In 1883 he took up land in the Lake Windermere district, and in the following year built two flat bottomed boats to take his produce to Golden City, and First Crossing, now Donald. In 1885 he revisited Montreal, and ordered boilers and engines for steamboats. This machinery was built at Sorel, Que., and sent west to him. In 1886 he built the s.s. Duchess, 74 ft. long, with 17 ft. beam, which was the first steamboat to run on the Columbia River. Other craft were added and the s.s. North Star was run on the Kootenay River as far south as Jennings, Mont. He was the pioneer of steamboat navigation on both the Upper Columbia and Upper Kootenay Rivers, and was one of a party to go by canoe from Lake Windermere, by the Columbia River, to Astoria, on the Pacific Ocean, to report on the navigability of the river. At the outbreak of war he volunteered for service, but his services were not accepted until some time later, when he was engaged in organizing the shallow draft navigation on the Tigris River in Mesopotamia, and later, on the Nile, in Egypt. On his return to Canada, he was engaged with the Dominion Public Works Department at Nelson, B.C., and met with an accident in Oct., 1922, breaking a leg, and receiving some internal injuries, which in conjunction with a com-

plaint contracted in the east during the war, caused his death. L. O. Armstrong, of the Colonization and Development Department, C.P.R., is a brother.

Claude Cameron Bonter, who has been appointed Assistant Passenger Traffic Manager, all lines, Canada Steamship Lines Ltd., Montreal, was born at Toronto, Nov. 13, 1884, and entered navigation service in 1905, since when he has been, to 1910, baggage agent, Richelieu & Ontario Navigation Co., Toronto; 1911 to 1912, Assistant Baggage and Claims Agent, same company, Montreal; 1913 to 1915, Special Agent, Passenger Traffic Department, Canada Steamship Lines, Ltd., Montreal; 1916 to Jan. 24, 1923, General Passenger Agent, Eastern Lines, same company, Montreal.

J. Cameron-Head, Deputy Chairman, Union Castle Line, and director, Royal Mail Steam Packet Co., Pacific Steam Navigation Co., and Nelson Lines, who died recently, aged 71, was a grandson of Sir Francis Bond Head, Bart., a former Governor of Upper Canada.

Mrs. G. J. Desbarats, wife of the Deputy Minister of the Naval Service, and Mrs. R. W. Reford, wife of the President of Robert Reford Co., Ltd., Montreal, attended the drawing room given by the Governor General and Lady Byng at Ottawa, Feb. 4.

Wm. Duff, Lunenburg, N. S., has been re-elected chairman of the House of Commons Marine and Fisheries Committee.

W. W. Foulds, Manager, New Zealand Shipping Co., Montreal, was nominated recently, as the Shipping Federation of Canada's representative on the Montreal Board of Trade's council.

Miss Mary Theresa Foy, daughter of the late John Foy, formerly President, Niagara Navigation Co., and sister of Frank C. Foy, Canadian Passenger Agent, New York Central Rd., and J. V. Foy, General Passenger Agent, Canada Steamship Lines, was married at Toronto, Feb. 1, to Stuart B. Heath.

C. Gardner Johnson, of Vancouver, B. C., representative of the Johnson Line, the Williams Steamship Co., and the Yamashita Kisen Kaisha, sailed from San Francisco, Cal., recently, on the Johnson Line's motorship Lima, for a business trip to the various Central American ports.

J. W. Jones, of the Cunard Line's London staff, was entertained to dinner, and presented with a silver tray, by the members of the North Atlantic West-bound Freight Association, recently, on his retirement after 50 years service with the company.

J. S. Leitch, Managing Director, Collingwood Shipbuilding Co., Collingwood, Ont., was married at Toronto, Feb. 8, to Mrs. Porter, widow of the late Dr. J. H. Porter, Toronto, and daughter of H. Y. Telfer, Collingwood. Mr. and Mrs. Leitch sailed from St. John, N.B., by the s.s. Melita, to spend 2 or 3 months in Great Britain and France.

Dr. W. L. McDougald, President, Montreal Harbor Commissioners, has resigned as a director of Canada Steamship Lines Ltd.

Capt. Charles Martin, master mariner and pilot on the St. Lawrence River, for the past 25 years, and for some time in Montreal Transportation Co's service, died at Kingston, Ont., Feb. 4.

Lady McMillan, wife of Sir Daniel McMillan, K.C.M.G., of Winnipeg, ex-Lieutenant Governor of Manitoba, who died in California, Feb. 1, was a sister

of S. H. Lindsay, Secretary, Collingwood Shipbuilding Co., Collingwood, Ont.

D. Murray has been appointed harbor master, Chemainus, Vancouver Island, B. C., at \$200 a year, to be retained from fees collected from ships entering that port, vice P. W. Fox, whose services have been dispensed with, as he is living at Vancouver.

C. H. Nicholson who has been appointed Manager, Canada Atlantic Transit Co., and Ontario Car Ferry Co., and in a consultative capacity in connection with the G. T. R. car ferries operating across Lake Michigan, between Grand Haven and Milwaukee, and across the Detroit River, between Windsor and Detroit, with office at Montreal, was born at Belleville, Ont., and was educated there, at Queen's University, Kingston, Ont., and University of Maryland, Baltimore. He entered transportation service with the Richelieu and Ontario Navigation Co., and subsequently became purser on one of the steamships operated by C. F. Gildersleeve, on the Bay of Quinte and River St. Lawrence, remaining in that position for three years, when he became a captain, and was master successively of the steamships, Hero, Hastings, Norseman and North King. When C. F. Gildersleeve organized the Lake Ontario and Bay of Quinte Steamboat Co., he became General Freight Agent, and, until 1903, represented that company at Rochester, N. Y. During 1903 he was Manager of Transportation, Muskoka Lakes Navigation and Hotel Co., Gravenhurst, Ont.; from Feb. 1904 to Nov. 30, 1909, Traffic Manager, Northern Navigation Co., Sarnia, Ont., and from Dec. 1, 1909 to Dec. 31, 1922, Manager, Grand Trunk Pacific Coast Steamship Co. Vancouver, B. C.

J. W. Norcross, Vice President and Managing Director, Canada Steamship Lines, Montreal, has been visiting Hamilton, Bermuda, with Mrs. and the Misses Edith and Helen Norcross.

Canadian Government Merchant Marine Operation, Etc.

Appointments.—R. B. Teakle, heretofore Manager, Canadian Government Merchant Marine, has been appointed General Manager, Canadian Government Merchant Marine and Grand Trunk Pacific Coast Steamship Co., reporting to the Chairman, Sir Henry Thornton. Office, Montreal.

B. C. Keeley, heretofore General Agent, Canadian Government Merchant Marine, Vancouver, B. C., has been appointed Pacific Coast Manager, C. G. M. M. The Grand Trunk Pacific Coast Steamship Co.'s ships will also be operated under his immediate jurisdiction.

E. E. Tedford, heretofore Marine Superintendent, has been appointed General Superintendent.

D. B. Carswell, heretofore Senior Assistant Superintendent Engineer, has been appointed Superintendent Engineer, vice I. J. Tait who has left the service. Office, Montreal.

John Young, heretofore Junior Assistant Superintendent Engineer, has been appointed Senior Assistant Superintendent Engineer, vice D. B. Carswell promoted. Offices, Montreal in summer and Halifax, N. S., and St. John, N. B., in winter.

A. Watson has been appointed Junior Assistant Superintendent Engineer, vice —, Winter, resigned. Offices, Montreal in summer, and Halifax N.S., and St. John, N.B., in winter.

A. G. MacLeod, heretofore in Traffic Department, Vancouver, B. C., has been appointed Contracting Freight Agent there, vice C. C. Kernahan, resigned.

Officers of Steamships.—The following appointments have been made since those mentioned in our last issue—s.s. Canadian Observer, J. P. Tait, master; Sheba, A. E. Seaman, master; J. M. Bowden, chief engineer.

The Grand Trunk Pacific Coast Steamship Co., which operates the steamships Prince Albert, Prince George, Prince John and Prince Rupert, in the northern coast freight and passenger service, has been placed under the Canadian Government Merchant Marine for operation, as from Jan. 1, and is under the immediate jurisdiction of B. C. Keeley, Pacific Coast Manager, C. G. M. M., Vancouver, reporting to R. B. Teakle, General Manager, Montreal.

The Barquentine S. F. Tolmie, bound from Newcastle, Australia, to San Francisco, Cal., with coal, put in at Honolulu, about the middle of January, for repairs, having lost her foretop and foretopgallant masts and top gear, during a heavy storm. She was built by Victoria (B. C.) Shipowners Ltd., under special aid from the Dominion Government, and since being handed over to Canadian Government Merchant Marine for operation, has been used chiefly in taking lumber from British Columbia to Australia, and coal from Australia to San Francisco.

West Indies Passenger Rates.—Commencing March 1, special minimum round trip fares are effective on the steamships Canadian Fisher and Canadian Forester, as follows, from Halifax, N. S., to Hamilton, Bermuda, \$70; to Kingston, Jamaica, \$150; to Belize, British Honduras, \$225.

Proposed Canadian Intercoastal Steamship Service.

The Canadian Manufacturers' Association, which has, during the past 10 years been gathering information as to the possibilities in connection with an intercoastal steamship service between Canadian ports on the Atlantic and Pacific Oceans, via the Panama Canal, circularized its members again recently to obtain additional and up to date information. What was obtained previously appeared to indicate that sufficient west-bound tonnage was not available to warrant a regular service. It is felt that there may have been a considerable change in the situation since those details were gathered, and questions have been sent to manufacturers interested, requesting information covering commodities shipped, average yearly tonnage, whether such tonnage would be routed by a new service, whether shipments are made regularly, or are seasonal, and whether such shipments move in carload, or less than carload lots. This information is only being gathered regarding shipments to British Columbia ports. It is pointed out that the various factors entering into the movement would have to be considered, such as rates from point of origin to Montreal or St. John, N. B., terminal charges, ocean rate, insurance and wharfage charges. Present rates from New York range from 30c. per 100 lb., on heavy iron and steel goods, to as high as \$2 per 100 lb., on small lots of highly manufactured goods. Time is also a matter to be considered; the time now taken by shipments from New York to Vancouver, is approximately 35 days.

Dominion Wreck Commissioners' Enquiries and Judgments.

Enquiry has been held and judgment delivered in connection with the following casualty:—

Grounding of s.s. Canadian Farmer.

Arising out of the enquiry into the striking of a submerged object in Stewart Passage, B.C., June 18, 1922, by the s.s. Canadian Farmer, the decision in which was given in Canadian Railway and Marine World for January, a further enquiry into charges made by the then master of the ship, Capt. W. J. Boyd, since dismissed, against Capt. M. Edcombe, then chief officer, and J. Abrams, then chief engineer, of falsifying entries in the log, was held by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Capt. A. P. W. Williamson and Commander H. M. Watkins, as assessors. The court, after hearing a considerable amount of evidence, much of which was not only very conflicting, but also unconvincing, found that the charges preferred were not only trivial and futile, but were utterly unwarrantable and unjustifiable, and, without a shadow of doubt, unproved. The court therefore, being mindful of the fact that one of its duties is to discountenance and avoid the waste of public money, ordered that the cost of the proceedings, viz.: \$246.75, being \$206.75 for taking and transcribing evidence, and \$40 assessors' fees, be imposed on Capt. W. J. Boyd, for his audacious attempt to imperil the character and integrity of those against whom he preferred his unfounded charges, and upon none of whom could the slightest reflection be cast.

Vancouver Grain Elevators.—The Woodward Grain Co., Winnipeg, is reported to be prepared to build a grain elevator plant at Vancouver, with an initial storage capacity of 500,000 bush., and ultimate capacity of 1,500,000 bush., and an elevator workhouse of 150,000 bush capacity. It was stated that construction would commence about the end of February, in order to have the plant in full operation for the new crop. The city is prepared to grant partial exemption from taxation. The Pacific and Coast Grain Elevator Ltd. is being organized at Vancouver, with \$1,000,000 capital, to build, own and operate grain elevators.

Vancouver Ocean Shipping Statistics.

—The following figures show the number and tonnage of ocean going ships, passing inward and outward at Cape Flattery, to and from Vancouver, not including ships sailing to, and from Puget Sound, British Columbia, or Alaska ports, and the cargo tonnage landed and shipped, not including lumber, for 1922 and 1921:—

	1922	1921
Number	716	496
Tons, gross	3,967,389	2,946,659
Tons, net	2,473,959	1,852,844
Cargo landed, tons	790,739	669,750
Cargo shipped, tons	764,182	829,906

North Land Navigation Co. Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to convey passengers, mail and merchandise on Canadian inland and coast waters, and on the high seas, and to own and operate ships and other transportation facilities. The incorporators are: Jos. Jean, J. P. Lavoie, E. Normand, F. Lemaire and E. Patenaude, Montreal.

Ship Building and Ship Repairing Throughout Canada and Newfoundland.

Dominion Government Endorsements for Shipbuilding. The Act Respecting the Shipbuilding Industry, passed by the Dominion Parliament in 1920 which authorized the Government to assist in financing the construction of ships, in existing Canadian shipyards, by endorsing, under certain conditions, notes given by the purchaser in favor of the shipbuilder, for 50 p. c. of the price of the ships required, required that particulars of the endorsements made, or liabilities incurred, should be submitted to Parliament. The Finance Minister submitted a return to the House of Commons on Feb. 1, stating that there had been no transactions under the act during the past year.

Canadian Vickers Ltd., Montreal, has the following ships laid up at its plant during the winter for the work stated: George Hall Coal Co's s.s. Ignifer, 1,137 tons, drydocked for survey, repair, bow damage and sundry repairs; s.s. John B. Ketchum 2nd, 1,109 tons, drydocked for survey, repairs to bow and after port quarter damage and sundry repairs; s.s. John F. Morrow, 1,840 tons, drydocked for survey and overhaul; s.s. Lehigh, 1,506 tons, drydocked for survey and winter overhaul; Imperial Oil Ltd., s.s. Iocomo, 1,669 tons, winter overhaul; Ontario Transportation & Pulp Co's s.s. Chicago Tribune, 1,689 tons, drydocked for survey, repair bottom deck and bow damage; Marine Department's dredge 16, winter overhaul.

Davie Shipbuilding and Repairing Co. Lauzon, Que.—The carpenter shop, with its contents, machinery, etc., was destroyed by fire, Jan. 29, the damage being estimated at considerably over \$100,000. Six steamships were in the yard, but suffered no damage. The company has some heavy repair work in hand, including the rebuilding and remodelling of Canada Steamship Lines' s.s. Richelieu formerly Narragansett, for the Saguenay service.

Halifax Shipyards Ltd., Halifax, N.S. did the following repair work during January.—Canadian Government Merchant Marine, s.s. Canadian Fisher, scraping and painting, removing ballast in way of thrust foundation, calking seams, rivets and electric welding, opening up sea valves, and rudder overhauled, undocked Jan. 15; s.s. Canadian Sapper, scraping and painting, drawing tail shaft for examination, overhauling sea connections, hull work, etc., undocked Jan. 18; s.s. Canadian Gunner, damaged by fire in holds 1 and 2, at St. John's, Nfld., ship cleaned and certain damaged work opened up for survey, extensive hold repairs, undocked Jan. 27, repairs completed Feb. 7; s.s. Canadian Otter, scraping and painting, undocked Jan. 30; Dominion Coal Co., s.s. Turret Court, overhauling sea connections, cleaning and painting, repairing bow damage, undocked Jan. 9; s.s. Wabana, boiler and engine repairs, bilge and tank top ceiling repairs, undocked Jan. 22, repairs completed Feb. 7; Royal Mail Steam Packet Co., s.s. Chaudiere, general repairs, survey, hull repairs, scraping and painting, undocked Jan. 12.

The company has been given a contract to repair the Commercial Cable Co's s.s. John W. Mackay, which grounded on Thrum Cap, near the Halifax harbor entrance, early in February, the work to be completed in 18 days. It was to have been commenced about

Feb. 19, or as soon as the oil and cable had been removed from the tanks.

Newfoundland Drydock Ltd., St. John's, Nfld.—The Newfoundland Government's s.s. Prospero, which grounded at Small Island, Green Pond, on the east coast of the Island, Dec. 16, 1922, was docked for survey at the end of January, on behalf of the London Salvage Association. The damage is said to be extensive, a new stem being required, and also a considerable number of new plates. The work in progress on the steamships Helder and Capto was to be completed before starting the Prospero repairs.

Northern Boat Building Co., Edmonton, Alta.—Three schooners have been completed at this plant, ready for their journey to the Arctic coast, on the reopening of navigation on the Mackenzie River. They are intended for the Eskimo fishing business in the Mackenzie River delta, the headquarters of which are at Aklavik. Another schooner is under construction for Inuitok, an Eskimo trader and navigator, for service in the delta and along the Arctic coast. It will be equipped with auxiliary power, and will be the fourth of the kind built at Edmonton for the same service. Some other boats are being built for use on Great Bear Lake, for transporting hunters' baggage, etc., from Fort Norman. A shallow draft boat is being fitted up for police patrol service, to operate out of McMurray. It is decked fore and aft and provided with a quarter tunnel stern to enable it to run in very shallow water. It will be equipped with a 9-12 universal engine. It is built of yellow cedar and oak, is 22 ft. long, and will draw about 12 in. of water.

The Northern Trading Co's s.s. Northland Echo is being rebuilt at Waterways, ready for the coming season. The framing has been assembled, and the sheathing commenced.

Prince Rupert Drydock and Shipyard, Prince Rupert, B. C., did the following repair work during January.—Grand Trunk Pacific Coast Steamship Co. steamships Prince Albert and Prince Rupert, general overhaul; Coastwise Steamship and Barge Co. s.s. Marmion, docked, painted, hull repairs and general overhaul; Dominion Government s.s. Marfish, general overhaul and extensive hull repairs; also 21 fishing ships overhauled.

Toronto Dry Dock Co., Toronto, has been given a contract by the Dominion Public Works Department, for repairing the dredge P.W.D. no. 117.

Victoria Machinery Depot Co., Victoria, B.C. did the following repair work during January.—Canadian Government Merchant Marine s.s. Canadian Transporter, 4,176 tons, docked, cleaned, and painted, hull, engine and boiler repairs; C.P.R. s.s. Princess Patricia, 1,158 tons, new tail and shaft and bronze propeller and general repairs; s.s. Charmer, docked cleaned and painted, hull repairs, new plates and frames; Naval Service Department's s.s. Stadacona, docked, cleaned and painted, tail shaft drawn for inspection, repairs; Public Works Department's steam tug Point Ellice, 205 tons, docked, propeller changed, hull repairs; dump scow 306, repairs to doors; Brackman-Ker Milling Co. s.s. Grainer, 144 tons, boiler repairs; Lummi Bay Fishing and Packing Co. motorship Bonilla, docked, cleaned and painted, and hull repairs; and a scow for A. O. Ruscoe, docked, cleaned, painted and repairs.

Yarrows Ltd., Victoria, B. C., did the following repair work during January.—H. M. C. S. Patrician, docked on marine railway, repairs to plates and frames, extensive refit and overhaul; hull cleaned, scraped and painted; C. P. R. s.s. Princess Beatrice, 1,290 tons, docked on marine railway for extensive repairs to bow, new stem and forefoot, and considerable new planking and general repairs due to collision; Central Wharfage Co. s.s. Forager, boiler repairs; Pacific Salvage Co. s.s. Algerine, 592 tons, new bronze propeller blades; s.s. Salvor, docked on marine railway, underwater repairs, cleaned and painted.

Canadian Pacific Railway Ocean Steamship Services.

Reference was made in our last issue to a Liverpool press report that the company intended having the s. s. Montreal which has been laid up at Glasgow, Scotland, for some time, reconditioned and placed in service between Glasgow and Montreal. We are officially advised that there is no truth in the report.

The s. s. Empress of Canada is scheduled to sail from Vancouver, B. C., March 8, on an Oriental cruise, arriving at Yokohama, March 20, leaving the next day for Kobe, and thence proceeding to Shanghai, Hong Kong and the Philippine Islands. The return trip will be made on the s. s. Empress of Russia, stops being made at Hong Kong, Shanghai, Nagasaki, Kobe, Osaka, Tokyo and Yokohama. The party will join the s. s. Empress of Australia at Yokohama, for Vancouver, arriving there, May 23.

Purchase of Tug Murray Stewart.—Minister of Marine and Fisheries, E. Lapointe, stated in the House of Commons recently, in answer to questions by R. B. Hanson, York-Sunbury, N.B., that the Marine & Fisheries Department had bought the tug Murray Stewart, to replace the lighthouse tender C.G.S. Lambton, lost on Lake Superior in the spring of 1922, and to be stationed at Georgian Bay ports at the end of each season of navigation, to render such assistance in the event of ice formation as may be necessary to enable ships handling grain to move freely. The tug's gross tonnage is 234.46, and registered tonnage 92.25. It was built by Port Arthur Shipbuilding Co. in 1918, and was bought from the registered owner, J. F. M. Stewart, Toronto, for \$80,000. Minister of Marine Lapointe stated in the House of Commons, Feb. 19, in answer to questions by H. A. Stewart, Leeds, Ont., that the Department had invited tenders for repairs to the tug, which were received up to Feb. 8 as follows:—P. Payette Co., Penetanguishene, Ont., \$4,489; Midland Shipbuilding Co., Midland, Ont., \$5,862; Great Lakes Foundry & Machine Co., Midland, \$6,077; Midland Engine Works, Midland, \$8,607.45.

The G. T. R. Elevator at Montreal, the only one in the port not controlled by the Montreal Harbor Commissioners, is reported to have been sold to the commissioners. The price has not been announced, but it is stated that the right of use to the railway is guaranteed as a condition of sale, and that there are other protective clauses.

Lake Steamship for J. F. M. Stewart.

Canadian Railway and Marine World for February, mentioned that J. F. M. Stewart, Toronto, was negotiating in England for the construction of a full Welland canal size cargo steamship. The negotiations are still in progress with Smith's Dock Co., Southbank-on-Tees, for a steel single deck steamship of the following dimensions:—length overall 256½ ft., length b.p. 250 ft., breadth over steel plating 42½ ft., depth moulded 18½ ft., d.w. carrying capacity 14 ft. draft 2,300 tons. The specifications provide for a ship with straight stem, elliptical stern, engine and boiler casing placed aft, raised forecabin with texas on top and navigating and wheel house above. The steel hull to have cellular double bottom all fore and aft, and after peak tanks, and the ship to be rigged as a two masted fore and aft schooner. She will be classed 100 A1 at Lloyd's for service on the Great Lakes and St. Lawrence River and Gulf, and built under special survey. Provision is made for 3 watertight bulkheads and 2 non watertight bulkheads, dividing the hold into three compartments. For handling cargo, etc., a double cylinder windlass and two double cylinder 7 x 10 in. steam winches are provided for. The propelling machinery to consist of direct acting, surface condensing, triple expansion engines with 3 inverted cylinders, 16, 26 and 44 in. diam. by 33 in. stroke, supplied with steam by 2 cylindrical, multitubular boilers, each 12½ ft. diam. by 10½ ft. long, at 180 lb. working pressure under forced draft. Accommodation for the captain, navigating officers and owner, to be in the forecabin and for engineers, stewards, etc., in the deckhouse aft.

Early Chart of St. Lawrence River.

Robert W. Reford, President of The Robert Reford Co., Montreal, and of the Shipping Federation of Canada, bought an early chart of the St. Lawrence River, in London, Eng., recently, for £1,080. It is entitled, "A plan of the River St. Lawrence, from Green Isle to Cape Cairouge, by James Cook." It is 115 x 22 in. and is in excellent condition. It was among the naval and other relics of the late Admiral Sir W. Fanshawe Martin, and is undoubtedly the original from which Capt. Cook made at least one replica, now in the British Admiralty library. The purchase is an interesting one, from a Canadian point of view, as, although Capt. Cook's pioneer navigation work is generally looked upon as being concerned with Australia and the southern Pacific

Ocean, he was one of the navigators who piloted General Wolfe up the St. Lawrence to Quebec, and during the siege of Quebec, he did considerable survey work. He was later engaged in fighting in Newfoundland, and subsequently made a survey of the St. Lawrence Gulf and River.

Red Line, Limited, has been incorporated under the Dominion Companies Act, with \$50,000 authorized capital, and office at Ottawa, to carry on a general transportation business by land and water, and to own and operate ships. The incorporators are: E. F. Newcombe, H. H. Ellis, W. R. Dillon, F. H. Emra and J. Brown, Ottawa, Ont.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Dearborn Chemical Co., 332 South Michigan Ave., Chicago, Ill. has issued an illustrated booklet, "Applying Science to Inhibit Rust", treating of its product, No-Ox-Id, as applied to the elimination of losses from rust and corrosion. It deals, among other things, with the application of the product in the numerous phases of the iron and steel industry, including railway and marine service.

Franklin Railway Supply Co. has appointed T. F. Whelan as Special Engineer, with headquarters in Chicago. He was a locomotive man for 26 years, and for the last 6 years was editor of the Brotherhood of Locomotive Engineers' Journal.

Ohio Brass Co., Mansfield, Ohio, has issued an illustrated catalogue of its Imperial line of headlights, including carbon arc, luminous arc, and incandescent headlights, wiring equipments and repair parts.

By order, G. T. CHISHOLM, Secretary.
Toronto, February 20, 1923.

Ottawa Traction Company, Limited

Ninth Annual Report for the Year Ending December 31st, 1922

Your Directors have much pleasure in submitting their Ninth Annual Report for the year ending December 31st, 1922.

The amount received from The Ottawa Electric Railway Company during the year was \$279,069.00, with which was paid the usual quarterly dividends of one per cent, and a bonus of one per cent.

The efforts of The Ottawa Electric Railway Company during the past year have been directed towards the maintenance of the plant and equipment in an efficient condition.

During the year a site for a checking office at the corner of Sussex and John Streets was purchased and occupied by the Company.

This should result in improved facilities for handling the car service in that section of the city.

Respectfully submitted.

T. AHEARN,

President.

TEAMWORK

CONSISTENT Teamwork of men, materials and methods produce a higher standard of track maintenance at a reduced cost of labor and materials.

Our willingness to serve, our ability to satisfy and the ultimate economy of HIPOWER Nut Locks are evidenced by the fact that they are standard equipment on 52% of America's Railroad track.

HIPOWER Nut Locks protect your large investment in steel rails, reduce the cost of high standards of track maintenance, and add to the general efficiency of Railroad operation.

THE SIGNIFICANCE TO YOU OF THE MEMBERSHIP OF THE

Canadian Railway and Marine World

IN THE ASSOCIATED BUSINESS PAPERS, INC.

YOU depend upon the Canadian Railway and Marine World for an unbiased and accurate report of all news affecting your business interests.

Probably, too, you give heed to its editorial counsel in many matters of considerable consequence. You have a right, therefore, to know about the policies and principles back of the important service rendered by Canadian Railway and Marine World.

The membership of this publication in The Associated Business Papers, Inc., means that it has achieved an exceptionally high publishing standard, and has subscribed unreservedly to these—

STANDARDS OF PRACTICE

The publisher of a business paper should dedicate his best efforts to the cause of Business and Social Service, and to this end should pledge himself—

1. To consider, first, the interests of the subscriber.
2. To subscribe to and work for truth and honesty in all departments.
3. To eliminate, in so far as possible, his personal opinions from his news columns, but to be a leader of thought in his editorial columns, and to make his criticisms constructive.
4. To refuse to publish "puffs," free reading notices or paid "write-ups"; to keep his reading columns independent of advertising considerations, and to measure all news by this standard: "Is it real news?"

5. To decline any advertisement which has a tendency to mislead or which does not conform to business integrity.

6. To solicit subscriptions and advertising solely upon the merits of the publication.

7. To supply advertisers with full information regarding character and extent of circulation, including detailed circulation statements, subject to proper, authentic verification.

8. To co-operate with all organizations and individuals engaged in creative advertising work.

9. To avoid unfair competition.

10. To determine what is the highest and largest function of the field which he serves, and then to strive in every legitimate way to promote that function.

If you have read the foregoing standards, there is not much left to be said, except to tell you that these principles are present day realities and not merely beautiful ideals for future attainment.

Gentlemen:

Thanks for catalog.
I always recommend and have a
good word for Fairbanks Valves.
I was impressed with them at
the Steel Co. We used the 2"
Fairbanks, and when reversing
the gas had only two minutes
to renew Discs. This was done
easily with the Fairbanks, and
I don't believe it could be done
with any other make of valve.

Yours truly,
(signed) Albert Almon

5 Advantages

Obtainable in
Fairbanks Globe Valves

This letter from Mr. Almon only mentions one of 5 pertinent reasons why Fairbanks Valves really surpass all others in durability, service and adjustment.

Renewable Disc means longest life. Bakelite Ring gives maximum efficiency. Raised and Rounded Seat prevents lodgement of sediment.

No Locknuts or obstructions to retard flow.

These points are proved conclusively in our Booklets. Write our nearest office for them.

**True
Varnish Economy**

In the long run, length of service
is the real measure of Varnish values.

Berry Brothers' Railway and Marine varnishes and enamels give long service because they are especially adapted to withstand the peculiar wear and exposure involved. They have been standard since 1858.

BERRY BROTHERS
World's Largest Makers
Varnishes and Paint Specialties
Walkerville, Ont.

YOU can effect a **SAVING** in Lubrication costs by using **TULC** for it will give results not to be obtained by the use of any other Lubricant.

T U L C	Will not splash over commutators.
	Will not cause short circuit or burnt armatures.
	Will not leak or rot fields.
	Will so save in brass and babbitt to pay for itself.
	Will only feed sufficient to lubricate properly.
	Will save dripping losses.
	Will make axles and journals last longer.
	Will cut down a lot of pull-ins.
	Will eliminate hot boxes and cut axles.
	Will be sent for trial on request.

The Universal Lubricating Company

Offices: Schofield Building

CLEVELAND, OHIO.

Works: Sweeney Avenue

M. C. McElligott, Canadian Representative - Preston, Ontario.

STERLING HACK SAWS

The most expensive tool used in a machine-shop is a poor Hack Saw Blade. Some buyers purchase them where they are cheapest, but unconsciously they are paying the highest price. The Hack Saw illustrated on this page represents the "STERLING" Blade, which is the last word in a Hack Saw Blade, the makers being back of their entire product. The material and workmanship that go into the manufacture of this blade are of the very highest quality.

RESULT—A blade that has no superior.

Manufactured by

Diamond Saw & Stamping Works Buffalo, N. Y., U.S. A.

Every Railroad Operating Officer in Canada *who is laying plans for the improvement of his road must be vitally interested in the economies that can be effected by the use of* **Automatic Block Signal and Interlocking.**

We are able to be of service to you:

First: In providing you with facts as to how Automatic Signals and Interlocking will aid in your particular problems—facts as to what has been accomplished by other railroads having similar problems.

Second: In providing you with estimated costs of obtaining operating improvements by the use of signal equipment to the end that you may have all of the facts and figures upon which a correct conclusion may be based.

Third:

By providing you with Automatic Block Signal and Interlocking Equipment which may be absolutely depended upon to give good reliable service, year in and year out, with a minimum of expense for its operation and maintenance.

When in Doubt Consult the Greening Catalog

Whenever you want a question answered on wire screen or cloth, refer to the Greening catalog. You will find it comprehensive and the illustrations explain many points, such as size of wire, variety of meshes, crimp, discharge area, etc.

If you require more detailed information, remember our data files are always at your disposal. Sixty years' experience has gained us valuable information that frequently saves our customers time and money.

Write for our catalog if you have none on file.

PROGRESS IN 1922

The results achieved by the North American Life Assurance Company during 1922 continue to establish beyond question the strength and security of the Company. The following outstanding figures will be very gratifying to all interested in the welfare of the Company:—

Policies Issued and Revived	\$17,931,327.00
Amount of Insurance in Force.....	108,059,134.00
Assets	23,683,842.94
Payments to Policyholders	2,402,039.74
Net Surplus.....	3,476,230.56
Surplus earned during the year exceeded....	1,000,000.00

These records are the outward evidence of the unexcelled financial position attained by the Company, and of the solid foundation upon which it has been built. In the North American Life, policyholders' interests are paramount, over 99% of the profits earned being allotted to them. When you are contemplating new insurance, see one of our representatives. If you desire fuller information about the Company's operations during 1922, mail the attached coupon.

MONCRIEFF'S**"UNIFIC" WATER GAUGE****GLASSES**

Moncrieff's "Unific" is not a cheap glass. But because it outlasts many ordinary glasses, the "Unific" is economical. British made.

The "Unific" does not readily corrode. It resists extreme changes of temperature and withstands the highest working steam pressure.

Every Tooth a Worker

Dull teeth in a file are a sign of lessened efficiency.

That means waste—waste effort time and money. A new file costs less than the money you pay out for this wasted time and effort. Scrap the file that is getting dull and buy a new one. And remember—these brands give long, efficient service before their first sharpness disappears.

Service shows the most successful car roof to be the

All Steel Dry Lading Roof

which made possible the following specifications:

No. 1. That should be weather-proof under all conditions, also rust-proof, fire-proof and burglar-proof.

No. 2. That should not require maintenance for at least ten years.

No. 3. That should be of low deadweight and give the car a low center of gravity.

No. 4. That should lessen strain on the superstructure of the car when the car is in motion.

No. 5. That should strengthen, rather than detract, from the strength of the car frame.

No. 6. That should give the greatest interior capacity and the lowest clearance limits.

No. 7. That should be flexible enough to conform to every service condition of the car.

No. 8. That should be possible to use again on the same or another car, even in case of partial or total destruction of the rest of the car by fire or wreck.

No. 9. That should not require roofing boards.

No. 10. That should be of low first cost.

No. 11. That should permit of inspection on the part of any shipper by merely closing the doors of the car and if no rays of light are seen through the roof, the shipper to consider it a weather-tight roof.

No. 12. That should be so constructed that the carlines, purlines and ridge, tie the sides and ends of the car together firmly, so that the weather-proof roof has only the one duty of protecting the contents of the car from the elements.

Subject: Another Dearborn Success in South America

This extract is from our copy of the recent report of a Director-General of Railways to the Minister of Public Works and Railways.

"The present stock of Dearborn Disincrustant is sufficient for approximately one and one-half months. The use of this disincrustant has given very satisfactory results, as we can say that if the boilers of the 'Mikado' locomotives which have been in service since the latter part of 1918, are in good condition, it is due mainly to the constant use of Dearborn Disincrustant. Consequently there should be no interruption in the use of this Disincrustant. . . ."

"From the trials made with the other disincrustants which were purchased in small quantities, we can state once more that the use of 'Dearborn' is more convenient than any of those which up to now we have tried."

"The use of Dearborn compound in the boilers of our locomotives has been increasing in these last years, in . . . , also in . . . and in . . . , where the waters are very bad. Before the use of disincrustants, the boilers had incrustations of 2 and 3 millimeters in thickness, which at the present time are prevented entirely. It has been established that each millimeter of incrustation causes an increase in fuel consumption of 10%, so that if in . . . and . . . , where the monthly coal consumption is about 22,000 tons of coal, we assume only this 10% of economy, the money saved each month would amount to considerable."

Dearborn Treatment is convenient. It is economical; requires no special installation of equipment. It is scientific; is prescribed only after laboratory analysis of feed waters. It corrects both immediate and ultimate destructive tendencies in raw waters. Roads not now using Dearborn Scientific Treatment are invited to communicate with us for further valuable interesting facts.

40 SECONDS-

to install an interchangeable O-B Cam Tip on an O-B Overhead Trolley Device

The installation of approach tips for frogs, crossovers and section insulators becomes a minor time consideration with O-B Cam Tips on O-B Overhead Trolley Devices.

The three simple operations, shown in the sketches, completed in 40 seconds for each tip, reduce construction costs and permit quick renewals in emergencies.

O-B Cam Tips are made with 2½ or 6 inch tips interchangeable on all O-B Trolley Devices.

Laboratory controlled bronze made to a distinct formula for trolley ears and tips insures uniform durability in all O-B Cam Tips.

Light Parts Without Heat Treatment

CARBON-VANADIUM Steel removes the last possible objection to the use of alloy steel for lighter reciprocating and revolving parts.

Carbon-Vanadium eliminates all heat-treating difficulties. It is an unquenchable steel which requires no handling beyond mere heating and slow cooling. Carbon-Vanadium Forgings can be reheated for straightening or repairs without affecting their high physical properties.

Furthermore, the physical properties of Carbon-Vanadium, without quenching or tempering, are equal to and generally higher than the physical properties of heat-treated alloy steels formerly advocated for light parts.

Write for facts and figures on Carbon-Vanadium Steel. You'll be interested in the possibilities for reducing locomotive weight and decreasing dynamic augment by means of lighter but stronger parts of Carbon-Vanadium.

Canadian National Railways

The Canadian National Railways Believe in Concrete Culvert Pipe

THE constantly increasing use of Concrete Culvert Pipe by the Canadian National Railways is a most significant tribute to the desirability of this type of structure.

In the construction of Railway Culverts, permanence should be a leading consideration. When economy and permanence are desired, Culvert Pipe made of Concrete is the logical material.

In addition to its permanence and economy, Pre-Cast Concrete Pipe has these advantages. It is ready for immediate use. Its maximum practicable size is limited only by the weight which can be economically shipped and lowered into place.

Concrete Road Building Again Breaks All Records

80,700,000 square yards of Concrete pavement were placed under contract last year in the United States and Canada—a gain of more than 40 per cent over 1921, the largest previous year.

The construction thus provided for, and to a large extent completed, is equivalent to almost 8,000 miles of 18-foot pavement.

That is a larger amount of Concrete highway than there was in the United States and Canada altogether up to 1917.

These facts witness the determination of the people to have roads equal to the traffic they bear.

Yet even with this great record, the output of motor vehicles continues to outstrip by far the construction of motor roads.

The revolution in road traffic due to the automobile has called for hole-proof, skid-proof, really enduring pavement; and Concrete fills the need.

That is the explanation of the steady, rapid gain in Concrete road construction during the last decade—the largest development in basic transportation facilities in this country in many years.

HIPOWER NUT LOCKS

Carry 'Em Through

RIDING on the rear end over track equipped with HIPOWER you'll hear a tick-tick-tick—a fine noise representative of good track with tight joints which begets confidence and creates good will. There is no bang-crash-bang due to loose joints and destructive pounding of rail ends.

Track protected by HIPOWER is a sound, long time investment with interest paid in continuous security of track at reduced cost of labor and expense for material renewals.

HIPOWER keep track joints tight, minimize bolt tightening and reduce the wear in angle bars, bolts, rail ends, ties and ballast that arises from loose joints being pounded by heavy rolling loads.

Arc suppressor plates are considered a necessary part of new controllers. Put them in your old equipment

These plates add life to the controller

C-G-E Arc Suppressor Plates are an auxiliary to the controller arc deflector. They are installed opposite the fingers where there is the most arcing, to shorten the time for disrupting the arc. This is accomplished by narrowing the arc passages, which increases the resistance of the arc and the cooling effect of the plates. The result is less burning of the controller fingers, segments, and arcing plates.

Modern controllers are now equipped with arc suppressor plates. They give better, longer service and require fewer repairs and less frequent inspection.

These plates are inexpensive and can be used to advantage on any C-G-E controller having individual-finger blowouts, such as the K-34, K-35, K-36 and K-64. It takes only a few minutes to install them.

Try them and see the difference.

Greening's Wire Rope Its Quality Pays

Greening's Standard Crucible Cast Steel, Best Plough Steel and Acme Steel Ropes are made from wire specially manufactured and unvarying in quality.

All the wires are carefully tested for tensile strength, elongation, and tension; all material that does not conform to the highest standard is rejected. Records of tests are kept for five years and there is no possibility of inferior material entering into these ropes.

Greening's Wire Rope, as used by Canadian Industry everywhere under all conditions, is proof positive, of the fact that "quality pays."

Our data files are always at your disposal or write for catalog.

Thermit Welds Have

High { Tensile Strength
Ductility
Resistance to Fatigue

The steel produced by the Thermit reaction, used for repairing locomotive frames, cross heads, driving wheel centers and various other parts has an excellent combination of the above mentioned properties with tensile strength of over 70,000 lbs. per square inch and elongation from 23 to 25%. No question of the reliability of Thermit welds for such repairs.

Westinghouse Marine Lighting Set— A New Design

Westinghouse 100-kw Marine Lighting Set

This new unit is strongly constructed throughout, and will withstand the most exacting requirements of marine service.

A very heavy cast-iron bed plate of girder construction prevents any misalignment that might otherwise occur as a result of the rolling of a ship at sea.

The Turbine has triple safeguards to prevent accident from overspeeding.

An ample heavy reduction gear, noiseless in operation, acts as the medium between the turbine and the generator.

An oil-cooling coil is attached to an easily removable flange plate, thus assuring easy accessibility.

The generator is constructed with provision to resist the action of salt moisture.

KILL C.M.C. 26" x 30" CRANK SHAPER

Just one of its good points—the ever visible stroke indicator. This feature was originated by us and tells at all times the exact stroke the Shaper is set for, whether in operation or not. It does not depend upon the motion of the ram.

This Shaper was designed to give to Railways and others operating machine shops the best possible value for their money. Nothing in its construction has been left to chance, and all details have been thoroughly proven in actual operation.

THREE YEARS' SERVICE

without loss of a single second!

Opens and closes quickly. Prevents cold air from chilling firebox sheets. Helps prevent leaky staybolts and flues. Reduces firebox repair costs.

"Engine 1067 came in this morning, giving me an opportunity to inspect the firedoor applied to this engine three years ago this month. This door is of the Butterfly Type and is in first class shape. No repairs have been needed during the three years service. Everyone says it is the best proposition in the way of a pneumatic door they have ever seen."

—Traveling Engineer.

This record is being equalled by thousands of engines all over the country.

The important thing is that it gave dependable, continuous service throughout this time.

LABORATORY ACCURACY AT A TOOL ROOM PRICE

"It certainly is easy to build 'em up"

ANYONE who has ever used Hoke Gages appreciates their ease of handling. They can be assembled with the least fuss and trouble to form inside and outside calipers, external and internal gages, height gages, and measuring standards of infinite variety.

No cumbersome outside clamps are required but the gages and attachments are firmly held together by internal tierods which pass through the centre of the blocks.

This patented and exclusive feature of Hoke Gage design makes possible their rapid and convenient assembling into neat, self-contained units which present the maximum gaging surface and which in no way interfere with the work being measured. The wear and lia-

bility of injury, inseparable with the use of outside clamps, are also avoided.

Hoke Gages are guaranteed accurate and within .000005 in. of marked size up to one-half inch size and within ten millionths per inch of length for all other sizes. They are sold at a price that brings them within the reach of every shop. Put up in sets to suit all requirements—an 81 block set is shown in the illustration—single blocks or any combination of standard blocks can be bought if desired.

Canadian Railway and Marine World

April, 1923

Completing The Canadian National Railways' Organization.

Canadian Government Railways Management Transferred.

In response to a motion by Murray McLaren, St. John, N.B., there was tabled in the House of Commons recently, the following report, which was approved by the Governor-General on Jan. 20, and passed as order in council 115:—

"The committee of the Privy Council have had before them a report, dated Jan. 18, 1923, from the acting Minister of Railways and Canals, stating that under the act to incorporate the Canadian National Railway Co., and respecting Canadian National Railways, statutes of 1919, chap. 13, authority was given by sec. 11 to the Governor in council, from time to time, by order in council, to entrust to the Canadian National Railway Co., 'the management and operation of any lines or railways, or parts thereof, and any property or works of whatever description, or interests therein, and any powers, rights or privileges over, or with respect to, any railways, properties or works, or interests therein, which may be from time to time vested in, or owned, controlled, or occupied by His Majesty, or such parts or part thereof, or rights or interests therein, as may be designated in any order in council, upon such terms, and subject to such regulations and conditions as the Governor in council may from time to time decide; such management and operation to continue during the pleasure of the Governor in council and to be subject to termination, or variation, from time to time in whole or in part by the Governor in council.'

"That the Canadian National Railway Co. has been brought into existence by virtue of an order in council passed on Oct. 4, 1922, whereby certain persons were nominated directors of the company pursuant to the provisions of sec. 1 of the act. That the powers of general manager, in respect of Canadian Government Railways, were heretofore entrusted by order in council, dated Nov. 20, 1918, to certain persons from time to time constituting the board of the Canadian Northern Railway Co., and that the powers of general manager, in respect of the Canadian Government Railways so entrusted, are now being exercised by the persons who constitute the board of directors of the Canadian National Railway Co. That it is expedient to terminate the authority of the said persons to act as general manager of the Canadian Government Railways, and to entrust in lieu thereof the management and operation of the said railways to the Canadian National Railway Co., pursuant to the provisions of sec. 11 of the act as above in part mentioned. The effect of said change will be to make applicable to the management and operation of the said railways many of the provisions of the act, and to accomplish the main purpose of the act as expressed in the recital thereto, viz.:—'To provide for the incorporation of a company, under which the railways, works and undertakings of the companies comprised

in the Canadian Northern System may be consolidated, and, together with the Canadian Government Railways, operated as a national railway system.'

"The Minister accordingly recommends that the Canadian Government Railways, which, for the purpose of sec. 10 of the act, shall include the following lines designated specifically, viz.: Intercolonial Ry., National Transcontinental Ry., Lake Superior Branch, leased from Grand Trunk Pacific Ry. Co., Prince Edward Island Ry., Hudson Bay Ry., and, as a general designation, all other railways and branch lines, the title to which, and to the lands and properties whereon such railways are constructed, is vested in His Majesty, be, by order in council, entrusted in respect of the management and operation thereof, to the Canadian National Railway Co., on the terms in the act expressly specified, viz., that such management and operation shall continue during the pleasure of the Governor in council, and shall be subject to termination or variation from time to time, in whole or in part, by the Governor in council. The Minister also recommends that the full benefit of all powers, rights, privileges and interests vested in His Majesty, under any agreement for joint operation, or running rights, with any other corporation, in connection with the operation of any of the Canadian Government Railways, be also entrusted, in respect of such operation and management, to the Canadian National Railway Co., on the same terms as hereinbefore set forth. That the order in council of Nov. 20, 1918, above referred to, be cancelled. The committee concur in the foregoing recommendation and submit the same for approval."

Co-ordination—Regions—Passes.

Sir Henry Thornton issued the following circulars March 15:—

Co-ordination of the Grand Trunk Ry. System and the Canadian National Rys. has now been effected, and all lines will be hereafter known and operated as the Canadian National Railways, except Grand Trunk System lines in the U. S.

For the purposes of operation, the system has been divided into units known as the Atlantic, Central and Western Regions, as follows:—

Atlantic Region:—Comprising all lines and facilities east of Riviere du Loup and Monk, Que. (including Riviere du Loup terminal, but not Monk terminal).

Central Region:—Comprising all lines and facilities between Riviere du Loup and Monk, Que., on the east, and Chicago, Ill., Current and Superior Jct., Ont., on the west (including Monk, Que., terminal; line to Portland, Me.; Grand Trunk Western Ry., including associated lines in United States west of the Detroit and St. Clair Rivers).

Western Region:—Comprising all lines and facilities west of Current and Superior Jct., Ont.

Annual, Term and Trip Passes.—Applications should be made to the Pass Bureau, Canadian National Rys., Montreal. The General Manager, Western Region, with headquarters at Winnipeg,

is authorized to apply for, and issue trip passes to roads having general offices at Chicago or points west thereof.

All annual and term passes issued by the Grand Trunk Ry. System and the Canadian National Rys., bearing expiry date Dec. 31, 1922, are further extended as to time limit good until May 31, 1923. The new 1923 annual and term passes for these railways will be a joint issue. Passes good between points in Canada and the United States will bear dual heading: "Canadian National Railways: Grand Trunk System (lines in U.S.)." Passes of single heading "Canadian National Railways" will be good between points designated in Canada only. Separate passes will be required for each of the following subsidiary lines: Niagara, St. Catharines & Toronto Ry., Toronto Suburban Ry., Duluth, Winnipeg & Pacific Ry., Grand Trunk Pacific Coast Steamship Co.

The President Calls for Co-operation.

"To all in the service of the Canadian National Rys.: The organization for administering the Canadian National Ry. system as one complete unit has been decided. Operating regions, districts and divisions have been determined. The necessary officers have been selected and their duties prescribed. We have embarked upon a mutual enterprise of great difficulty, and of vast importance to ourselves, both as employees of the company and as citizens of the Dominion. If we make a success of our undertaking we shall not only have added materially to our individual welfare and reputation as railroad men, but we shall have performed a fine and patriotic service, which will reflect itself in the advancement and prosperity of our country, in which we will all share. But our success will depend upon the skill, energy and high principles with which the property is administered, and upon the fidelity, loyalty and vigilance which actuate every employe in the performance of his daily duties. Technical ability alone will not win the battle. Only by enthusiastic and constant team work on the part of the great army of our men can we hope to win.

"I am sure that every man in the service ardently wishes our experiment to succeed, and it will if each one tries to live up to these simple rules:—Be courteous and helpful to everyone, especially the public. We need their business. Try to make a friend a day for the company. Try to influence all the freight and passengers you can our way. You may think that is the job of the Traffic Department. So it is, but you and I and all of us first, last and always, belong to that department. Do all you can to stop waste. Try to save something each day for the company. Remember you are working for a company you may be proud of, and make it so. Hold up your head, and smile, smile, smile."

Atlantic Region's Western Termini.

Following the Moncton, N.B., Board of Trade's protest against the Atlantic Region's western termini being fixed at

Riviere du Loup and Monk, Que., respectively, as given fully in Canadian Railway and Marine World for March, a meeting of representatives of the Nova Scotia and New Brunswick governments and boards of trade in those provinces was held at Amherst, N.S., March 2, when a resolution was passed declaring the C.N.R. directors' decision to be most unsatisfactory to maritime provinces people generally; that the region should be extended west to Montreal, and that the directors be requested to meet representatives from maritime provinces governments and boards of trade in Moncton, within 10 days, to discuss the matter, or to fix another place and a date for the reception of a delegation. Premier Veinot of New Brunswick said he had telegraphed Prime Minister King at Ottawa as follows:—"On my return from Ottawa have looked carefully into movement to have eastern division Canadian National Rys. extended to Montreal. The movement is purely non-political and embraces efforts of all classes to obtain what is sincerely considered fair play for maritime provinces. Before reaching definite final decision, it would be a wise move to have full board of railways come to Moncton and hold conference with representatives from various civic and municipal bodies. Could you not have this done? The matter of transfer of Audit Department from Moncton to Montreal should also be subject of conference before final decision. Rest assured the movement in maritimes does not mean political interference, but disregard for wishes of our people may have result of bringing in later a political squabble. This can be avoided by showing a spirit of recognition of maritime claims."

On receiving by telegraph the resolution adopted at the Amherst meeting, Sir Henry Thornton at once telegraphed in reply as follows:—"I regret that there is dissatisfaction with respect to boundaries of eastern division. It has always been my understanding that the people of the maritime provinces wish original Intercolonial Ry. maintained intact as operating division, and that officers placed in charge of it should be as far as possible men from maritime provinces and individuals in whom people had confidence. The appointments which have already been made, it seems to me, adequately take care of that aspect of problem. From an operating point of view, and for technical reasons, it would be impossible to draw dividing line between eastern and central divisions at Montreal. Only possible point at which a division could be made would be at Brockville, but I did not want the through artery of traffic extending from Quebec through Montreal, Toronto, and Detroit to Chicago, to be under separate regional administrations. I am extremely anxious to grant every reasonable request which may be made by people of maritime provinces, and I have utmost sympathy for their position. I think the fact that we have placed in charge of their affairs officers in whom they should have confidence, and whom I know have sympathy with aspirations of maritimes, should be at least some tangible evidence of our desire to meet your wishes. It is inconceivable to my mind how the fixing of boundary at Riviere du Loup and Monk can possibly affect interest of maritime provinces to the slightest degree, and any changes which may take place would occur no matter where boundaries might be. The problem in the determination of these regions has been an extremely

difficult one and has caused me much anxiety. I appeal to you and your people to let matter stand as it is and see how it works out. I pledge my friendship and good will to the maritime provinces, and shall leave nothing undone to assist in your development and further your interests in every way. In conclusion, may I point out that the fact that Moncton now becomes headquarters of one of the three regions of Canadian National Rys. System, where full regional staff will be located, and from which local purchases will be made, should be at least something in the way of an asset."

Sir Henry Thornton then sent the C.N.R. Director of Publicity to see the New Brunswick Premier and others, and on March 23, the Director telegraphed Premier Viot as follows:—"The reply to the resolution of the united boards of trade adopted at the Amherst meeting has been delayed owing to Sir Henry Thornton having been under the doctor's care and away from the office for the past 10 days. On the matter being laid before Sir Henry today, he authorized me to tell you that he will be pleased to receive the maritime provinces' representatives at Montreal during the week beginning April 9. An earlier date would be decided upon, but the records and staff of Sir Henry's office are being transferred from Ottawa to Montreal, and he will not be fully established here before that time. I am asking L. S. Brown, General Manager, Atlantic region, to place at the disposal of the maritime representatives one of the Canadian National business cars for the journey to Montreal and return. In acknowledging receipt of this wire, I would be glad to have any suggestion that you may care to make."

Subsequently it was arranged that the meeting should be held in Montreal on April 19.

Senator Tanner, Picton, N.S., asked in the Senate recently:—"Are Riviere du Loup and Monk, Que., the points fixed as western limits of the Canadian National Rys. Atlantic Division, and for what reason were they so fixed?" Senator Dandurand replied:—"Yes. That part of the Canadian National Rys. System which serves the maritime provinces is considered by the management to require close and concentrated attention, in order that the railway may more adequately meet the requirements of the public than has been the case in the past, and also in order that nothing be left undone to promote development and increase traffic. It was felt that if satisfactory results are to be obtained, that part of the property in question should be under the direction, not only of competent officers who enjoy the confidence of the public, but also that those officers should devote themselves unreservedly and continuously to their work. For these reasons it was the desire of the Canadian National Rys. directors that, for the time being at least, the officers of the Atlantic Region should not be burdened with too much territory. They point out that the dividing line could not be drawn at Quebec, because in good railway practice it is always disadvantageous to split operating regions in the center of a terminal. The same thing applies to Montreal. Furthermore, it is claimed there is no point between Quebec and Montreal at which a line could be drawn without seriously disturbing the general superintendents' operating districts. It is said that a division might have been made at Brockville, Ont., but that this would put too much mileage in

the Atlantic Region; and, furthermore, it is considered to be highly important that this main artery from Quebec, through Montreal, Toronto and Detroit, to Chicago, should remain under one general manager. Since it was considered to be impracticable from the point of view of efficiency and the welfare of the property to divide the Atlantic and Central Regions at Quebec or any point west thereof, the only other points which could be selected were Riviere du Loup and Monk."

Quebec District's Boundaries.

In consequence of the division of the Canadian National Rys. into three regions, the eastern boundary of the Quebec District on the Intercolonial Ry., is now at Riviere du Loup, Que. (exclusive of yard), to Superior Jct., Ont., instead of as formerly, from Mont Joli, Que. (exclusive of yard), to Armstrong, Ont.

President's Appointments.

Sir Henry Thornton has made the following:—

D. E. GALLOWAY, heretofore Assistant Vice President, G.T.R., to be Chief Assistant to President, C.N.R. Office, Montreal.

R. A. C. HENRY, heretofore Special Engineer, Railways and Canals Department, Ottawa, to be Director of the Bureau of Economics, which has been established to deal with all problems of an economic nature affecting the railways, reporting to, and receiving instructions from, the President; but he, and the Bureau, will be available at all times to the various departments, in connection with any economic problem that may require special study or investigation. Office, Montreal.

E. P. MALLORY, heretofore General Statistician, Toronto, to be Director, Bureau of Statistics, reporting to President. The Bureau of Statistics will provide statistical service for the several departments, and in addition to other assigned duties, will analyze and direct the compilation of divisional operating statistics, and other performance and cost data related to transportation. Office, Montreal.

W. S. THOMPSON, heretofore Publicity Agent, G.T.R., to be Director of Publicity, C.N.R. Office, Montreal.

Legal Department Appointments.

A. J. Reid, K.C., Regional Counsel, Central Region, Toronto, has announced the following:—

T. W. R. McRAE, heretofore Claims Agent, Personal Injury, Montreal, to be Chief Claims Agent. Office, Montreal.

D. F. McCRAW, heretofore Claims Agent, G.T.R., Toronto, to be Assistant Chief Claims Agent, Central Region. Office, Toronto.

A. EDGE, heretofore Claims Agent, Eastern Lines, Toronto, to be Division Claims Agent. Office, Toronto.

J. M. GILL, J. M. McKERROW and G. E. ELLIOTT, to be Claims Agents, Toronto.

W. C. MILLS, G. L. McCONNELL and A. MARCHINGTON, to be Claims Agents, Montreal.

H. A. CORMIER, heretofore Claims Agent, Quebec Province and National Transcontinental Ry. to Armstrong, Ont., Quebec, Que., to be Claims Agent, Quebec, Que.

Telegraphic reports of all accidents and fires on the Central Region, exclusive of the Michigan Division, resulting in death, personal injury or damage to property not owned by this company,

shall be made to T. W. R. McRae; a copy of such reports concerning the lines in Canada west and north of Belleville, Ont., excluding lines Hammer to Ottawa and Depot Harbor to Ottawa, shall also be addressed to D. F. McCraw; a copy of such reports concerning all lines east of Superior Jct., on the former National Transcontinental Ry., and east of Joliette, St. Rosalie Jct. and Richmond, shall also be addressed to H. A. Cormier.

General Traffic Department Appointments.

J. E. Dalrymple, Vice President in charge of Traffic, has announced the following:—

G. T. BELL, heretofore Passenger Traffic Manager, G.T.R., Montreal, to be Executive Assistant to Vice President of Traffic, C.N.R. Office, Montreal.

H. H. MELANSON, heretofore Passenger Traffic Manager, Canadian National Rys., Toronto, to be Passenger Traffic Manager. Office, Montreal.

H. C. MARTIN, heretofore Freight Traffic Manager, G.T.R., Montreal, to be General Freight Traffic Manager, C.N.R. Office, Montreal.

D. O. WOOD, heretofore General Foreign Freight Agent, Canadian National-Grand Trunk Rys., Montreal, to be Traffic Manager, Foreign Freight Department, C.N.R. His former position has been abolished. Office, Montreal.

A. T. WELDON, heretofore Assistant Freight Traffic Manager, Eastern Lines, Montreal, to be Traffic Manager, Atlantic Region. Office, Moncton, N.B.

W. P. FITZSIMMONS, heretofore Commissioner of Industries, G.T.R., to be Commissioner of Industries, Atlantic and Central Regions, C.N.R. Office, Montreal.

The position of Vice President in charge of Traffic at Toronto, held heretofore by C. A. HAYES, has been abolished.

Passenger Traffic Department Appointments.

H. H. Melanson, General Passenger Traffic Manager, has announced the following:—

C. W. JOHNSTON, heretofore Assistant General Passenger Agent, G.T.R., Montreal, to be Passenger Traffic Manager, C.N.R., reporting to General Passenger Traffic Manager, vice G. T. Bell, Passenger Traffic Manager, G.T.R. System, promoted. Office, Montreal.

W. S. COOKSON, heretofore General Passenger Agent, G.T.R., Montreal, to be Manager, Tariff and Ticket Bureau, C.N.R., reporting to General Passenger Traffic Manager. His former position has been abolished. Office, Montreal.

R. L. FAIRBAIRN, heretofore Assistant Passenger Traffic Manager, Eastern Lines, Toronto, to be Manager, Passenger Service Bureau, reporting to General Passenger Traffic Manager. His former position has been abolished. Office, Montreal.

J. R. MELVILLE, heretofore General Agent, Passenger Department, G.T.R., Toronto, to be Assistant to Manager, Passenger Service Bureau, C.N.R. Office, Montreal.

E. S. DAVIES, heretofore chief clerk to Passenger Traffic Manager, Toronto, has been appointed General Agent, Passenger Department, Montreal, supervising arrangements with respect to the handling of Chinese and other special traffic as assigned.

J. P. MARION has been appointed District Passenger Agent, with territory, lines in central region, Kingston, Harrowsmith, Madawaska, Callendar, Ont.,

and east to and including Grand Mere, St. Hyacinth, Richmond, Que., and Portland, Me., vice E. C. Elliott, appointed General Passenger Agent. Office, Montreal.

H. R. CHARLTON, heretofore General Advertising Agent, G.T.R., to be Manager, Advertising Bureau, C.N.R., reporting to General Passenger Traffic Manager. His former position has been abolished. Office, Montreal.

W. L. CRIGHTON, heretofore General Advertising Agent, C.N.R., Toronto, to be Assistant Manager, Advertising Bureau. His former position has been abolished. Office, Montreal.

R. F. MACLEOD, heretofore Assistant to Passenger Traffic Manager, Montreal, to be Assistant to General Passenger Traffic Manager. His former position has been abolished. Office, Montreal.

R. CREELMAN, heretofore Assistant Passenger Traffic Manager, Western Lines, Winnipeg, to be Passenger Traffic Manager, Western Region, reporting to General Passenger Traffic Manager, on administration; and to Passenger Traffic Manager, Montreal, on solicitation. His former position has been abolished. Office, Winnipeg.

W. E. DUPEROW, heretofore General Passenger Agent, Western Lines, Winnipeg, to be Passenger Traffic Manager, Central Region, except lines west of St. Clair and Detroit Rivers, reporting to General Passenger Traffic Manager, on administration, and to Passenger Traffic Manager, Montreal, on solicitation. The position of Passenger Traffic Manager, held heretofore by H. H. Melanson, has been abolished. Office, Toronto.

H. C. BOURLIER, heretofore Assistant General Passenger Agent, Toronto, to be General Passenger Agent, Central Region, west of Kingston, Harrowsmith, Madawaska, Callendar and LaReine, except west of St. Clair and Detroit Rivers, reporting to Passenger Traffic Manager, Toronto. His former position has been abolished. Office, Toronto.

E. C. ELLIOTT, heretofore District Passenger Agent, G.T.R., Montreal, to be General Passenger Agent, Central Region, C.N.R., Kingston, Harrowsmith, Madawaska, Callendar, LaReine and east, reporting to Passenger Traffic Manager, Toronto. The position of Assistant General Passenger Agent, G.T.R., Montreal, held heretofore by C. W. Johnston, has been abolished. Office, Montreal.

JAMES MORRISON, heretofore Assistant General Passenger Agent, Montreal, to be General Passenger Agent, Steamship Traffic, Central and Atlantic Regions, reporting to Passenger Traffic Manager, Montreal. His former position has been abolished. Office, Montreal.

C. K. HOWARD, heretofore General Tourist Agent, Toronto, to be General Tourist Agent, Montreal, reporting to General Passenger Traffic Manager. His former position has been abolished.

Sleeping, Dining and Parlor Cars and Railway Restaurants Department Appointments.

Walter Pratt, General Manager, has announced the following:—

J. M. GRIEVE, heretofore General Superintendent, Sleeping and Dining Cars, and News Service, to be General Superintendent. Office, Montreal.

R. M. FLETT, heretofore Equipment Supervisor, Sleeping, Dining and Parlor Car Department, to be Assistant to General Manager. Office, Montreal.

E. CAMERON, heretofore Superintendent, Halifax, N.S., to be Superintendent, with jurisdiction over all ser-

vices on Atlantic Region, and including trains 1, 2, 3 and 4 through to Montreal. Office, Halifax, N.S.

J. F. COLEMAN, heretofore Assistant Superintendent, Halifax, N.S., to be Assistant Superintendent. Office, Halifax, N.S.

C. H. WORBY, heretofore Assistant Superintendent, Sleeping, Dining and Parlor Cars, Western Lines, Winnipeg, to be Superintendent, with jurisdiction over services on all lines originating in Quebec Province, including trains 1 and 2 from Montreal to Winnipeg, but not including the International Limited and trains 1, 2, 3 and 4 from Montreal to Halifax. Office, Montreal.

J. A. McISAAC, to be Assistant Superintendent. Office, Montreal.

E. W. SMITH, heretofore Superintendent, Dining and Parlor Car Service, G.T.R., Toronto, to be Superintendent, with jurisdiction over services on all lines in Ontario, and west of Detroit and St. Clair Rivers, except trains 1, 3 and 4, Toronto to Winnipeg. Office, Toronto.

Y. MOODY, Assistant Superintendent, Toronto, confirmed in that position.

L. C. HAYMAN, to be Assistant Superintendent. Office, Battle Creek, Mich.

JAMES GORMAN, heretofore Superintendent, Sleeping, Dining and Parlor Car Department, to be Superintendent, with jurisdiction over services on all lines comprising Western Region, including trains 3 and 4, Toronto to Winnipeg, but not including 1 and 2, Montreal to Winnipeg. Office, Winnipeg.

H. C. R. FORD, heretofore Chief Inspector, Dining Cars, Western Lines, to be Assistant Superintendent. Office, Winnipeg.

W. A. McDONALD, heretofore Sleeping and Dining Car Agent, Montreal, to be Assistant Superintendent. Office, Edmonton, Alta.

EUSTACE SMITH, heretofore Superintendent, Sleeping and Dining Cars, Toronto, to be Supervisor of Service. Office, Toronto.

M. L. FLETT, Commissary Purchasing Agent, confirmed in that position. Office, Montreal.

J. L. INGHAM, to be Chief Inspector of Restaurants (system). Office, Montreal.

J. W. JOHNSON, to be Inspector of Restaurants. Office, Toronto.

E. Cameron, Superintendent, Halifax, N.S., has announced the following:—

S. J. FULLERTON, to be Sleeping and Dining Car Agent, Halifax, N.S.

D. J. STRAHAN, to be Road Inspector, Halifax, N.S.

W. C. SMITH and G. L. FLEMING, to be Platform Inspectors, Halifax, N.S.

P. S. BUTLER, to be Equipment Inspector, Halifax, N.S.

J. M. LeBLANC, to be Sleeping and Dining Car Agent, Moncton, N.B.

C. H. Worby, Superintendent, Montreal, has announced the following:—

A. R. McPHERSON, to be Sleeping and Dining Car Agent, Montreal.

A. T. LANDRY, to be Assistant Sleeping and Dining Car Agent, Montreal.

S. D. DULMAGE and B. F. NEVIN, to be Road Inspectors, Montreal.

F. S. BUSH and E. D. MILLEN, to be Platform Inspectors, Montreal.

D. E. MOLLINS, to be Equipment Inspector, Montreal.

E. L. MACDOUGALL, to be Sleeping and Dining Car Agent, Quebec, Que.

G. URQUHART, to be Equipment Inspector, Quebec, Que.

E. W. Smith, Superintendent, Toronto, has announced the following:—

J. K. WRIGHT, heretofore Assistant Superintendent, Dining and Parlor Cars, G.T.R., Toronto, to be Sleeping and Dining Car Agent, C.N.R., Toronto.

J. C. HICKEY, heretofore Road Inspector, Dining and Parlor Cars, G.T.R., Toronto, to be Road Inspector, Sleeping, Dining and Parlor Car and Railway Restaurant Department, C.N.R., Toronto.

O. I. VIRTUE, heretofore acting Agent, Sleeping, Dining and Parlor Car, Hotel and News Department, Ottawa, Ont., to be Road Inspector, Sleeping, Dining and Parlor Car and Railway Restaurant Department, Toronto.

W. MURRAY, heretofore Platform Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Toronto, to be Platform Inspector, Sleeping, Dining and Parlor Car and Railway Restaurant Department, Toronto.

J. LOWREY, heretofore acting Agent, Sleeping, Dining and Parlor Car, Hotel and News Department, Toronto, to be Platform Inspector, Sleeping, Dining and Parlor Car and Railway Restaurant Department, Toronto.

J. J. ELDER, heretofore Equipment Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Toronto, to be Equipment Inspector, Sleeping, Dining and Parlor Car and Railway Restaurant Department, Toronto.

H. J. LAMBKIN, heretofore Road Inspector, Sleeping, Dining and Parlor Car, Hotel and News Department, Winnipeg, to be Sleeping and Dining Car Agent, Ottawa, Ont.

J. Gorman, Superintendent, Winnipeg, has announced the following:—

A. E. McALLEN, to be Sleeping and Dining Car Agent, Winnipeg.

J. A. LEADER, to be Chief Inspector, Winnipeg.

A. R. WINFIELD and J. DALTON, to be Road Inspectors, Winnipeg.

W. POTTS, A. J. DONOVAN and F. BRADLEY, to be Platform Inspectors, Winnipeg.

C. B. WATT, to be Equipment Inspector, Winnipeg.

H. COLEY, to be Sleeping and Dining Car Agent, Saskatoon, Sask.

D. C. GILMORE, to be Sleeping and Dining Car Agent, Edmonton, Alta.

J. W. HORNE and A. G. FLETCHER, to be Platform Inspectors, Edmonton, Alta.

S. C. SYKES, to be Sleeping and Dining Car Agent, Vancouver, B.C.

L. R. PARRY, to be Sleeping and Dining Car Agent, Prince Rupert, B.C.

Freight Traffic Department Appointments.

H. C. Martin, General Freight Traffic Manager, has announced the following:

F. J. WATSON, heretofore General Freight Agent, G.T.R., Montreal, to be Freight Traffic Manager, C.N.R., with jurisdiction, Central Region, Fort William, Armstrong, Ont.; Detroit, Port Huron, Mich., and east. Office, Montreal. The position of Freight Traffic Manager, Toronto, held until recently

by GEO. STEPHEN, who has entered the C.P.R. service, has been abolished.

W. G. MANDERS, heretofore Assistant Freight Traffic Manager, Winnipeg, to be Freight Traffic Manager, with jurisdiction, Western Region, Fort William, Armstrong, Ont., and west. His former position has been abolished. Office, Winnipeg.

LORNE MACDONALD, heretofore Assistant General Freight Agent, G.T.R., Montreal, to be Assistant Freight Traffic Manager, C.N.R., with jurisdiction, Central Region, Napanee, Scotia Jct., North Bay, O'Brien and west to Fort William, Armstrong, Ont.; Detroit, Port Huron, Mich. Office, Toronto. The position of Division Freight Agent (Grand Trunk section), has been abolished.

R. W. LONG, heretofore Division Freight Agent, G.T.R., Toronto, to be General Freight Agent, C.N.R., with jurisdiction, Central Region, east of Napanee, Scotia Jct., North Bay and O'Brien, Ont. Office, Montreal.

R. E. PERRY, heretofore Assistant General Freight Agent, Montreal, to be Manager, Tariff Bureau, with jurisdiction, Central Region, Fort William, Armstrong, Ont.; Detroit, Port Huron, Mich., and east; also Atlantic Region. Office, Montreal.

JAMES ORR, heretofore Assistant General Freight Agent, Montreal, to be Assistant Manager, Tariff Bureau, with jurisdiction, Central Region, Fort William, Armstrong, Ont.; Detroit, Port Huron, Mich., and east; also Atlantic Region. Office, Montreal.

The positions of Assistant General Freight Agent, Tariff Bureau; Assistant General Freight Agent, Special Tariff Bureau; and Chiefs of Tariff Bureau (2), Montreal, have been abolished.

S. G. TIFFIN, heretofore Assistant General Freight Agent, Montreal, to be Assistant General Freight Agent, with jurisdiction extended to cover lines, Grand Trunk section, east of Hawkesbury and Napanee, Ont., in Central Region. Office, Montreal.

G. R. FAIRHEAD, heretofore Division Freight Agent, Toronto, to be Division Freight Agent, with jurisdiction extended to cover lines formerly under jurisdiction of Division Freight Agent, G.T.R., Toronto. Office, Toronto.

Purchases and Stores Department Appointments.

R. C. Vaughan, Director of Purchases and Stores, has announced the following:—

G. W. CAYE, heretofore General Purchasing Agent, G.T.R., to be Purchasing Agent, C.N.R. Office, Montreal.

L. LAVOIE, heretofore General Purchasing Agent, C.N.R., Toronto, to be Purchasing Agent. Office, Toronto.

J. W. CORBETT, heretofore Purchasing Agent, Canadian Government Merchant Marine Ltd., Montreal, to be Assistant Purchasing Agent, C.N.R. Office, Toronto.

F. H. KINNEAR, heretofore Assistant Purchasing Agent, Toronto, to be Purchasing Agent, Moncton, N.B.

F. W. TISDALE, Purchasing Agent, Winnipeg, is confirmed in that position.

C. C. LABRIE, heretofore Purchasing Agent, Vancouver, B.C., confirmed as Purchasing Agent there.

G. H. JENKINS, heretofore Assistant to General Purchasing Agent, G.T.R., Montreal, to be General Fuel Agent, C.N.R. Office, Montreal.

A. L. GRABURN, heretofore General Fuel Agent, Toronto, to be Assistant General Fuel Agent. Office, Montreal.

W. H. GRANT, heretofore General Tie Agent, Toronto, to be General Tie Agent, Montreal.

L. C. THOMSON, heretofore General Storekeeper, Toronto, to be Chief of Stores. Office, Montreal.

F. W. HARGRAVE, heretofore Assistant Purchasing Agent, Toronto, is transferred to Montreal, but title not yet announced.

E. J. McVEIGH, heretofore General Storekeeper, G.T.R., Montreal, to be General Storekeeper, C.N.R., Toronto.

E. D. TOYE, heretofore on special duty in office of Vice President, Purchasing, Supplies and Stores, Toronto, to be Assistant General Storekeeper, Toronto.

W. B. LOGAN, heretofore District Storekeeper, Moncton, N.B., to be General Storekeeper, Moncton, N.B.

A. E. COX, heretofore General Storekeeper, Western Lines, Winnipeg, to be General Storekeeper, Winnipeg.

D. ROBERTSON, heretofore Assistant General Storekeeper, Western Lines, Winnipeg, to be Assistant General Storekeeper, Winnipeg.

Operation and Construction Department Appointments.

D. Crombie, Chief of Transportation, has announced the following:—

F. PRICE, heretofore Superintendent of Car Service, G.T.R., to be Chief of Car Service, all lines, C.N.R. Office, Montreal.

J. P. DRISCOLL, heretofore General Superintendent of Car Service, Toronto, to be Chief of Car Accounts, all lines. Office, Montreal.

C. B. Brown, Chief Engineer, Operation Department, has announced the following:—

M. S. BLAIKLOCK, heretofore Engineer Maintenance of Way, G.T.R., Montreal, to be Assistant Chief Engineer, Operation Department, C.N.R. Office, Montreal.

C. N. MONSARATT, heretofore Consulting Engineer of Bridges, Toronto, to be Consulting Engineer, Operation Department. Office, Montreal.

R. G. GAGE, heretofore Signal and Electrical Engineer, Moncton, N.B., to be Electrical Engineer. Office, Montreal.

W. M. PUNTER, heretofore Signal Engineer, Eastern Lines, Canadian Northern Ry., Toronto, to be Signal Engineer, Operation Department. Office, Montreal.

W. A. DUFF, heretofore Engineer of Standards, Toronto, to be Engineer of Standards, Operation Department. Office, Montreal.

J. A. ELLIS, heretofore Assistant Engineer of Standards (Roadway Standards), Toronto, to be Assistant Engineer Roadway Standards, Operation Department. Office, Montreal.

R. O. STEWART, heretofore Assistant Engineer of Standards (Bridge Standards), Toronto, to be Assistant Engineer of Bridge Standards, Operation Department. Office, Montreal.

R. M. MITCHELL, heretofore Right of Way and Property Commissioner, Toronto, to be General Right of Way Agent, Operation Department. Office, Montreal.

LT.-COL. F. F. CLARKE, heretofore Chief Land Surveyor, Toronto, to be Chief Land Surveyor, Operation Department. Office, Montreal.

Investigation Department Appointments.

H. J. Page, Chief of Investigation Department, has announced the following:—

A. J. TINGLEY, heretofore District Special Agent, Moncton, N.B., to be

Superintendent of Investigation, Atlantic Region. Office, Moncton, N.B.

WM. TISDALE, to be Superintendent of Investigation, Northern Ontario, Southwestern Ontario and Montreal Districts, Central Region. Office, Toronto.

THOS. COOPER, to be Assistant Superintendent of Investigation, Northern Ontario, Southwestern Ontario and Montreal Districts, Central Region. Office, Toronto.

ROLAND FLYNN, to be Inspector of Investigation, Northern Ontario District, Central Region. Office, Toronto.

MILTON BOND, to be Inspector of Investigation, Southwestern Ontario District, Central Region. Office, Toronto.

L. C. BOISJOLY, to be Superintendent of Investigation, Quebec District, Central Region. Office, Montreal.

H. McMORRAN, to be Inspector of Investigation, Montreal District, Central Region. Office, Montreal.

J. W. WOZNACK, to be Inspector of Police, Michigan District, Central Region. Office, Detroit, Mich.

J. M. BANNERMAN, to be Superintendent of Investigation, Western Region. Office, Winnipeg.

GILBERT HODGE, to be Chief Special Agent, Central Vermont Ry., St. Albans, Vt.

Motive Power and Car Equipment Departments Appointments.

C. E. Brooks, Chief of Motive Power, and G. E. Smart, Chief of Car Equipment, have announced the following:—

W. F. CONNALL, heretofore Mechanical Engineer, Toronto, to be Mechanical Engineer, Montreal.

W. A. BOOTH, heretofore Engineer of Locomotive Construction, G.T.R., Montreal, to be chief draftsman, C.N.R. Office, Montreal.

W. H. CLEGG, heretofore Chief Inspector of Air Brake Equipment, Toronto, to be Chief Inspector of Air Brake and Car Heating Equipment, Montreal. It is his duty, generally to supervise the maintenance of air brake and car heating equipment, to establish standards, and to co-operate with regional officials in arranging for instruction of employes and methods of performing air brake and car heating work.

J. W. JOHNSTON, heretofore Chief Inspector, Car Lighting, Toronto, to be Chief Inspector of Car Lighting and Headlight Equipment, Montreal. It will be his duty, generally to supervise the maintenance of car lighting and headlight equipment, to establish standards, and to co-operate with regional officials in arranging for instruction of employes and methods of performing car lighting and headlight work.

Express Department Appointments.

W. D. Robb, Vice President in charge of Insurance, Lands, Express, Telegraphs, Colonization, etc., has announced the following:—

JOHN PULLEN, President, Canadian National Express Co., after long and faithful service, having retired under the company's pension plan, C. A. HAYES, heretofore Vice President of Traffic, Canadian National Rys., Toronto, is appointed General Manager, Express Department, Canadian National Rys. Office, Montreal.

C. A. Hayes, General Manager, Express Department, has announced the following:—

W. C. MUIR, heretofore Vice President and General Manager, Canadian National Express Co., Montreal, to be Assistant General Manager, Express De-

partment, C.N.R. His former position has been abolished. Office, Montreal.

G. E. BELLEROSE, heretofore Assistant to General Manager, Canadian National Express Co., Montreal, to be General Assistant, Express Department, C.N.R. His former position has been abolished. Office, Montreal.

Atlantic Region Appointments.

A. C. Barker, Superintendent of Transportation, has announced the following:

A. P. GORBELL, heretofore Superintendent of Car Service, Eastern Lines, Moncton, to be Assistant Superintendent of Transportation, Atlantic Region. Office, Moncton, N.B.

W. E. Barnes and G. E. McCoy have announced the following:—

W. C. HUNTER, heretofore Air Brake Inspector, Montreal, to be Inspector of Air Brake and Car Heating Equipment, Atlantic Region. He will supervise the maintenance of air brake and car heating equipment, and assist all concerned in operation of same. Office, Moncton, N.B.

H. V. BELYEA has been appointed Inspector of Car Lighting and Headlight Equipment, Atlantic Region. He will supervise the maintenance of car lighting and headlight equipment and assist all concerned in operation of same. Office, Moncton, N.B.

Central Region Appointments.

Major F. L. C. Bond, Regional Chief Engineer, has announced the following:

H. T. HAZEN, heretofore Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto, to be Assistant Chief Engineer, Central Region, Canadian National Rys. Office, Toronto.

G. P. MACLAREN, heretofore Engineer Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto, to be Engineer Maintenance of Way, Central Region, Canadian National Rys. Office, Toronto.

H. B. STUART, heretofore Structural Engineer, G.T.R., Montreal, to be Bridge Engineer, Central Region, C.N.R. Office, Toronto.

C. P. DISNEY, heretofore Bridge Engineer, Eastern Lines, Canadian Northern Ry., Toronto, to be Assistant Bridge Engineer, Central Region, Canadian National Rys. Office, Toronto.

C. H. TILLET, heretofore Signal Engineer, G.T.R., Montreal, to be Signal Engineer, Central Region, C.N.R. Office, Toronto.

A. CRUMPTON, heretofore Valuation Engineer, G.T.R., Montreal, to be Valuation Engineer, Central Region, C.N.R. Office, Toronto.

GEORGE O'CONNELL, to be Superintendent of Work Equipment. Office, Toronto.

W. H. SECORD, heretofore Supervisor of Work Equipment, Eastern Lines, Toronto, to be Assistant Superintendent of Work Equipment, Central Region. Office, Toronto.

J. C. Garden, General Superintendent of Motive Power, has announced the following:—

T. C. HUDSON, heretofore General Master Mechanic, Montreal, to be Assistant General Superintendent Motive Power, Central Region. Office, Toronto.

G. M. WILSON, heretofore Superintendent Motive Power Shops, G.T.R., Montreal, to be Superintendent of Motive Power Shops, C.N.R. Office, Montreal.

J. ROBERTS, heretofore Superintendent Motive Power Shops, G.T.R., Stratford, Ont., to be Superintendent of Motive Power Shops, C.N.R. Office, Stratford.

G. F. KNIGHT, heretofore Superintendent St. Malo Shops, is confirmed in that position. Office, St. Malo.

OTIS GRANT, heretofore Superintendent of Shops, Leaside, Ont., is confirmed in that position. Office, Leaside.

R. J. NEEDHAM, heretofore Mechanical and Electrical Engineer, G.T.R., Montreal, to be Mechanical and Electrical Engineer, Central Region, C.N.R. Office, Toronto.

J. Coleman, General Superintendent, Car Equipment, has announced the following:—

T. M. HYMAN, heretofore Master Car Builder, Point St. Charles, G.T.R., Montreal, to be Superintendent Car Shops, C.N.R. Office, Montreal.

D. C. MESSEROLL, heretofore Master Car Builder, London Shops, G.T.R., London, Ont., to be Superintendent Car Shops, C.N.R. Office, London.

J. E. Morazain, General Superintendent, Quebec District, has had his jurisdiction extended from Riviere du Loup, Que. (exclusive of yard) to Superior Jct., Ont., instead of from Mont Joli, Que. (exclusive of yard), to Armstrong, Ont., as heretofore. He has announced the following:—

H. W. SHARPE, heretofore Master Mechanic, Quebec District, Quebec, Que., to be Superintendent Motive Power, Quebec District. Office, Quebec, Que.

E. G. THEOBALD, heretofore District Car Foreman, Quebec, Que., to be District Car Foreman, Quebec District, Central Region. Office, Quebec, Que.

W. B. WAY, Superintendent, Cochrane Division, Quebec District, Central Region, has had his jurisdiction extended west from Armstrong to Superior Jct., Ont.

W. R. Davidson, General Superintendent, Montreal District, has announced the following:—

E. R. BATTLE, heretofore Superintendent of Motive Power, Eastern Lines, G.T.R., Montreal, to be Superintendent Motive Power, Montreal District, Central Region, C.N.R. Office, Montreal.

A. B. MITCHELL, heretofore Master Car Builder, Eastern Lines, G.T.R., Montreal, to be Superintendent of Car Equipment, Montreal District, Central Region, C.N.R. Office, Montreal.

R. H. Fish, General Superintendent, Southwestern Ontario District, has announced the following:—

D. J. McCUAIG, heretofore Superintendent Motive Power, Ontario Lines, G.T.R., Toronto, to be Superintendent Motive Power, Southwestern Ontario District, Central Region. Office, Toronto.

GEORGE FISHER, heretofore Master Car Builder, Ontario Lines, G.T.R., London, Ont., to be Superintendent of Car Equipment, Southwestern Ontario District, Central Region, C.N.R. Office, Toronto.

W. R. Devenish, General Superintendent, Northern Ontario District, has announced the following:—

J. H. McALPINE, heretofore Master Mechanic, Toronto, to be Superintendent Motive Power, Northern Ontario District, Central Region. Office, Toronto.

W. H. LONG, heretofore General Car Foreman, Toronto, to be District Car Foreman, Northern Ontario District, Central Region. Office, Toronto.

Western Region Appointments.

A. E. Warren, General Manager, has announced the following:—

A. A. TISDALE, heretofore Assistant to General Manager, Western Lines, to be Assistant to General Manager, Western Region. Office, Winnipeg.

H. H. BREWER, heretofore Assistant General Manager, Western Lines, to be Assistant General Manager, Western Region. Office, Winnipeg.

H. A. DIXON, heretofore Chief Engineer, Western Lines, to be Regional Chief Engineer, Western Region. Office, Winnipeg.

A. H. EAGER, heretofore General Superintendent of Rolling Stock, Western Lines, to be General Superintendent Motive Power and Car Equipment, Western Region. Office, Winnipeg.

E. CRAWFORD, heretofore Superintendent of Car Service, Western Lines, to be Superintendent of Car Service, Western Region. Office, Winnipeg.

J. W. KIMBALL, heretofore Superintendent Boarding Car Department, Western Lines, to be Superintendent of Boarding Cars, Western Region. Office, Winnipeg.

Dr. J. M. LENEY, heretofore Assistant Chief Medical Officer, Western Lines, to be Assistant Chief Medical Officer, Western Region. Office, Winnipeg.

E. BRODERICK, heretofore Right of Way and Property Agent, Western Lines, to be Regional Right of Way Agent, Western Region. Office, Winnipeg.

J. R. CAMERON, heretofore Assistant General Manager, British Columbia District, Western Lines, to be Assistant General Manager, British Columbia District, Western Region. Office, Vancouver, B.C.

A. WILCOX, heretofore General Superintendent, Manitoba District, Western Lines, Winnipeg, to be General Superintendent, Manitoba District, Western Region. Office, Winnipeg.

B. T. CHAPPELL, heretofore General Superintendent, Saskatchewan District, Western Lines, to be General Superintendent, Saskatchewan District, Western Region. Office, Saskatoon, Sask.

W. A. BROWN, heretofore General Superintendent, Alberta District, Western Lines, to be General Superintendent, Alberta District, Western Region. Office, Edmonton, Alta.

J. H. PILLSBURY, heretofore Manager, Grand Trunk Pacific Drydock, Prince Rupert, B.C., to be Manager, Drydock, there.

A. H. Eager, General Superintendent Motive Power and Car Equipment, has announced the following:—

H. G. REID, heretofore General Master Mechanic, Western Lines, to be Assistant General Superintendent Motive Power, Western Region. Office, Winnipeg.

A. McCOWAN, heretofore Master Car Builder, Western Lines, to be Assistant General Superintendent Car Equipment, Western Region. Office, Winnipeg.

A. Wilcox, General Superintendent, Manitoba District, has announced the following:—

H. A. ENGLISH, heretofore Master Mechanic, Manitoba District, to be Superintendent Motive Power and Car Equipment, Manitoba District. Office, Winnipeg.

The officials heretofore termed assistant master mechanics, will hereafter be designated master mechanics.

B. T. Chappell, General Superintendent, Saskatchewan District, has announced the following:—

L. G. ROBLIN, heretofore Master Mechanic, Saskatchewan District, to be Superintendent Motive Power and Car Equipment, Saskatchewan District. Office, Saskatoon, Sask.

The officials heretofore termed assistant master mechanics, will hereafter be designated master mechanics.

W. A. Brown, General Superintendent,

Alberta District, has announced the following:—

J. KYLE, heretofore Master Mechanic, Alberta District, to be Superintendent Motive Power and Car Equipment, Alberta District. Office, Edmonton, Alta.

The officials heretofore termed assistant master mechanics will hereafter be designated master mechanics.

J. R. Cameron, Assistant General Manager, British Columbia District, has announced the following:—

C. J. QUANTIC, heretofore Master Mechanic, British Columbia District, to be Superintendent Motive Power and Car Equipment, British Columbia District. Office, Vancouver, B.C.

The officials heretofore termed assistant master mechanics will hereafter be designated master mechanics.

Removal of Officials' Offices.

Sir Henry Thornton, President; Gerard Ruel, Vice President and General Counsel; D. E. Galloway, Chief Assistant to President; R. A. C. Henry, Director, Bureau of Economics; and H. J. Page, Chief of Investigation Department, who had temporary offices at 122 Bank St., Ottawa, have removed to the Canadian National Rys. head office building, formerly G.T.R. general offices, 94 McGill St., Montreal. Major Graham A. Bell, Vice President, C.N.R. Co., and Vice President of Finance, C. N. Rys., does not expect to remove his office from Ottawa to Montreal much before May 1. The following officials of his department have already removed from Toronto to Montreal:—D. E. Brown, Chief Assistant to Vice President; C. E. Friend, Assistant General Comptroller; H. G. Foreman, Assistant General Treasurer, and C. D. Cowie, Assistant to Vice President. It is expected that his entire staff will be established in Montreal by May 1. J. B. McLaren, Comptroller, Central Region, has been moved from Montreal to Toronto, and A. E. Plant, acting Comptroller, Atlantic Region, has arrived in Moncton, N.B., from Portland, Me.

R. P. Ormsby, Secretary, C.N.R. Co., and numerous subsidiaries, has removed, with his staff, from Toronto to Montreal. E. P. Mallory, Director of Bureau of Statistics, and W. A. Tuxford, Chief of Pass Bureau, have also removed from Toronto to Montreal.

S. J. Hungerford, Vice President, Operation and Construction Departments, removed from Toronto to Montreal, in the middle of March, and is installed in the general office building, on the fourth floor. He took with him A. J. Hills, Assistant to Vice President, Operation and Construction; D. Crombie, Chief of Transportation; C. B. Brown, Chief Engineer, Operation Department; C. S. Gzowski, Chief Engineer, Construction Department; C. E. Brooks, Chief of Motive Power; G. E. Smart, Chief of Car Equipment; and W. Pratt, General Manager, Sleeping, Dining and Parlor Cars and Railway Restaurants. These officials' headquarters staffs have also been transferred from Toronto to Montreal.

R. C. Vaughan, Director of Purchases and Stores, who spent considerable time in Montreal during March, will remove his offices from the new union station, Toronto, to the Canadian National Express Building, 95 McGill St., Montreal, early in April, and will concentrate his immediate staff there, including, in addition to those already in Montreal, the following, who will be transferred from Toronto:—F. W. Hargrave, who will probably be given the title of Assistant Purchasing Agent; A. L. Graburn, As-

sistant General Fuel Agent, and W. H. Grant, General Tie Agent.

H. H. Melanson, General Passenger Traffic Manager, has transferred his office from Toronto to Montreal, as also have R. L. Fairbairn, Manager, Passenger Service Bureau; J. R. Melville, Assistant to Manager, Passenger Service Bureau, and W. L. Crighton, Assistant Manager, Advertising Bureau. W. E. Duperow has removed from Winnipeg to Toronto, on his appointment as Passenger Traffic Manager, Central Region, east of Detroit and St. Clair Rivers.

C. A. Hayes has removed from Toronto to Montreal, on his appointment as General Manager C.N.R. Express Department, and is located in the Canadian National Express Building.

C. G. Bowker, General Manager, Central Region, removed from Montreal to Toronto, early in March, and is located in the new union station. The following officials were also transferred from Montreal to Toronto:—W. A. Kingsland, Assistant General Manager; C. F. Needham, Assistant to General Manager; F. L. C. Bond, Regional Chief Engineer; C. R. Moore, General Superintendent of Transportation; J. Coleman, General Superintendent, Car Equipment; J. C. Garden, General Superintendent, Motive Power; C. H. Nicholson, Manager Canada Atlantic Transit Co., etc.; H. B. Stuart, Bridge Engineer; T. C. Hudson, Assistant General Superintendent Motive Power, and R. J. Needham, Mechanical and Electrical Engineer. G. C. Jones, Assistant General Manager, has removed from Toronto to Montreal.

The C.N.R. has leased some 90,000 sq. ft. of space, consisting of a half of the third floor, and the whole of the two top floors, of the building occupied formerly by Almy's Ltd., corner of St. Catherine and Bleury Streets, Montreal, which is being occupied by the General Auditor of Revenues' staff, the car accounting, and some other branches of the Finance Department.

The G.T.R. divisional freight office staff, located formerly in the new union station, Toronto, has been consolidated with the Canadian National Rys. general freight department, in the Royal Bank Building, King and Yonge Sts., Toronto.

A Toronto paper stated recently that the C.N.R. dining and sleeping car crews, which had had their headquarters in Toronto, would be shifted to Montreal, and that about 60 men would be affected. We are officially advised that no dining and sleeping car crews are being transferred from Toronto to Montreal. The creation of regions has in some cases altered certain officers' jurisdiction over certain dining and sleeping car crews, but it does not in any way affect the home quarters, or operation, of any of the crews which have headquarters in Toronto.

Nova Scotia Coal for Canadian National Rys.—J. S. Woodsworth, Winnipeg Center, said in the House of Commons recently:—"I am informed that the Canadian National Rys. are refusing to take the run of the mine coal from any small companies in Maccan and River Hebert districts, and that this means that some 800 men are thrown out of work, and these districts are being ruined. Has the Government any information with regard to the withdrawal of orders from these districts?" Acting Minister of Railways Graham replied:—"The matter is under consideration. Time may be given in order to install certain screens that will help out the difficulty. That matter is being considered."

The Canadian Pacific Railway's 1922 Results.

The C.P.R. report for 1922 shows gross earnings of \$186,675,036, compared with \$193,021,854 in 1921, and net earnings of \$36,301,691, compared with \$34,201,740 in 1921. After all deductions, the 1922 contribution to surplus was \$1,025,509, compared with \$755,391 in 1921. Special income was \$11,092,355, compared with \$10,987,199 in 1921, and the special income surplus at the end of 1922 was \$25,059,845, compared with \$21,767,490 at the end of 1921. The operating ratio for 1922 was 80.55, compared with 82.28 in 1921. While gross earnings for the year were \$6,346,818 less than in 1921, the net earnings were \$2,099,950 more, so that on the year's operations a substantial improvement was secured. The gross earnings for the first nine months were consistently smaller than in corresponding months of 1921, but with the large crop movement, beginning in October, coincidentally with a quickening of the improvement in business and economic conditions generally, gross returns in the last three months were very much better than in the last three of 1921, with a corresponding improvement in net returns.

Net earnings in 1922, in addition to being an improvement over those of 1921, were a still greater improvement over those of 1920, in view of which it may be confidently stated that the company is making real progress in its endeavor to restore railway operating conditions to the status occupied before the great wave of inflation made them so unfavorable. In 1921, despite the unfortunate condition of business, and therefore of traffic, not only in Canada, but throughout the world, the company was able to show some improvement over 1920, and in 1922 this progress was carried a step further. With all conditions pointing to a continuation of the economic recovery, there is every reason to hope that the company will enjoy further success in getting railway operating revenues and expenses into proper relationship—a relationship most adequately expressed by an operating ratio of between 70 and 75.

The 1922 earnings were equivalent to a return of 11.66% on the common stock. This is significant, and lends strength to the belief that good progress is being made in overcoming the effects of the inflation period, as this is the best return on capital the company has secured since 1917, when the earnings on common were 15.89%. In 1918 the return was 10.97%; in 1919, 10.8%; in 1920, 11.4%, and in 1921, 11.5%. While there is a wide margin between the 1917 return of 15.89%, and the 1922 return of 11.66%, the fact that the 1922 return was better than in any year from 1918 to 1921 cannot be regarded as otherwise than holding out encouragement for the future.

Special income account earnings of \$11,092,355, compared with \$10,987,199 in 1921, show a prosperous condition, and returns from this department of the company's business must be regarded as highly satisfactory. The company's land sales, during the year, were on a greatly restricted scale, only 107,503 acres having been sold, at an average price of \$16.12. It is evident, however, that this was not due to any influence within the company's power to change or remedy, but was a logical result of business and economic conditions throughout the west, particularly during the first part of the year, and to restricted immigration. Improvement in this department of the

company's business can be expected to accompany improvement in its transportation business, and, like that, will be dependent on the country's progress.

The C.P.R., like all other steamship operators, found 1922 a trying year, the unfavorable traffic conditions prevailing until the latter part of the year, adding to the severity of the competition experienced, and to the fact of there being most unsettled conditions in the Orient, to make conditions generally bad. The greatly reduced operating costs in 1922, compared with 1921, are, however, an encouraging feature. While the decrease in gross earnings was large, the decrease in expenses, amounting to 37% on a per voyage basis, was enough to compensate for the decrease in gross earnings, and, in addition, to increase net earnings by \$234,000. The decreased expenses were not secured at the expense of the steamship service, as is evident from the fact that everything in connection with it has been maintained at the highest standard. With the new ships, *Empress of Canada* and *Empress of Australia*, operating on the Pacific route, good business there is contemplated, despite the severity of the competition, and the outlook for the shipping branch of the service in its entirety is considered bright.

One of the outstanding features of C.P.R. progress in 1922 was the large improvement secured in operating results by the Minneapolis, St. Paul & Sault Ste. Marie Ry. Net operating revenues for 1922 were \$7,178,972, compared with a loss of \$696,584 in 1921. This improvement is expected to continue, and in view of the manner in which the road's earnings have picked up, on the strength of the business improvement which has so far taken place, the expectation appears to be entirely reasonable.

Faith in the future is reflected in the directors' action in asking approval of proposed expenditures on capital account for 1923, of \$7,630,100, to cover cost of replacing and enlarging structures, improving terminal facilities and track, improving the telegraph service, etc., and in the request for approval of issue and sale of 4% consolidated debenture stock to provide for nearly 100 miles of railway construction in the west. This expectation of greater development and bigger business in Canada is further shown by the action taken to secure equipment to the value of \$12,295,000, among which will be 36 locomotives, 1,000 box cars, and other freight and passenger equipment of various types.

Analysis of the company's traffic during 1922 shows that the amount of freight carried, while substantially larger than in 1921, was somewhat less than in 1920. The differences in the average receipt per ton mile are notable, that between the average in 1922 and 1921 furnishing the explanation of the decrease in gross earnings, despite the greater volume of freight traffic handled. The average receipt per ton mile in 1921 was 1.19c., and in 1922 but 0.99c., which comparison furnishes an adequate idea of the extent to which the general rate reductions and the restoration of the Crowsnest rates on grain have cut into the company's revenues. Passenger traffic in 1922 was somewhat of a disappointment, the number of passengers carried, and the number of passenger miles, both showing decreases from 1921, but indications for future passenger traffic are encouraging.

Viewing the matter broadly, perhaps the most outstanding feature of the company's 1922 operations was the remarkable "come-back" accomplished in the latter part of the year. The first seven months were most discouraging, showing not inconsiderable declines in net earnings compared with 1921, but the results secured in the last part of the year were so good as to make the improvement secured verge on the spectacular, particularly in view of the reduced rates of carriage at which transportation service was performed. The balance sheet shows that the hard times of the early part of 1922, and practically all of 1921, combined with the effects of the foregoing period of inflation, which tended to affect the railway industry in its entirety most adversely, have not affected the C.P.R.'s strong financial position, or detracted from its position of pre-eminence as Canada's leading industrial enterprise. With a continuation of the improvement in economic conditions, and with continued favorable agricultural production, for both of which, there is every reason to hope, there is every prospect that the C.P.R. will continue to make progress in its task of getting railway operating revenues and expenses into the relationship which is desirable not only from the corporate viewpoint, but which, in the final analysis, is equally desirable from the viewpoint of Canadian industry and the Canadian public.

Jasper to Remain a Divisional Point.

The Board of Railway Commissioners issued order 33,402, March 3, as follows: Re application of Canadian National Rys., under sec. 179, for leave to close the divisional point at Jasper, Alta., and consolidate it with the existing terminal facilities at Lucerne, B.C.: Upon hearing the application of Lucerne, Sept. 12, 1922, the applicant company, citizens of Lucerne, and firemen of the applicant company being represented at the hearing, and what was alleged, the Board orders that the application to close the divisional point at Jasper, be refused; the divisional point to be consolidated at Jasper; the work to commence not later than April 1, 1923, and to be completed not later than Oct. 1, 1923; the financial loss, if any, involved by the removal of employes from Lucerne to Jasper to be paid by the applicant company; and in case of dispute as to such actual loss of money, the same to be settled by the Board.

Midland Grain Elevators.—Senator Bennett, Simcoe East, Ont., enquired in the Senate recently: "Are the two grain elevators at Midland, Ont., known as the Aberdeen and the Grand Trunk elevators, now under Canadian National Rys. ownership, and if not, do the Canadian National Rys. propose to buy both or either of them?" Senator Dandurand replied: "The Canadian National Rys. own two elevators at Midland, which are sometimes referred to by the names mentioned."

Immoral Literature on Canadian National Trains?—The Roman Catholic Commercial Travellers' Association, Quebec, is reported to have protested to Sir Henry Thornton that immoral literature is being sold by news agents on C.N. trains.

The Hudson Bay Railway Completion Problem.

The discussion which has been going on in the prairie provinces for some considerable time, culminated in the House of Commons on March 12, when Andrew Knox, Prince Albert, Sask., moved:—"That, in the opinion of this House, the Government of Canada give further consideration to the report of the Senate committee on the Hudson Bay Ry., with a view to safeguarding the investment of public moneys made in the construction of that portion of the work completed to date, and that the Government recognize the priority of this undertaking with reference to other transportation projects started subsequent to the Hudson Bay Ry." Mr. Knox said the matter had been before the people for the past 40 years, and had been discussed from every angle. The project had been investigated time and time again, and as a result of the various investigations, both of the old historic parties have endorsed it. Nothing had ever been brought forward to prove it is not feasible or not workable. Work on the railway was started in 1910, the present acting Minister of Railways turning the first sod. When the change of government came in 1911, the project was again the subject of investigation, with the result that the new government was convinced of its feasibility and the advisability of carrying it on. Work proceeded slowly up to 1918, when, without any apparent reason, except possibly that of necessity for economy, the work was stopped, and during the past four years or more nothing has been done. The railway is 424 miles long, from the Saskatchewan River at Pas, Man., to Hudson Bay; the grading has all been done, but there remain 92 miles upon which rails have not been laid. There is a fortnightly train service from Pas to mile 214. Up to the time work was stopped, about \$14,000,000 had been expended on the railway, and \$6,000,000 on the terminals at Port Nelson. The Deputy Minister of Railways advised the Senate committee which looked into the project in 1920, that it was estimated that \$2,500,000 more would complete the railway and terminals. The object in view is to have the railway completed and brought up to standard. There is no necessity to discuss the feasibility of the project, as that has been investigated very fully, the Senate committee of 1920 reporting that it is feasible and likely to be profitable. The motion asked that this project be given priority over other transportation projects started at a later date. This has no reference to certain branch lines, many of which are urgently needed, but more particularly to the projected Prince Albert-Paddock Wood line, and the Melfort northeasterly line. The Hudson Bay Ry. was intended to be built from the sale of certain western lands which were set apart for that purpose. Whether there would be sufficient to complete the road, he did not know, but sufficient had been realized up to the present to practically cover all the expenditures made. He had nothing to say against the development of the Vancouver route, but the prairie provinces require more outlets than they have. The strongest argument in favor of the Hudson Bay route, in preference to any other, is the short railway haul, which is necessarily the cheap haul. If the freight rates on the Hudson Bay line were the same per mile as they are on any other route, there would certainly be a great saving in

transporting freight. It is fully expected that there would be a higher insurance rate at the beginning, but the elimination of so much rail transportation would far more than offset this extra expense. The sentiment in the prairie provinces is all in favor of the completion of the line, as shown by the resolutions passed by the three legislatures, and by all kinds of public bodies there. In summing up, he said: "This project has been found feasible after repeated investigations, and nothing has ever transpired to prove it otherwise. The people of the prairies claim the completion of this road as their right and as a national enterprise. Money was provided for it by the sale of lands in the west especially set aside for that purpose. We believe there is no great opposition to the road, except possibly among a few doubting Thomases and those who may be directly interested. Conditions demand that if we can get a shorter and a cheaper route to the European markets we must take advantage of it, and this fact is all the more emphasized since the tariff barrier has been increased between us and the United States market. We believe that with an increase in the British preference, coupled with this shorter and cheaper route, much of the handicap imposed upon us by the United States tariff would disappear, and that a better, brighter day would dawn for the western provinces, and incidentally for the whole of Canada."

T. W. Bird, Nelson, in seconding the motion, reviewed the progress of development in the prairie provinces, and claimed that the completion of the railway would not only free the farmers from the isolation in which they are placed, but would bring about a still greater development in the future.

W. Duff, Lunenburg, N.S., said that he could not discuss the feasibility of the construction of the railway, as he did not know very much about it, but he considered that the navigation conditions between Port Nelson and Europe are such that it would not be a valuable route. He did not think that the project should be gone on with until Parliament was possessed of further information as to the navigation of Hudson Bay and Straits.

Other members who took part in the discussion were: R. Forke, Brandon, Man., leader of the Progressives; W. F. Maclean, South York, Ont.; C. C. Davis, North Battleford, Sask.; W. K. Baldwin, Stanstead, Que.; D. W. Warner, Strathcona, Alta.; J. Miller, Qu'Appelle, Sask.; C. W. Stewart, Humboldt, Sask.; M. N. Campbell, Mackenzie, Sask., most of whom gave a general support to the motion, but all expressed sympathy with the desire for better railway facilities.

Hon. G. P. Graham, acting Minister of Railways, reviewed the legislation of 1906 and 1908 with respect to a land grant for the construction of a railway from Manitoba to Hudson Bay, stating that there could be no question that there was in the mind of Parliament—at least the idea was expressed as fairly as it could be without putting the words in the statute—that certain lands might be sold and the money received from them as pre-emptions, be used to construct the Hudson Bay railway. Several suggestions had been made in connection with the matter which were worthy of consideration, in particular one for the completion of the line for 30 miles from

the present end of track, to the head of navigation on the Nelson River. He then said: "The situation is this: The Government has no idea of abandoning the Hudson Bay Ry., but we have to go slowly—perhaps I should not use that word after the addresses we have heard tonight—but we have to go carefully and with caution. The position of the second 118 miles at present is almost as if it had never been built. I believe—and I propose to make this recommendation—that we ought to proceed to put that second 118 miles in such shape that it could be operated, and to rescue some million dollars worth of material—I do not mean to take it out, but to rescue it—and put into workable shape, that 118 miles of line. Now you will ask why we wanted to take the rails out. Well, there was a report made by the board, prior to the coming of Sir Henry Thornton, suggesting that these 80 lb. rails might be taken out for the present and used for branch lines that were being hardly pressed for, but, on his arrival, Sir Henry Thornton made the suggestion that we had better have more investigation before we removed that material, because, to begin with, in order to get the line in condition to move the material over it, a good many thousand dollars would have to be expended; so that at present Sir Henry Thornton's advice is—and I have discussed it with him—that we proceed to expend an amount to begin the work of putting the 118 miles, which is now practically out of business, into respectable operating condition. To put it in first class condition would take a great deal of money, but I am going to ask my colleagues to allow me to bring down an item for the purpose of beginning the work at least of putting the 118 miles in condition, so that, along the line, where there are poles, nuts, ties and fish-plates and all that kind of thing, we can save all this material, level up and realign the rails, and straighten up the trestles and bridges that have become warped for lack of care for the last three or four years. Of course, that will take some time and some money, but when that is done we will be in position to discuss what is the next step to take. This will give a total length of track of 332 miles. I think the first duty of the Government to the country is to place the 118 miles in repair again. When that is completed we can decide what the next step will be. In the meantime, I assure the House that, so far as the Government is concerned, they have never suggested, so far as I have any knowledge, the abandonment of the Hudson Bay project."

Right Hon. A. Meighen, leader of the Opposition, said that the motion did not have the definiteness and meaningfulness that one would like. The first part asked the Government to consider a report of a Senate committee for the purpose of saving an investment in the Hudson Bay Ry. The Government, accepting that, would be just where it was before. The second part of the motion called upon the Government to give priority to this particular undertaking to those started subsequently. He favored the completion of the railway; the country had been committed to the project for the last 15 years, and it was a matter of good faith that the covenant be kept. The late Government did not feel that it could justify acceding to the pressure to con-

tinue building the line during its term of office, but the situation is rather different now—though he did not say that even yet the time had come when the capital necessary for the completion of the line, and the terminal facilities, and the harbor on the scale originally con-

templated, could be provided. It did seem to him, however, that the completion of the railway, and the harbor, on a less pretentious and less permanent scale, might be carried through so that the project could be tested. He supported the motion because, if it were nega-

tived, it would leave the Government free to adopt and enter upon any transportation project, leaving this particular project, to which the country had been committed for years, in abeyance indefinitely.

Mr. Knox having replied, the motion was agreed to.

Can Alberta Coal be Transported to Ontario Successfully?

M. J. Butler, C.M.G., LL.B., formerly Deputy Minister of Railways and Canals and Chairman of the Canadian Government Railways Management Board, now retired and living at Oakville, Ont., wrote a Toronto paper recently as follows:—"The problem of transportation of coal from the west to the east is surely so important that 'a plea for courageously attacking it,' in the words of President C. V. Corless, mining engineer, ought not to require an apology. The usual condemnation given out by traffic officers ought not to be considered. The freight rate is quoted on a basis of a certain class of rate in the freight schedule, and it is predicated on an experience had in handling odd car lots, instead of what might or could be done in treating such a special train load lot on the most economical possible basis.

"I venture to submit for consideration the following solution: Solid trains, from a central point, where train loads may be assembled from the mine or mines. A locomotive of the latest and most powerful type, capable of hauling over our transcontinental lines with 4-10th of 1% grades, 7,500 tons gross, a net tonnage of 5,000 tons; this may be increased in favorable weather. Coal cars of a capacity of 100 tons, 50 cars to the train, so that the length of the train over-all will be about 2,400 ft. Local distributing yards, with ample facilities for the quick and economical discharge of the train.

"The Virginian Ry. is doing much better than the above. 120-ton capacity cars are in use, 84 cars to the train, making 10,080 tons of coal per trip. Locomotives and vans are changed every 2nd Division, or as may work out best.

"From the Alberta mines to Winnipeg is about 975 miles. Allow earnings per train mile of \$5, a fairly generous rate, run the train back empty, and the cost will be $975 \times 2 \times \$5.00 = \$9,750$, or per ton on the basis of 5,000 tons at \$1.95. Using 10,000 tons train, the cost would be cut in half, or 97½¢ a ton of coal. The distance from the mines to Cochrane is 1,751 miles, so with the same allowance the cost per ton would be \$3.50.

"The mileage to Port Arthur is 1,413 and the cost per ton delivered would be \$2.82, from which point, with properly equipped shipping docks, it could be transported to all points on Lakes Erie and Huron, and Georgian Bay, and, after the Welland Canal is completed, to Lake Ontario points at a cost on the dock not exceeding \$2.50 additional a ton. So that a fair average transportation charge from Alberta mines to Port Colborne would not exceed, should not exceed, \$5.32. I understand coal may be bought loaded on the cars at the mines for \$2, hence total cost would be in the neighborhood of \$7.50 a ton. United States coal is now costing at Toronto, \$10.30 a short ton; local yard charges would be the same for all coal delivery to any consumer."

Senator J. D. Reid read the foregoing letter in the Senate recently, and said that Mr. Butler was the only man who agreed with him when he was Minister

of Railways and when he suggested that the Dominion Government should buy 5,000 cars and enough locomotives to haul them, half of the equipment to be handed over to the C.P.R. and the other half to the Canadian National Rys., with which to carry coal to central Canada from both Nova Scotia and the western provinces. His proposal was, not to charge the railways interest on the cost of this equipment, but to require them to haul the coal at cost and to keep the equipment in good repair. He estimated that the necessary equipment would cost between \$20,000,000 and \$25,000,000. No doubt the railways did not view the proposition with favor, because to carry coal at actual cost would produce a demand for correspondingly lower rates throughout the whole country.

Keen interest in the possibility of supplying eastern Canada with Alberta coal is evident in the west, as shown by a resolution passed by the Alberta Legislature on motion of Premier Greenfield, urging Dominion and provincial co-operation, and lower freight rates, to enable Alberta coal to be placed on the Ontario market at a price to compete with U.S. coal. The resolution was unanimously endorsed. J. L. Cote, former Minister of Mines, suggested that a trainload of Alberta coal should be sent east to demonstrate that it could be successfully and economically used in competition with the U.S. product, and urged that in developing a market only the best grade of coal be shipped, the standard to be maintained by grading at Winnipeg. Premier Greenfield is reported to have stated that consideration was being given to the possibility of waiving the provincial tax of 10c. a ton on coal shipped to eastern competitive markets.

Sir Henry Thornton, President, Canadian National Rys., gave evidence before the Senate fuel committee in Ottawa recently, and is reported to have stated that the prospects of bringing coal east from Alberta appear "fairly hopeful," but that railway rates must not be reduced unduly to permit this to be done. He is reported to have called attention to the fact that whatever is done for Alberta coal interests in the way of providing markets, would also have to be done for the Nova Scotia operators. He emphasized the desirability of having Canada supply her own fuel requirements, but also pointed out the Canadian National Rys.' financial condition and his primary duty to the public to remedy that condition.

As far as Canadian Railway and Marine World can ascertain, the possibilities claimed in Mr. Butler's letter are not likely to be converted into realities for some time to come, if ever. While his estimate of a train mile cost of \$5 from the western mines to the head of Lake Superior and return seems reasonable, and while his allowance of \$2.50 a ton to cover cost of movement by water from the head of the lakes to lower Ontario points is also reasonable, and even liberal, exception must be taken to his estimate of probable train tonnage,

and also as to the cost f.o.b. western mines of a coal suitable for both long distance carriage and for eastern consumption. The latest quotation available on lignite, which has a high moisture content, and which is universally transported in box cars and kept in storage under cover, is \$3.57 a ton f.o.b. mine, while that on coal suitable for locomotive use, in large lots, in \$5 a ton f.o.b. western mines. With the power now available, the heaviest trains that can be hauled from the western mine area to the head of the lakes average around 3,000 tons. It is possible that with the provision of articulated locomotives, or possibly decapods of the heaviest type, trains carrying 5,000 net tons could be operated eastbound over the route specified. The comparison with the Virginian Ry. operation loses most of its significance when it is remembered that that line is almost entirely a coal carrying one, with a very favorable grade from the mines to tidewater. The capital cost of the large locomotives, and high capacity cars, for the movement would be great, and the resulting interest charges would have to be reckoned, as would also the cost of an efficient transshipping plant at the head of Lake Superior. Costs incidental to the marshalling of cars would also have to be considered.

It would certainly be most advantageous if Canada could get along without the necessity of large coal importation, and every effort to increase the area of consumption for Canadian coal is therefore most worthy of consideration. The unfortunate fact of the matter, as concerns western coal, however, is that with U.S. coal holding the market at the head of Lake Superior and probably west to the Manitoba boundary, against western Canadian coal, the amount of decrease in western mine production cost, and the amount of decrease in transportation cost, necessary to enable the western coal to not only take the market away from U.S. coal at the head of Lake Superior and west of it, but to take the market away from U.S. coal in eastern Ontario, would have to be greater than now seems possible.

If the desire to be able to rely on Canada's own coal and to be independent of foreign production should be given prior consideration over the matter of costs alone, western coal could be brought east, by having the general public foot the bill, through the payment of additional taxation to compensate for greater Canadian National Rys. deficits; but if the proposition be regarded as a strictly economic one, it must be recognized that if the traffic movement proposed be made possible by unduly reduced railway rates, the loss occasioned will be no smaller owing to its being concealed.

C. A. Harwood, K.C., Solicitor, Central Region, Canadian National Rys., Montreal, writes: "I am enclosing my subscription for Canadian Railway and Marine World, which supplies me with very important material and information."

Self Propelled Cars on Steam Railways.

The Canadian National Rys. now have 11 self propelled cars, as follows: no. 15,800, formerly a gasoline electric car, operating between Winnipeg and Transcona, but now at the Niagara, St. Catharines & Toronto shops at St. Catharines, Ont., for conversion into a storage battery car; 15,801, storage battery car now operating between Toronto and Beaverton; 15,802, the larger of the two battery cars bought from Cambria & Indiana Rd., now being overhauled at St. Catharines, preparatory to being run between Bathurst and Campbellton, N.B.; 15,803, the other battery car bought from Cambria & Indiana Rd., now operating between Brockville and Westport, Ont.; 15,805, steam car which was operating between Trenton, Picton and Napanee, Ont., but not operating at the time of writing; 15,810, a small gasoline car, with Winton chassis and 6-cylinder engine, which was operating between Souris and Elmira, Prince Edward Island Ry., but which has been replaced by steam train service during the winter; 15,811, a small Ledoux, Jennings gasoline car, operating on the Stanley Branch, Maritime District; 15,812, Ledoux, Jennings gasoline car, operating between Victoria and Sooke, Vancouver Island; 15,813, Ledoux, Jennings gasoline car, also operating between Victoria and Sooke; 15,814, Service gasoline car operating between Trenton, Napanee and Picton, Ont., and 15,815, a Ledoux, Jennings gasoline car, similar to 15,814, acquired recently, and also operating between Trenton, Napanee and Picton.

In addition to the above, construction will soon be started at the Niagara, St. Catharines & Toronto shops of storage battery car 15,804, which will be very similar to car 15,801, which was described and illustrated in preceding numbers of Canadian Railway and Marine World. This car will be of all steel construction, about 60 ft. long, and with seating accommodation for about 60 passengers. It will be equipped with 260 A-12-H Edison batteries, and 4 General Electric 261-A motors. The trucks, to be supplied by Canadian Car & Foundry Co., will be of the ball bearing type. S.K.F. ball bearings will be used.

Car 15,800, which was heretofore of the gas electric type, is undergoing radical change in being converted into a storage battery car. Its dimensions were as follows:—

Length over couplers.....	58 ft. 11 in.
Length over end sills.....	53 ft. 5½ in.
Truck centers.....	40 ft. 7 in.
Width over all at eaves.....	10 ft. 8½ in.
Height, rail to top of roof.....	12 ft. 6 in.
Truck wheel base.....	6 ft.

As a gasoline electric car, it was equipped with a power plant, consisting of a G.E. gasoline engine, coupled with generator, the engine having 8 cylinders, and developing up to 175 h.p., and the dynamo being rated at 80 k.w. It had only 2 motors, the drive being to the leading truck axles. The motors were G.E. type 205B. The gasoline engine, generator and motors, are being taken out, and will be replaced by 250 Edison A-12-H storage batteries and four G.E. type G-261A ball bearing motors of 25 h.p. each. The car will be arranged for double end operation, with standard series parallel controller at each end, and the ends will be altered to form standard vestibules, with a compartment for the motorman, at each end. To provide for the addition of a rear vestibule, the sills will be extended at the back, and in addition,

two new members in the form of sill extensions will be put in to secure added strength. The car is of all steel construction, with 4 sills of channel section; to secure additional strength and rigidity 5 transverse members of truss construction will be put in between the bolsters.

As a gas-electric car, the weight was about 44 tons, but it is anticipated that when the conversion into a storage battery car is completed, it will be only 35 tons. A large saving in weight will be introduced by replacing the old engine and generator set with batteries, while the 4 new motors will have an aggregate weight much less than the 2 old style motors. The new ball bearing trucks will be lighter than the trucks heretofore under the car. The car body will be arranged to have a seating capacity of nearly 100, and the interior will be in one compartment only. When the conversion is completed, the car will be returned to Winnipeg, to its run between Winnipeg and Transcona, 7.1 miles, on which it had been making 7 round trips daily. It is felt that the conversion into a storage battery car will introduce a large saving, as maintenance expenses were very heavy with the old equipment, and also because there is an abundance of cheap electrical power available.

Battery car 15,802, the overhaul of which at St. Catharines, preparatory to it being placed on the Bathurst-Campbellton run, is about completed, will be equipped with 277 Edison A-12-H batteries, 4 Westinghouse V65-A3 ball bearing motors of 25 h.p. each, and Brill 69E ball bearing trucks. The seating in this car, which was described in a preceding issue of Canadian Railway and Marine World, will be rearranged somewhat, and a smoking compartment and lavatory will be installed.

Battery car 15,803, now operating between Brockville and Westport, Ont., was overhauled at St. Catharines and turned out with 110 MVX Ironclad Exide batteries, 4 Westinghouse V65-A3 motors and Brill type 69E ball bearing trucks. The car is making 107 miles daily, the current being obtained from the hydro system at Brockville, and the batteries being charged during the night.

The gasoline car ordered by the G.T.R. from the National Steel Car Corporation will be numbered 15,816. It was described and illustrated in Canadian Railway and Marine World for February, pg. 49.

Hearing re Air Brakes for Self Propelled Cars.

Canadian Railway and Marine World for March contained a brief account of a hearing by the Board of Railway Commissioners on Feb. 7, at which railways were required to show cause why self-propelled cars should not be equipped with air brakes. At the hearing, C. E. Brooks, Chief of Motive Power, Canadian National Rys., in his evidence to show that hand brakes are safe and satisfactory on the smaller cars, said: "We know that, travelling at 30 m.p.h. under normal track conditions, we can stop, and have stopped, these cars in anywhere from 325 to 600 ft. We know there are cases where these cars have been tested on a descent of 1½%, the car weighing 20,000 lb. and with approximately 8,000 to 10,000 lb. weight of passengers, and the car has been stopped in between 600 and 700 ft., when the initial application was made at 30 m.p.h. We

feel that under ordinary maximum speed conditions, we can expect, even under unusual rail conditions, to stop within 600 ft., or in approximately 25 seconds."

A. L. Currie, Superintendent, Quebec, Montreal & Southern Ry., which has been operating a Ledoux, Jennings gasoline car, said: "The Q. M. & S. objects to an order requiring air brakes, especially for cars weighing less than 35,000 lbs., and less than 37 ft. long, for the following reasons: 1. Cost of car would be increased by approximately \$1,100. 2. Weight would be increased by 1,000 to 1,200 lb., or over 5%, and thus increase gasoline consumption and cost of operation. 3. It would require drivers with knowledge of air brakes and appurtenances, who would have to be paid higher. 4. Additional car failures would be caused by additional strain put on drive shaft and electric starter. 5. While automobile engine has been developed until it is now reasonably free from failure, introduction of air compressing apparatus would complicate it and introduce causes of failure. 6. The great need of these small cars is to furnish service on branch lines, where experts cannot be provided, except at needless expense, to look after air equipment. 7. Cars being terminused away from repair shops, any air brake defect would cause great expense and delay. 8. Power of car would be detracted from and repairs to driving gear would be difficult. 9. It would be difficult to maintain adjustment of air brakes so as to maintain proper braking power. 10. Maintenance costs would be greatly increased. 11. In general, the use of air brakes would inject into the operation an appliance difficult to maintain in proper shape, and expensive as to operation and maintenance. 12. Even if air brakes were installed, hand brakes would still be necessary. 13. The driver of the present Q. M. & S. car, not equipped with air brakes, states he would just as soon have hand brakes. 14. The hand brakes will stop the car more effectively than air brakes. The power from the hand brakes goes on gradually and is not so apt as the air brakes to skid the wheels and so lessen the braking power. 15. The hand brake is positive in action, whereas something might occur to the mechanism of an air brake which would render it inoperative when required. 16. From tests made, it is felt that with hand brakes, the car may be stopped more quickly than with air brakes.

W. A. Newman, Mechanical Engineer, C.P.R., in speaking of the Ledoux, Jennings gasoline car the C.P.R. is operating on its Lasalle Loop Subdivision, said: "We have made a number of tests with the hand brake . . . it was snowing on both days and the weather was cold. Sand was used at all stops. The tests on the level were taken at a maximum speed, 36 m.p.h. We stopped in 397 ft., or 13 sec. from the time the signal was given. At 7 m.p.h. we had two tests; in one we stopped in 23 ft. and in the other 19 ft., the time being 2½ and 3 sec. I have one test classified as an ordinary stop running at 35 m.p.h.; we stopped in 13 sec. in 468 ft. We had an emergency stop going at 36 m.p.h. and stopped in 9 sec. in 359 ft. We demonstrated to our own satisfaction that with our hand brakes we are accomplishing everything that can be accomplished with an air brake."

From the evidence quoted above it appears that the hand brake is a satis-

factory device for the lighter self propelled cars. Canadian National Rys. cars not equipped with air brake are nos. 15,810; 15,811; 15,812, and 15,813, all of which are of light construction.

Railway Machinery Orders.

The Canadian National Rys. have given the following orders recently for Western Lines locomotive and car shops:—1 Bertram 26 in. b.g. crank shaper, m. 38 complete; 1 Bertram 26 in. back geared crank shaper; 1 electro and impact recorder; 1 Savage impact register; 1 Variety rip and cross cut saw; 1 band saw, 36 x 2 in. wheel; 1 single cylinder surface planer, cap. 30 x 10, with all attachments; 2 C.P. angle wood boring machines; 1 3/2 Berwick rivet heating electric furnace; 1 Yale & Towne model 20, electric chain block; 1 C.P. angle wood boring machine; 1 no. 2 Little David motor hoist; 1 no. 304 B. Oster pipe threading machine, with motor; 1 C.M.C. 20 x 10 quick change gear d.b. gear engine lathe; 1 safety cylinder, 24 in., complete with carbon steel knives; 1 New Williams 14 ft. geared sensitive feed drill, complete; 1 24 in. Ingersoll milling cutting grinder, complete with attachments and motor; 1 25 in. Bertram h.d. vertical drilling machine, complete; 1 no. 19 perfect round base, col. type, 18 in. sensitive drill, complete; 1 Rapid H.S. metal saw, cap. up to 6 x 6; 1 Rae 18 x 8 engine lathe, d.b. geared, i.c. gear, complete with 4 jaw ind. chuck; 1 Bertram 36 in. heavy vertical drilling machine complete; 1 Bertram 25 in. heavy vertical drilling machine complete; 1 Lincoln 200 amp. portable welding machine; 1 Springfield bench straightening press; 1 set attachments Warner & Swasey turret lathe; 1 C.M.C. 20 x 12 quick change gear engine lathe, complete; 1 Bertram 26 in. back geared crank shaper complete; 1 Bertram 36 in. heavy vertical drilling machine, complete; 1 Bertram 25 in. heavy vertical drilling machine, complete; 1 no. 10 Racine Imp. H.S. metal cutting machine; 1 20 in. x 8 ft. lathe, C.M.C., complete with 18-4 jaw ind. chuck and motor; 1 C.M.C. 16 in. x 8 ft. lathe, complete with 3 h.p. motor; 1 20 C.B. & F. back geared power drill, complete with attachments and motors; 1 Ryerson combined shear and hot punching machine, complete with motor; 1 standard car wheel boring tool, no. 12, 3 3/4 to 5 1/4 in.; 1 heavy duty planer, model C.X., complete with attachments and motor; 1 1 in. Niagara oil meter, complete; 1 Mumford 12 in. cylinder, jolt squeezing, split pattern machine, equipped for 14 x 16 in.; 1 Simpson bucket loader for no. 2 mixer; 1 rail handling electric magnet, complete; 1 Marshalltown supertine shear, no. 18, hand power; 1 combined lever punch and slitting shear, no. 73 B. & B.; 1 no. 2 C. Mitts & Merrill chopping hog, complete; 1 Ingersoll-Rand F.L. 2 air compressor, complete; 1 no. 59 stock and dies, 1/4 to 1 1/2; 1 set taps, 1/4 to 1 1/4; 1 Southwark 100-ton triple power type spring banding press, complete; 1 Bertram 26 in. back geared crank shaper, no. 38, complete; 1 no. 4 T.L. Dexter globe valve reseating machine, complete 1/4 to 4 in.; 1 104 Reed machine vise, 4 to 6 in.; 1 no. 59 complete set W.S.S. std. stocks and dies, 1/4 to 1 1/4; 3 sets Armstrong stock and dies; 1 18 x 8 ft. lathe, 18 in. or more swing, complete with 4 jaw ind. chuck; 1 Ashton wheel press recording gauge, 200-ton on 9 in. ram; 10 Ellison combined diff. draft gauges, 0 to 1 1/2; 1 2 in. Worthington tube boiler feed meter, complete; 2 C.P.

angle wood boring machines; 1 Yale & Towne model 20 imp. electric chain hoist; 1 C.F.M., 12 x 7 x 12 full brass fitted washout pump; 1 Bertram 26 in. back geared crank shaper, M. 38; 1 Lancashire size J.F. 3.5 h.p. motor; 1 Westinghouse 25 h.p. motor; 1 Lancashire size M.F. 10 h.p. motor; 18 acetylene cutting equipments. A number of jacks, pneumatic tools and Yale & Towne chain blocks were also ordered.

The orders were divided among: John Bertram & Sons Co.; Canada Machinery Corporation; A. R. Williams Machinery Co.; Williams & Wilson; Rudel-Belnap Co.; Alfred Herbert Machinery Co.; Canadian Fairbanks-Morse Co.; Peacock Bros.; Cowan & Co.; The Holden Co.; Canadian Car & Foundry Co.; Canadian Ingersoll-Rand Co.; Independent Pneumatic Tool Co.; Perfect Tool Co.; Lincoln Electric Co.; Northern Electric Co.; Lancashire Dynamo & Motor Co.; Canadian Westinghouse Co.; A. O. Norton Co.; Templeton, Kenley Co.; Canadian Liquid Air Co.

Ticket Thefts from the C.P.R.

Mark Portigal, proprietor of a confectionery store on Higgins Ave., Winnipeg, was arrested Feb. 22, charged with being involved in an organized theft of railway tickets from the C.P.R., and their sale through storekeepers and others. When brought before the Police Magistrate on Feb. 23, a charge of illegally selling tickets was laid against him under the Railway Act, and a second charge of receiving stolen property. He pleaded not guilty, and was remanded for a week, bail of \$1,000 being accepted. On March 1 he was re-arrested, charged with conspiring with A. A. Andrews, and others, names unknown, to steal from the C.P.R. railway tickets or money derived therefrom, and to defraud the company of the tickets. He was remanded until March 6, but was released on finding additional bail for \$1,000 more. On March 2, Philip Greenberg, a Main St. storekeeper, was arrested, being charged with complicity in the above mentioned charges, and specifically mentioning a sale of a ticket from Winnipeg to Toronto. The hearing was postponed, Greenberg being admitted to bail for \$500.

The case against Portigal was gone on with March 6, when the C.P.R. counsel stated that the investigations, which had been under way for some months, showed that a very extensive system of stealing railway tickets was going on, and that agents for the sale of the tickets were scattered all over the west. It was impossible to reach any conclusion as to the amount of money lost to the company. Evidence was given showing that Portigal had no authority to sell tickets; that detectives had, after tracing the illegal sale of tickets to him, bought tickets at less than the regular fares from him. A. A. Andrews, a sleeping car porter, who was given the court's protection, stated that, under an arrangement with him, he held tickets he collected, gave them to Portigal, receiving therefor 25% of their value, and on their sale a further percentage. Portigal was remanded until the following day. When the case was called on March 7, the C.P.R. counsel told the court that witnesses who had given evidence had been threatened with violence by relatives of the accused person, or others interested, and intimated that if it was continued, the Crown would be asked to interfere. Portigal was then committed for trial at the next assizes

on two charges of conspiracy, and two of receiving stolen goods, and was admitted to bail for \$3,000. The charge of illegally selling tickets entered under the provisions of the Railway Act, was held over pending enquiry as to the court's competency to hear it.

A Winnipeg press dispatch of March 25 said that Portigal was tried before Mr. Justice Galt at the assizes there, found guilty on two counts of the indictment, and sentenced to three years imprisonment.

Traffic Orders by Board of Railway Commissioners.

Rates On Newsprint Paper from Fort Frances.

33,407, March 3.—Re application of Minnesota & Ontario Paper Co., International Falls, Minn., for an order declaring that the rates on newsprint paper from Fort Frances, Ont., to stations in Western Canada, in Northern Pacific Tariff, C.R.C. no. 541, effective Jan. 9, 1922, should have been effective Dec. 1, 1921, under the provisions of general order 350; and for a direction to the Northern Pacific Ry. to make reparation on shipments between the said dates: Upon hearing the application at Winnipeg, Oct. 2, 1922, the applicant, the Northern Pacific and the Canadian Pacific Rys. being represented, and what was alleged; and upon the Chief Traffic Officer's report and recommendation, the Board declares that the rates published in the said tariff, should have been made effective Dec. 1, 1921, under the provisions of general order 350, and the Board orders that the Northern Pacific Ry. and other interested railway companies be authorized to make refund on shipments made between Dec. 1, 1921, and Jan. 9, 1922, of the difference between the freight charges based on the higher rates assessed and the rates which were published to become effective Jan. 9, 1922.

Amendment to Milling in Transit Arrangement.

33,413, March 6.—Re application of Toronto Board of Trade; Cannors Seeds Ltd., Wellington; Squier & Son, Lindsay; H. Coulthorp & Son, Port Hope, and Hume & Son, Port Hope, Ontario, for an order suspending Supplement 12 to the Canadian National Ry. Co.'s (Grand Trunk) Tariff, C.R.C. no. E-4411, which provides for an amendment confining the milling in transit arrangement, to apply on shipments of wheat, oats, barley, rye, corn and buckwheat: Upon reading the submissions filed in support of the applications, and on behalf of the railway company, the Board orders that the said supplement be suspended as from March 2, 1923, with leave to the railway company to make formal application to the Board to cancel the milling in transit arrangement on peas.

Claims For Express Goods Lost or Damaged at Flag Stations.

33,471, March 23.—Re complaint of P. Burns & Co., Prince Albert, Sask., against Canadian National Express Co., with respect to claims for goods lost or damaged at flag stations: Upon hearing the complaint at Calgary, Alta., Sept. 28, 1922, the complainant, the Canadian National Express Co., the Dominion Express Co. and the Canadian Pacific and Canadian National Railways being represented, and what was alleged; and upon the report and recommendation of its Chief Traffic Officer, the Board orders that the complaint be dismissed.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canada Steamship Lines Ltd.—A. A. AULD, heretofore Superintendent, Northern Navigation Co., Sarnia, Ont., has been appointed Manager, New Ontario Dock, C. S. L. Ltd., Sault Ste. Marie, Ont.

Canadian Government Merchant Marine.—R. T. ARMSTRONG, heretofore in Customs and Immigration Department, C.G.M.M., Montreal, has been appointed Travelling Agent. Headquarters, Montreal.

W. A. CUNNINGHAM, heretofore General Freight Agent, has been appointed Traffic Manager. Office, Montreal.

A. DAVIDSON has been appointed Assistant Freight Agent at Vancouver, B.C.

C. W. TOURTELLOTTE, heretofore chief clerk to General Agent, Vancouver, B.C., has been appointed Assistant to Pacific Coast Manager, Vancouver, B.C.

Canadian National Rys.—JOHN CARROLL, heretofore dock agent, Seattle, Wash., is reported to have been appointed dock agent, Victoria, B.C., vice James McArthur, transferred to Vancouver, B.C.

J. J. CROWE, heretofore Signal Supervisor, Edmonton, Alta., has been appointed Signal Supervisor, Saskatoon, Sask., vice R. C. Gardiner, transferred to Edmonton, Alta.

R. C. GARDINER, heretofore Signal Supervisor, Saskatoon, Sask., has been appointed Signal Supervisor, Edmonton, Alta., vice J. J. Crowe, transferred to Saskatoon, Sask.

C. E. HERBERT, heretofore Assistant Foreman, tender shop, has been appointed Assistant Foreman, erecting shop, St. Malo, Que., vice J. D. Ouellette, who has been transferred to machinist there.

C. H. KNOWLES, heretofore machinist, has been appointed Assistant Foreman, tender shop, St. Malo, Que., vice C. E. Herbert, transferred to erecting shop.

C. A. LONG, heretofore Assistant Foreman, erecting shop, has been appointed Assistant Foreman, machine shop, Moncton, N.B., vice F. G. Williams, transferred to draftsman.

J. S. McADAM, heretofore acting Trainmaster, Ottawa Division, Eastern Lines, G.T.R., Ottawa, Ont., has been appointed Trainmaster, Ottawa Division, Montreal District, Central Region, C.N.R. Office, Ottawa.

JAMES McARTHUR, heretofore dock agent, C.N.R. and Grand Trunk Pacific Coast Steamship Co., Victoria, B.C., is reported to have been appointed dock manager, C.N.R., Vancouver, B.C.

W. E. WEEGAR, heretofore acting Superintendent, Barrie Division, Ontario Lines, G.T.R., Allandale, Ont., has been appointed Superintendent, Barrie Division, Southwestern District, Central Region, C.N.R. P. J. Lynch, Superintendent, Barrie Division, Ontario Lines, G.T.R., died recently. Office, Allandale, Ont.

Other appointments made in connection with the co-ordination of the Canadian National Rys., consequent on the amalgamation of the G.T.R., are given on an earlier page of this issue, under "Completing the Canadian National Rys. Co-ordination."

Canadian Pacific Ry.—F. W. ALEXANDER, heretofore District Engineer, Alberta District, Calgary, has been appointed District Engineer, British Columbia District, vice H. Rindal, transferred to Calgary, Alta. Office, Vancouver.

W. G. ANNABLE, heretofore Assistant Passenger Traffic Manager, Ocean Traffic, has been appointed Assistant Steamship Passenger Manager. Office, Montreal.

WM. BALLANTYNE, heretofore General Passenger Agent, Ocean Traffic, has been appointed Steamship General Passenger Agent. Office, Montreal.

J. DONALDSON, heretofore Night Locomotive Foreman, Field, B.C., has been appointed Night Locomotive Foreman, Revelstoke, B.C., vice W. H. Moles, appointed Locomotive Foreman, Weyburn, Sask.

S. P. FRASER has been appointed Locomotive Foreman, North Bend, B.C., vice A. E. Bennets, deceased.

W. H. LEE, heretofore Locomotive Foreman, Weyburn, Sask., has been appointed Night Locomotive Foreman, Field, B.C., vice J. Donaldson, transferred to Revelstoke, B.C.

H. M. MacCALLUM, heretofore Assistant General Passenger Agent, Ocean Traffic, has been appointed Assistant Steamship General Passenger Agent. Office, Montreal.

WALTER MAUGHAN, heretofore Assistant to General Passenger Traffic Manager, Montreal, has been appointed Steamship Passenger Manager. Office, Montreal.

W. H. MOLES, heretofore Night Locomotive Foreman, Revelstoke, B.C., has been appointed Locomotive Foreman, Weyburn, Sask., vice W. H. Lee, appointed Night Locomotive Foreman, Field, B.C.

G. F. NICHOLS has been appointed District Freight Agent, C.P.R., Minneapolis, St. Paul & Sault Ste. Marie Ry., Duluth, South Shore & Atlantic Ry. and Spokane International Ry. Office, 1025 W.O.W. Building, Omaha, Neb.

H. RINDAL, heretofore District Engineer, British Columbia District, Vancouver, B.C., has been appointed District Engineer, Alberta District, vice F. W. Alexander, transferred to Vancouver. Office, Calgary, Alta.

E. STONE, heretofore on special work, General Passenger Agent's office, Montreal, has been appointed Assistant to Steamship General Passenger Agent. Office, Montreal.

Delaware & Hudson Co.—F. P. GUTELIUS, heretofore Vice President, Operating and Traffic Departments, Albany, N.Y., and formerly General Manager, Canadian Government Rys., Moncton, N.B., has been appointed Resident Vice President, D. & H. Co., Montreal, vice C. S. Sims, resigned.

J. T. LOREE, heretofore General Manager, Operating Department, has been appointed Vice President and General Manager, in charge of Operating and Traffic Departments. Office, Albany, N.Y.

Northern Navigation Co.—J. E. ADAMS, heretofore chief steward, s.s. Hamonic, has been appointed Chief Commissary, vice J. H. Morrison, promoted. Office, Sarnia, Ont.

J. H. MORRISON, heretofore Chief Commissary, has been appointed Superintendent, vice A. A. Auld, resigned, to enter Canada Steamship Lines service. Office, Sarnia, Ont.

Northern Pacific Ry.—W. H. JAYNES, formerly chief clerk to Assistant General Freight Agent, Portland, Ore., who was appointed Assistant General Agent, Vancouver, B.C., Jan. 15, has been appointed General Agent, Freight Department, there, vice H. Swinford, who retired March 31.

C.P.R. Trans-Canada Train.—We are officially advised that the C.P.R.'s trans-continental passenger train, the Trans-Canada, which will resume operation on May 20, will have its running time cut by one hour in each direction. Westbound, the train will start in two parts, one from Montreal and the other from Toronto, and are consolidated at Sudbury, Ont., for further westbound movement. Eastbound, the train starting from Vancouver will be split at Sudbury, one part proceeding to Montreal and the other to Toronto. The Montreal leaving time will be 5 p.m. and Toronto 9 p.m., as formerly, but the arriving time at Vancouver will be 9 on the fourth morning, instead of 10. Eastbound, the leaving time at Vancouver will be 4 p.m. instead of 3 p.m., with the arriving times at Toronto and Montreal the same as formerly, viz., 9 a.m. and 2 p.m., respectively. It is possible that an additional 20 minutes will be taken off the time of the eastbound train to Toronto, to meet an operating condition, making the arriving time 8.40 a.m. instead of 9 a.m.

Caraquet Railway Purchase.—The following questions were asked in the House of Commons recently by W. F. Garland, Carleton, Ont., the answers being given by the acting Minister of Railways, Mr. Graham:—Q. "What price was paid for the Caraquet Railway?" A. "\$200,000, and the cancellation of indebtedness of the Caraquet & Gulf Shore Ry. to the Canadian Government Rys., amounting to \$96,399.60." Q. "Who were the shareholders of the company at the time of the purchase, and what were their respective interests?" A. "The Government bought the physical property, not the stock, though 24,444 shares of the par value of \$50 each, in the names of E. B. Stockdale and C. S. Hamilton, in trust, and by them endorsed in blank, were, together with certain debentures, turned over to the Government, Jan. 13, 1921, by the Trusts and Guarantee Co., Toronto, trustees for bondholders, as security for an advance of \$175,000 on purchase price, pending settlement of differences regarding title."

Canadian National Railways Hotels.—The House of Commons passed a motion, by G. G. Coote, Macleod, Alta., recently, for a return showing: How many hotels are owned by the Canadian National Rys.? What was the cost of construction of each of them? What is the present value of equipment of each? How much fire insurance is carried on each hotel and equipment, and in what companies? Are all these hotels being operated by the railways? What was the revenue of each of these hotels in each of the last three fiscal years? What was the expenditure in connection with each of these hotels in each of the last three fiscal years? In regard to each of these hotels operated by the railways, in each of the last three fiscal years, what was the net profit or loss in connection with the operation, including all charges such as insurance, interest on investment, and allowance for depreciation on building and equipment?

Mainly About Railway People Throughout Canada.

James Coleman, who has been appointed General Superintendent, Car Equipment, Central Region, Canadian National Rys., Toronto, was born at Port Huron, Mich., and started work with the G.T.R. as a car department apprentice in 1873. He worked at Port Huron until 1889, when he was appointed foreman at Chicago, remaining in that position until 1899, when he was appointed Master Car Builder, Central Vermont Ry., at St. Albans, Vt. In 1905 he entered the Canada Car Co.'s service at Montreal, taking charge of the manufacturing department, and in 1906 returned to his former position with the Central Vermont Ry. From Jan. 1908 to May 1, 1920, he was Superintendent, Car Department, G.T.R., Montreal; May 1, 1920, to Feb. 28, 1923, Assistant to General Superintendent of Motive Power and Car Departments, G.T.R., Montreal. He is chairman of the American Railway Association, Mechanical Division.

W. S. Cookson, who has been appointed Manager, Tariff and Ticket Bureau, Canadian National Rys., Montreal, was born at Port Jervis, Orange County, N.Y., June 12, 1871, and entered railway service July 15, 1886, since when he has been, to Nov. 1, 1886, clerk in Car Record Office, Erie Rd., Jersey City; Nov. 1, 1886, to Dec. 1, 1899, clerk in General Roadmaster's office, Chicago & Western Indiana Rd., Chicago, Ill. (the G.T.R. is part owner of this railway); Dec. 1, 1899, to May 1, 1909, chief clerk, Assistant General Passenger Agent's office, G.T.R., Chicago, Ill.; May 1, 1909, to June 1, 1910, Assistant General Passenger Agent, G.T.R., Chicago, Ill.; June 1, 1910, to Nov. 13, 1915, Assistant General Passenger Agent, G.T.R., Montreal; Nov. 13, 1915, to March 9, 1923, General Passenger Agent, G.T.R., Montreal.

Arthur Crumpton, Valuation Engineer, Central Region, Canadian National Rys., addressed the Engineering Institute of Canada's Toronto branch, on March 8, on the federal valuation of United States railways.

W. R. Devenish, General Superintendent, Northern Ontario District, Canadian National Rys., left Toronto, March 22, for a fortnight's holiday, owing to slight illness.

W. E. Duperow, who has been appointed Passenger Traffic Manager, Central Region, Canadian National Rys., except lines west of St. Clair and Detroit Rivers, Toronto, was born at Stratford, Ont., Sept. 4, 1872, and entered transportation service Nov. 3, 1893, since when he has been, to Oct. 15, 1894, in G.T.R. service at Seaforth, Ont.; Oct. 15, 1894, to June 1, 1896, ticket clerk, G.T.R., London, Ont.; June 1, 1896, to July 11, 1898, ticket clerk, G.T.R., Toronto; July 11, 1898, to Aug. 1, 1899, theatrical and excursion clerk, General Passenger Agent's office, G.T.R., Toronto; Aug. 1, 1899, to April 19, 1902, chief clerk, same office; April 19, 1902, to Feb. 15, 1907, General Manager, Secretary and Treasurer, Huntsville, Lake of Bays and Lake Simcoe Navigation Co., Huntsville, Ont.; Feb. 15, 1907, to June 1, 1910, Travelling Passenger Agent, G.T.R., Toronto; June 1, 1910, to April 15, 1912, City Passenger and Ticket Agent, G.T.R., and Grand Trunk Pacific Ry., Victoria, B.C.; Apr. 15, 1912, to Mar. 1, 1914, General Agent, Passenger Department, G.T.R., G.T.P.R., and Grand

Trunk Pacific Coast Steamship Co., Vancouver, B.C.; Mar. 1, 1914, to Sept. 1, 1917, Assistant General Passenger Agent G.T.P.R., Winnipeg; Sept. 1, 1917, to March 9, 1923, Assistant General Passenger Agent, Canadian National Rys., Winnipeg.

R. L. Fairbairn, who has been appointed Manager, Passenger Service Bureau, Canadian National Rys., Montreal, was born at Stillwater, Minn., Nov. 24, 1880, his parentage being Canadian. He entered railway service in July 1899, since when he has been, to Mar. 1904, in office of Auditor of Passenger Receipts, G.N.R.; Mar. 1904 to May 1, 1906, in Passenger Traffic Manager's office, same road; May 1 to Dec. 1, 1906, assistant rate clerk, Passenger Department, same road; Dec. 1, 1906, to June 1, 1908, chief rate clerk, Passenger Department, same road; June 15, 1908, to Oct. 1910, chief clerk, Passenger Department, Canadian Northern Ry., Winnipeg; Oct. 1910 to Apr. 1911, District Passenger Agent, C.N.R., Saskatoon, Sask.; Apr. 1911 to May 1912, Assistant General Passenger Agent, lines east of Port Arthur, C.N.R., Toronto; May 1912 to Oct. 4, 1920, General Passenger Agent, Eastern Lines, Canadian Northern Ry., and latterly Canadian National Rys., Toronto; Oct. 4, 1920, to March 9, 1923, Assistant Passenger Traffic Manager, Eastern Lines, Canadian National Rys., Toronto.

F. B. Goedike, who has been appointed Engineer, York Tp., Ont., is a graduate of Queen's University, and, prior to graduation, served as transit man on the construction of the Canadian Northern Ry. Ottawa-Hawkesbury line. He was subsequently engaged on plane table surveys for the C.P.R. irrigation works at Calgary, Alta., and was Assistant Engineer on the construction of 22 miles of main canal for that company. In 1912 he conducted a hydrographic survey of Toronto Bay, for the Toronto Harbor Commissioners. In 1915 he acted as locating and estimating engineer for a commission investigating possible radial railway entrances to Toronto, and later became Assistant Engineer, Toronto Harbor Commission. In 1918 he joined the firm of Barber & Wynne-Roberts, consulting engineers, Toronto, and did designing and other work for the Hydro Electric Power Commission of Ontario, and later carried out some waterworks extensions for Toronto, and at the time of his present appointment was Resident Engineer on tunnel sewer construction for Hamilton, Ont.

Casimir Stanislaus Gzowski, who has been appointed Chief Engineer, Construction Department, Canadian National Rys., Montreal, was born at Toronto, May 1, 1876, and entered transportation service in April, 1897. While attending Toronto University he was engaged during the summers on survey work, in 1897 being with the C.P.R. on survey and construction on its Crowsnest Branch and subsequently in various positions in charge of location and construction work for the C.P.R. and other roads. In 1905 he became a partner in Macdonell, Gzowski & Co., Vancouver, B.C., and later with a branch in Spokane, Wash., under the name of G. O. Foss & Co., as contractors and engineers, building the C.P.R. Nicola Branch, changes of line on C.P.R. at Rogers Pass, near Nelson, B.C., and on the Esquimalt & Nanaimo Rys., Vancouver Island. The firm also built

parts of the Milwaukee extension westward, Great Northern Ry. changes of lines and parts of branches in Canada and the U.S.; C.P.R. spiral tunnels at Field, B.C., and considerable other railway work in Canada and the U.S., until its dissolution in 1914, after which he did valuation work for the Dominion commission of enquiry into railways and also acted as special engineer for the Canadian Northern Ry. on the government arbitration of its stock valuation. From June, 1919, to Sept. 1920, he was Special Engineer to Vice President, Operation, Maintenance and Construction, Canadian National Rys., Toronto; Sept. 1920 to Feb. 19, 1923, Assistant to Vice President of Construction, Canadian National Rys., Toronto.

D. B. Hanna, ex-President, and A. J. Mitchell, ex-Vice President, Finance and Accounting, Canadian National Rys., expect to leave Toronto, about the middle of April, to spend several weeks in Great Britain.

H. T. Hazen, who has been appointed Assistant Chief Engineer, Central Region, Canadian National Rys., Toronto, was born at Truro, N.S., Mar. 14, 1870, and commenced his railway career on survey work on the Hants Central Ry., Truro, N.S., since when he has been, to 1893, rodman and Resident Engineer on location and construction, Ottawa & Gatineau Ry.; 1893 to 1894, Locating Engineer, Restigouche & Victoria Colonization Ry.; 1894, Locating Engineer, New Brunswick Trunk Line Ry.; 1894 to 1895, on topographical survey of Riviere du Lievre; 1895 to 1896, Resident Engineer, St. Lawrence & Adirondack Ry.; 1896 to 1897, Resident Engineer, Cobourg, Northumberland & Pacific Ry.; 1897 to 1898, Resident Engineer, Montreal & Ottawa short line, C.P.R.; 1898 to 1899, Resident Engineer, C.P.R. double-tracking; 1899, Assistant Engineer, Great Northern Ry. of Canada; 1899 to 1900, Assistant Engineer, Ottawa & Gatineau Ry.; 1900 to 1904, Assistant Engineer, Grand Trunk Ry.; 1904, in charge of exploration surveys, Midway & Vernon Ry.; 1904, Superintendent and Engineer for contractor, Ragged Rapids dam on Severn River; Jan. 1, 1905, to Oct., 1909, with Canadian Northern Ry. as Division Engineer, location Parry Sound to Sudbury, Division Engineer of construction, Parry Sound to French River and Key Branch, and Engineer in charge Garneau to Quebec, St. Jerome-Montfort Branch and St. Jacques Branch; Oct., 1909, he was appointed Chief Engineer, Duluth, Winnipeg & Pacific Ry.; and from July, 1911, to Aug., 1915, also District Engineer, Canadian Northern Ontario Ry.; Aug. 1915, to Oct. 1917, Chief Engineer, Toronto Suburban Ry., Toronto; Oct. 1917 to Oct. 1920, Engineer Maintenance of Way, Eastern Lines, Canadian Northern Ry., Toronto; Oct. 1920 to Feb. 28, 1923, acting Chief Engineer, and latterly Chief Engineer, Eastern Lines, Canadian Northern Ry., Toronto.

Robert Alexander Cecil Henry, who has been appointed Director of the Bureau of Economics, Canadian National Rys., Montreal, was born there Sept. 20, 1884, and graduated from McGill University with the degrees of B.A. and B.Sc. He has been, from June 1905 to Oct. 1906, chairman, rodman and leveller, C.P.R.; Apr. 1907 to Oct. 1908, Assistant Engineer, C.P.R.; June to Dec. 1909,

Assistant Engineer of Water Power Investigation, Interior Department, Ottawa; Dec. 1909 to Sept. 1910, private work; May to Nov. 1911, Superintendent of Concrete Construction, Jago & Co., Montreal; May 1912 to Dec. 1913, Inspecting Engineer, Railways and Canals Department, at North Bay and Ottawa, Ont.; Dec. 1913 to March 1920, Assistant Engineer, Railways and Canals Department; March 1920 to June 1922, engineer in charge of G.T.R. arbitration, for Railways and Canals Department; June 1922 to March 1, 1923, Special Engineer, Railways and Canals Department.

Cecil Wray Johnston, who has been appointed Passenger Traffic Manager, Canadian National Rys., Montreal, was born at Actonvale, Que., July 27, 1879, and entered G.T.R. service Sept. 1, 1897, since when he has been, to Mar. 8, 1900, operator and agent at Richmond, Que.; Berlin, Ont.; Island Pond, Vt., and Sherbrooke, Que., consecutively; Mar. 9, 1900, to June 21, 1901, clerk to Auditor of Freight Accounts, Montreal; June 22, 1901, to June 25, 1902, ticket clerk, Montreal; June 26, 1902, to Dec. 31, 1904, Travelling Passenger Agent, Montreal; Jan. 1, 1905, to Feb. 15, 1907, excursion clerk, General Passenger Agent's office, Montreal; Feb. 16, 1907, to May 10, 1909, Travelling Passenger Agent, Montreal; May 11, 1909, to Jan. 31, 1912, chief clerk, General Passenger Agent's office, Grand Trunk Pacific Ry., Winnipeg; Feb. 1, 1912, to May 25, 1913, chief clerk, Assistant Passenger Traffic Manager's office, G.T.R., Montreal; May 26, 1913, to Feb. 15, 1914, chief clerk, Passenger Traffic Manager's office, Montreal; Feb. 15, 1914, to Nov. 13, 1915, Assistant to Passenger Traffic Manager, Montreal; Nov. 13, 1915, to March 5, 1923, Assistant General Passenger Agent, G.T.R., Montreal.

Commissioner Calvin Lawrence, of the Board of Railway Commissioners, Ottawa, formerly of St. Thomas, Ont., and his daughter-in-law, Mrs. Ruby Lawrence, of St. Thomas, have given \$1,000 for the memorial hospital to be built at St. Thomas, the donation to be used to furnish a ward in memory of the Commissioner's son, Clarence Victor, who died overseas, while serving with the Canadian Air Force.

J. G. Rutherford, C.M.G., one of the members of the Board of Railway Commissioners for Canada, who went to the Pacific coast some weeks ago, became so ill that he had to go to a hospital, and he is now with relatives in Vancouver, convalescing. He is not expected back in Ottawa until probably the end of April.

John S. Thomson, of Jersey City, who was at one time junior secretary to the late Sir Joseph Hickson, a former Grand Trunk Ry. General Manager, is a candidate for appointment as United States Minister to China. He was at one time Manager, at Hong Kong, of the Pacific Mail & Toyo Kisen Kaisha Steamship Co.

Sir Henry Thornton, President, Canadian National Rys., had to be away from his office, in Ottawa, for about 10 days prior to March 22, owing to illness. On March 24 he spoke at a dinner in Kingston, Ont., in celebration of the local board of trade's 50th anniversary. He has been elected an American Railway Association director.

W. Walker, chief clerk, C.P.R., Sudbury, Ont., was seriously injured, and his wife lost her life, March 12, in a fire in the building in which their apartment was situated.

Exemption of Government Railways, Etc., from Sales Tax.

Sir Henry Drayton asked in the House of Commons, recently, what, if any, rulings, orders or regulations, had been made or adopted which exempt, or declare to be exempt, from the operations of the sales tax; purchases when made by certain individuals, organizations, or companies, or what, if any, rebates or remissions have been made or authorized to be made in respect of taxes payable under the sales tax?

The Minister of Customs and Excise, Mr. Bureau, in reply, gave particulars of the ruling made on Dec. 2, 1922, exempting certain railways owned by the Government from payment of sales tax, which was published in Canadian Railway and Marine World for March, and also gave particulars of the following remissions authorized by order in council:—

July 27, 1922.—On importations, and sale, or deliveries, of material entering into the construction of the new international bridge for the Michigan Central Ry., to be built at Niagara Falls.

July 27, 1922.—Remission of sales tax on launch being built by Vancouver Shipyards Co., for the Church and Manse Board of the Presbyterian Church in Canada for missionary work.

Sir Henry Drayton brought the matter up a second time and said:—"By a return tabled on Feb. 28, it appears that goods purchased by the Canadian Government Railway Group, 'not for resale,' were, on Dec. 2, 1922, ruled exempt from sales tax on or after May 24, 1922, such railway group comprising in all some 14 different railways. The ruling was retroactive and exempted purchases on or after May 24, 1922. What was the amount of purchases made by said railway group between May 24 and Dec. 2, 1922, in respect of which the ruling was made, and what was the amount of the sales tax payable thereon? What is the estimated amount of revenue lost by the department under this ruling? What was the former practice under which the sales tax was collected on purchases by railways irrespective of ownership changed owing to alleged insufficiency in the statute or on other legal grounds or as a matter of Government policy? If, owing to alleged insufficiency of the statute or other legal grounds, is it the Government's intention to bring down further and remedial legislation?"

The Minister of Customs, Mr. Bureau, replied:—"I should like to be allowed to answer the hon. gentleman by informing him that since the reorganization of the Canadian National Rys., sales tax is being collected from, or paid by, all railways. I hope that will satisfy my hon. friend."

In order to obtain more definite information in regard to this matter, Canadian Railway and Marine World communicated with the Customs and Excise Department, and has received a reply, which reads in part as follows:—"On account of the changed status of the Canadian Government railway group, which took place on Jan. 20 last, the Department has ruled that, with effect from that date, the exemption enjoyed prior to that date by certain lines of the Canadian National Rys. would become non-effective, and that goods purchased by the Canadian National Rys. for all lines are taxable. This ruling does not alter the exemption in respect of goods purchased by the Timiskaming & North-

ern Ontario Ry. and the Hydro Electric Power Commission of Ontario, when such goods are for their own use."

It would appear from the above that the Minister was misinformed when he said that the "sales tax is being collected from, or paid by, all railways."

National Defence Department's Railway Committee.—Authority has been granted for the formation of a railway committee, to advise the Minister on all matters concerning the operation of railways and their subsidiary services, so far as pertains to the requirements of the Canadian naval, military and air forces, and on such other matters concerning the defence of Canada, in which the operation of railways may be involved in peace and in war. The committee will be composed of the Quartermaster General, and the Director of Supplies & Transport, National Defence Department; a Railways & Canals Department representative, a Canadian National Rys. representative, and a C.P.R. representative. The Quartermaster General will be chairman of the committee and the Director of Supplies & Transport will act as secretary.

The American Society of Mechanical Engineers will hold its spring meeting in Montreal, the railway session being fixed for May 29. H. R. Naylor, Assistant Works Manager, Angus Shops, C.P.R., Montreal, will read a paper on construction of steel frame box cars by the jig method, which will describe the methods employed at Angus shops, and detail the jig plan of car construction, which is a definite step forward in car building. C. E. Brooks, Chief of Motive Power, Canadian National Rys., will read a paper on railway motor cars, giving experience with, and qualifications of, various designs of these cars, of which the C.N.R. has a considerable number.

G.T.R. Arbitration Counsel.—The Minister of Justice stated in the House of Commons recently, in answer to A. J. Benoit, St. John's and Iberville, Que., that the minister who engaged the various counsel in connection with the G.T.R. arbitration during 1919, 1920 and 1921, was the Right Hon. C. J. Doherty, then Minister of Justice, who was then, and still is, receiving an annual statutory pension of \$4,666.66, as a superannuated judge of the Quebec Superior Court.

Canadian National Rys.' Hotels for Maritime Provinces.—Senator McDonald, Shediac, N.B., moved in the Senate recently for the appointment of a special committee to enquire into and report upon the extension of the C.N.R. hotel system throughout Canada, and especially in New Brunswick, Nova Scotia and Prince Edward Island. After a brief discussion, in which Senator J. D. Reid, formerly Minister of Railways, took part, the motion was withdrawn.

Fidelity Insurance, Canadian National Rys.—Acting Minister of Railways Graham stated in the House of Commons recently, in answer to D. M. Kennedy, Edmonton West, Alta., that the London Guarantee & Accident Co., the Guarantee Company of North America, and Lloyd's, London, carry the C.N.R. fidelity insurance, the approximate amount of the schedule being \$10,000,000, and the annual cost of premium approximately \$16,000.

Loop Tunnel Relining.—The C.P.R. has given a contract, for renewing the timber lining of the loop tunnel, at mile 4.8, Fernie Subdivision, B.C., to Nickson Construction Co., Vancouver.

Canadian Railway AND Marine World

Founded in 1895 by Acton Burrows.

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transporta-
tion Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager.

Assistant Editors, John Keir, Donald F. Keir and
Edwin Winfield.

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Cir-
culations, Canadian National Newspapers and
Periodicals Association, Canadian Press Associa-
tion.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, (except Australia), and to Mexico, \$2 a
year. Extra postage to United States, 50c a year;
to other foreign countries, except Mexico, \$1.50
a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.

ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

TORONTO, CANADA, APRIL, 1923.

The Misuse of the Name Mogul.

Toronto daily newspapers stated recently that when the C.P.R. express train from Vancouver was approaching Bolton, Ont., on the day previous, en route to Toronto, and travelling about 35 miles an hour, the steel tire of one of the locomotive driving wheels splintered, that the locomotive man's attention was drawn to it by a loud, rasping noise, and that he was slowing down, when the "big mogul" suddenly left the rails, but by applying the emergency brakes speedily, he succeeded in preventing the cars from being derailed. It was also stated that an examination of the damaged tire showed that it had splintered in many places, there not being 2 ft. of the entire tire left intact. The same matter was sent from Toronto as a press dispatch, and published in a number of other daily newspapers.

Canadian Railway and Marine World is not calling attention to the report referred to primarily because it is inaccurate, for the reason that when a railway sees in an average daily newspaper an account of some railway occurrence, he naturally expects it to be characterized by inaccuracy more than anything else. The inaccuracy in this particular case lies in the fact that it was not a driving wheel tire which splintered, but a tender truck wheel tire, and also in the fact that the locomotive was not derailed, the only derailment taking place being that of the pair of tender truck wheels which included the wheel with the broken tire, those wheels dropping alongside the rails when the train was about stopped.

However, the thing to which we desire to call attention particularly is the use of the word "mogul" to describe a locomotive. It seems that newspaper reporters, moving picture producers and a large proportion of the general public cannot mention a locomotive without referring to it as "a mogul." The locomotive concerned in the slight mishap mentioned above was a Pacific type passenger locomotive. It is indeed a strange thing, when mention of a mogul type locomotive makes a railway man think of some wheezing old-timer, equipped with D valves, using saturated steam, and operating on a logging road away back in the woods, that the general public should continue to entertain the idea that the degree to which locomotive development has been perfected can best be expressed by simply stating in awe-inspiring tones that the heavy trains of to-day are pulled by giant, powerful "moguls."

Unfair Government Discrimination.

T. E. Ross, Simcoe North, Ont., asked in the House of Commons recently:—"1. Is the Great Northwestern Telegraph Co. virtually owned or controlled by the Dominion Government? 2. If so, are all officials of the Government instructed to send and receive, if possible, all messages by this company? 3. If such instructions have not been issued, what is the reason?" The acting Minister of Railways, Mr. Graham, replied to question 1: "Yes," and added, "Although up to the present no general instructions have been issued, the Dominion Government officials are expected, wherever practicable, to make use of the Canadian National Telegraphs for public business."

Mr. Ross then asked the following question:—"Are all Dominion Government officials instructed to send and receive, where possible, all parcels by Canadian National Express, thus swell-

ing the Government's receipts? If not, why?" Mr. Graham replied: "Although, up to the present, no general instructions have been issued, Federal officials are expected, when making shipments by express, to make use of the Canadian National Express, where it is practicable to do so."

Mr. Graham's answer shows that the C.P.R. Telegraphs and Dominion Express Co.'s services are only to be used by Dominion Government officials when it cannot be avoided, and not to any competitive points; in other words, that the C.P.R. Co., which, as President Beatty stated a short time ago, is the largest Canadian taxpayer, is to be discriminated against. This is a striking illustration of the difficulty of securing fair play by the Government, as between a Government-owned public utility and a privately-owned one.

The National Transcontinental Ry. and the Maritime Provinces.

The Moncton Times, in discussing the division of the Canadian National Ry. into regions, complains that the greater part of the National Transcontinental Ry., which, it says, was "supposed to have been built especially to serve maritime interests, is to be administered from Toronto." This is the first time we have ever heard it contended that the National Transcontinental was built especially to serve the maritime provinces. When it was projected, it was certainly argued by Sir Wilfred Laurier that it was to be built in the interest of the whole Dominion. The desire of the late C. M. Hays, then General Manager of the G.T.R., to build another line north of Lake Superior, starting at North Bay, Ont., and ending at the Pacific coast, was, of course, most ill advised and unfortunate, finally resulting in the G.T.R. Co's practical bankruptcy. The proposition was made worse by demands of Quebec politicians to have the line extended eastward to Quebec City, followed by maritime provinces members' demands for a further extension to Moncton, N.B. The late Hon. A. G. Blair, then Minister of Railways, opposed the whole project, and resigned from the Government rather than have anything to do with it. The building of the line from Cochrane to Quebec was a bad enough blunder. Its extension from Quebec to Moncton was a worse one, if not a political crime. As Canadian Railway and Marine World frequently contended, the Intercolonial Ry. should have been double tracked from Montreal to Halifax, and had that been done, many millions would have been saved in the cost of original construction, and many more in annual maintenance and operating charges. The contention that the National Transcontinental was built especially to serve maritime interests, is absurd and will not hold water.

"Heads C.P.R. Steamships."

Some misconception has been caused by announcements in various daily papers, of Walter Maughan's appointment as Steamship Passenger Manager, C.P.R., the majority of which have published matter under the heading, "Heads C.P.R. Steamships," following an expression used, evidently, in error, in information sent out by the company's press bureau. The head of the Canadian Pacific Steamships Ltd., is the Chairman, G. M. Bosworth. The C.P.R. is Traffic Agent for Canadian Pacific Steamships

Ltd., and the steamships' freight and passenger business therefore comes under W. R. MacInnes, Vice President, Traffic Department, the passenger portion being again under C. E. E. Ussher, General Passenger Traffic Manager, who issued the circular announcing Mr. Maughan's appointment, which was approved by Mr. MacInnes. Mr. Maughan's promotion is a well merited one, and his new position a very important one, but it is misleading to say that he "heads C.P.R. steamships."

Legal Appointments, Canadian National Railways.

The St. Jean Baptiste Society's St. Stanislas, Que., section has, according to a press report, passed a resolution protesting that no French-Canadian has been included in the Canadian National Rys.' recent appointments, especially in the Legal Department, which, the resolution maintains, does not need the services of railway experts, and might have been equipped with one or more capable French-Canadian lawyers. The recent appointments in the Legal Department have not been filled by new men, but are really merely transfers, and, as far as Canadian Railway and Marine World is aware, all the positions have been filled by persons theretofore in either Canadian National or Grand Trunk service. It is certainly advisable that appointees to a railway's legal department should have a knowledge of railway law.

A Business Car Boom.

By ordering a business car to be provided, for taking, from Moncton to Montreal and return, the maritime provinces delegates, who are to meet him on April 19 to discuss the Canadian National Rys. Atlantic Region western termini, Sir Henry Thornton has certainly overwhelmed them with courtesy, but he will probably not want it to be considered as a precedent. There will doubtless always be districts which think they have grievances, and more often wants, and their representatives will desire to meet the C.N.R.'s chief executive. If they were all to be conveyed to and fro in business cars, the number of the latter would have to be considerably increased.

Valuable Farm Work by C.P.R.

The C.P.R.'s National Resources Department has added to the many improved services it has rendered farmers, by demonstrating, at Strathmore, Alta., the feasibility of a trench silo system for providing winter fodder for cattle, instead of erecting silo buildings. It is believed that the trench system will materially reduce the cost of cattle raising, and save approximately 20% in production costs of dairy products.

W. N. Tilley's Employment re G.T.R. Arbitration.—The Minister of Justice stated in the House of Commons recently, in answer to A. J. Benoit, St. John's and Iherville, Que., that W. N. Tilley, K.C., was employed by the Dominion Government, in connection with the Grand Trunk arbitration, on or about Dec. 1, 1919, his services in that connection ceasing in July, 1922. It was not specified how many hours a day he devoted to the Government's service, when he was drawing fees amounting to \$100 and \$400 a day, respectively.

The Purchases and Stores Division, American Railway Association, will hold its annual meeting at Hotel Sherman, Chicago, May 15-17.

Southern New England Railway Construction Resumption Proposed.

The Southern New England Railway Co. was incorporated in Massachusetts and Rhode Island, U.S.A., to build a line from Palmer, Mass., on the Central Vermont Ry., to tidewater at Providence, R.I. The stock is controlled by the Central Vermont Ry., which is owned by the G.T.R. Co., now part of the Canadian National Rys. Construction of the line was started in 1910, but was suspended owing to financial and other reasons in 1912. The charter was kept alive, the last extension being to Dec. 31. The Massachusetts and Rhode Island Legislatures are being asked to extend the time for the completion of the line for two years.

J. S. Murdock, Vice President S.N.E. Ry., Providence, R.I., is reported to have said recently in a letter to the Rhode Island Legislature, that the G.T.R. management had definitely decided to proceed with the completion of the extension to Providence. The grading was very nearly completed when work was suspended in 1912.

Canadian National Rys. officials are reported to have had a conference with the New Brunswick Premier on March 22, respecting the extension of the Southern New England Ry., at which it was stated that the object of the construction is to avoid the possible loss of \$12,000,000 already invested, and \$5,000,000 in penalties for non-completion. When completed, the line will be a valuable feeder for the rest of the system. The cost of terminals for export traffic would be very great, but the management does not contemplate making any expenditure thereon.

The question of the extension came up in the Senate at Ottawa on March 22, on a notice of motion covering five questions, by Senator Tanner, Pictou, N.S., who said the matter had received very wide consideration in the maritime provinces. There was a desire to know how far its construction will, or will not, affect the interests of maritime province ports particularly, and Canadian ports generally, and how far, if at all, it will affect Canadian trade passing through Canadian channels. It was a matter of common knowledge that at times a large part of the winter freight, grain particularly, goes to Portland, Me., instead of to St. John, N.B., or Halifax, N.S. Halifax practically receives none of that freight; St. John receives a little, but Portland is the outlet for the largest share. The maritime provinces had reason to complain in regard to railway transportation, export of Canadian produce and the import of goods for Canada. When the National Transcontinental-Grand Trunk Pacific Ry. was under consideration, great stress was laid on the statement that their construction was proposed, not only to develop the inland provinces, but for securing the export trade for Canadian ports. The maritime provinces had waited 20 years for the fulfilment of these promises, but they were still waiting, and were compelled to watch a large proportion of Canadian export trade being carried to Portland. They were very anxious to know if there was any intention of building a railway which will take still more Canadian business into the U.S. for export through U.S. ports.

Senator Dandurand, Government leader, replied that when the National Trans-

continental Ry. was built, he claimed that within 50 years it would be shown that the then government policy was based upon sound principles. The Southern New England Ry. belongs to the G.T.R. System, which expended considerable money upon its construction towards Providence. Steps must be taken to conserve the rights of Canada in that line. The matter had been seriously considered by the Canadian National Rys. directors and the Government. He was not in a position to say what conclusions had been arrived at, but the Senator could be assured that the matter was being looked into with a single eye to the interest and welfare of Canada's finances.

The Vacant Railways and Canals Portfolio.

The following discussion occurred in the House of Commons recently:—

Mr. Meighen, leader of the Opposition: "Will the Prime Minister be good enough to tell us now when we may expect an end of the present makeshift arrangement as to the Department of Railways and Canals?"

Hon. Mr. Graham: "Order."

Mr. Mackenzie King: "The present arrangement is a very good one."

Mr. Meighen: "I think the House has a right to a better answer than that. I used the term 'makeshift' because it was the name the Prime Minister himself applied a few years ago to a similar arrangement. I think the Prime Minister owes it to the House to say what his intentions are as to time in this regard—how long he expects it will be before there will be a regularly constituted minister in charge of this department. The House is in session and the need of a regularly constituted minister is much greater than if the House were not in session."

Mr. Mackenzie King: "I do not think the House has been embarrassed in any way, in view of the arrangement at the present time. My hon. friend will appreciate that, in the matter of filling a cabinet vacancy, the Prime Minister must be allowed sufficient time, if he thinks necessary in the public interest. I do not think it is necessary to fill the vacancy at present."

Mr. Meighen: "I know the Prime Minister must be allowed sufficient time, but all I am asking is, not that he be not allowed the time, but that he advise the House as nearly as he can what time he considers necessary."

Mr. Mackenzie King: "I am not in a position to give my hon. friend a definite answer."

Toronto New Union Station.—Sir Edward Kemp asked in the Senate recently: "When will the new union station in Toronto be used by the Canadian National Rys?" Senator Dandurand replied: "The Canadian National Rys. represent only a partial interest in the station. Before it is opened for service, a number of related questions will require to be considered and decided by all parties interested. It is hoped that negotiations to that end will be shortly inaugurated by the Canadian National Rys.' management."

Hon. W. H. Taft's Fee.—The acting Minister of Railways, Mr. Graham, stated in the House of Commons recently, that Mr. Taft was paid \$75,000, in connection with the arbitration as to the value of G.T.R. securities, the payment being made by G.T.R. shareholders, and not by the G.T.R. company.

Steam Railway Operating Statistics for Year Ended Dec. 31, 1921

Name of Railway	First track mileage	Passenger earnings	Freight and switching earnings	Gross earnings from operations	Maintenance of way and structures	Maintenance of equipment	Traffic and transportation expenses, etc.	General expenses	Net operating earnings

\$35,427,685

In the table given above, the column headed "First track mileage" includes the first track of main line, branches and spur lines, represented by the respective companies' capital stock, the lines of proprietary companies, the lines operated under lease, and the lines operated under contract, but not lines operated under trackage rights, the mileages of which are included in those for the respective owning companies.

There were 28 companies operating under trackage rights over 1,111.54 miles of other companies' tracks, the principal being: Canadian Northern, 163.82 miles; Canadian Pacific, 93.90; Grand Trunk

Pacific, 128.88; Midland Ry. of Manitoba, 69.88; Pere Marquette, 137.93; Vancouver, Victoria & Eastern, 54.95; Wabash, which does not own any line in Canada, 245.40. In addition to the 39,771.16 miles of first track operated, there were 2,628.72 miles of second track, owned by the following companies:

	Miles
Canada Southern	242.53
Canadian Government	118.42
Canadian Northern	29.63
Canadian Pacific	1,446.30
Detroit River Tunnel	2.72
Grand Trunk	723.21
Grand Trunk Pacific	25.97
Montreal & Atlantic	6.50
Quebec Ry., Light & Power Co.	9.50

Sydney & Louisburg	1.00
Timiskaming & N. Ontario	1.70
Toronto, Hamilton & Buffalo	14.07
Vancouver, Victoria & Eastern	7.12

The figures in the column headed "Gross earnings from operation," include passenger and freight earnings, as well as miscellaneous earnings, the latter not being shown separately; the next four columns give the principal operating expenses, classified under their various headings, and the last gives the net earnings or net loss. The figures in the latter column are ascertained by deducting the totals of the four columns referred to, plus certain other figures referred

to below, from the figures in the gross earnings column. These additional figures cover the cost of water transportation, in which four companies are interested to the amount of \$1,710,103, and miscellaneous expenses connected with operation, amounting to \$6,034,416, distributed among 15 different companies. The column headed "Transportation for investment, Cr.," also has to be taken into account in ascertaining the total operating expenses. This affects 13 companies as follows:

Algoma Eastern	\$	63.25
Alberta & Great Waterways.....		36,038.44
Canada Southern		158.06
Canadian Northern	1,607,066.41	
Central Vermont		568.96
Grand Trunk		17,974.09
Grand Trunk Pacific.....		380,477.04
Ottawa & New York.....		22.00
Pacific Great Eastern.....		69,834.33
Pere Marquette		301.29
Temiscouata		450.85
Vancouver, Victoria & Eastern.....		8.96
Wabash		1,276.24

Total \$2,114,239.92

The following companies have either not reported, or are not operating their railways: Inverness Ry. & Coal Co.; Lake Huron & Northern Ontario Ry.

The Detroit River Tunnel, operated by the Michigan Central Rd., which controls the Canada Southern Ry.; the International Bridge, and the St. Clair Tunnel owned by the G.T.R.; and the Van Buren Bridge, are of an international character and are reported on in the following table, together with the Pullman Co.:

	Total Revenue	Total Operating Expenses	Total Operating Revenue
Detroit River Tunnel Co.	\$1,059,874.90		\$1,059,874.90
Int. Bridge Co.	409,509.59	\$144,144.58	265,365.01
Pullman Co.	1,001,077.00	1,026,722.31	25,642.31
St. Clair Tunnel Co.	309,584.88	246,486.47	63,098.41
Van Buren Bridge Co.	15,369.37	2,123.23	13,246.14
Total	\$2,795,415.74	\$1,419,476.59	\$1,401,584.46
			25,645.31
			\$1,375,939.15

Freight Car Locations on Canadian Railways.

The Railway Association of Canada has issued a report on location of freight cars on Canadian railways on March 1, based on returns from the following railways: Algoma Central & Hudson Bay; Canadian National, including Grand Trunk Pacific; Canadian Pacific; Dominion Atlantic; Edmonton, Dunvegan & British Columbia; Grand Trunk; Kettle Valley; Napierville Jct.; Quebec Central; Quebec, Montreal & Southern; Timiskaming & Northern Ontario; Temiscouata; Toronto, Hamilton & Buffalo; Wabash, in Canada; Central Vermont, in Canada; Michigan Central, in Canada; Pere Marquette, in Canada, as follows: Number of cars owned, 220,254; home cars on Canadian foreign lines, 20,578; home cars on U.S. lines, 62,492; home cars on home roads, 137,184; Canadian owned foreign cars on home lines, 18,001; U.S. owned foreign cars on home lines, 32,591; total cars on lines, 187,776; per cent. on lines to total owned, 85.2; deficiency on lines to total owned, 32,478; home cars in bad order, 10,545; foreign cars in bad order, 568; total cars in bad order, 11,113; per cent. in bad order, 5.9; privately owned U.S. cars on lines, 2,502; privately owned Canadian cars on lines, 913.

Birthdays of Transportation Men in April.

Many happy returns of the day to:—
F. G. Adams, Assistant General Freight Agent, Canadian National Rys., Winnipeg, born at St. John's, Nfld., April 6, 1878.

W. H. Ardley, ex Comptroller, G.T.R., and Grand Trunk Pacific Ry., Montreal, born at London, Eng., April 24, 1858.

Jas. Black, Freight Claim Agent, C. P. R., Vancouver, B.C., born near Seaford, Ont., April 19, 1858.

C. G. Bowker, General Manager, Central Region, Canadian National Rys., Toronto, born at Medford, N.J., April 21, 1871.

G. C. Briggs, Architect, Western Lines Canadian National Rys., Winnipeg, born at Cockermouth, Eng., April 23, 1886.

Major F. D. Burpee, Manager and Director, Ottawa Electric Ry., and President, Canadian Electric Railway Association, Ottawa, Ont., born there April 25, 1876.

J. R. Caswell, Division Engineer, Sudbury Division, Ontario District, C.P.R., Sudbury, Ont., born at Coldwater, Ont., April 13, 1892.

G. Cobb, Superintendent, Western Division, Reid Newfoundland Co., Bishop's Falls, Nfld., born at Coupar Angus, Scotland, April 21, 1885.

A. V. Collins, Travelling Auditor, Canada Steamship Lines Ltd., Toronto, born at Island Pond, Vt., April 21, 1868.

G. E. Cowie, General Freight Agent, United Kingdom Traffic, Canadian National Rys., London, Eng., born at Iowa City, Iowa, April 30, 1883.

J. P. Doherty, Export Freight Agent, Canadian Government Merchant Marine Ltd., Montreal, born at Portland, Me., April 8, 1889.

L. A. W. Doherty, Freight Traffic Manager, Canada Steamship Lines Ltd., Montreal, born at Toronto, April 10, 1878.

W. A. Duff, Engineer of Standards, Canadian National Rys., Toronto, born at Hamilton, Ont., April 20, 1877.

Lieut.-Col. F. A. Gascoigne, D.S.O., Secretary - Treasurer, Canadian Pacific Steamships Ltd., Montreal, born at Gosport, Hants, Eng., April 2, 1866.

J. Murray Gibbon, General Publicity Agent, C.P.R., Montreal, born at Udwella, Ceylon, April 12, 1875.

V. A. Harshaw, Manager, Fredericton & Grand Lake Coal & Ry. Co., and New Brunswick Coal & Ry., Fredericton, N.B., born at Mono, Ont., April 26, 1865.

L. M. Hatfield, Assistant Marine Superintendent, Canadian Government Merchant Marine Ltd., Montreal, born at Yarmouth, N.S., April 4, 1880.

E. J. Hilliard, Division Freight Agent, Canadian National Rys., Ottawa, Ont., born at Montreal, April 14, 1870.

John Hulbert, Representative, Royal Mail Steam Packet Co., Halifax, N.S., born in London, England, April 2, 1879.

J. H. Johnston, formerly Stores Department, G.T.R., Montreal, now at Barrie, Ont., born at Uxbridge, Ont., April 22, 1866.

A. A. Larocque, President, Sincennes-McNaughton Line Ltd., Montreal, born at Henryville, Que., April 30, 1865.

G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, North Bay, Ont., born at Renfrew, Ont., April 15, 1871.

J. A. Macgregor, Manager, Edmonton, Dunvegan & British Columbia Ry., Edmonton, Alta., born at Dufftown, Scotland, April 5, 1873.

G. P. MacLaren, Engineer, Maintenance of Way, Central Region, Canadian

National Rys., Toronto, born at London, Ont., April 4, 1878.

Paul J. Myler, President, Canadian Westinghouse Co. Ltd., Hamilton, Ont., born at Pittsburgh, Pa., April 24, 1869.

J. H. Norton, Assistant General Freight Agent, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Shaftesbury, Eng., April 21, 1884.

G. D. Perry, Vice President and General Manager, Canadian National Telegraphs, Toronto, born at Whitby, Ont., April 19, 1858.

R. A. Pyne, Superintendent of Motive Power and Car Department, Western Lines, C.P.R., Winnipeg, born at Toronto, April 10, 1874.

R. E. Richmond, Assistant City Ticket Agent, Canadian National Rys., Toronto, born at Uxbridge, Ont., April 5, 1888.

Lieut. R. S. Richardson, Superintendent, Canadian National Rys., Fort William, Ont., born at Napanee, Ont., April 9, 1865.

E. W. Smith, Superintendent; Sleeping, Dining and Parlor Cars and Railway Restaurants, Canadian National Rys., Toronto, born at North Bridge, Mass., April 21, 1869.

J. J. Sullivan, Roadmaster, C.P.R., Lauder, Man., born at Fishers, N. Y., April 29, 1866.

G. M. Thomas, Commercial Agent, Canadian National Rys., Windsor, Ont., born at Dundas, Ont., April 21, 1876.

C. H. Towle, Assistant Superintendent, Smiths Falls Division, Quebec District, C.P.R., Smiths Falls, Ont., born at Enfield, Me., April 13, 1878.

W. Woollatt, Vice President and General Manager, Essex Terminal Ry., Walkerville, Ont., born at Weedon, Hertfordshire, Eng., April 2, 1855.

Railway Earnings.

Canadian National Railways.

Following are total operating revenues, total operating expenses, and net operating revenues or deficits, for the Canadian Northern Ry. System (steam lines only), Grand Trunk Pacific Ry., and Canadian Government Rys., the last including the Intercolonial Ry., Prince Edward Island Ry., and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government:—

	Revenue.	Expenses.	Net.	Decrease.
Jan.	\$9,550,296	\$10,706,673	\$1,156,377	\$1,066,785
Incr'se	\$1,339,895	\$ 273,110		
Decr'se			\$1,066,785	

Approximate gross earnings for February, \$7,758,241, and for three weeks ended March 21, \$5,941,522, against \$7,733,660 for February, and \$6,410,247 for three weeks ended March 21, 1922.

Grand Trunk Railway.

Following are total operating revenues, total operating expenses, and net operating earnings, or deficits, of the whole system, for 1923 and 1922:—

	Revenue.	Expenses.	Net.	Increase.
Jan.	\$8,623,348	\$7,937,775	\$ 685,573	\$ 89,768

Incr'se \$1,283,743 \$1,193,975 \$ 89,768

Approximate gross earnings for February, \$7,924,775, against \$7,171,690 for February, 1922.

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1923, compared with those for 1922. The discrepancies between these figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimalt & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World:—

	Gross.	Expenses.	Net.	Increase.
Jan.	\$13,148,914	\$12,428,888	\$ 720,026	\$ 236,549

Incr'se \$ 1,810,939 \$ 1,574,390 \$ 236,549

Approximate gross earnings for February, \$10,737,000, and for three weeks ended March 21, \$8,866,000, against \$10,923,000 for January, and \$9,247,000 for three weeks ended March 21, 1922.

Orders by the Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a complete record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

33,300. Jan. 19.—Declaring that for the present, Canadian National Rys. crossing north of Lyn station, Ont., is protected to Board's satisfaction, provided gasoline operated cars equipped with hand brakes only shall be operated over crossing at speed not exceeding 10 miles an hour.

33,301. Jan. 18.—Approving agreement between Bell Telephone Co. and Plummer, Aberdeen & Galbraith Rural Telephone Association, Algoma District, Ont.

33,302. Jan. 19.—Approving plan showing standard timber overhead crossing of C.P.R. designed to carry a 15-ton motor truck.

33,303. Jan. 15.—Directing that all switching movements over G.T.R. at Preston, Ont., be flagged.

33,304. Jan. 19.—Extending to May 1, time within which G.T.R. may build siding for Carroll Bros., Sherston, Ont.

33,305. Jan. 22.—Authorizing Ontario Public Highways Department to divert Bath Road, Collins Bay, Ont., across G.T.R.

33,306. Jan. 22.—Dismissing application of residents of St. Telephore, Que., for order directing Glengarry & Stormont Ry. to provide station and 5-car siding at St. Telephore.

33,307. Jan. 16.—Authorizing Canadian National Rys. to build across C.P.R. and across the Mattawin River, near Rowan, Ont.

33,308. Jan. 20.—Ordering C.P.R. to build road diversion and overhead bridge on road allowance, east of Sec. 15, Tp. 9, Range 17, west 3rd Meridian, Sask.

33,309. Jan. 22.—Authorizing Canadian Northern Ry. to make highway crossing over its tracks between Secs. 26 and 27, Tp. 50, Range 9, Vegreville Subdivision, Alta.

33,310. Jan. 22.—Authorizing Richmond Tp., B.C., to make highway over Vancouver & Lulu Island Ry. (B.C. Electric Ry.), at intersection of Secs. 25, 26, 35 and 36, Block N.

33,311. Jan. 19.—Declaring that general order 252, Oct. 26, 1918, prescribed interswitching rates for freight not exceeding 4 miles, which when added to the line carriers' rates to or from the interchange point, fixed the legal maximum joint rates in respect of the traffic covered by the order. This order is given fully on another page of this issue.

33,312. Jan. 24.—Authorizing Canadian Northern Ry. to connect with G.T.R. near Lampman, Sask.

33,313. Jan. 25.—Authorizing C.P.R. to open for traffic, portion of its Langdon North Branch (Acme to Empress), from mile 74.29 to 77.88.

33,314. Jan. 22.—Authorizing Crownstey Southern Ry. to build spur for East Kootenay Power Co., near Elko, B.C.

33,315. Jan. 22.—Approving revised location of connection between Grand Trunk Pacific Ry. and Qu'Appelle, Long Lake & Saskatchewan Ry., near Regina, Sask.

33,316. Jan. 19.—Ordering G.T.R. to build farm crossing for A. Knipfel, Petersburg, Ont.

33,317. Jan. 22.—Declaring that for the present, the second crossing west of Scarboro Jet. station (Kennedy Road), over G.T.R., is protected to Board's satisfaction.

33,318. Jan. 22.—Authorizing Fort William Municipal Ry. to build across Grand Trunk Pacific Ry. on Montreal St., Fort William, Ont.

33,319. Jan. 17.—Approving agreement between Bell Telephone Co. and Bradden Telephone Co., Hastings County, Ont.

33,320. Jan. 25.—Authorizing Canadian Northern Ry. to build spur for Prince Albert Mineral Water Co., Prince Albert, Sask.

33,321. Jan. 25.—Declaring that for the present, the first public crossing south of Sundridge, Ont., over G.T.R., is protected to Board's satisfaction.

33,322. Jan. 25.—Approving agreement between Bell Telephone Co. and People's Mutual Telephone Co., Prince Edward County, Ont.

33,323. Jan. 25.—Authorizing Kettle Valley Ry. to build spur for Summerland Lumber Co., at mile 229.47 on joint section of Kettle Valley Ry. and Vancouver, Victoria & Eastern Ry. & Navigation Co., B.C.

33,324. Jan. 26.—Approving agreement between Bell Telephone Co. and Tay Tp. Municipal Telephone System, Simcoe County, Ont.

33,325. Jan. 25.—Approving G.T.R. plan showing addition to bell at crossing at Maxville, Ont.

33,326. Jan. 26.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to appeal from Board's order 31,647, Oct. 15, 1922, authorizing Vancouver Harbor Commissioners to operate trains over V. V. & E. Ry. tracks at Burrard Inlet, B.C.

33,327. Jan. 26.—Authorizing C.P.R. to connect its siding with Congoleum Co. of Canada's siding on G.T.R., Montreal Parish, Que.

33,328. Jan. 26.—Approving agreement between Bell Telephone Co. and the Canadian Explosives, Ltd., Parry Sound District, Ont.

33,329. Jan. 26.—Authorizing use of bridge carrying public highway on Lot 12, Con. 2, Chaffey Ap., Ont., across G.T.R., near Huntsville, Ont.

33,330. Jan. 26.—Authorizing Canadian Northern Ry. to make road diversion and highway crossing at Dawson Road, mile 34.6, west of Port Arthur, Ont.

33,331. Jan. 27.—Authorizing Alberta Public Works Department to make highway across Edmonton, Dunvegan & British Columbia Ry. in s.w. ¼, Sec. 9, Tp. 78, Range 21, west 5th Meridian, Alta.

33,332. Jan. 27.—Approving Michigan Central Rd. plan showing changes in location of signals 3 and 4 in connection with interlocking plant at east end of M.C.R. yards, at Windsor, Ont.

33,333. Jan. 27.—Amending order 33,199, Dec. 6, 1922, relieving Canadian National Rys. from speed limitation of 10 miles an hour at crossing west of Minard, Sask., by changing order to read east instead of west, of Minard, Sask.

33,334. Jan. 22.—Extending to June 15, time within which British Columbia Public Works Department may make highway across Great Northern Ry. at mile 173.04, Nelson-Fort Sheppard-Spokane Branch, authorized by order 32,903, Sept. 29, 1922.

33,335. Jan. 27.—Authorizing C.P.R. to use bridge 6.8, Orangeville Subdivision, Ontario District.

33,336. Jan. 29.—Declaring that for the present the first public crossing north of Longford station, Ont., over G.T.R., is protected to Board's satisfaction.

33,337. Jan. 29.—Declaring that for the present, the C.P.R. crossing in Tp. 16, Range 16, west 3rd Meridian, near Centaur, Alta., is protected to Board's satisfaction.

33,338. Jan. 29.—Authorizing C.P.R. to build spur for Pembroke Shook Mills, Ltd., in Con. 11, Clara Tp., Ont.

33,339. Jan. 29.—Approving agreement between Bell Telephone Co. and Arundel Development Co., Terrebonne, Argenteuil and Ottawa Counties, Que.

33,340. Jan. 30.—Authorizing C.P.R. to build spur for Ontario Highways Department in Lot 28, Arthur Tp., Ont.

33,341. Jan. 30.—Approving general location and detail plan of foot subway under Canadian National Rys. main line and elevator track at Main St., Dauphin, Man.

33,342. Jan. 30.—Approving until further order, conditions to be printed, and signed by holders of free annual transportation issued by C.P.R.

33,343. Jan. 29.—Authorizing C.P.R. to put on attachment to jackknife style gates at crossing of Talbot Ave., Winnipeg.

33,344. Jan. 31.—Dismissing complaint of Spanish River Pulp & Paper Mills, Ltd., that rates on Group A descriptions of paper from Sturgeon Falls and Espanola to Toronto and other destinations in Ontario, are higher, distances considered, than from Montreal, Lachute and other origin stations named in C.P.R. and Canadian National Rys' tariffs. This order is given in full on another page.

33,345. Jan. 31.—Ordering G.T.R., where cars are stored on passing track most easterly of two tracks over Orillia St., Washago, Ont., to keep same back 350 ft. from street line.

33,346. Jan. 31.—Authorizing C.P.R. to build spur across 13th St., Owen Sound, Ont., for Imperial Oil Ltd.

33,347. Jan. 31.—Approving location and details of Canadian Northern Rys. station building at Giroux, Man.

33,348. Jan. 31.—Authorizing C.P.R. to build spur for Backus-Brooks Co., Kenora, Ont.

33,349 to 33,351. Feb. 1.—Approving Bell Telephone agreements with West Lake Telephone Co., Algoma District; Belmont Tp. Telephone System, Peterborough County, and Fordwich Rural Telephone Co., Huron and Perth Counties, Ont.

33,352. Feb. 2.—Authorizing Canadian Northern Ry. to use bridge over Sinclair St., Cobourg, Ont.

33,353. Jan. 27.—Declaring that for the present, C.P.R. crossing of Hunter St., Woodstock, Ont., is protected to Board's satisfaction.

33,354. Feb. 1.—Approving agreement between Bell Telephone Co. and Springbank Telephone Co., Huron and Wellington Counties, Ont.

33,355. Feb. 1.—Dismissing application of Great West Sand & Gravel Co., and Braid & McCurdy, Winnipeg, for reduction in rates on building sand, gravel and crushed stone from Birds Hill to Winnipeg.

33,356. Feb. 5.—Amending order 33,299, Jan. 19, re C.P.R. crossing at King St., St. Stephen, N.B., by providing that all train movements over crossing during the 4 days of the annual exhibition, be flagged.

33,357. Feb. 5.—Approving G.T.R. plan showing installation of switch box at first highway crossing west of Carp station, Ont.

33,358. Feb. 3.—Declaring that for the present, the G.T.R. crossing of Government Road, near Waterville, Que., is protected to Board's satisfaction.

33,359. Feb. 6.—Approving and authorizing clearance on C.P.R. at proposed tank car shed of Imperial Oil Ltd., Calgary, Alta.

33,360. Feb. 6.—Authorizing Westbourne municipality, Man., to make highway crossing over

Manitoba & Northwestern Ry., at mile 27.21, Minnedosa Subdivision, Man.

33,361. Feb. 2.—Declaring that for the present, between 7 a.m. and 11 p.m., the C.P.R. crossing at Dundas St., Trenton, Ont., is protected to Board's satisfaction, and ordering that between 11 p.m. and 7 a.m., speed of trains over crossing be limited to 10 miles an hour.

33,362. Feb. 7.—Dismissing application of Dominion Sheet Metal Corporation, Hamilton, Ont., against rates on galvanized sheets to Winnipeg.

33,363, 33,364. Jan. 30.—Dismissing application of Quebec Ry., Light, Heat & Power Co. for order distributing cost of maintenance and operation of crossings at Crown and St. Valer Sts., Quebec, between C.P.R., G.T.R., Quebec Central Ry. and Quebec Ry., Light, Heat & Power Co.

33,365. Feb. 7.—Approving route map of general location of portion of Manitoba & Northwestern Ry., Tuffnell to Prince Albert line, mile 0 to 211.75, Sask.

33,366. Feb. 6.—Suspending until further order, rule 5-A in Supplement 4 to C.P.R. tariff, C.R.C. no. W-2658.

33,367. Feb. 9.—Authorizing C.P.R. and Canadian National Rys., to install bell and wigwag signals in lieu of watchman at Kingston Road crossing in Lot 33, Con. 1, Hastings County, Ont.

33,368. Feb. 7.—Amending order 3,079, April 23, 1907, authorizing Vancouver, Westminster & Yukon Ry. to cross British Columbia Electric Ry. at Venables St., Vancouver, B.C., by providing that conditions in the Railway Act, 1919, secs. 306 and 307, be observed by the railways, at this crossing.

33,369. Feb. 9.—Authorizing G.T.R. to build spur for J. M. Schneider & Sons, Kitchener, Ont.

33,370. Feb. 10.—Approving details and location of Canadian National Rys. freight and passenger shelter at Bredin, Sask.

33,371. Feb. 7.—Rescinding order 25,449, Sept. 20, 1916, in so far as it authorizes building portions of sidings serving James Playfair's mill yard on Lot 108, Con. 2, Tay Tp., Ont.

33,372. Feb. 10.—Declaring that for the present, G.T.R. crossing at Wilson St., Woodstock, Ont., is protected to Board's satisfaction.

33,373. Feb. 9.—Declaring that for the present, Canadian National Rys. crossing near Lilac, Sask., is protected to Board's satisfaction.

33,374. Feb. 12.—Authorizing Canadian National Rys. to build across highway between Secs. 26 and 25, Tp. 26, Range 8, West 3rd Meridian, Sask.

33,375. Feb. 12.—Approving location and detail plans of Canadian National Rys. station at Brussels, Ont.

33,376. Feb. 12.—Declaring that for the present, C.P.R. crossing near Chesterville station, Ont., is protected to Board's satisfaction.

33,377. Feb. 12.—Declaring that for the present, Pere Marquette Rd. crossing over first road south of Mooretown station, Ont., is protected to Board's satisfaction.

33,378. Feb. 12.—Authorizing City of Weyburn, Sask., to make highway crossing over Grand Trunk Pacific Ry. between 4th and 5th Aves. North, Weyburn, Sask.

33,379. Feb. 16.—Authorizing G.T.R. to rebuild bridge carrying highway between Lots 13 and 14, Broken Front Concession, Darlington Tp., Ont., over its tracks.

33,380. Feb. 16.—Authorizing Saskatchewan Highways Department to make highway across C.P.R. in n.w. ¼ Sec. 17, Tp. 14, Range 15, west 2nd meridian, near Sedley, Sask.

33,381. Feb. 17.—Authorizing G.T.R. to build spur for Carriage Factories, Ltd., South Orillia Tp., Ont.

33,382. Feb. 19.—Authorizing C.P.R. to open for traffic, portion of its line from mile 100.74 to 101.93, in Lot 3, Kingston Tp., Ont.

33,383. Feb. 19.—Declaring that for the present, G.T.R. crossing near Jarvis, Ont., is protected to Board's satisfaction.

33,384. Feb. 19.—Authorizing G.T.R. and Toronto, Hamilton & Buffalo Ry. to build six spurs for Massey-Harris Co., Brantford, Ont.

33,385. Feb. 19.—Authorizing C.P.R. to build connection with Spokane & Alberta Coal & Coke Co. in s.w. ¼ Sec. 7, Tp. 8, Range 5, west 5th meridian, Alta.

33,386. Feb. 20.—Ordering C.P.R. to pay Ontario Public Highways Department, \$1,368.50 as its proportion of cost of new drainage system at subway at Dundas St. crossing, Whitby Tp., Ont.

33,387. Feb. 21.—Declaring that for the present, C.P.R. crossing near Dranoel, Ont., is protected to Board's satisfaction.

33,388. Feb. 21.—Amending order 33,218, Dec. 7, 1922, re Furncoal Road crossing, Rodney, Ont., by Michigan Central Rd. and Pere Marquette Rd. by providing that cost be paid 25% out of railway grade crossing fund and remainder by M.C.R. and P.M.R.

33,389. Feb. 21.—Rescinding orders 26,423 and 26,591, Aug. 14 and Oct. 2, 1917, prohibiting the sounding of any locomotive or steam whistle or other engine of C.P.R., G.T.R. and Canadian Northern Ry. when approaching highway crossings in Brighton, Ont., as provided by bylaw A115, Aug. 7, 1917.

33,390. Feb. 21.—Authorizing Canadian Northern Ry. to cross Paipoon Road, Kashabowie Subdivision, Neebing Tp., Ont.

33,391. Feb. 21.—Declaring that for the pres-

ent, C.P.R. crossing at Zorra St., Beachville, Ont., is protected to Board's satisfaction.

33,392. Feb. 21.—Ordering G.T.R. to stop train 58, westbound on flag, at Moose Creek, Ont., on Sunday evenings.

33,393. Feb. 23.—Authorizing Canadian Northern Ry. to build spur for Eastern Collieries of Bienfait Ltd., near Bienfait, Sask.

33,394. Feb. 20.—Amending order 33,258, Jan. 2, 1923, approving plan showing change in operation of bell at crossing of Beverley and Dundas Sts., Galt, Ont., by G.T.R., Grand River Ry. and C.P.R., by striking out C.P.R.

33,395. Feb. 23.—Authorizing Canadian Northern Ry. to build spur for Wm. Addie, near Bienfait, Sask.

33,396. Feb. 23.—Authorizing C.P.R. to build spur for St. Lawrence Paper Mills, Ltd., Three Rivers, Que.

33,397. Feb. 19.—Ordering Toronto, Hamilton & Buffalo Ry. to remove board fence on south side of tracks at crossing of First Governor's Road, 1.24 miles west of Mineral Springs station,

Ont., and to cut down embankment on north side to provide better view of approaching trains.

33,398. Feb. 19.—Dismissing complaint of Coteau Landing village, Que., against G.T.R. refusal to supply cars for the shipment of hay, coal and grain.

33,399. Feb. 21.—Authorizing G.T.R. to build extension of passing track across public road at Brighton, Ont.

33,400. Feb. 26.—Ordering G.T.R. to trim trees to improve view of approaching trains at crossing between cons. 10 and 11, near Drayton, Ont.

33,401. Mar. 3.—Declaring that for the present, C.P.R. crossing of Crown St., Quebec, Que., is protected to Board's satisfaction.

33,402. Mar. 3.—Dismissing Canadian National Ry. application to close divisional point at Jasper, Alta., and consolidate it with divisional point at Lucerne, B.C., and ordering that divisional point at Lucerne be consolidated with divisional point at Jasper, Alta.

33,403. Feb. 26.—Rescinding order 26,133, May 21, 1917, authorizing G.T.R. to build spur for The

William Kennedy & Sons, Ltd., at Collingwood, Ont.

33,404. Feb. 28.—Authorizing Canadian National Ry. to rebuild bridge carrying public highway between Lots 18 and 19, Con. D, Scarborough Tp., Ont., across G.T.R.

33,405. Feb. 28.—Authorizing Canadian National Ry. to cross and divert Dawson Road, near Rowan, Ont.

33,406. Feb. 28.—Ordering Canadian National Ry. to appoint station agent at Ardley, Alta., by April 1.

33,407. Mar. 5.—Declaring that rates published in Northern Pacific tariff C.R.C. 541 should have been made effective Dec. 1, 1921, under provisions of general order 350; and authorizing Northern Pacific Ry. and other interested railways to make refund on shipments made between Dec. 1, 1921, and Jan. 9, 1922, of the difference between freight charges based on the higher rates assessed and the rates which were published to become effective Jan. 9, 1922 (complaint of Minnesota & Ontario Paper Co., International Falls, Minn.).

Canadian Pacific, Canadian National and Grand Trunk Railways' Earnings.

C.P.R. January gross earnings were \$13,148,914, an increase over Jan. 1922 of \$1,810,939; operating expenses were \$12,428,888, an increase of \$1,574,390. Net earnings for Jan. 1923 were \$720,026, being \$236,549 greater than in Jan. 1922.

The Canadian National Ry. (Canadian Northern Ry., Canadian Government Ry. and G.T.P. Ry., steam lines only) January gross earnings were \$9,550,296, against \$8,210,401 in Jan. 1922; operating expenses were \$10,706,673, against \$10,433,563 in Jan. 1922. The operating

compensate for the operating loss on the original Canadian National system. The loss for the system as a whole, however, was much smaller than in Jan. 1923.

There has been a lot of conjecture in railway and financial circles as to how the railways would fare with the reduced rates, after the bulk of the grain crop had been moved, and the January figures furnish a partial answer, indicating that traffic conditions are now such as to enable the roads to get better net results, with lower rates, than they could in Jan. 1922 with higher rates. The improve-

to see the railways deriving net returns to compare favorably with those of 1922, with lower rates prevailing, with labor costs not decreased commensurately, and with a commodity market marked by increasing, rather than decreasing, prices, the only way they can do it is by securing and handling a much larger traffic than in 1922.

This will be all the more difficult, because 1922 was a year in which the usual seasonal improvement in traffic which takes place as autumn approaches, was accompanied by another improvement which was not seasonal, but which was due entirely to improving business and economic conditions. How much further traffic improvement can be expected to result from this cause is largely problematical, but if the improvement in economic conditions continues, and results in continued improvement in railway traffic, then it may be at least hoped that the railways can turn this condition to good account, in counterbalancing the rate reductions which are keeping down gross revenues.

But even if the railways should secure net results throughout 1923, as good as, or somewhat better than, in 1922, they will have a long way to go before their net earnings will be nearly as favorable as prior to 1920. The accompanying graph of the net earnings secured by the C.P.R. in each January from 1914, shows that while the net in Jan. 1923 was better than in January of 1920, 1921 or 1922, it was not nearly so large as in January of any of the preceding years back to 1914. The condition illustrated is broadly applicable to the Canadian railway industry in its entirety, and when it is considered that the net earnings in January of 1914, and the five following years, were derived from gross earnings much smaller than in January of 1920 and the three following years, it is evident that railway operating expenses still constitute an unduly large portion of gross earnings. As stated above, under the present relationship between unit revenues and expenses, the railways' only salvation is in a continued heavy traffic movement. Consideration of the position in the railway industry which has been indicated, together with the fact that the railways have had, and continue to have, their facilities, particularly cars, taxed to the limit to meet the traffic now offering, leads to the belief that if the railways were now deriving net earnings more in proportion to those enjoyed prior to 1920, they would be in a much more favorable position to provide facilities to look after further traffic increases.

C.P.R. January Net Earnings, 1914-1923.

deficit in Jan. 1923 was \$1,156,377, against \$2,223,163 in Jan. 1922, an improvement of \$1,066,786.

Grand Trunk Ry., all lines, gross revenues for Jan. 1923 were \$8,623,348, against \$7,339,605 in Jan. 1922; operating expenses were \$7,937,775, against \$6,743,800, and net earnings were \$685,573, against \$595,805 in Jan. 1922. G.T.R. Canadian lines gross earnings for Jan. 1923 were \$6,046,562, against \$5,354,317 in Jan. 1922; operating expenses were \$5,695,596, against \$4,984,953, and net earnings were \$350,966, against \$369,364 in Jan. 1922.

It is evident that all three roads derived better net earnings in Jan. 1923 than in Jan. 1922, the improvement accomplished by the Canadian National Ry., in the reduction of the operating deficit, being of greater magnitude than that accomplished by either the C.P.R. or G.T.R. in increasing their net earnings. The month resulted in an operating loss for the national system as a whole, the net earnings secured by all G.T.R. lines not being large enough to

ment in net in Jan. 1923 was made possible, primarily, by a substantial increase in gross earnings. Examination of the relationship between operating revenues and expenses, indicates clearly that had not the revival in traffic taken place which the larger gross earnings record, the railways would be in a most unenviable position with the present relationship between unit rates and expenses. As to succeeding months, preliminary statements for February indicate that the steady increase in gross, compared with corresponding weeks in 1922, which was experienced throughout January, was not maintained; some weeks in February showing considerable decreases in gross earnings for all roads. It may be possible that with various items of operating expense influenced favorably by better weather and other conditions, operating expenses in February and March will have been held down to accord with the manner in which lower rates have kept the gross earnings down; but however this may have been, it must be evident that if the immediate future is

Combined Operating Results of Dominion Government Railways.

While Canadian Railway and Marine World has from time to time published statistics showing the financial and operating results on the different lines constituting the Canadian Government-owned railways, as the figures became available, no table showing the complete returns for the Government-owned lines as a whole has been given heretofore. The Railways and Canals Department's report for the year ended Mar. 31, 1922, issued recently, contains a table showing the combined results of the operation of the various railways comprising the Government system, which is reproduced below. The total deficits recorded for

1920 and 1921 show how serious has been the drain imposed upon the public treasury. The smaller operating loss experienced in 1921 by the roads as a whole was almost counterbalanced by the large increase in fixed charges over those for 1920. When it is considered that after the Canadian National Rys. management succeeds in making those railways earn their operating expenses, the large fixed charges will still remain as an ever-present liability, some idea of the immensity of the country's railway problem is furnished. There are indications that for 1922 the operating expenses were about earned, but the fixed charges remaining

to be paid constitute a compelling argument in support of the proposition that Canada's population, and industrial and agricultural activity, must be increased, so that a vastly increased traffic can be offered to her railways.

The figures for the Canadian National System include those relating to the Canadian Northern and the former Government lines, the Intercolonial and the National Transcontinental, which were combined for co-ordinated operation in the closing months of 1918, and the Grand Trunk Pacific, which has been operated as an integral part of the National System since Oct., 1920. For the first time, it is possible to present, in comparable detail, the result of the operation of the Grand Trunk and the Central Vermont, in which the G.T.R. has a controlling interest. For purpose of reference, the combined result of the operation of these various railways has been set out in the statements given herewith.

Grain in Store at Elevators.

The Dominion Bureau of Statistics, Internal Trade Branch, reports that the quantity of grain in store for the week ended March 9, had decreased: wheat 1,714,806 bush., flax 7,346, rye 96,327; and increased, oats 491,361, barley 119,088 bush. Western country elevators showed increases in all grains: wheat 1,262,821 bush., oats 543,313, barley 75,652, flax 4,295, rye 30,461. The receipts for the previous week were 6,255,026 bush. total, and the shipments 4,341,114 total.

Interior terminal elevators showed increases: wheat 135,884 bush., oats 121,431, barley 8,635. Flax decreased 747 bush.

Public and private terminal elevators at Fort William and Port Arthur showed increase: wheat 301,905 bush., barley 44,561, rye 62,222, and decreases, oats 138,535 bush., flax 23,815. The receipts at Fort William and Port Arthur, Ont., from Sept. 1, 1922, were 245,405,504 bush., and at Vancouver, B.C., 12,286,997 bush.

Winnipeg private terminal elevators showed decreases: wheat 13,461 bush., oats 9,542, and increases: barley 317 bush., flax 935.

Public elevators in the east showed decreases: wheat 883,946 bush., oats 52,137, barley 87,312, and an increase in flax of 11,986 bush. The receipts of all grains were 247,986 bush. by ship and 850,605 by rail, the shipments being 307,941 bush. by ship and 1,592,298 by rail. The quantity of U.S. grain in store was 2,076,349 bush., compared with 3,781,166 at the same period 1922.

U.S. lake ports show decreases in all grains: wheat 976,450 bush., oats 65,000, barley 23,885, rye 291,785.

U.S. Atlantic seaboard ports showed increases in oats 91,829 bush., barley 100,620, rye 102,775, and a decrease of 663,337 in wheat.

Reid Newfoundland Co.—As stated previously in Canadian Railway and Marine World, the arrangement between the Newfoundland Government and the Reid Newfoundland Co., for continuing operation of the railway and steamship lines, was extended until Feb. 15. We have reason to believe that it has been further extended until June 30.

The operating results of the Grand Trunk Western lines, New England lines, and the Central Vermont during 1920 are for 10 months only from March 1, when the United States roads were turned over to their owners for operation after the war-time period of Government control with standard return.

Railway Rolling Stock Orders and Deliveries.

The Essex Terminal Ry. has received 1 six-wheel locomotive, with cylinders 20 x 26 in., from Montreal Locomotive Works.

Sir William Arrol & Co., sub-contractors on Welland ship canal, St. Catharines, Ont., have bought 7 second hand Western, long cylinder, all steel dump cars, 12 cub. yd. capacity, 19 ft. bed, the floors being wood, steel lined, from Canadian Equipment Co., Montreal.

The C.P.R., between Feb. 11 and March 14, received 133 freight refrigerator cars from National Steel Car Corporation, and 2 Jordan ballast spreaders.

The National Steel Car Corporation, between Feb. 12 and March 20, delivered 135 refrigerator cars to the C.P.R., and expected to deliver 39 more before the end of the month, thus completing an order for 250.

The Timiskaming & Northern Ontario Ry. has ordered 50 steel under frame, single sheathed box cars, 40 tons capacity, from National Steel Car Corporation. They will be the same as to dimensions, construction, etc., as the 1,000 box cars ordered recently by Canadian National Rys. from National Steel Car Corporation. The T. & N. O. Ry. cars will have Andrews steel truck side frames, instead of arch bar construction as applied to the C.N.R. cars.

The C.P.R. gave orders for rolling stock, between Feb. 11 and March 14, as follows:—6 buffet parlor cars, 6 cafe parlor cars, and 15 first class passenger cars, frames of each lot to be built by Canadian Car & Foundry Co.; 12 mail and express cars, and 300 coal cars, each lot to be completely built by Canadian Car & Foundry Co.; 300 freight cars, to be completely built by Eastern Car Co.

We were officially advised early in March, in regard to the Canadian National Rys. orders given Canadian Car & Foundry Co., that preparations were being made to proceed with the construction of the ballast cars, and that it was the intention to start on the freight and passenger cars as soon as sufficient material had been secured. Delivery of the entire order is expected to be completed by Aug. 1.

The Canadian National Rys. have ordered 7 transfer locomotives from Canadian Locomotive Works. They will have similar dimensions, and will be similar in design to, the five 0-8-0 transfer locomotives built by the G.T.R. at its Montreal shops last year, which have a weight on drivers of 242,750 lb., tractive effort of 52,329 lb., driving wheel base of 15½ ft., and extended wagon top type boiler, carrying working pressure of 170 lb., and are equipped with brick arch and all modern appliances.

United States locomotive plants' shipments declined somewhat in February, compared with January, but unfilled orders were considerably higher at the end of February than at the end of January. Both shipments and unfilled orders for foreign countries continued to decline throughout February. The shipments in February were 207 locomotives, compared with 229 in January and but 44 in Feb. 1922. Unfilled orders at the end of February were 2,220, compared with 1,788 at the end of January, and but 239 at the end of Feb. 1922. Of the 2,220 unfilled orders at the end of February, 79 were foreign.

We are officially advised, in regard to the work equipment ordered by the Canadian National Rys., as stated in Canadian

Railway and Marine World for February and March, that at March 16, shipments had been made as follows:—Erie ditcher, to Toronto; 150-ton wrecking crane, to Transcona, Man.; one of the 160-ton wrecking cranes, to St. Thomas, Ont.; 3 Industrial cranes, 6 ballast ploughs, and 1 concrete mixer, billed to Winnipeg. The equipment is for use in the territory around the point to which billed in each instance. We were also advised that delivery on the balance of the work equipment ordered was expected in the near future.

The British-American Oil Co., Toronto, has ordered 50 type A center anchorage tank cars from Standard Tank Car Co., Sharon, Pa. The principal dimensions will be as follows:—

Length over striking plates.....	35 ft. 9 in.
Length overall of tank.....	32 ft. 11 in.
Bend line to bend line.....	31 ft. 4½ in.
Height over all.....	14 ft. 6½ in.
Width.....	9 ft. 3 in.
Distance between truck centers.....	25 ft.
Truck wheelbase.....	5 ft. 6 in.
Capacity of tank.....	10,050 gall.

The cars will be mounted on 50-ton arch bar trucks and will be equipped with Cardwell G-11 draft gears.

Quebec Development Co., Quebec, Que., has ordered 8 four-wheel locomotives, Q 318, and 5 four-wheel locomotives, Q 319, from Montreal Locomotive Works. Following are chief details:—

	Q 318	Q 319
Gauge.....	4 ft. 8½ in.	4 ft. 8½ in.
Weight, total.....	80,000 lb.	66,000 lb.
Wheel base.....	7 ft.	6 ft. 3 in.
Cylinders, diam. and stroke.....	14 x 22 in.	13 x 20 in.
Driving wheels, diam.....	40 in.	36 in.
Driving journals.....	7 x 8 in.	6½ x 8 in.
Boiler, type.....	Straight top	Radial stay
Boiler pressure.....	190 lb.	180 lb.
Firebox, length.....	46½ in.	47 11/16 in.
Firebox, width.....	50¼ in.	36¼ in.
Tubes, no. and diam.....	111—2 in.	90—2 in.
Tubes, length.....	11 ft. 8 in.	10 ft.
Heating surface, tubes.....	675 sq. ft.	472 sq. ft.
Heating surface, firebox.....	60 sq. ft.	53 sq. ft.
Heating surface, total.....	735 sq. ft.	525 sq. ft.
Grate area.....	16.2 sq. ft.	12 sq. ft.
Tractive power.....	17,400 lb.	14,400 lb.
Factor of adhesion.....	4.6	4.6
Tank, type.....	Saddle	Saddle
Capacity, water.....	1,700 gall.	1,600 gall.
Capacity, coal.....	1,600 lb.	1,200 lb.

United States Railways' Financial Results.

U.S. class 1 railways had in January the best month experienced since the Transportation Act was passed, so far as net operating income earned is concerned. The net operating income earned by them as a whole was \$60,544,700 for the month, or at the annual rate of 5.54%. The highest rate at which they earned previous to January, since the passage of the act setting up a "just and reasonable" return at which to aim, was 5.4%, in Oct. 1921. The rate prescribed as just and reasonable is now 5.75%. In Dec. 1922 they earned at the rate of 5.15% annually, and in Jan. 1922 at but 2.75%.

Operating revenues in Jan. 1923 were \$500,683,400, an increase of 27% over Jan. 1922. Operating expenses were \$407,615,000, an increase of 21% over Jan. 1922. The operating ratio for the month was 81.4, compared with 85.3 in Jan. 1922. Freight traffic was 39% heavier, expressed in ton mileage, than in Jan. 1922, and on the assumption that passenger traffic was about constant, the fact that operating revenues increased only 27% makes evident the effect of the lower rates under which the U.S. railways are now operating.

The Bad Order Car Situation.

The Railway Association of Canada reports that on March 1 there were 187,776 freight cars on Canadian lines, of which 11,113 were in bad order. On the A.R.A. basis, which assumes that a normal percentage of bad order cars is 7, a total of 13,144 bad order cars could have been expected. The bad order percentage was 5.9. A shortage of 4,810 cars was reported.

The American Railway Association's Car Service Division reports that, at Feb. 1, out of 2,287,258 freight cars on U.S. lines, 209,471, or 9.2%, were awaiting repairs. Out of 1,047,171 box cars, 88,966, or 8.5%, were in bad order; out of 59,295 refrigerator cars, 6,303, or 10.6%; out of 962,375 gondolas, 95,093, or 9.9%; out of 80,931 stock cars, 7,669, or 9.5%; and out of 95,041 flat cars, there were 8,729, or 9.2%, in bad order.

The situation in Canada at March 1, when there were 11,113 cars in bad order, was not quite as good as at Feb. 1, when there were but 10,952, the latter figure being but 5.73% of the total. The situation in the U.S. at Feb. 1, when 9.2% of all freight cars were in bad order, was somewhat better than at Jan. 15, when there were 9.6%. The difference in the situation on Canadian and U.S. roads in favor of the former is still notable, however. If U.S. lines had but 5.9% of their freight equipment in bad order, instead of 9.2%, it would mean that they would have only 134,948 cars tied up, instead of 209,471.

Canadian Freight Cars in United States.

Sir Edward Kemp enquired in the Senate recently: "How many Canadian National Rys. freight cars were in United States territory according to the latest statistics?" Senator Dandurand replied: "On Feb. 1, 28,672 Canadian National (all lines) freight cars were located on foreign lines in the United States." In answer to further questions by Senator McMeans as to whether he could tell the number there at the time of the enquiry, and when the cars would be returned to Canada, Senator Dandurand said: "No. This is the answer I received from the Department," and added: "There is a constant interchange of freight cars between Canada and the United States. Of course, the honorable gentleman is aware that these cars, when detained a certain number of days, are paid for, and that there is an exchange office at Chicago, to the maintenance of which all railways contribute, for the purpose of tracing the cars and reporting daily as to their movements. We can always know from day to day where the Canadian cars are, and it would perhaps be interesting to know, when there is a majority of cars on the other side, what is the total return to our railways for demurrage."

Doctors Employed by Canadian National Rys.—The House of Commons passed a motion recently by J. E. S. E. D'Anjou, Rimouski, Que., for a return showing the number of doctors employed by the Canadian National Rys., including the Intercolonial, Canadian Northern and Grand Trunk, in Quebec province, their names and addresses, salaries received, on whose recommendation the appointments were made, and whether they are allowed to take part in politics, either Dominion or provincial.

Railway Wages and Working Conditions in Canada and the United States.

Developments in the railway wage and working condition situation in Canada during March were few and included none of what may be termed country-wide importance, with the exception of Mr. Justice Galt's decision in regard to the Brotherhood of Locomotive Engineers status, which is dealt with fully elsewhere in this issue. Among other developments have been the following:

The Canadian Brotherhood of Railway Employees applied to the Minister of Labor, for a conciliation board, under the Lemieux Act, to investigate a dispute between the Canadian National Rys. and certain sleeping car porters and dining car employes, the majority of whom are members of the Canadian Brotherhood of Railway Employees. Application for a board was made originally in 1922, but as it was thought possible to effect a settlement by direct negotiation, the application was not acted on. After many meetings, covering several months, an agreement was not arrived at, hence the latest application. We were advised on March 16 that the appointment of a board has been further delayed pending investigation by Labor Department officials to see if a direct agreement could be arrived at. The dispute has to do largely with back time, accruing since 1920, claimed by the employes.

The agitation for the adoption of the one big union idea, in railway labor organization, has continued, the propaganda originating in and spreading from Montreal, where addresses have been delivered in favor of the scheme by Z. Foster. Reports state that over 100 shopmen's local unions have declared in favor of the plan, and that the majority of the carmen, machinists, blacksmiths and boilermakers are ready to repudiate the craft union form of labor organization. The maintenance of way employes have also been circularized, and the intention is to try to get the running trades interested also. The success which the one big union agitators will meet with among the latter does not promise to be very great, as it is probable that the train and locomotive employes will have nothing to do with them. The opinion is freely expressed among men well versed in railway labor organization matters that it would be thought that the shopmen, like the train and locomotive men, would recognize that the one big union theory is impracticable and unproductive of desirable result, without having to discover that fact by trying it all over again.

In accordance with the agreement reached between the C.P.R. and its clerical employes, as stated in a previous issue, these employes have been accorded the slightly increased rates of pay provided for, ranging from \$2 to \$10 a month.

The International Association of Machinists held a meeting in Winnipeg, early in March, at which wages and working conditions were discussed. Much dissatisfaction with some of the working conditions introduced in the May, 1922, agreement was expressed, particularly with the clauses dealing with overtime and Sunday work.

Canadian National Railways shopmen are planning a readjustment of committees to accord with the reorganization of the national system, so that there will be committees for each of the three regions and proper co-relation between the local organizations through these

committees and the system general committee. Plans have been made by the shopmen's officials to go into this matter thoroughly in the near future.

G. W. Lee, Chairman, Timiskaming & Northern Ontario Ry. Commission, is reported to have assured International Association of Machinists' officials on March 8 that all contracts let by the Commission will contain a fair wage clause, so that all labor performed in connection with them will be paid for at equitable rates. Dissatisfaction with wages paid in connection with the construction of some locomotives for the Commission is said to have led the machinists' officials to seek the assurance obtained.

The C.P.R. was reported about March 20 to have decided to lay off a number of junior employes at the various car and locomotive shops throughout the system, to prevent the temporary shut-downs which have been the rule during the past two years, and to which the shop employes have strenuously objected. A Montreal press dispatch of March 24 stated that the C.P.R. Angus shops had been closed on March 23, and would remain closed to April 3, in consequence of an arrangement between the management and the employes, arising from a suggestion from the latter, that instead of there being a staff reduction, with the junior men laid off, all employes should be retained and the work available spread among them.

Ash Kennedy, Vice Chairman, Brotherhood of Locomotive Engineers, is reported to have stated that preliminary meetings had been held with a view to merging the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen, and that next year something definite might be done. Such a merger has been mooted for so many years, without getting past the discussion stage, that any real action in the matter would be a surprise.

A. R. Mosher, President, Canadian Brotherhood of Railway Employees, issued a statement pointing out that that organization is registered under the Trade Unions Act, and is therefore not an illegal organization operating in restraint of trade, as the Brotherhood of Locomotive Engineers was declared to be in the judgment referred to above.

United States Situation.—It is reported that the U.S. Government is to be asked by the American Federation of Labor, Railway Employees' Department, and associated organizations, to take over and operate, as in wartime, the railways on which strike conditions still prevail. This was stated by Tim Healy, President, International Brotherhood of Firemen and Oilers, who was in Montreal recently, attending the pulp and paper makers' convention, in the interests of stationary firemen employed in pulp mills. He expressed the opinion that in 10 years all U.S. railways will be government-owned and operated. The request to the President to take over those roads, not many in number, where the shopmen have not come to a settlement with the management, is in line with labor's desire generally to see all the railways under government control.

Practically all U.S. roads have entered into agreements with their train, locomotive and yard employes, providing for the continuation of existing wage and working condition agreements for another year.

The U.S. Railroad Labor Board gave a decision, effective March 1, granting freight handlers and common laborers an increase of 2c. an hour, with time and a half for overtime and for Sunday work, or for work on any other day which the employe should have free if he has to work on Sunday on account of the demands of the service. The rule in connection with the latter matter is the same as that laid down by the Board for signalmen recently, as explained in Canadian Railway and Marine World for March. In connection with punitive rates for overtime and Sunday, the Board said:—"The Board is of the opinion. . . that the insistence of this class of employes that they should be allowed time and a half for all time in excess of the basic 8-hour day, is a just and reasonable contention. The overtime work of this class of employes is so largely under the control of the carrier, that the time and a half rule will not impose any appreciable financial burden. The Sunday and holiday rule, herein promulgated, simply recognizes the justice of the principle that every employe is entitled to one day off duty in seven."

Equalization of Freight Rates from Prairie Provinces Westward.

In the article in Canadian Railway and Marine World for March, on pg. 120, dealing with British Columbia and Alberta's appeal from the Board of Railway Commissioners' decision on freight rates, as affecting the interests of those provinces, attention was called to a notice of motion placed on the House of Commons order paper by J. A. Clark, Burrard, B.C., as follows:—"That in the opinion of this House, railway rates westward from the prairie provinces should be reduced to an equality with railway rates eastward from said provinces, for similar goods and distances."

Mr. Clark introduced his motion on March 5, but stated that he had been requested by some members interested in the matter to allow it to stand, and having received assurance of the acting Minister of Railways that an opportunity would be given to debate it, he had agreed to do so. On March 19, the motion again came up, but the Speaker stated that he had reason to believe that the question involved was sub judice, and asked Mr. Clark to suspend the presentation of the resolution till he had made up his mind on that matter. On being assured that the motion would hold its place and be called in its turn, if found to be in order, Mr. Clark agreed, and it was arranged that the matter would be brought up again on March 26.

A Calgary press dispatch of March 24 stated that the Calgary and Edmonton boards of trade would ask the Alberta Government to reconsider its decision to support British Columbia's application for an equalization of freight rates.

C.P.R. Quebec Terminals.—The House of Commons passed a motion recently, by G. Parent, Quebec West, for a copy of all contracts entered into between the C.P.R. and the National Transcontinental Ry. Commission, or the Dominion Government, concerning the price and conditions for the use by the Canadian National or the National Transcontinental Rys. of C.P.R. terminals and station at Quebec, Que.

Freight Car Surplusage and Shortage.

The accompanying diagram shows the conditions on Canadian railways, in regard to freight car surplusage and shortage, and also the bad order car situation, from Jan. 1, 1922, to March 1, 1923. At the start of the period there was a large surplus of serviceable freight cars on Canadian railways, amounting to 45,333. At Feb. 1, 1922, there were 44,928. At Aug. 1, 1922, there were 30,603; by Sept. 1 it had been reduced to 15,871, and by Oct. 1, so sudden was the increase in the demand by shippers, that a shortage of 7,667 freight cars had developed. This shortage continued throughout the crop moving season to Jan. 1, when the Railway Association of Canada reported a surplus of 244. This state of affairs was most temporary, however, as developments between Jan. 1, 1923, and March 1 showed, the shortage reported on March 1 being 4,810 cars.

The broken line representing the bad order car situation demonstrates that considerable improvement has been

shown did exist. In the words of the man on the street, the first part of 1922 marked the "last part of the worst slump the country ever experienced," and as business conditions are invariably truthfully reflected in traffic conditions, the lack of demand for freight cars was not surprising. But with the economic recovery becoming more pronounced as time passes, it is becoming increasingly evident that the country's normal traffic is going to require all the freight cars the railways can furnish, and on studying the diagram, one is liable to ask himself what the situation will be next autumn, if there is another large crop, when the situation in the winter months will be that there will be more demands for cars than can be filled. It is a fact that after every periodical slump, recovery brings a railway traffic greatly in excess of what was thought possible but a few short years before, and if the experiences of the past can be combined with present indications to point to any conclusion, it must be that the cars the

Freight Car Surplusage and Shortage, and Bad Order Car Situation, Jan. 1, 1922, to March 1, 1923

effected since last summer. At June 1, 1922, there were 22,408 cars in bad order, or 11.5% of all freight cars on line. At March 1, 1923, there were only 11,113 in bad order, or but 5.9% of the total. In view of the fact that the American Railway Association holds that a railway is accomplishing about all that can be expected of it if it keeps 93% of its freight equipment in operative condition, it is evident that there is not much room for improvement in the Canadian railway position, as far as the bad order car situation is concerned.

The diagram is of interest not only as a record of the past, but also as an indication of what may be expected in the future. A noticeable feature of the situation presented is that, contrary to frequently expressed expectation, a large car surplus did not develop with the coming of 1923. Those who thought that, with the bulk of the crop movement accomplished, the periodical and seasonal surplus would develop, were badly out in their calculations.

Looking back at 1922, it is scarcely to be wondered at that the car surplus

railways now own, and those they have on order, will have to make an unprecedented number of car miles per day to meet the country's transportation needs. Either that, or there will have to be more cars.

Railways' Department's Estimates for 1923-4.

The estimates for the year ending March 31, 1924, submitted in the House of Commons recently, contain the following items:

Chargeable to Capital.

To provide for purchase of Moncton & Buctouche Ry., revote \$70,000; interest estimated, from date of taking possession to March 31, 1924, not exceeding (including revote, \$21,125), \$23,625. Total\$93,625
To pay claim of Fortin & Moffat (National Transcontinental Ry.).....\$5,390
Hudson Bay Ry. Port Nelson terminals\$40,000

Chargeable to Income

To supplement pension allowances pay-

able under Intercolonial and Prince Edward Island Ry. Employees' Provident Fund Act so as to make the minimum payment, during the current fiscal year, of \$30 a month, instead of \$20, as fixed by the Act.....\$50,000
Arbitration and awards and costs of litigation\$2,000
Board of Railway Commissioners, maintenance and operation of.....\$228,969
Canada Highways Commission: To provide for organization and payment of staff, including A. W. Campbell, Chief Commissioner of Highways, at \$5,000 a year, and W. R. Smythe, Commissioner of Highways, at \$4,000....\$70,000
Governor General's cars: Attendance, repairs and alterations.....\$10,000
Miscellaneous works, not provided for\$2,000
Printing and stationery: outside service\$7,000
Surveys and inspections, railways, including salaries and expenses of experts employed temporarily.....\$55,000
Amount not exceeding \$73,000,000 to meet expenditures made or indebtedness incurred (where amounts available from net operating earnings may be insufficient) by or on behalf of the Canadian National Ry. Co., or any company specified in the first schedule to the act incorporating the Canadian National Ry. Co., chap. 13, Statutes of Canada, 1919, or by the company in respect of any railways, properties or works entrusted to the company from time to time under the provisions of sec. 11 of the said act, or by or on behalf of any company specified or referred to in chap. 13 of the Statutes of 1920; or any one or more of them, on any of the following accounts:—
Operating deficits whenever incurred or ascertained; acquisition of property, materials and supplies; interest and sinking funds on notes, securities or obligations; principal and interest of maturing or matured loans secured or unsecured; construction and betterments; co-ordination or consolidation of railway lines and facilities; guarantees of securities. The amount herein authorized may be applied from time to time, in the discretion of the Governor in council:—To meet expenditures made or indebtedness incurred by the company in respect of railways, properties and works entrusted to the company as aforesaid. By way of loans in cash, or by way of guarantee, or partly one way and partly the other, subject, however, as follows:—If by way of loans, the amount or amounts advanced shall be repayable on demand, with interest at the rate fixed by the Governor in council, from time to time, payable half-yearly, secured if and when directed by the Governor in council by mortgage or mortgages upon such properties, in such form and containing such terms and conditions, not inconsistent herewith, as the Governor in council may approve. If by way of guarantee, any such guarantee may be of the principal and interest of the notes and obligations or securities of one or more of the said companies specified by the Governor in council, and may be signed by the Minister of Finance, in such form and on such terms and conditions as the Governor in council may determine to be appropriate and applicable thereto\$73,000,000
Salaries of Board of Railway Commissioners authorized by statute.....\$58,500
Chargeable to Collection of Revenue.
Staff and repairs.....\$2,232,000

Sir Henry Thornton's Contract with Dominion Government.

In response to a motion by the leader of the Opposition, Mr. Meighen, acting Minister of Railways Graham submitted in the House of Commons recently, a copy as follows: "An agreement made at Ottawa, Ont., Oct. 4, 1922, between His Majesty The King, on behalf of the Dominion of Canada, herein represented by the acting Minister of Railways and Canals (hereinafter called 'His Majesty'), of the first part; and Major General Sir Henry Worth Thornton, K.B.E. (hereinafter called the 'Managing Head'), of the second part. Whereas His Majesty in the right of the Dominion of Canada has acquired control of the Canadian Northern Ry. Co., of the Grand Trunk Ry. Co. of Canada, and of the various constituent and subsidiary companies comprising the systems of these respective railway companies, and also controls the Canadian Government Merchant Marine Ltd., operating various steamships owned by individual companies, and it is expedient to provide for the operation of the companies aforesaid, together with the Canadian Government Rys. as a national system, or enterprise, under one management, as outlined and provided for in the act to incorporate the Canadian National Railway Company, being chap. 13 of the Statutes of 1919, or any amendments hereafter made to such act, and, to that end, to appoint an officer who shall be the Managing Head of the enterprise, as may from time to time during the period hereafter specified be constituted and existing. Witnesseth that the parties have agreed as follows:

"Engagement.—His Majesty hereby agrees to employ, or cause to be employed, the Managing Head to serve, and the Managing Head hereby agrees to serve, as the directing head of the railways, works, steamships, undertakings and enterprise above referred to, together with such other works and undertakings as may from time to time be owned or controlled by His Majesty, and may by order in council be placed under the same management, but excepting any works or undertakings which may at any time be withdrawn by His Majesty by order in council from any such management.

"The Period of the engagement hereby entered into shall extend for three years from Oct. 4, 1922, subject to earlier termination, as hereinafter specified.

"The Remuneration of the Managing Head shall be a fixed annual salary, irrespective of the magnitude or extent of the work or duties to be performed from time to time and without any extra fees or remuneration of any description, of \$50,000 a year, payable in equal monthly instalments on or about the first day of each month, but not in advance; such remuneration, however, to be subject to adjustment at any time by mutual agreement of the parties hereto.

"Exclusive Services.—During the continuance of his employment, the Managing Head shall devote his whole time exclusively to his duties as herein provided, or as from time to time specified by the Governor in council, or by the board of directors of the various companies owning or controlling the properties referred to in this agreement.

"General Duties.—The said Managing Head shall diligently and faithfully perform, to the best of his skill and ability, all the duties that may devolve upon him by virtue of this agreement, and shall use all reasonable means to preserve and extend the interests entrusted to him.

"Presiding Officer.—His Majesty will arrange that the Managing Head shall, subject to all applicable bylaws, rules or regulations, statutory or otherwise, be the presiding officer, when present, at all meetings of the board of directors of the principal companies referred to in this agreement.

"Expenses.—The Managing Head shall, subject to the said bylaws, rules and regulations, be entitled to be paid all reasonable out of pocket expenses incurred in connection with the duties of his office.

"Termination of Agreement.—In case either party hereto desires to terminate this agreement, he may do so upon giving 6 months notice, and in such event the other party shall be entitled to such compensation on account of said termination as may be mutually agreed upon, or, failing agreement, as may be determined by three arbitrators, one to be appointed by each party, and the third by the two so appointed; but, upon their failure to agree, then such third arbitrator shall be appointed by the Chief Justice of the Supreme Court of Canada.

"Restraints.—The Managing Head shall not, directly or indirectly, hold any stock, share or interest in, nor become a director, partner, or other officer in any company or firm from or with which on behalf of the enterprise or any part thereof: any materials, supplies or other commodities whatsoever are purchased or acquired; or any contract for any work or services is entered into; nor shall he permit any such materials, supplies or other commodities to be purchased, or acquired, from, nor any contract to be entered into, with, any such company or firm while the conditions above prohibited exist."

This agreement was signed by Hon. G. P. Graham, acting Minister of Railways and Canals; J. W. Fensley, Secretary, Railway and Canals Department, and Sir H. W. Thornton; the witness being Major G. A. Bell, Deputy Minister of Railways and Canals.

Daylight Saving and the Railways.

The Railway Association of Canada sent the following letter to the newspapers recently: "May we request the influence of your valuable publication toward obtaining—among those municipalities that may adopt daylight saving hours this summer—uniform dates for beginning and ending the period of changed time? You are aware of course that the railways take no part in any dispute as to the merits or demerits of daylight saving, and have no interest in influencing any community for or against it. Where daylight saving is likely to be adopted, however, they respectfully urge that it be made effective from midnight, commencing the Sunday nearest to May 1 (April 29, this year) to midnight commencing the Sunday nearest Oct. 1 (Sept. 30 this year). These are the dates on which, as long experience has taught the railways, the nation wide changes from winter to summer train schedules, and back again, are best made. These approximate the beginning and end of summer about as closely as can be devised. They are easily fixed in memory. By becoming effective on Sunday, they interfere with less business than would be the case on other days. By making daylight saving effective over the same period as the summer train

schedules, confusion and inconvenience will be saved to travellers and the work of railway employes will be simplified. The necessary earlier arrival of summer trains will then coincide from the first with the earlier business hours of the municipality which may have adopted daylight saving. The reversion to winter schedules in the autumn will then coincide with the reversion to winter hours of work. The suburban dweller or the long distance traveller will both be better accommodated. May we ask that your influence be directed toward obtaining this desirable end?"

C. P. Riddell, General Secretary, Railway Association of Canada, is reported to have stated in an interview on March 10, that Ottawa was the only city that approved of daylight saving, although the matter was being discussed in a number of other places. In the absence of definite advice, the railways would proceed to make the schedules for summer trains on the assumption that daylight saving would not be adopted generally. Subsequently, the Westmount, Que., City Council adopted it, and on March 15, Montreal City Council, by 23 to 13, decided not to adopt it unless the Dominion Parliament should make its adoption general. Manufacturing and other interests immediately took action and a deputation waited on the council's executive council March 20, asking for the rescinding of the resolution and the adoption of one putting daylight saving into effect.

Quebec City Council, on March 17, postponed further consideration of the matter to March 22 on a number of petitions favorable to the new time being presented. The Toronto City Council, on March 19, voted unanimously to adopt daylight saving from May 13 to Sept. 9.

While the object aimed at by the Railway Association of Canada in its letter given above, has not been achieved, it is said that suburban trains serving cities which adopt the new time, will be changed so as to run an hour earlier, as was done in previous years.

Grain Inspected at Western Points.

The Dominion Bureau of Statistics, Internal Trade Branch, reports the number of cars inspected at Winnipeg and other points on the Western Division, for February, and for 6 months ended Feb. 1923 and 1922, as follows:—

	Feb. 1923	6 mons. to Feb. 28, 1923	6 mons. to Feb. 28, 1922
C.N.R.	3,138	97,927	83,563
C.P.R.	3,055	118,243	82,934
G.N.R.	43	1,515	770
Total	6,326	217,685	167,267

The total of cars inspected for the 1922-23 season to date of report was 217,685, which is the highest reached in any previous complete year, the previous highest being 209,637 in 1915-16.

Intercolonial Railway Earnings.—Senator McCormick, Sydney Mines, N.S., enquired in the Senate recently: "What were the earnings of the Intercolonial Ry. eastern division, between New Glasgow and Sydney, or between Truro and Sydney, for 1918, 1919, 1920, 1921 and 1922, giving amounts received in each year from freight and passenger traffic?" Senator Dandurand replied: "Railway accounting methods do not provide this information by divisions. Information, therefore, is not available."

The American Railway Association, Division 6, Purchases and Stores, will hold its annual meeting at Chicago, Ill., May 15 to 17, for consideration of committees' reports and discussion of papers.

Brotherhood of Locomotive Engineers Declared an Illegal Organization.

Mr. Justice Galt, of the Manitoba Court of King's Bench, on March 10 decided, in effect, that the Brotherhood of Locomotive Engineers is an illegal organization, operating in restraint of trade. The brotherhood had taken action to recover funds alleged to have been unaccounted for by Samuel Starr, Secretary-Treasurer, at the time of his enforced resignation. The case came to trial in Dec. 1922, and progressed until Jan. 15, when Starr's counsel sought to amend the statement of defence, and moved for a non-suit on the ground that the organization is illegal, which the judge granted. The decision was based on the fact that the brotherhood had not registered as a trade union, under the Trade Unions Act, and in his decision, based on a case in England, for want of a precedent in Canada, the judge said: "I cannot resist the conclusion that the provisions in the legislation and ritual of the plaintiffs relating to strikes are open, under our Canadian law, to the same objection as were the rules of the respondent Russell vs. Amalgamated Society of Carpenters. They are in direct restraint of trade, and render the plaintiffs an unlawful trade union, to the extent of preventing them from enforcing rights in a court of law. It is unnecessary to decide whether, to what extent, they could have enforced their claim against the defendant if they had registered their organization under the Trade Unions Act."

The Trade Unions Act apparently assumes that any labor organization is a combination in restraint of trade and that legality is conferred upon it only as a special privilege, and then only when the clause requiring registration has been complied with. It provides as follows:—"In this act . . . trade union means such combination, whether temporary or permanent, for regulating the relations between workmen and masters, or for imposing restrictive conditions on the conduct of any trade or business, as would, but for this act, have been deemed to be an unlawful combination by reason of some one or more of its purposes being in restraint of trade. . . . This act shall not apply to any trade union not registered under this act. . . . The trustees of any trade union under this act. . . may bring or defend, or cause to be brought or defended, any action, suit, prosecution or complaint, in any court of competent jurisdiction. . . ."

J. G. O'Donoghue, a Toronto lawyer specializing in labor organization matters, is reported to have stated that, in view of Justice Galt's decision, very few Canadian labor organizations are endowed with legality. This, of course, does not mean that they are in danger of being prevented from continuing to function, for the criminal code, which prohibits combinations in restraint of trade, specifically exempts labor unions, but it does mean that, unless unregistered unions register in compliance with the act, they cannot be successful in any legal action. Mr. O'Donoghue brought up this point two years ago when a hoisting engineers' union wanted to sue the Toronto Building Trades' Council; he pointed out to the union officials that if they went to court they would be non-suited, and as a result the case was dropped.

As a natural consequence of Justice

Galt's decision, trade unions which have not registered under the act have become apprehensive for their funds, a large part of which are invested in Canadian industries and securities, and H. B. Chase, General Chairman of the B. of L.E. for Canadian National Rys. lines, is reported to have stated that if the decision is upheld it will be necessary to remove all the brotherhood funds to the United States. Officers of other unregistered trade unions are reported to have made similar statements. The Canadian Brotherhood of Railway Employees has no worry in this connection, for, according to A. R. Mosher, President, it registered under the act some time ago. It is probable that a lot of the unregistered trade unions' officers' worry is needless, however; as, when asked if the decision means that any unprincipled person with union funds in his possession could get away with them, Mr. O'Donoghue stated that he could be proceeded against criminally, so there does not seem to be much likelihood of a series of raids on trade union treasuries materializing as a result of the decision. The future in the matter is uncertain. Apparently a good many of the trade unions have hesitated to register for fear that by so doing they would become more vulnerable in law suits, less powerful, and more restricted in their activities. Tom Moore, President of the Trades and Labor Congress of Canada, is reported to have stated that organized labor is definitely opposed to registration. Mr. Chase is reported to have stated that the decision will be appealed to the Manitoba Court of Appeals, and other labor leaders are reported to have said that the case will be carried to the British Privy Council if necessary. It is possible that the Dominion Parliament will be asked to amend the act by striking out the clause requiring registration, or to define explicitly how union status is affected by registration.

Transportation Events of Twenty-five Years Ago.

From Railway and Shipping World, new Canadian Railway and Marine World, for April, 1898.

Three dining cars placed on Intercolonial Ry.

Pontiac Pacific Jct. Ry. trains lit with acetylene gas.

C.P.R. building 12 steamboats for Stikine River trade.

Contract let for building Midland Ry. from Windsor to Truro, N.S.

A. H. Harris appointed General Traffic Manager, Canadian Government Rys., Moncton, N.B.

Restigouche & Western Ry. completed arrangements for building first 20 miles.

G. McL. Brown, Executive Agent, C.P.R., for British Columbia, makes Victoria his headquarters.

C.P.R. equips sleeping car, on Montreal-Toronto run, with electric light generated from axle.

J. A. Richardson appointed District Passenger Agent, Wabash Rd., with offices at Toronto and St. Thomas.

Prof. McLeod, of McGill University, given charge of time transmission over G.T.R. wires, also over company's clocks and employees' watches.

Canada Atlantic Ry. appointments at

Ottawa:—C. J. Smith, General Traffic Manager; M. Donaldson, General Superintendent; W. P. Hinton, Assistant General Freight Agent; J. E. Walsh, Assistant General Passenger Agent; J. Ogilvie, Superintendent, Motive Power.

Manager Thos. Tait, of Eastern Lines, C.P.R., gave notice that the company would not accept any car, to be hauled in passenger trains east of Fort William, unless equipped with M.C.B. vertical plane couplers, steel tired wheels and Westinghouse automatic air brake and train signal, interchangeable therewith respectively, and, during cold weather, unless equipped for steam heating.

Grand Trunk Ry. report, for six months ended Dec. 31, 1897, showed a surplus of \$275,263, and stated company free from debt for first time since 1890. Directors expressed regret that amicable arrangements with C.P.R. had been interrupted, the latter declining to agree with its U.S. competitors and the G.T.R. on equal passenger fares to and from western points. President Sir C. Rivers Wilson stated, at annual meeting, he did not believe Sir William Van Horne was serious in threatening to build a line from Toronto to North Bay.

The C.P.R. Co.'s report showed a very successful year in 1897, the company paying 4% dividend and carrying forward \$897,088 surplus to reserve. The ratio of working expenses to receipts had been reduced to 57%. The use of heavier locomotives had had a marked effect on costs of transportation. At the annual meeting, Sir William Van Horne said the G.T.R. and other lines had violated the agreement as to differential passenger rates to the Pacific coast, and the C.P.R. had published an open tariff, making such rates as the law provides and the C.P.R. interests seem to require. He alleged that the G.T.R.'s cancellation of the North Bay agreement was the result of an understanding with U.S. lines, and was intended to place the C.P.R. at a disadvantage.

Railway Accidents Throughout Canada. The total number of accidents on railways throughout Canada reported to the Board of Railway Commissioners for January and February was 464, in which 3 passengers, 19 employees and 15 others were killed, and 70 passengers, 415 employees and 41 others were injured. In "others" are included 21 highway crossing accidents, in which 4 persons were killed, and 23 injured. Crossings were unprotected in 15 of these cases, and in the others were protected in 4 cases by bells, 1 by a gate, and 1 by a watchman; automobiles were concerned in 8 of these accidents, resulting in 1 person being killed and 12 injured; other vehicles were concerned in 6, pedestrians in 5, and children coasting down hill on sleds and playing on tracks, 2.

Grand Trunk Railway Arbitration Fees.—Acting Minister of Railways Graham stated in the House of Commons, recently, in answer to a letter by D. F. Kellner, Edmonton East, Alta., that the following amounts were paid the arbitrators on the value of the G.T.R. and subsidiary companies' junior securities: Sir Thomas White, \$29,000; Sir Walter Cassels, in addition to amount paid by G.T.R., \$25,000. Hon. W. H. Taft was paid by the G.T.R. shareholders.

Canadian Railway Club.—G. Bulkeley, A.M.I.Mech.E., of the General Manager's staff, Great Western Ry. of England, read a paper before the Club on March 13, on "Can the 2-8-0 (or 4-8-0) locomotive be further developed?"

Mainly About Railway People Throughout Canada.

Other Mainly About Railway People is given on earlier pages of this issue.

R. B. Angus, a former C.P.R. director, who died at Montreal in Sept., 1922, left an estate of approximately \$4,000,000, on which succession duties amounting to \$257,000 have been paid to the Quebec Government.

Walter U. Appleton, who has been appointed General Superintendent, Atlantic Region, Canadian National Rys., Moncton, N.B., was born there, Jan. 29, 1878, and entered railway service Oct. 12, 1890, since when he has been, to Sept. 1895, junior clerk, Intercolonial Ry., Moncton; Sept. 1895 to May 1899, machinist apprentice, same road; 1900, clerk; 1901 to 1903, machinist; 1905 to 1909, chief clerk to Superintendent of Motive Power; 1909 to 1913, Assistant to Superintendent of Motive Power; 1913 to Feb. 1918, General Master Mechanic; Feb. to Dec. 1918, Superintendent of Motive Power, Canadian Government Rys., all at Moncton; Dec. 1918 to Sept. 15, 1920, Mechanical Superintendent, Eastern Lines, Canadian National Rys., Moncton; Sept. 15, 1920, to Feb. 28, 1923, General Superintendent of Rolling Stock, Eastern Lines, Canadian National Rys., Moncton, N.B.

George Turnbull Bell, who has been appointed Executive Assistant to Vice President of Traffic, Canadian National Rys., Montreal, was born there Sept. 7, 1861, and entered railway service in 1878, since when he has been consecutively, to Nov. 1880, clerk, car mileage office, Great Western Ry.; Nov. 1880 to Nov. 1882, stenographer, General Passenger Agent and Rate Clerk's Office, same road; Nov. 1882 to Jan. 1, 1884, Chief Clerk, Assistant Passenger Agent's Office, G.T.R.; Jan. 1, 1884, to Apr. 25, 1892, Chief Clerk, General Passenger Agent's Office, same road; Apr. 25, 1892, to Apr. 1896, Assistant General Passenger Agent, same road, Montreal; Apr. 1896 to Aug. 1899, Assistant General Passenger and Ticket Agent, same road, Montreal; Aug. 1899 to May 1900, First Assistant General Passenger and Ticket Agent, same road, Chicago, Ill.; May 1900 to Aug. 1908, General Passenger and Ticket Agent, same road, Montreal; Aug. 1908 to Apr. 1909, General Passenger and Ticket Agent, G.T.R., and G.T.P.R., Montreal; Apr. 1909 to May 1913, Assistant Passenger Traffic Manager, G.T.R. and G.T.P.R., Montreal; May 1913 to March 9, 1923, Passenger Traffic Manager, G.T.R., and to March 1919, also Passenger Traffic Manager, G.T.P.R., Montreal.

Major F. L. C. Bond, who has been appointed Regional Chief Engineer, Central Region, Canadian National Rys., Toronto, was born at Montreal in 1877, and educated at Montreal High School, Collegiate Institute and McGill University, graduating in 1898, when he entered G.T.R. service, since when he has been, to 1901, Assistant Resident Engineer, Eastern Division; 1901 to 1902, engineer in charge of double track construction; 1902, night superintendent on construction of the Park Ave. tunnel, New York; 1902 to 1913, Resident Engineer, Eastern Division, G.T.R.; 1913 to 1916, when he went overseas, Division Engineer, G.T.R., Montreal; Dec. 1918 to Feb. 19, 1923, Chief Engineer, G.T.R., Montreal.

C. G. Bowker, who has been appointed General Manager, Central Region, Canadian National Rys., Toronto, was born at

Medford, N.J., Apr. 21, 1871, and entered railway service in May, 1888, since when he has been, to Oct. 1890, operator, Philadelphia & Reading Rd.; Oct. 1890 to 1893, operator, New England Division, same road; 1893 to 1897, in charge of telegraph lines and electrical service,

G. T. Bell,
Executive Assistant to Vice President of Traffic,
Canadian National Railways.

H. R. Charlton,
Manager, Advertising Bureau, Canadian National
Railways.

Buffalo Division, Lehigh Valley Rd., Buffalo, N.Y.; May 1900 to Feb. 1902, train dispatcher, G.T.R., London, Ont.; Feb. 1902 to Nov. 1905, train dispatcher, G.T.R., Durand, Mich.; Nov. 1905 to May 1907, Chief Train Dispatcher, G.T.R., Stratford, Ont.; May 1907 to Sept. 1909, Trainmaster, G.T.R., Stratford, Ont.;

Sept. 1909 to May 13, 1911, Joint Superintendent, G.T.R., and Wabash Rd., St. Thomas, Ont.; May 13, 1911, to Jan. 1913, Superintendent Middle Division, G.T.R., London, Ont.; Jan. 1913 to May 1, 1918, General Superintendent, Eastern Lines, G.T.R., Montreal; May 1, 1918, to Oct. 10, 1922, General Superintendent, Ontario Lines, G.T.R., Toronto; Oct. 10, 1922, to Feb. 19, 1923, Operating Manager, lines east of Detroit and St. Clair Rivers, G.T.R., Montreal.

H. W. Brodie, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, who has been granted three months leave of absence, owing to illness, has gone on a trip from Vancouver to Australia, accompanied by Mrs. Brodie.

Charles Edward Brooks, who has been appointed Chief of Motive Power, Canadian National Rys., Montreal, was born at Constantinople, Turkey, July 3, 1886, and entered railway service in 1905, since when he has been, to 1908, apprentice, G.T.R., Montreal, 1908 to 1914, machinist, draftsman and Locomotive Foreman, Grand Trunk Pacific Ry., successively, Portage la Prairie and Rivers, Man., Watrous and Regina, Sask., Wainwright and Edmonton, Alta.; 1914 to May 1915, General Foreman, G.T.P.R., Transcona, Man.; May 1915 to Oct. 1, 1920, Superintendent of Motive Power, G.T.P.R., Transcona, Man.; Oct. 1, 1920, to Feb. 19, 1923, Mechanical Assistant, Locomotive Department, to Vice President, Operation and Maintenance, Canadian National Rys., Toronto.

Collingwood B. Brown, who has been appointed Chief Engineer, Operating Department, Canadian National Rys., Montreal, was born at Ithaca, N.Y., Aug. 27, 1879, and graduated from Cornell University. In the summer of 1898 he was an assistant on U.S. geological survey work in New York, and in the following summer acted as topographer and instrument man on survey for the New York State College of Forestry. He entered C.P.R. service in 1901, since when he has been, draftsman and rodman, Trail, B.C.; 1902, Assistant Engineer, Bridge Department, Montreal; Assistant Engineer in charge of erection of Red River bridge, Winnipeg, and also of the construction of the annexes to the elevators at Fort William, Ont.; 1902 to 1904, Resident Engineer, District 2, Ontario Division, London; and Resident Engineer, Toronto Terminals; 1904 to 1906, Assistant Division Engineer, Western Division, Calgary, Alta.; 1906 to 1908, Division Engineer, Atlantic Division, St. John, N.B.; 1908 to 1912, Division Engineer, Eastern Division, Montreal; 1912 to July 1913, Principal Assistant Engineer, Eastern Lines, Montreal; July 1913 to Oct. 1920, Chief Engineer, Canadian Government Rys., Moncton, N.B.; Oct. 1920 to Feb. 19, 1923, Engineering Assistant to Vice President, Operation and Maintenance, Canadian National Rys., Toronto.

Sir George McLaren Brown, European General Manager, C.P.R., London, made a tour of inspection of the company's agencies throughout Europe recently, except Germany, as he found the railway service too disorganized by the French occupation of the Ruhr district to go there. Among others, he met the Italian and Hungarian premiers, and also the Hungarian Governor, Admiral von Horthy.

Lady Brown, wife of Sir George McLaren Brown, European General Man-

ager, C.P.R., who spent part of the winter with her sister, Mrs. C. E. Neill, in Montreal, has returned to England.

Lafayette S. Brown, who has been appointed General Manager, Atlantic Region, Canadian National Rys., Moncton, N.B., was born at Nelson, N.B., Oct. 19, 1863, and entered Intercolonial Ry. service Dec. 1880, since when he has been, to Dec. 20, 1881, cleaning locomotives, and machinist helper, Newcastle, N.B.; Dec. 20, 1881, to Sept. 5, 1882, shunting in Newcastle yard and learning telegraphy; Sept. 5, 1882, to Nov. 25, 1883, assistant agent, Newcastle, N.B.; Nov. 26, 1883, to Oct. 4, 1898, train dispatcher, Moncton and Ste. Flavie District, Campbellton, N.B.; Oct. 4, 1898, to April 30, 1912, Chief Dispatcher, New Glasgow, N.S.; May 1, 1912, to July 31, 1913, Assistant Superintendent, Moncton and Ste. Flavie and Fredericton to Loggieville, N.B., Newcastle, N.B.; Aug. 1, 1913, to June 1, 1917, Superintendent, Truro, Sydney and Oxford District, I.R.C., afterwards District 4, Intercolonial Division, Canadian Government Rys., New Glasgow, N.S.; June 1 to Sept. 17, 1917, Assistant General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.; Sept. 17, 1917, to Dec. 1918, General Superintendent, Eastern Lines, Canadian Government Rys., Moncton, N.B.; Dec. 1918 to Dec. 1, 1920, General Superintendent, Maritime District, Eastern Lines, Canadian National Rys., Moncton, N.B.; Dec. 1, 1920, to Feb. 19, 1923, Assistant General Manager, Eastern Lines, Canadian National Rys., Montreal.

A. C. Bryson, who died at Winnipeg, March 3, was head of A. C. Bryson & Son, railway contractors.

Sir Walter Cassels, who was chairman of the arbitration board which enquired into the value of certain G.T.R. stock in connection with the taking over of the company by the Dominion Government recently, died at Ottawa, March 1, aged 77. He was President of the Exchequer Court of Canada, and during his long career, he did considerable legal work for the C.P.R. and the Dominion Government.

H. R. Charlton, who has been appointed Manager, Advertising Bureau, Canadian National Rys., Montreal, was born Feb. 6, 1866, and after engaging for three years in newspaper work at St. John's, Que., was on railway survey work in 1883 and 1884, on the Waterloo and Magog Ry. He was in commercial business employment in St. John's, Que., until 1887, when from Feb. to June he travelled with the C.P.R. exhibition car, and after four years of newspaper work was given charge of the C.P.R. advertising department in April, 1891, remaining there until April, 1896, when he again went into business employment. From Jan., 1898, to March 9, 1923, he was General Advertising Agent, G.T.R., and to March, 1919, also General Advertising Agent, G.T.P.R., Montreal.

Kingsland, who has been appointed General Manager, Central Region, Canadian National Rys., Toronto, was born at New York, N.Y., Jan. 5, 1869, and entered transportation service in 1887, since when he has been, to 1889, billing clerk, Delaware, Lackawanna & Western Ry., New York; 1889 to Oct. 26, 1900, clerk, Audit Department, New York Central Rd., New York; Oct. 26, 1900, to 1904, Auditor, Great Northern Ry. of Canada, Quebec, Que.; 1904 to Sept. 10, 1915, Auditor, Canadian Northern Quebec Ry., and also from Mar. 24, 1908, to Sept. 10, 1915, Auditor, Quebec & Lake St. John Ry., Quebec, Que.; Sept. 10, 1915, to Nov. 21, 1918, General Superintendent, Canadian Northern Ry., Montreal; Nov. 21, 1918, to Dec. 1, 1920, Assistant General Manager, Eastern Lines, Canadian National Rys., Montreal; Dec. 1, 1920, to Feb. 28, 1923, General Manager, Eastern Lines, Canadian National Rys., Montreal.

P. J. Lynch, Superintendent, Barrie Division, Ontario Lines, G.T.R., Allandale, Ont., died in Wellesley Hospital, Toronto, March 1, after a long illness. He entered G.T.R. service in 1879, and to Oct. 1, 1898, was conductor between Toronto and North Bay, Ont.; Oct. 1, 1898, to 1899, trainman, Stratford, Ont.; 1899 to 1900, trainman, Belleville, Ont.; 1900 to 1904, trainman, Stratford, Ont.; 1904 to June 1, 1910, Assistant Superintendent, Northern Division, Allandale, Ont.; June 1, 1910, to the time of his death, Superintendent, Barrie Division, Ontario Lines, Allandale, Ont. He was conductor of the train which carried the Duke of York (King George V.) and his party over the G.T.R. in 1901. The funeral, at Barrie, March 3, was attended by a number of railwaymen and others, including S. J. Hungerford, Vice President Operation and Construction; C. G. Bowker, General Manager, Central Region, and A. J. Hills, D. Crombie, C. B. Brown, G. E. Smart, C. E. Brooks, G. C. Jones, W. S. Wilson, G. A. Mitchell, D. McCooe, L. L. Grabill, C. E. Horning, R. W. Long, C. S. Proctor, F. R. Porter, G. A. Hoag, H. E. Whittenberger, C. Forrester, W. J. Piggott, and H. W. Matthews, all of Canadian National Rys.; James Clark, representing the Board of Railway Commissioners; C. O. Baker, North Bay, representing the Timiskaming & Northern Ry.; W. F. Wasley, Muskoka Lakes Navigation & Hotel Co., Gravenhurst, Ont.; F. H. McGuigan, formerly fourth Vice President, G.T.R.; U. E. Gillen, General Manager, Toronto Terminal Ry. Co.; A. L. Smith, Manager, Toronto Union Station; and Hon. E. C. Drury, Premier of Ontario. The pallbearers were W. R. Davidson, R. H. Fish, W. S. Wilson, C. Forrester, W. J. Piggott and W. E. Weegar.

Roderick J. Mackenzie, who died at Los Angeles, Cal., March 1, aged 49, was the oldest son of Sir William Mackenzie, ex-President, Canadian Northern Ry., Toronto. He was born at Kirkfield, Ont., and was educated at Ridley College, St. Catharines, Ont. He was engaged for some time under his father in the re-

building and electrifying of the Toronto Ry., and became associated with the construction firm of Mackenzie, Mann & Co., Ltd., of which he was a Vice President, and engaged in the construction of several Canadian Northern Ry. lines in the west, from the company's incep-

C. E. Friend.
Assistant General Comptroller, Canadian National Railways.

A. C. Egan,
Comptroller, Western Region, Canadian National Railways.

tion until its completion as a transcontinental railway. He later became concerned with oil properties, and continued his interest in horses, being a well known racehorse owner. The funeral took place at Kirkfield, Ont., March 11, and was

attended by numerous railway officials and former associates.

Malcolm H. MacLeod, who has retired from the position of Vice President in charge of Construction, and has been appointed Consulting Officer to the Executive, Canadian National Rys., was born in Skye, Invernesshire, Scotland, July 13, 1857. His railway record is as follows: 1877, chainman, Victoria Ry., Ont.; 1879 to 1880, rodman and leveller, Credit Valley Ry.; 1881, transitman location surveys, Ontario & Sault Ste. Marie Ry.; 1882, resident engineer, construction Toronto & Ottawa Ry.; 1883 to 1885, assistant engineer, construction Lake Superior Section C.P.R.; 1886, on location and construction C.P.R. lines east of Montreal; 1887, on construction C.P. R. Sault Ste. Marie branch; 1888 to 1889, locating engineer, and in charge of construction, Windsor Division, C.P.R.; 1890, locating engineer, Calgary & Edmonton Ry.; 1891, revision surveys C.P.R. and locating Niagara Falls, Park & River Ry.; 1892, revision surveys C.P.R., Chalk River to Sudbury; 1892 to 1895, Chief Engineer Lake Timiskaming Colonization Ry.; 1896, division engineer, construction, Montreal & Ottawa Short Line, C.P.R.; 1897 to 1900, locating engineer, assistant Chief Superintending Engineer, and Chief Engineer and Superintendent, Crowsnest Branch, C.P.R.; May 1900 to 1907, Chief Engineer, and from 1907 to Oct. 1918, General Manager and Chief Engineer, Western Lines, Canadian Northern Ry., Winnipeg; Oct. 1918 to Sept. 1920, Vice President, Construction, Operation and Maintenance, Canadian National Rys., Toronto; Sept. 1920 to Feb. 19, 1923, Vice President in charge of Construction, Canadian National Rys., Toronto.

Mrs. McNicoll, widow of David McNicoll, formerly Vice President, C.P.R., and the Misses McNicoll, have returned to Montreal from Jamaica.

Henry Hilaire Melanson, who has been appointed General Passenger Traffic Manager, Canadian National Rys., Montreal, was born at Scadouc, N.B., Mar. 9, 1872, and entered Intercolonial Ry. service Nov. 18, 1889, since when he has been, to Aug. 1892, clerk in Mechanical Department; Aug. 1892 to Dec. 1899, clerk in Passenger Department; Dec. 1899 to Mar. 1901, chief clerk, Passenger Department; Mar. 1901 to May 1903, General Baggage Agent; May 1903 to Nov. 1909, chief clerk, Passenger Department; Nov. 1909 to May 1913, Assistant General Passenger Agent; May 1913 to June 1917, acting General Passenger Agent; June 1917 to Dec. 1918, Passenger Traffic Manager, Canadian Government Rys., all at Moncton, N.B.; Dec. 1918 to March 1, 1923, Passenger Traffic Manager, Canadian National Rys., Toronto.

R. C. Morgan, Superintendent, Winnipeg Terminal Division, C.P.R., who has been granted several leaves of absence to enable him to act as General Manager, Reid Newfoundland Co., and who returned to St. John's, Nfld., about the middle of January, after spending a short time in Winnipeg, expects to leave again for Winnipeg, about the middle of April, to take Mrs. Morgan home, after she is able to leave the hospital, where she has been for some weeks, in consequence of having fallen on ice and breaking a leg.

John Pullen, President, Canadian National Express Co., Montreal, who has retired on superannuation, was born at Shepton Mallet, Eng., Jan. 23, 1863, and entered G.T.R. service in 1877, since

when he has been, to 1878, in various capacities in the Assistant General Freight Agent's office, Sherbrooke, Que.; 1878 to 1880, in General Freight Department, Montreal; 1880 to 1890, secretary to Traffic Manager, Chicago, Ill.; 1890 to 1896, Agent, West Shore Fast Freight Line, and subsequently Agent, Reading Despatch, Chicago, Ill.; 1896 to 1897, Division Freight Agent, Stratford, Ont.; 1897 to May 1, 1899, Division Freight Agent, Hamilton, Ont.; May 1, 1899, to May 1, 1900, General Freight Agent, Central Vermont Ry., St. Albans, Vt.; May 1, 1900, to Aug. 14, 1905, General Freight Agent, G.T.R., Montreal; Aug. 14, 1905, to Oct. 2, 1911, Assistant Freight Traffic Manager, G.T.R., Montreal; Oct. 2, 1911, to Sept. 1, 1921, President, Canadian Ex. Co., Montreal; Sept. 1, 1921, to March 10, 1923, President, Canadian National Express Co., Montreal.

H. Rindal, who has been appointed District Engineer, Alberta District, C.P.R., Calgary, Alta., was born at Tyvold, Norway, Nov. 1, 1879, and was from Sept. 1900 to Sept. 1902 with the Norwegian Government Rys., and Nov. 1902 to May 1903, rodman, Pennsylvania Rd., Pittsburgh, Pa. He entered C.P.R. service June 1903, since when he has been, to Sept. 1903, transit man, Winnipeg; Sept. 1903 to 1905, Resident Engineer, Fort William, Ont.; 1905 to 1907, Assistant Division Engineer, Winnipeg; 1907 to 1910, Assistant Engineer, Winnipeg; 1910 to Feb. 1923, District Engineer, British Columbia District, Vancouver.

W. D. Robb, Vice President, Insurance, Lands, Express, Telegraphs, Colonization, Development, etc., Canadian National Rys., Montreal, and Mrs. Robb, sailed from New York, March 3, to spend a few weeks at Hamilton, Bermuda.

Arthur St. Laurent, B.Sc., C.E., Chief Engineer, Dominion Public Works Department, Ottawa, died there March 6, after two months illness. He was born at Rimouski, Que., Nov. 20, 1859, graduated from l'Ecole Polytechnique, Montreal, in 1885, and for three years was engaged on Temiscouata Ry. location and construction. He entered the Dominion Public Works Department service Sept. 18, 1888, and to 1898, was Assistant Engineer, Winnipeg. He was afterwards engaged on various works throughout the Dominion for the Department; from 1908 to Feb. 1922 was Assistant Deputy Minister, and from Feb. 1922, Chief Engineer of the Department.

Sir William Scott, General Manager, Anglo-Newfoundland Development Co., who died in London, Eng., March 5, is reported to have been at one time an engineer in the C.P.R. Construction Department.

L. K. Silcox, General Superintendent, Motive Power, Chicago, Milwaukee & St. Paul Ry., and formerly Mechanical Engineer, Canadian Northern Ry., Toronto, read a paper, "A mechanical man's views on locomotive terminals," before the Western Society of Engineers, in Chicago recently.

Hon. J. A. Stewart, formerly Minister of Railways and Canals, who died at Montreal recently, left an estate valued at approximately \$420,000. After family bequests of \$50,000 are paid, the balance goes to his widow.

Major John W. Stewart, C.B., C.M.G., railway and harbor contractor, etc., Vancouver, B.C., and Mrs. and Miss Margaret Stewart, have returned from England.

Lady Thornton, wife of the President, Canadian National Rys., and Miss Thornton, who, since coming out from England, have spent some time with Sir Henry Thornton in Ottawa, left there early in March to be abroad for a few months.

A. E. Warren, who has been appointed General Manager, Western Region, Canadian National Rys., Winnipeg, was born at Taunton, Eng., June 9, 1874, entered railway service in 1889, and served in various capacities in Car Service Department, Superintendent's, General Superintendent's and Manager's offices, and station and yard service, C.P.R., until July, 1901, when he resigned to enter mercantile business. He entered Canadian Northern Ry. service in Aug. 1902, and served as station agent, chief clerk to General Manager, Superintendent, General Superintendent and Assistant to General Manager, Western Lines. From Jan. 1 to Aug. 1, 1918, he was loaned to the Dominion Government and acted as Chief Operating Officer, Department of Railways and Canals, Ottawa. He was appointed General Manager, Western Lines, Canadian National Rys., Winnipeg, in Nov. 1918, and in Aug. 1920, when the Grand Trunk Pacific Ry. was placed under C.N.R. management, was also appointed General Manager, G.T.P.R.

Among the Express Companies.

The Dominion Ex. Co. has opened offices at Glenton, La Gabelle, and St. Narcisse, Que.

O. A. Sharpe, heretofore route agent, has been appointed agent, Dominion Ex. Co., Hamilton, Ont., vice C. A. Dobson.

A. F. Boyer has been appointed acting agent, Dominion Ex. Co., North Bay, Ont., during absence of R. Glover on leave.

The Canadian National Ex. Co. has reopened its offices at Les Eboulements and Petite Riviere, Que., and has opened an office at Val Gagne, Ont.

J. A. Grignon, a money order clerk, Dominion Ex. Co., Montreal, committed suicide by shooting, in his cage, at the company's office there, March 24. He had been in ill health for some time, and was, apparently, in financial difficulties.

H. J. Palmateer, heretofore Assistant Superintendent, has been appointed Superintendent, lines east of Port Arthur, Dominion Ex. Co., Toronto, vice George Parker, deceased. The position of Assistant Superintendent has been abolished.

The Board of Railway Commissioners' order 33,471, dismissing P. Burns & Co.'s complaint against Canadian National Ex. Co., with respect to claims for goods lost or damaged at flag stations, is given in full, under "Traffic Orders by Board of Railway Commissioners," on an earlier page of this issue.

The delivery limit of express companies in Toronto have been extended, as follows: In the Moore Park district, the area bordered by Moore Ave., Welthe north Toronto section, the territory west of Duplex Ave. to Avenue Road, between St. Clement Ave. and Lytton Boulevard.

As stated in Canadian Railway and Marine World for February, the Railways and Canals Department notified the Canadian National Express Co., as successor to the Canadian Express Co., and also the Dominion Express Co., that

the arrangements they had for operation over the Canadian National Rys. lines south of the St. Lawrence River, formerly the Intercolonial and Prince Edward Island Rys., would be terminated on March 31. It was stated subsequently that this was preparatory to giving the Canadian National Ex. Co. exclusive operating rights on those lines. Towards the end of March it was stated that the Dominion Ex. Co. would not cease operating on the lines on March 31, and that the matter had been deferred for at least another month, but no official information is available.

National Dairy Council's Appeals.

The Dominion Government has dealt with two appeals by the National Dairy Council of Canada, by passing two orders in council on March 15, as follows:—

No. 494. "Whereas the committee of the Privy Council on Jan. 18, 1923, had under consideration the National Dairy Council of Canada's petition by way of an appeal under the Railway Act 1919, sec. 52, from a decision of the Railway Commissioners for Canada, refusing an application of the petitioners for the cancellation of a 20% increase in special commodity express rates on cream, granted by the Board's order of Feb. 2, 1921, and for the rearrangement of the special commodity express rates on cream in existence prior to that order, and whereas the committee is of the opinion that the bill should be allowed, therefore the Governor-General in council is pleased to order, and it is hereby ordered, that the special commodity express rates on cream in Canada in effect prior to Feb. 2, 1921, be re-established on and after April 1, 1923."

No. 495. "Whereas the committee of the Privy Council on Jan. 12 and 18, 1923, had under consideration the petition of the National Dairy Council of Canada by way of appeal under the provisions of the Railway Act 1919, sec. 52, from a decision of the Board of Railway Commissioners for Canada, refusing an application of the petitioners for the classification of ice cream as second class, instead of first class, in the Express Classification for Canada, for express rate purposes, and whereas, after hearing counsel for both parties to the contention, the committee has reached the conclusion that the appeal should be dismissed, therefore the Governor in council is pleased to dismiss the said appeal, and the same is hereby dismissed accordingly."

Telegraph, Telephone and Cable Matters.

The placing of all Canadian National Telegraphs wires underground in Montreal and London, Ont., is reported to be nearly completed.

Canadian National Telegraphs have opened offices at Cushing Lake and Peninsula, Que.; and Agate, Newcastle and Pass Lake, Ont., and have closed offices at Brucefield, Missongia and Wroxeter, Ont. The name of the office at Howell, Sask., has been changed to Prudhomme.

It was announced in London, Eng., recently that on account of the Government having decided to invite private enterprise to participate in the erection of a chain of wireless telegraph stations throughout the empire, the work was being taken in hand at once, and that, within two years, the Marconi Wireless Telegraph Co. will have several stations in England, in direct communication with the various dominions and with India.

Electric Railway Department

Toronto Terminals, Hydro Electric Railways, Toronto & York District.

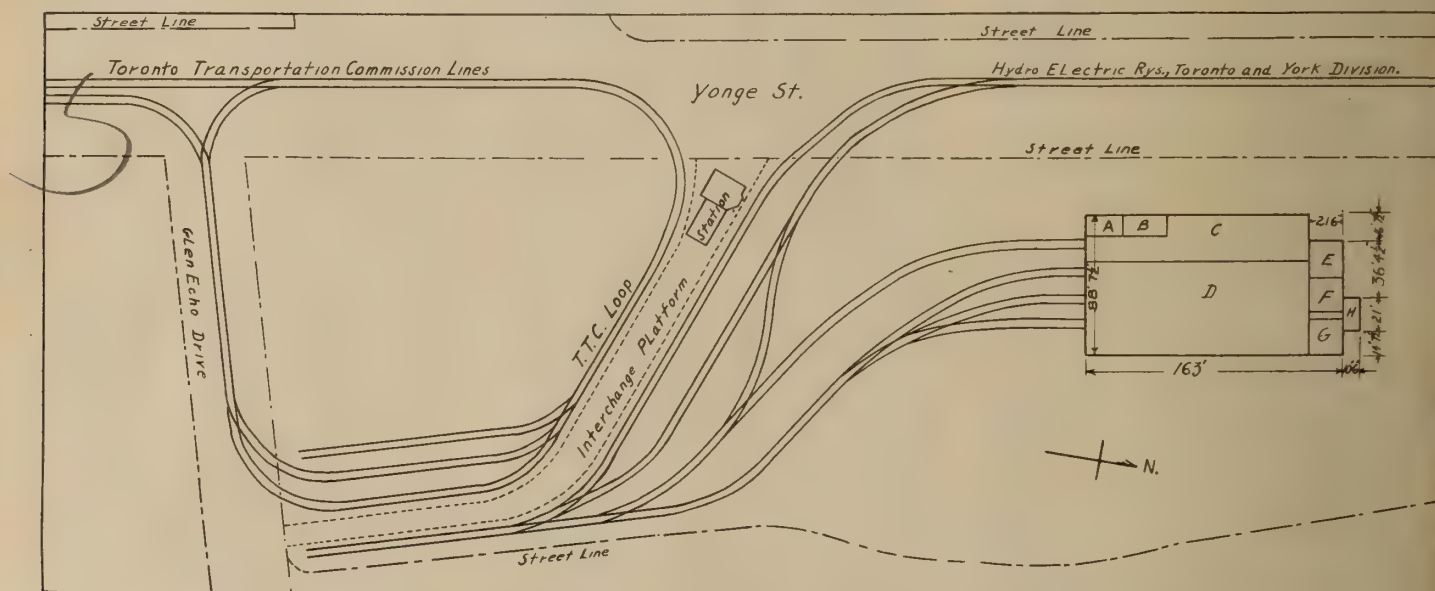

The Toronto & York Radial Ry. is now being operated by the Hydro Electric Power Commission of Ontario, and the old Metropolitan Division, running north from Toronto's north boundary, is designated the Hydro Electric Railways, Toronto & York District, Metropolitan Division. Consequent upon the Toronto Transportation Commission's lines on Yonge St. being extended to the north city limits, the radial railway single track line on Yonge St., between the former southern terminal and the north city limits, was taken up, and a new radial line terminal at the north city limits became necessary.

As stated in Canadian Railway and Marine World for February, terminal facilities have been provided near the Toronto Transportation Commission's north Yonge St. loop, and to permit their construction, Doncliffe Drive, a street

and interchange platform are exclusively those of the radial line, and consist of a main track, run-around track, a track leading to the freight house portion of the main building at the north end of the property, a connection between the two latter tracks, and a lead branching into three tracks entering the car barn. The building at the north end, also exclusively a radial line facility, is divided as follows, with reference to the lettering on the plan: A, office; B, perishable freight storage; C, freight house; D, car barn; E, blacksmith shop; F, machine shop; G, carpenter shop; H, lavatory and wash room. The portion of the building occupied by the carpenter shop and machine shop has a basement below it, in which are the boiler room and coal storage, and also has a second story, divided into an air brake, controller, etc., repair room, and an armature room.

ft. east. The roof eaves are 8 ft. above the platform, and the roof is 18 ft. wide and slopes to the eaves at an angle of 30 deg. to the horizontal. It is carried by steel I beam and angle supports, at 12 ft. centers, and is of steel truss construction, with wood rafters, and covered with wood and Spanish metal tiling.

The car barn, repair shop and freight house building is of steel truss and brick construction, with concrete foundations, and is divided as mentioned above. It is 173½ ft. long over all, and 88 ft. 7½ in. wide. The car barn portion is 141 ft. 1½ in. x 54 ft. One concrete pit, with 5 in. concrete floor on 8 in. cinder fill, extends underneath all three tracks, the bottom of the pit being 4 ft. 8 in. below the top of rail, and the tracks being supported on reinforced concrete piers. The track on the east side of the building is equipped with a 40-ton 4-screw hoist. Two sets

Toronto Terminals, Hydro Electric Railways, Toronto & York District.

formerly running east from Yonge St., one block north of Glen Echo Drive, was closed. Some of the terminal construction work was done jointly by the Hydro Electric Railways and the Toronto Transportation Commission; and the construction of facilities for use by the radial line alone, was done under contract from the Hydro Electric Power Commission's Railways Department.

The accompanying plan shows the layout of the new terminal and the arrangement of its facilities. Toronto Transportation Commission cars, from the downtown portion of the city, turn at the loop shown, while radial cars from north of the city proceed to the station and interchange platform, between the loop track and the radial track, where the passengers change from one line to the other. The interchange platform, a joint facility, follows the loop tracks all the way around from Yonge St. to the former street line of Glen Echo Drive. This platform was the first unit of the new facilities to be completed, having been finished early in the winter of 1922-23. The station is a purely radial railway facility. The tracks to the north of the station

The station, which is also a purely radial line facility, is of buff colored brick and hollow tile construction, with concrete foundations and Spanish tile roofing. The length over all is 50 ft. The one story or eastern portion is 22 ft. wide and the two story or western portion is 28 ft. wide. The height to eaves of the two story portion is 18½ ft., and of the one story portion, 10 ft. The west side is provided with a canopy, 9 ft. above the ground level. The interior is divided into a waiting room, 20 x 34 ft.; lavatories; a ticket office, 11 x 8 ft.; an annex for conductors, 5 ft. 5 in. x 3 ft., and a baggage room 14¼ x 15 ft. On the second floor are the Superintendent's office, 14 x 13 ft., and the dispatcher's office 14 x 13 ft. The interior is finished in lath and plaster; the floor downstairs is of tile, which also extends to the windows, and the partitions between the rooms are of tile. The building is heated by hot water and electrically lighted.

The interchange platform is 352 ft. long, and ranges in width from 27 to 36 ft. It is of concrete, and is covered in part by an umbrella roof, which adjoins the station building, and extends for 150

of stairs lead into the pit at the north end of the building and one at the south. Sand storage space of 60 tons capacity is provided at the east side, the sand being dried by steam coils.

The freight storage portion of this building, 31 ft. 1½ in. x 141 ft. 1½ in., includes the perishable freight room, 14 ft. x 23¼ ft., and an office, 14 ft. x 23 ft. 10½ in. The freight shed is served by the most westerly track entering the building. The flooring in the freight shed and perishable freight room is of 2 in. plank, with a top flooring of 1 in. white pine. The office portion has 1 in. maple flooring.

The shop portion of the building is of heavy mill type construction, and the various shops, the locations of which are given above, have the following dimensions: blacksmith shop, 21½ ft. x 19 ft. 10½ in.; machine shop, 20 ft. x 21½ ft.; carpenter shop, 21 ft. x 21½ ft.; boiler room and coal storage, equal in area to the machine shop and carpenter shop, under which they are located; armature shop and air brake repair shop, equal in area to the machine shop and carpenter shop respectively, over which they are

located. The blacksmith shop, machine shop and carpenter shop are fitted up to take care adequately of running repairs on electric car bodies and trucks, and the armature and air brake repair shops are equipped to take care of the motor and air brake work. A feature of the construction is that a hoist has been installed to lift armatures, motors, etc., out of the car barn portion of the building and to transfer them into the armature shop in the one straight line movement. Stairs leading to the boiler room and coal storage space in the basement, and leading to the armature shop and air brake repair shop in the second story, are located between the machine shop and carpenter shop. The building is heated by steam, with the low pressure system.
